The carving of M.c. is virtually unknown outside Ethiopia, although monolithic temple architecture was well-established in India from the 7th cent. (cf. Mahabalipuram, on the west coast, and Ellora) and knowledge thereof may have reached the highlands over the maritime ↗trade routes. Almost every R.c. has the potential of being a M.c., and although few are, many are monolithic to a degree. Generally speaking, the M.c. incorporate the best workmanship within the field of rock-hewn architecture. To produce them was far more labour intensive and hence costly than was the case for churches carved into the rock, indicating that their existence depended upon the patronage of the very wealthy. The pure monoliths of Däbrä Roha (Lalibäla) and Gännätä Maryam (s. fig. 1) are royal foundations; they appear to be largely contemporary with the near monoliths of Wəq̱ro Mäsqälä Krəstos near Säqoṭa, and Bilbala Qirqos (Lasta), which also lie in Wällo Province. They all contain western as well as eastern side rooms, a feature known in Syria as well as in Nubian churches of the 8th through 12th cent. Distinctly semi-monolithic (with two-thirds of their total mass excavated towards the west) are the great churches of Ṣəraᶜ Abrəha wä-Aṣbəḥa, Wəq̱ro Qirqos and Mikaᵓel Amba (East Təgray). Without drawing firm conclusions about the dating of all the Lalibäla monoliths, the custom of excavating a wide passage around such monuments later dwindled, perhaps for economic reasons, leading to the narrow separation from the surrounding rock of such churches as Wəqro Mädḫane ᶜAläm (South Gondär) and Gäbrəᵓel ↗Wäqen (Tämben). Qanqanit Mikaᵓel, Sarzäna Mikaᵓel and ↗Ǝšätän Maryam (Lasta) introduce a new architectonic development, possibly drawn from the colonnades of Lalibäla Mädḫane ᶜAläm and Gännätä Maryam, whereby a western porch continued on the north and south sides as a gallery.

C.c. find their finest example in the royal church of ↗Yəmrəḥannä Krəstos (Lasta). Like it, most are built in large, open-mouthed caves in the massif of ↗Abunä Yosef (Wällo). Above Gännätä Maryam are ↗Ǝmäkina Mädḫane ᶜAläm (s. fig. 2) and Lədäta Maryam, and somewhat to the north-east is the 15th-cent. Zämmado Maryam. Others, as yet undocumented, lie between Lalibäla and Wäldiya. Related is Däbrä Sälam Mikaᵓel (near Aṣbi [Wänbärta, Təgray]), the ceiling, north and west sides of which are cut from the mother rock, while the rest is constructed, like Yəmrəḥannä Krəstos but with wall binders known as "monkey heads" (in this case decorative and non-functional), of alternating horizontal layers of stucco-covered split stones and dark wooden facing. The mother rock is used for the south wall of the apparently early church of Agewo (Agobo) Qirqos, and for parts of the east end and ceiling of Qirqos Ṣäba ᶜAyna, both in Aṣbi Dära.

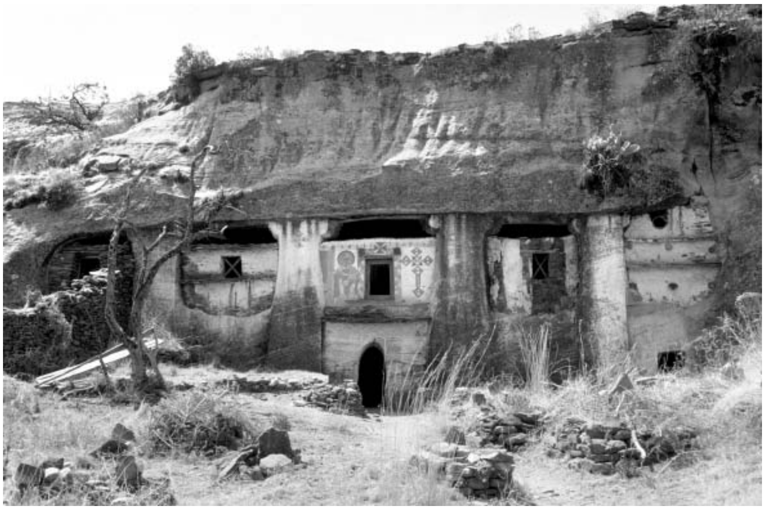

Fig. 3: The probably 14th cent. rock-hewn church of ᶜAddi Qešo Mädḫane ᶜAläm, Təgray, facing east; photo 2004, courtesy of Michael Gervers

Scholarly opinion about the chronology of these churches has varied widely. Some see them dating as early as the 6th cent., while others argue that the R.c. were introduced during the Zagʷe dynasty (TadTChurch 58). The *églises de vallée* have been attributed both to the 8th to 12th cent. (Lepage 2006: 24) and, less convincingly, to the 13th or 14th cent., or later (Buxton 1971: 38, 56–57). The 15th-cent. Vita of Yəmrəḥannä Krəstos (Marrassini 1995: 80–90) describes the ruler as the builder of what is now considered to be his eponymous church (apparently dedicated originally to Qirqos), the murals of which point to a date in the second half of the 12th cent. The contemporary Acts of *aṣe* ↗Lalibäla claim that this late 12th- early 13th-cent. ruler was responsible for excavating ten R.c. there, which, according to the tradition recorded by Alvares, was accomplished over a 24-year period with the intervention of Copts (Beckingham 1959: 145). The work might well have begun prior to his reign, while stylistic and liturgical evidence provided by the Lalibäla Golgota-Śəllase complex and by Lalibäla Betä Giyorgis has led some authors to posit a post-13th cent. date (Gervers 2003), while others would still accept the tradition as basically correct (Fritsch 2008). An inscription in the monolithic church of Gännätä Maryam attributes it and its murals to the patronage of the late 13th-cent. King ↗Yəkunno Amlak.

Liturgical change has proven to be the best explanation so far for variations in the development of ecclesiastical architecture in Ethiopia. It offers a relative chronology for built and especially rock-hewn churches, but one that is difficult to interpret because such changes did not occur in a purely linear progression. Numerous forms might overlap, as at Gännätä Maryam, and Wəqro Maryam near Näbälät, where altars were introduced to the seeming *pastophoria*, thus extending the sanctuary. Such changes were triggered by the example in Egypt, where the Copts sought to commemorate more saints at times when it was not possible to construct more churches. Their solution was to introduce altars dedicated to these saints into rooms which had originally been made for other purposes, especially those which flank the sanctuary on its north and south sides. This change led to other developments concerning the altar-tablet (↗*Tabot*) and the shape of future churches.

A typology may be established by tracing the route used to pass from a *pastophorion* through doorways to the sanctuary. In the late Aksumite period, doorways from the north and south *pastophoria* opened westwards into the aisles (↗Adulis, ↗Mäṭära). This feature continued in certain churches (Gazen, Gundəfru) while, in others, the *pastophoria* opened only to the sanctuary (Dəgum, Bäraqit). Subsequently, an additional set of doorways permitted direct access to both an aisle and the sanctuary (Yəmrəḥannä Krəstos, Lalibäla Mädḫane ᶜAläm, Lalibäla Maryam). This arrangement happened to facilitate 1) the extension of the sanctuary into the side rooms and across the full width of the church and, therefore, 2) the multiplication of altars from one to two or three in older churches (Yəmrəḥannä Krəstos, Lalibäla Mädḫane ᶜAläm et al.) as well as in new ones (Gännätä Maryam, Lalibäla Abba Libanos, Wəq̱ro Mäsqäl). The blind doorways between *pastophoria* and aisles at Lalibäla Abba Libanos or Bilbala Qirqos document the transition from double east-west/north-south, to single north-south access, thereby apparently reverting to what had been the case at Dəgum and elsewhere. Subsequently, the side rooms and their western walls disappeared, leaving the entire east end as an open sanctuary (Lalibäla Däbrä Sina, Betä Golgota and Betä Śəllase, and ↗Gʷəḥ Yəmʾata, Däbrä Ṣəyon and ↗Mäᶜaquddi Yoḥannəs in Gärᶜalta).

The 14th cent. also sees the introduction of the monolithic altar (*mänbärä tabot*) which, from modest beginnings (↗Maryam Dəngəlat), develops into the high altars of the ciborium type current today (May Kado Giyorgis, Däbrä Ṣəyon, Maryam Wəq̱ro [Amba Sännayti]), also of Coptic origin. Under the same impulse still later, monuments are further characterized by high ceilings with a multiplicity of cupolas, sometimes replaced with decorative figures such as diamonds, on relatively slender pillars (Abba Yoḥanni and Gäbrəʾel Wäqen) and, in the case of C.c., by ashlar building blocks (Zämmado Maryam [Wällo]).

Michael Gervers – Emmanuel Fritsch

Rodatz, Hans Albert

R. (b. 7 April 1816, Kuhhorst, Brandenburg–Preußen, d. 20 September 1849, ship "Africa", near Madagascar) was a sea captain and pioneer merchant, who explored possibilities of commerce with North-east Africa and Zanzibar.

First, in 1843, R. travelled to the ↗Red Sea from Bremen with his own ship "Alf". After becoming almost bankrupt in early 1844, he joined the O'Swald Company, Hamburg, and awakened their interest in the Red Sea and eastern Africa. He continued to explore the ports of Aden, Jiddah, ↗Massawa and ↗Sawākin, with a focus on Massawa. Contacts with the German settler ↗Schimper (at that time governor of ↗Ǝntič̣č̣o province) and ↗Parkyns in ᶜAdwa enabled R. to undertake an exploration journey to ↗Təgray, where he was received by *däǧǧazmač* ↗Wəbe Ḫaylä Maryam. He documented the products of the Ethiopian interior and the coast, aiming at opening the market for German products (such as knives and swords from Solingen, firearms, textiles, glass such as *bərəlle* for ↗*ṭäǧǧ* etc., to be traded against ↗ivory, gum arabicum, wax, hides, mother-of-pearl, tortoise-shell, ↗coffee, ↗zibeth etc.). This was followed by an exploration of the ↗Dahlak archipelago, after which he visited the northern Somali ports, again documenting their economic potential, and from where he continued to Zanzibar. Back in Hamburg in 1845, R. published a travelogue, relating interesting details especially on the political situation in Təgray (1846).

In 1846, R. was sent back to the Red Sea and Indian Ocean to continue his exploration, staying in Massawa for almost half a year in 1847, after which, however, his focus shifted to Zanzibar. His secret reports to his firm contain detailed descriptions of the new, but already corrupt Egyptian governorship of Massawa, products and the situation of war in the Ethiopian hinterlands. R. suggested establishing a full commercial station in Zanzibar (which was realized in June 1849, the beginning of German involvement in eastern Africa), and employing a commercial agent in Massawa. His brother Johannes accompanied him on this journey and published a vivid report on their expeditions into the coastal lowlands (1849).

R. died during a third exploration journey to the Indian Ocean. His unpublished commercial reports, kept in the state archives of Hamburg, contain a wealth of information on the state of the economy of the Horn of Africa and East African coast at that time.

Rodd Mission

The R.M. of 1897 was a British mission to *aṣe* ↗Mənilək II, which constituted the first talks between Britain and the rulers of Šäwa since the reign of *nəguś* ↗Śahlä Śəllase half a century earlier. The R.M. included its leader, Sir Rennell Rodd, first Baron Rennell (1858–1941), who was second-in-command to Lord Cromer, the British ruler of Egypt; Colonel Reginald Wingate, head of British military intelligence in that country; Captain H.G.C. Swayne, who had travelled widely in Somaliland; Count Gleichen, a War Office intelligence officer; and Captain Tristram Speedy, who was considered an expert on Ethiopia, which he had first visited in the 1860s.

The R.M. was dispatched in the aftermath of the Battle of ↗ᶜAdwa, not only because the battle had enhanced Mənilək's prestige – making Ethiopia a power "to be reckoned with", but also because it had weakened Italy's position in the area, and thereby intensified rivalry between Britain and ↗France, the region's two main colonial powers. The R.M.'s ostensible object, as stated in the House of Commons on 25 February 1897, was to assure Mənilək of Britain's "friendly intentions", to "promote amicable political and commercial relations", and to "settle certain [frontier and other] questions" between Ethiopia and the neighbouring British Somali Protectorate. Rodd (1923: 112), however, also admitted that the British were afraid that Mənilək might ally himself with the Sudanese ↗Mahdists, who had destroyed Britain's position in Sudan, or with the French, who sought to establish an east-west axis in Africa, thus clashing directly with Britain's proposed "Cape to Cairo" axis. The British were also perturbed by the advance of Ethiopian forces into neighbouring lands, particularly in the Somaliland area, to which Britain laid claim.

The R.M. ignored the Ethio–Sudanese frontier, since it was then under Mahdist rule, and limited itself to discussing the Ethio–Somaliland border, where it found much of the disputed area already under effective Ethiopian occupation. Rodd established cordial, though far from harmonious, relations with Mənilək, as well as with *ras* ↗Mäkʷännən Wäldä Mikaᵓel (with whom he later negotiated the ↗British Somaliland frontier, threatening to leave if Mäkʷännən remained adamant). Rodd nevertheless wrote highly of both Ethiopian leaders' intelligence and character.

Mənilək and Rodd duly signed a six-point treaty on 14 May 1897. Written in both Amharic and English this (1) permitted Ethiopian and ↗British Somaliland subjects to cross their common frontier freely; (2) stipulated that this frontier should be separately negotiated by Rodd and Mäkʷännən; (3) kept open the Zaylaᶜ–Harär caravan route; (4) gave Britain most favoured commercial rights; (5) granted Mənilək the right to import ↗fire-arms through British territory; and (6) had the Emperor prohibit the supply of such weapons to the Sudanese Mahdists, whom he officially declared "the enemies of his empire". Anxious to avoid any ambiguity such as that resulting from the differing interpretations of the Wəčale treaty (↗Italo–Ethiopian Treaty of Friendship and Commerce), it was specified in an Annexe that the two versions should be accompanied by a French translation which would be deemed correct should the above versions differ.

The R.M. owed much to the ability of the British Assistant Resident in Zaylaᶜ, Colonel Sir John Lane ↗Harrington, who organized its supplies.

Richard Pankhurst

Rodinson, Maxime

R. (b. 26 January 1915, Paris, d. 23 May 2004, Marseille) was an *islamisant*, sociologist of the Near East and Ethiopianist, born into a Jewish family of emigrants from Russia. In his memoirs (2005) R. describes the milieu of his family, atheistic, communist and non-Zionist, that was to deeply influence his political orientation (from 1937 to 1958, he was a member of the French Communist Party).

In 1932 R. enrolled as a student at the École nationale des Langues orientales (now ↗Institut National des Langues et Civilisations Orientales, INALCO). During his time as a student of INALCO (1932–36) he took his "baccalauréat" degree (in France = end of secondary school) in 1934. In 1935–36 he obtained degrees in Turkish, Arabic (written, eastern, Maghreb), and in "Abyssinian" (i.e., Amharic), the latter course being taught by Marcel ↗Cohen. R. also attended Cohen's course in Gəᶜəz at the École pratique des hautes études (EPHE), IVᵉ section, as well as other courses at the École du Louvre and the Institut d'ethnologie. He took bachelor degrees (in French "Licence") in literature (1936) and in Arabic (1939), followed by two diplomas at the EPHE (1949 and 1955–56) and by a doctor's degree "based on already performed works" (1970).

During World War II, R. was assigned to Syria. Demobilized in 1940, he stayed in Lebanon until 1947, occupying various teaching and scholarly positions. Upon returning to France, he worked on the oriental printed editions at the ↗Bibliothèque Nationale de France. He also became an active participant at the sessions of Groupe linguistique d'études chamito-sémitique. From 1949 he lectured at the EPHE along with Cohen, whom he succeeded in November 1955 as director of the Ethiopian and South Arabian studies section – continuing to teach and to publish for many years, until his retirement in 1984. In the *Annuaire* of the EPHE, IVᵉ section, one finds R.'s scrupulous reports on his courses and his scholarly achievements. His classes were attended by most French and several foreign *éthiopisants* and *sémitisants*, such as Robert Beylot, Gérard Colin, Alain Rouaud, Jacques Mercier, Eric Godet, Mäkʷännən Argaw, etc. The revised version of Cohen's *Précis* of Gəᶜəz grammar, which constituted the linguistic part of R.'s lectures, is about to be published. Thanks to R., South Arabian studies, both ancient and modern, were revived in France, and are today continued by his former students, esp. by Christian Robin and Antoine Lonnet. Ethiopisants are indebted to him for his important book on ↗magic in Gondär (1967) and a number of other scholarly works (s. Robin 1985).

Next to his activities in the field of Ethiopian studies, R. pursued a second, and even more successful carrier as a student of Islam. He gave a course of historical ethnology of the Near East at the EPHE VIᵉ section from 1959 to 1971, and published several general works, among which his masterpiece on the Prophet ↗Muḥammad (1961) – thus ranking among the greatest French *islamisants*.

Alain Rouaud

Rodriguez, Gonçalo

R. (also *mestre* Gonçalo, b. Portugal, d. 4 March 1564, Goa) was the first member of the ↗Jesuits to enter Ethiopia. He joined the Jesuit order in 1545 and studied at the University of Coimbra. In 1550, he arrived in Goa and was immediately dispatched to Ormuz where he assumed the duties of Father Gaspar Barzeo. After five years, he went to Ethiopia with Brother Fulgencio Freire and the Portuguese Diogo Dias to meet *aṣe* ↗Gälawdewos.

The Portuguese reached Dəbarwa in March 1555 and met with João ↗Bermudez, who informed them that Gälawdewos had no intention of embracing Catholicism and that he had already put in a request for a new metropolitan from Alexandria. This notwithstanding, R. and Dias were received by the Ethiopian sovereign at his court in ↗Damot the following month. R. presented Gälawdewos with letters from ↗João III in which the Portuguese king expressed his desire to send a Catholic patriarch and several Jesuit fathers to Ethiopia. The Emperor then took a month to weigh the proposition, but his response would prove to be ambiguous. While awaiting the monarch's reply, R. composed a treatise elucidating the faults of Ethiopian doctrine vis à vis the virtues of Catholicism. The text, which was translated into Ethiopic by a Portuguese living in Ethiopia called Afonso de França (both versions have been lost to history), drew the ire of the Ethiopian sovereign, who asserted that he had never intended to renounce the Orthodox faith. Moreover, the monarch wrote a defense of his doctrine, the *Confessio Fidei of King Claudius* (Ullendorff 1987; Cohen in PICES 14), which he presented to R.

Before leaving the country, R. and a group of other Portuguese were invited to ↗Däbrä Libanos by a local monk. Upon his return to India, R. reached the conclusion that Emperor Gälawdewos had tendered his invitation to the Portuguese for purely practical reasons, namely the procurement of arms.

Leonardo Cohen

Roḥa ↗Lalibäla

Rohlfs, Gerhard

Friedrich Gerhard R. (b. 14 April 1831, Vegesack, d. 2 June 1896, Rungsdorf) was a German physician, explorer, writer and diplomat. His several books and numerous articles on Ethiopia and on northern and western Africa which were published in the academic journals of the time such as *Petermanns Geographische Mittheilungen*, *Globus*, *Ausland*, etc. (cf. Lockot I) are still valuable sources (↗Ethiopian studies).

R. attended secondary school in Osnabrück. In 1848 he enlisted in the volunteer Bremen Corps, took part in the Schleswig-Holstein war, and was promoted to officer rank two years later. After leaving military service in 1850, he studied medicine in Heidelberg, Würzburg and Göttingen. His interest lay nonetheless in exploration and in 1855 he left for Algeria where he learnt Arabic. For a while, he joined the French Foreign Legion and even took part in a battle in Kabylia, northern Algeria, but he soon left the military to explore Morocco, pretending to be a Muslim. His medical training (which he never actually completed) also facilitated his access to the country, as he became private physician of the *sulṭān*.

Upon his return to Germany in 1867, after having explored, mapped and described various regions in Algeria, Morocco, the Sahara and western Africa, the Prussian king assigned him, together with Count Seckendorff, to accompany the British ↗Napier expedition to ↗Mäqdäla as an observer (Rohlfs 1869; Seckendorff 1869). Although he had wished to travel throughout the length and breadth of Ethiopia, he followed the

Gerhard Rohlfs, etching after a photograph; from Smidt 2005:21

route the military took from ↗Zula to ↗Sänᶜafe, ↗ᶜAddigrat, ↗Ǝndärta, ↗Ḥašəngä to ↗Mäqdäla. His descriptions of people, events and places are astoundingly rich and accurate. On his way back, he separated from the British expedition which was travelling quite quickly, and he travelled at leisure through ↗Lalibäla and ↗Aksum, leaving us an account of their historical splendour and their appearance at the time of his visit.

Only a few months after his return to Prussia, R. set out for northern Africa to explore parts of Libya and Algeria as well as the Sahara and beyond. He could not travel southward, because of various ethnic conflicts, but he was able to cross Cyrenaica, reaching Egypt by way of the Siwa Oasis in 1869. He returned to Prussia, got married and settled in Weimar. In 1873–74, he conducted an expedition on behalf of *ḫidīw* ↗Ismāᶜīl to the Libyan desert. In 1878–79, R., together with his nephew Dr. Anton Stecker (1855–83), undertook an expedition to Wadai on behalf of the Deutsche Afrika-Gesellschaft. They crossed the Sahara, but could not proceed beyond Kufra, as they encountered stiff resistance (as did ↗Munzinger, who was sent to Wadai 17 years earlier). They were nonetheless able to map and describe a region which was still largely unknown to Europeans.

In 1880 the new German imperial government chose R. as an envoy to the Ethiopian court. Once again, this assignment would not let him travel as widely as he wished. But this time, he saw to it that Stecker accompanied him on behalf of the Deutsche Afrika-Gesellschaft. *Aṣe* ↗Yoḥannəs IV, impressed by R.'s personality, requested him to act as his minister plenipotentiary in the Ethio–Egyptian negotiations which had been dragging on since the ↗Egyptian–Ethiopian war of 1875–76. In return, the sovereign promised to pay all his expenses and to promote Stecker's scientific research. R., however, had to seek the permission of his government in order to be able to undertake such a task. His profound knowledge and judgment of the Ethio–Egyptian conflict can be read in his book published in 1883. He did his best to convince Berlin to grant him permission to act on behalf of Yoḥannəs, but in vain. The British were supporting Egyptian interests, and the German government did not wish to offend the British by involving themselves in the matter (instead, the British dispatched their own envoy, who concluded the ↗Hewett Treaty).

In spite of this, Yoḥannəs allowed Stecker to travel wherever he wanted. He explored the Lake ↗Ṭana region and ↗Goǧǧam as well as a large part of the Oromo country south of the ↗Abbay. His aim was to cross what later became southern Ethiopia and go down to Mombasa. But this project failed as the result of the conflict between the rulers of Goǧǧam and Šäwa which culminated in the Battle of ↗Ǝmbabo in June 1882. ↗Mənilək treated Stecker well, but did not allow him to travel further south. Instead, he brought him back to Yoḥannəs, then in Wällo. The sovereign allowed the traveller to visit the northern regions, including parts of the ↗ᶜAfar depression, until he returned to Europe via ↗Massawa. The publications of both R. and Stecker are still among the most reliable sources for geographical, historical and ethnological studies of Ethiopia.

In 1885, R. was appointed German consul to ↗Zanzibar. When German claims over the island were given up in exchange for Heligoland in 1890, R. was brought back to Germany.

Rolph Bienenfeld, Giuseppe and Vittorio

The brothers R.B. (also Bienenfeld [Rolph]), Giuseppe (b. Trieste, d. 6 March 1913, Trieste) and Vittorio (d. 1933), were Triestine merchants of Jewish descent. In the 1860s they established an important import-export company with the head office at Aden and agencies in ↗Massawa and ↗Harär.

Because of his commercial interests, Giuseppe R.B. wanted to see the Bay of ↗ᶜAsäb under Italian rule and travelled extensively, staying for long periods in Harär and in Eritrea. From the mid-1870s onwards he was the resident of the Italian consulate at Aden. From there he offered support to all Italian explorers from Orazio ↗Antinori to Vittorio ↗Bottego. In his consular function he had to communicate with the foreign ministers of the time, including Pietro ↗Antonelli, both before and after the ↗Italo–Ethiopian treaty of 1889 was signed. Together with Enrico Tagliabue, Pietro ↗Sacconi's nephew Giuseppe Guasconi and other Italian traders he founded the first Società Commerciale Eritrea (later Società Coloniale Italiana), dedicated to developing trade between Italy, Šäwa, Harär, Eritrea, Somalia and Yemen. The company, however, was unsuccessful, and Giuseppe R.B. lost most of the capital he had earned in Aden. He subsequently retired to Trieste where he died; the Bienenfeld trading company was bought out by the Società Coloniale Italiana.

Vittorio R.B. filled the post of vice consul in Aden several times, once also replacing Antonio ↗Cecchi.

Among the agents of the Bienenfeld trading company were also such Italian explorers as Ugo ↗Ferrandi and Emilio Dal Seno, a member of two expeditions organized by Eugenio ↗Ruspoli; other employees worth mentioning were the merchant Ottorino Rosa, whose memoirs are an important source for the Egyptian period in Harär, and Gaetano Sacconi. R.B. were among the influential merchants who made Italian colonialism possible.

Manlio Bonati

Romanä Wärq

R.W. (**ሮማነ፡ ወርቅ**; fl. 16th cent.) was the daughter of *aṣe* ↗Naᵓod and sister of *aṣe* ↗Ləbnä Dəngəl. She married the ruler of Gäñ, Semo Wäld, and gave birth to two sons, ↗Ḥamälmal[ä Wärq] and Laᵓəkä Maryam.

Laᵓəkä Maryam fought against the Muslim army of ↗ᶜAbbās b. Abūn b. Ibrāhīm in 1539 and was captured alongside the future *aṣe* ↗Minas and the son of R.W.'s and Ləbnä Dəngəl's sister Amätä Dəngəl, also Laᵓəkä Maryam. The two namesakes were castrated by the Muslims shortly upon their capture. The three prisoners were later sent to the Ottoman *paša* in Zabīd in Yemen. They were eventually released in exchange for ↗Aḥmad b. Ibrāhīm al-Ġāzī's son Muḥammad in 1544.

R.W. was also married to Abuqir, the son of *aqqabe säᶜat* ↗Nägädä Iyäsus. It is probably by him that she had her son Yoḥannəs, who later joined other lords from Amhara in the revolt against Minas led by *baḥər nägaš* ↗Yəsḥaq.

R.W. is mentioned in the chronicles of Gälawdewos and Minas. In an 18th-cent. manuscript of the ↗*Sənkəssar* (BN Éth. 126), her ↗*täzkar* is commemorated on 20 *Mäskäräm*.

Romna

Ǝmmäbet R. (**ሮምና**, possibly hypochoristic for Romanä Wärq; fl. 15th cent.) was a wife or a concubine of *aṣe* ↗Bäᵓədä Maryam. According to the latter's chronicle, she bore him two sons, ↗Ǝskəndər and ᶜƎnqʷä Ǝsraᵓel, the latter sometimes assumed to be the same as ↗Naᶜod. She apparently spent the last years of her husband's reign in exile in Amhara and was reintroduced to the court when Ǝskəndər was enthroned. As he was too young to reign, she assumed the regency with two other counsellors: *yäqäñ bitwäddäd* ᶜAmdä Mikaᵓel and the *ᶜaqqabe säᶜat* Täsfa Giyorgis. The consecration ceremony was probably performed for R. and her son at this time.

During her regency, R. developed a close relationship with the monastery of ↗Däbrä Libanos of Šäwa and its abbot, ↗Märḥa Krəstos. The *History of Däbrä Libanos*, written in the 17th cent., mentions a church named Məᶜərafä Maryam that R. allegedly commissioned and gave to Däbrä Libanos. Her special attention to the monks and her devotion were recognized in this monastery, and the author of the Vita of Märḥa Krəstos celebrated her memory in this hagiographical text. He tells of her ties to the Däbrä Libanos community and commemorates her death on 12 *Näḥase*.

Marie-Laure Derat

Rora

R. (**ሮራ**, Tgr.: 'high place') is a region of present Eritrea delimited by the Eritrean–Sudanese lowlands in the west and north, by the coastal plain in the east and by ↗Ḥamasen in the South (for location s. map for Qarora). The region is mainly inhabited by ↗Təgre-speaking groups but also by ↗Beğa speakers and other minor groups and is characterized by deep valleys draining from the Ḥamasen plateau to the coastal lowlands. Due to its geographic features and location in a strategic position between the highlands, the coastal strip and the Gaš-Märäb draining towards the Nile, the region was always crossed by the pastoral peoples in their seasonal movements and by trade caravans.

The importance of the region's history and its archaeological sites was emphasized by Carlo ↗Conti Rossini. A large number of archaeological monuments recorded in the area remain, however, undated. Among them there are several cairns and tumuli or more complex monuments formed by a squared stone structure supporting a cylindrical building topped by a cone or by a second cylinder with domed top. Most of these monuments had a funerary function and some can be related to Islamic times and ascribed to the well-known type of the Islamic domed tombs named *qubba*. ↗Rock art sites (among them Qarora, Nagran, "Cullite", Däwdäw, and "Dinae") are quite abundant, but most of them are affected by chronological uncertainty. They mainly consist of representations of domestic bovines and camels sometimes associated with Christian symbols. These sites show iconographical and stylistic similarities with regions as far away as the Egyptian–Nubian Eastern Desert and central Ethiopia, as well as South Arabia. Other sites are characterized by the occurrence of undated ↗stelae (see e.g. Ḥəmbol, Mamäruk and Ǝnzəlal).

At Rora Laba a unique monument was found, consisting of a couple of stone stelae surmounted by a sculpture of a crouching ↗lion, lying on its side, with crossed paws and, probably, head turned to the side, showing Hellenistic stylistic influence. At R. Laba, "Aranto" and "Danga" foundations of large buildings on podia of apparent Aksumite (↗Aksum) affinity occur as well. An important Aksumite site was investigated in colonial times at Aratu, in the area of R. Ḥalḥal, by Abele ↗Piva. It was characterized by stepped walls roughly dressed and by a stone platform with big carved rectangular stone slabs on the top, and gave a late Aksumite coin and a Gəᶜəz inscription. Also the stone thrones or seats recorded at Dəgdəg, close to ↗Naqfa, at Gäläb, and at Aḵra may be related to the well-known type of the Aksumite thrones, but this needs confirmation. On the basis of the available data, a striking aspect of the archaeology of the region is the quantity and variety of elements related to the cultures of the neighbouring

View on the mountainous region east of the Rora Ho, near Azmat in the Zara valley, which is separating two Roras; photo 1983, courtesy of Günter Schröder

regions, such as the Ethio–Eritrean highlands, the Sudanese lowlands or even the Nile Valley. This may be linked to the fact that traditionally the R. represented a bridge between these different cultural contexts.

Andrea Manzo

Ros Näbiyat

R.N. (**ሮስ፡ ነቢያት**, Arab.: Rās Banyāt; in Portuguese sources: Arraz Anobiata etc., fl. 16th cent.) was a prominent member of the ruling elite and nobility of the Ethiopian empire on the eve of the Muslim invasion of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"). The name R.N. means literally 'the offsprings of the prophets' (in the O.T. sense, as in 2 Kgs 9:1; for *ros* s. Ex 21:4, DillmLex 306).

Occasionally, R.N. is mentioned as ↗*azzaž* and governor of Šäbäl, a small region in Goǧǧam (around the river of the same name) that he might have governed in the 1510s (cp. mss. EMML 2190, 3667). When ↗Alvares was at the court of *aṣe* ↗Ləbnä Dəngəl in 1520/21, R.N. was *bəḥt wäddäd* (↗*Bitwäddäd*), seemingly "of the right" (BeckHuntAlvar 385; cp. CRAxum no. 27); he was appointed ↗*baḥər nägaš* (BeckHuntAlvar 114) probably in 1524, holding that office for ca. two years (cp. CRAxum no. 20). He appears as the only *bəḥt wäddäd* in the 18th year of Ləbnä Dəngəl's reign, i.e. in 1526 (s. CRAxum no. 30), and as *bəḥt wäddäd* "of the left" shortly thereafter (ibid. nos. 31, 33).

During the Muslim war, R.N. was first the commander of the strategic province of ↗Däwaro. The *Futuḥ al-Ḥabaša* has it that he came to terms with the Muslims and surrendered to them an important pass, provided that an important church of the area be spared (BassHist 135f.). On another occasion, R.N. led his Däwaro troops against Aḥmad "Grañ" (ibid. 143f.), but was defeated, despite his personal bravery. At a later stage of the war, as the Muslim troops were about to enter Amḥara (s. EAE vol. 5), he was ordered to defend a strategic pass leading into ↗Mänz (BassHist 283): a plan overthrown by the defeat of the royal army in the battle of Wasil, October 1531. After the fall of ↗Däbrä Bərhan, R.N. was sent to face ^{c}Uray Abūñ in ↗Ifat, but was again unsuccessful: during the battle at "Kesâyah" (in ↗Gəddəm) he was attacked by ↗^{c}Abbās b. Abūñ b. Ibrāhīm and escaped with difficulty (ibid. 357f.). Lastly, he is mentioned as heading an expedition to Wäräb(a), which was unsuccessful as well, since local people refused to help him (ibid. 393f.).

Denis Nosnitsin

Rosen, Felix

R. (b. 1863, Leipzig, d. August 1925, Breslau) was a German professor of botany, who was a member of the German extraordinary diplomatic mission to Ethiopia 1904–05, headed by his brother, the diplomat Friedrich ↗Rosen.

R. grew up in Jerusalem and Belgrade, where his father Georg R. served as a Prussian, later German, diplomat (for more details on the family s. Rosen, Friedrich). R. had strong ties to the town of Detmold, Westphalia, where his paternal family came from. After studying in Basel and Strasbourg (acquiring a doctorate in 1886), he began to work in Breslau in 1891, as an assistant to Ferdinand Cohn, the head of the institute for plant-physiology. He finished his Habilitation in 1892, and in 1906 became director of the institute. He also taught at the University, but did not have full tenure until 1920 (Staercke 1935). He was murdered in his sleep.

R. joined the mission dispatched to Ethiopia in 1905 as consultant naturalist and collector. The delegation negotiated the establishment of permanent diplomatic relations between Ethiopia and ↗Germany, and the members of the mission, especially R., used the opportunity to undertake research. R. wrote a vivid travel account, which also contains detailed information on Ethiopian history, including oral accounts, ethnography and politics, illustrated by 160 photographs (Rosen 1907).

R. was a specialist in observing plants in their living environments, and the relation between nature and art (Rosen 1903). Both aspects influenced his mode of observation, and his rich photographic presentation of Ethiopian landscapes and people. In Ethiopia R. collected ethnographic objects, including music recordings on wax cylinders (↗Phonograms), for the ethnological museum of Berlin, and for the Wurttemberg Association for the Geography of Trade (today Linden-Museum, Stuttgart; Rosen 1907:238). He also made a collection of plant specimens (Pax 1907; Cufodontis 1950:127). This collection was partly destroyed when the Botanical Museum of Berlin-Dahlem was bombed in 1943 (Cufodontis 1950:106, 129). As a botanist R. only published on the *ǧibarra* (*Lobelia Rhynchopetalum*; Rosen 1911) and discussed it in its ethnographic context in his travel account (Rosen 1907:443). Apart from that he focused on ethnographical and historical issues.

Thomas Zitelmann

Rosen, Friedrich

R. (b. 30 August 1856, Leipzig, d. 26 November 1935, Beijing) was a German Orientalist, diplomat and Minister of Foreign Affairs. His father Georg R. served as Prussian, later German consul in Jerusalem and Belgrade where Friedrich grew up, his mother Serena, née Moscheles, came from a British family.

R. studied philology in Berlin, Leipzig, Munich, Göttingen and Paris, and was fluent in Arabic, Turkish, Farsi and Urdu. For some years he was the private tutor for the sons of Prince Albrecht of Prussia and for the son of Lord Dufferin, viceroy of India, where he stayed in 1885–87. In 1887 he became lecturer for Urdu and Farsi at the Department of Oriental Languages of the University of Berlin. In 1890 he joined the German Foreign Service, first as dragoman, i.e. diplomatic interpreter, serving in Beirut and Teheran. In 1898 he was posted as consul to Baghdad, in 1899 to Jerusalem. In 1900 he returned to the Foreign Office in Berlin and was promoted head of the section for the Orient. In 1904 he attracted the attention of Emperor Wilhelm II when he accompanied him on his trip in the Mediterranean Sea.

The Emperor considered R. the right man to head "the extraordinary imperial delegation" to Ethiopia which embarked in December 1904. Since ascending the throne in 1889, *aṣe* ↗Mənilək II of Ethiopia had sent several letters to his German counterpart, trying to involve ↗Germany in the development of his newly forged empire. Mənilək looked for a fourth player to keep the expansive colonial powers ↗United Kingdom, ↗France and ↗Italy at bay, which had already encircled his territory. He was equally impressed by Germany's technological progress from which his country hoped to benefit on its way to modernity. For more than a decade the German Foreign Office which anxiously tried to avoid any conflict of interests with England and

France had ignored these offers, until Wilhelm II made it his personal cause.

R. was head of this delegation of eight men – among them his younger brother, the botanist Felix ↗Rosen – guarded by nine soldiers and accompanied by two servants, which arrived in Addis Abäba, on 12 February 1905. Mənilək and *ətege* ↗Ṭaytu welcomed the Germans with a splendid dinner for several thousand guests. *Käntiba* ↗Gäbrä Ǝgziʾabəḥer Dästa served as local interpreter. On 7 March 1905 Germany and Ethiopia signed a Treaty of Friendship and Commerce (↗Treaties and conventions, s. EAE vol. 5), Germany being the last to do so after Great Britain, France, ↗Russia and the ↗United States of America. In addition, Mənilək conceded German capital to participate in the founding of the Bank of Abyssinia (↗Banking system) and in the railroad company (↗Railway), the latter being obstructed by France. He also gave permission to excavate ↗Aksum, allowing Enno ↗Littmann to embark on the ↗Deutsche Aksum-Expedition in early 1906.

Friedrich Rosen during his expedition to Addis Abäba, with the famous Somali warrior and poet, Šawal [Schëual] Abdi; photo ca. 1905, from Rosen 1907: 110

The scholarly outcome of the R. delegation proved to be more fruitful than the economic aspirations. The expedition documented Ethiopian civilization, peoples, flora and fauna (Rosen 1907), and collected ethnographic objects and music recordings on wax cylinders (↗Phonograms). When the delegation left Ethiopia in May 1905, *aläqa* ↗Tayyä Gäbrä Maryam accompanied them to Berlin, where for two years he taught in collaboration with Eugen ↗Mittwoch at the University's department of Oriental languages. It was due to R.'s support that the German government decided to establish permanent diplomatic relations with Ethiopia at the end of the same year.

The Ethiopian mission laid the foundation of R.'s future impressive career: He was appointed head of diplomatic mission to Tangier, Bucharest, Lisbon and the Hague, until he became Foreign Minister from May till October 1921. After his resignation he returned to his interests as an Orientalist.

Ursula Gehring-Münzel

Rosenthal, Henry

R. (b. Mecklenburg in Fürstenburg, resident of London) was a 19th-cent. missionary to the ↗Betä Ǝsraʾel.

He entered Ethiopia together with his wife late in 1862, in the company of Henry ↗Stern, a representative of the ↗London Society for Promoting Christianity amongst the Jews. The R. were to establish themselves as missionaries at Ǧända in Dämbəya, continuing the work established by Stern on a previous visit in 1860.

Stern and R. spent much of 1863 at Ǧända. Other Protestant missionaries, settled as artisans at ↗Gafat, near Däbrä Tabor, hearing of Stern's arrival, had unsuccessfully petitioned Emperor ↗Tewodros II to refuse him entrance into the country. They had anticipated the storm which was to come. In October 1863, Stern was arrested, beaten and taken in chains to Gondär, where his papers were searched, and passages found offensive to the Emperor were reported. Correspondence was also discovered in which R. and Pauline ↗Flad had expressed disparaging views of Tewodros. The two were arraigned. R. had written, with reference to the Emperor, of his "first meeting with the wild beast" and alleged that Tewodros had written to the acting English consul at Massawa to come and get drunk with him (RubInd 233; in his own account of this correspondence, R. noted simply that he had added some personal remarks to a journal).

While Flad was released, R. was chained and thrashed on 5 November. Subsequently, the Emperor alleged that R. had presumed to know what was taking place inside the royal compound, even though he had only been in the country for a few months, that he had ridiculed the Emperor's invocation of the Trinity in his formal correspondence, and that he was the source of information that the British Government had laughed at him. R. noted that for some time he was chained in such a manner that he was unable to stand upright and that his feet were bound very closely together. By May 1865, R. was writing from Tewodros's fortress of ↗Mäqdäla, where he was to stay until his release by the ↗Napier expedition in April 1868.

Donald Crummey

Rossetti, Carlo

R. (b. 18 October 1876, d. 1948, Turin) was an Italian Navy officer, diplomat, geographer and cartographer.

As a lieutenant in the Royal Navy of the Kingdom of Italy, serving in the Colonial Office of the Consulta, he undertook long journeys to Africa, Australia and Asia. He contributed a number of articles to the journal *L'Italia coloniale* and later to the bulletins of the ↗Società Geografica Italiana and of Società Africana d'Italia, of which he became a member. In 1904 he became a close collaborator of Giacomo Agnesa, central director of the Foreign Ministry for Colonial Affairs. In 1905, Senator admiral Camillo Candiani appointed R. Secretary General of the first Italian Colonial Congress in ↗Asmära. As a result of this conference, l'Istituto Coloniale Italiano with its headquarters in Rome was established in 1906. R. became its Secretary General and the editor-in-chief of the monthly *Rivista coloniale*. In 1914 R. organized the *Mostra Coloniale di Genova* and edited its catalogue. He also drew geographical maps of Eritrea, Ethiopia, Somalia and Libya. In 1938 R. became the editor of the monthly *Africa Italiana* for the Istituto Fascista dell'Africa Italiana, the successor of the Istituto Coloniale.

R.'s *Storia diplomatica* is an important source of the diplomatic history of Ethiopia up to 1910.

Rubattino, Raffaele

R. (b. 10 October 1810, Genoa, d. 2 November 1881, Genoa) was an Italian entrepreneur, creator of the navigation company Rubattino and a pioneer of Italian expansion in the Red Sea region.

Son of a well-to-do shopkeeper and an active member of Giuseppe Mazzini's *Giovine Italia* R. helped many Italian patriots during the Risorgimento. The first company he owned was the *Compagnia Lombarda d'Assicurazioni marittime*, which later became the *Società di navigazione,* and finally the *Società dei vapori Sardi della ditta Raffaele Rubattino e C.*

In 1868 R. founded the fortnightly Genoa–Alexandria line and acquired four steamers for the trips to the Indies. In 1869/70 R. was authorized by the government to acquire the ᶜAsäb Bay, through the mediation of Giuseppe ↗Sapeto, whose subsequent research *Assab e i suoi critici* was funded by R. In 1879 the property was transferred to the state of Italy, and in January 1881 the first civil commissioner took office, an act which formally marked the foundation of the ↗Colonia di Assab (1882).

R. also established regular navigation to Tunisia and Libya. To combat its debts, the company tried to become a joint-stock company with limited liability, the *R. Rubattino e C.*; on 28 March 1881 it merged with Florio, a powerful shipping company in Palermo, giving birth to the *Navigazione Generale Italiana*.

R. died the same year and was buried in the monumental cemetery of Staglieno (Genoa) on 5 November 1881.

Rufinus ↗Sälama Käśate Bərhan

Rüppell, Eduard

R. (b. 20 November 1794, Frankfurt am Main, d. 10 December 1884, Frankfurt am Main) was a German naturalist and traveller. After visiting Nubia, Kordofan and Arabia Petraea (1823–25), R. chose to do research in Ethiopia. On 17 September 1831 he landed in ↗Massawa, and on 19 April 1832 started his journey into the interior highlands, which had been described before him only by ↗Bruce and ↗Salt. On 12 October he entered ↗Gondär and stayed there until May 1833, making one excursion into the lowlands of Wärqämədər and ↗Armač̣əho, north of Gondär, and then travelling along the eastern shore of Lake ↗Ṭana. On 18 May 1833 R. left Gondär to return via ↗Aksum and ↗ᶜAdwa. He reached Massawa on 29 June.

Dr Eduard Rüppell 1846.

Eduard Rüppell on an early daguerrotype of 1846; courtesy of the Senckenberg Gesellschaft für Naturforschung, Frankfurt am Main

His research journey, described in his two-volume *Reise in Abyssinien* (1838, 1840),) was marked by a number of important findings. R. carried out cartographic, archaeological, numismatical, historical and ethnological research, and, above all, added immensely to the knowledge of the country's fauna (esp. Rüppell 1834–40, 1845). He was the first person to copy and publish two important inscriptions of King ↗ᶜEzana at Aksum (cp. RIÉ nos. 188, 189). Furthermore he acquired a number of Ethiopian ↗manuscripts (s. Rüppell 1840:403–10), which he presented to the Frankfurt Stadtbibliothek (the "Rüppel Collection", s. Goldschmidt 1897). The Ms. Rüpp. Ib (Goldschmidt 1897, no. 18) is an important historiographic work produced by *liq* ↗Aṣqu, R.'s "field assistant" in Gondär (cp. Goldschmidt 1897:63–67; Kropp 1989:239, 302). R. also brought back one of the earliest known ↗Təgrəñña manuscripts (Ms. Rüpp. II, 8; Goldschmidt 1897, no. 8), a Gospel of John, written on the initiative of ↗Gobat. An excerpt from it was printed in ↗Praetorius's Təgrəñña grammar (Praetorius 1871, Beilage 1–5).

R. was actively involved in exchanging information with other scholars working on Ethiopia and finally left his personal papers to the Senckenbergische Naturforschende Gesellschaft, which he co-founded, and of which he was the second director, starting from 1841.

Red.

Ruspoli, Eugenio

R. (b. 6 January?, Ţigăneşti, Rumania, d. 4 December 1893, Burǧi) was an Italian explorer. A Roman nobleman, prince of Poggio Suasa, he was a son of Prince Eugenio, patriot and politician, and of the Rumanian princess Catherine Vogoridès-Conaki. His passions were topography and painting. He graduated from the Military Academy of Modena with the rank of Cavalry lieutenant junior grade and was sent to Florence. On turning 21 he inherited his mother's fortune, left the army and started travelling to Russia, Egypt and Mozambique.

In Africa, R. decided to explore the area of Italian colonial influence. In 1891 he prepared an expedition to Somalia. Emilio Dal Seno from Trieste led the caravan and interpreted through Arabic, the language he had learnt in Massawa and Aden as an employee of the ↗Rolph Bienenfeld brothers. Professor Konrad Keller of the Polytechnic Institute of Zurich was the team's naturalist. In Aden, the consul Antonio ↗Cecchi suggested that they start from ↗Berbera. The expedition, which by then included 80 armed locals, 70 camels and horses for the explorers, left Berbera on 8 July 1891. By 15 August they had crossed the ↗Ogaden desert and on 27 August reached the ↗Wabi Šäbälle. Due to attacks from local clans and the subsequent revolt and desertion of the ↗*askari*, the expedition came to an end soon after the river had been crossed.

Back in Rome, R. realized that he had become very popular. Knowing that Vittorio ↗Bottego was preparing an expedition to Juba, R. too hastened to organize his second expedition. This time he was accompanied by the Swiss engineer and geologist Walter Borchardt, doctor and botanist Domenico Riva, Luigi Lucca and again Dal Seno. They started from Berbera on 2 December 1892 with 130 *askari* reaching the Wabi Šäbälle on 23 January 1893. It took 30 days for all to cross it. This time the local inhabitants remained peaceful, the use of arms remaining minimal. In March he saw that the three rivers Wäyb, ↗Ganaalee and Dawa all merge to form the Juba. In Lūq he established friendly relations with the local *sulṭān*, even signing a treaty. Borchardt fell ill and had to stay behind in Lūq, with Dal Seno. R. continued to Bardera, where Ugo ↗Ferrandi had lived, and then on towards the ↗Omo, entering the land of the Amaaro ↗Burǧi where he befriended the *sulṭān* Guǧo. On 6 November he reached Lake ↗Č̣amo which he thoroughly explored. The Italians called the lake Ruspoli in his

Eugenio Ruspoli; photo ca. 1891, from the collection of the author honour. However, the expedition ended shortly afterwards when R. was killed by an elephant he was hunting.

Manlio Bonati

Russia, relations with

Early period

R. first showed its interest in Christian Ethiopia towards the beginning of the 18th cent. Prior to that time the Russians, similar to other Europeans, might have met Ethiopians in ↗Jerusalem; any other information about "mythical" ↗*Aithiopía* would have been found in oral accounts collected by Russians travelling abroad.

In 1673, a Saxonian Laurentius Rinhuber (b. in Lucka), briefly in the service of the Russian Tsar Alexej and later an envoy of Ernst I, the Duke of Saxe–Gotha–Altenburg (the patron of Hiob ↗Ludolf) to Moscow, proposed an idea of the Russian–Ethiopian alliance against the ↗Ottoman Empire and the sending of a Russian mission to Ethiopia. In Moscow his ideas were given serious consideration; in 1674 Semion Protopopov, a *podiačij* of Posolskij Prikaz, was dispatched to Saxony, together with Rinhuber, to discuss Turkish affairs and to inquire about Ethiopia. Protopopov returned in December 1674 bringing an extensive memorandum on Ethiopia, on its faith, the Latin propaganda, political situation etc., written by Ludolf. However, at that time, the realization of Rinhuber's idea turned to be impossible. During his last visit to Moscow in 1684, he handed an exemplar of Ludolf's *Historia Aethiopica* to Prince Vasilij Golitsyn, the Head of the Posolskij Prikaz. Two translations of this work were prepared a few years later: a short summary and an exact translation (both kept in St. Petersburg, National Library, mss. F. IV.105 and Pogodin's collection no. 1711). Thereafter, information on Ethiopia reaching R. was only sporadic and indirect, and no attempts at contacts were made over a long period (cp. ↗Pushkin).

Relations in the 19th–20th cent.

The interest in Ethiopia remained, maintained by the general early 19th-cent. development of scholarship (specifically linguistics) in R. and by the first Ethiopian ↗manuscripts brought by Russian diplomats (such as Pavel Dubrovskij, Pjotr Suhtelen). In 1829–36 ↗Gəʿəz was taught at the University of Kharkov (Ukraine, then R.) by ↗Dorn, who, after moving to St. Petersburg in 1836, produced the first scholarly descriptions of twelve Ethiopian manuscripts (at the Institute of Oriental Languages of the Ministry of Foreign Affairs and the Imperial Public Library).

From the middle of the 19th cent. onwards, the search for contact was gradually renewed, based on the image of Ethiopia as an Orthodox country, since R. regarded itself as the patron and defender of Eastern Christians. The head of the Russian Orthodox mission in Jerusalem, Archimandrite Porfirij ↗Uspenskij did much to popularize the idea of a political and religious alliance with Ethiopia. For a long time, the "common faith" was frequently referred to as the main argument for establishing close relations with Ethiopia (despite some sceptical voices, cp. ↗Bolotov).

Fragmentary information on R. – a large Christian Empire in the north which had defeated the Turks – also reached Ethiopia. *Aṣe* ↗Tewodros II is reported to have looked for contacts with the Russian Tsar; he knew of the Crimean war (1853–56), hence the name "Sabastopol" for his famous canon (cast by ↗Hall), after the Russian city besieged during that war (1854–55). *Aṣe* ↗Yoḥannəs IV sent letters to Tsar Alexander II (1855–81), as did the Šäwan *nəguś* Mənilək (later *aṣe* ↗Mənilək II), but the government in St. Petersburg regarded any active steps as premature.

Changes were brought by important international developments, such as the defeat of the Ottomans in the Russo–Turkish war of 1877–78 and the decline of the Ottoman Empire. At the end of the 19th cent., the Russian government started to see in Ethiopia a chance to counterbalance the colonial ambitions of the ↗United Kingdom in East Africa and to gain a position in the Red Sea. However, the (failed) "Orthodox spiritual mission" of ↗Ashinov had its rôle in the surge of popular slavophile, pan-Orthodox and nationalist moods, rather than in R.'s official politics. In 1889–92, two Russian reconnoitering missions under guidance of ↗Maškov visited Ethiopia. They were followed by the exploratory expedition of Eliseev, Zvjagin and ↗Leontiev in 1894–95. It was only by chance that the political aspect of the latter gained importance, but its outcome was positive for both sides (especially for Ethiopia, by that time *de facto* in a state of war with Italy).

In 1895 *aṣe* Mənilək II sent the first Ethiopian diplomatic mission to R., headed by *fitawrari* Damṭäw. Despite the protests of Italy, which had declared a protectorate over Ethiopia by virtue of the ↗Italo–Ethiopian Treaty of friendship and commerce, i.e. the Treaty of Wəç̣ale (1889), the Ethiopian mission was met in St. Petersburg with great respect and as the delegation of an independent country. The Russian Foreign Minister Prince Alexej Lobanov-Rostovskij said in his statement to the Italian envoy that R. "had never recognized the Italian protectorate over Ethiopia" and accordingly did not see any obstacles to the establishment of direct relations.

Leontiev managed to convince the Russian government to sell arms to Ethiopia. The first shipment with arms and munition had been sent (with the help of Leontiev and ↗Chefneux) in autumn 1895, but it arrived in Ethiopia only in 1896, after the battle of ↗ᶜAdwa. During the ↗Italian war of 1895–96, Russian sympathy was fully with Ethiopia. Newspapers followed the development of events; a fundraising campaign was started spontaneously to help Ethiopians. In March 1896, a large field ambulance of the ↗Russian Red Cross Mission was sent to Ethiopia, organized on donations and funds allocated by the government to assist Ethiopian soldiers wounded in the battle of ᶜAdwa. Within several months of their activities in Addis Abäba and Harär, the Russian doctors rendered medical care to ca. 30,000 patients. Simultaneously, preparation of local medical personnel began. Later, some Russian doctors became honorary physicians-in-ordinary to the Ethiopian Emperor. *Aṣe* Mənilək II sent five Ethiopian youths to R. for education (one of them being ↗Täklä Ḥawaryat Täklä Maryam).

After the Ethiopian victory, there was no longer any obstacle to the establishment of a permanent political relationship between the two countries. In addition, the French minister of foreign affairs Théophile Delcassé persisted in elaborating a co-ordinated Franco–Russian policy in Ethiopia against the common opponent, Great Britain (cp. ↗Fashoda incident).

In February 1898, the first official Russian diplomatic mission headed by the Envoy Extraordinary Pjotr Vlasov (assisted by A.A. Orlov, his secretary), arrived in Addis Abäba. The diplomats were accompanied by officers (Colonel Leonid K. Artamonov; ↗Bulatovich), a unit of the Cossak-elite troops (under the command of Pjotr N. Krasnov) and a large group of Russian doctors who came to Ethiopia at the request of Mənilək and established the first standing hospital of European kind in the Ethiopian capital.

Russian officers, members of Vlasov's mission, participated in some Ethiopian campaigns in 1896–98. Beside the French, Colonel Leonid Artamonov had participated in the expedition of *däǧǧazmač* ↗Täsämma Nadäw which was supposed to delimit the border of the Sudan between France and Ethiopia at the conjunction of the ↗Nile and Sobat (↗Baro), some 100 km from Fashoda, in accordance with the agreement of 1897. Artamonov personally crossed the Nile and planted the French flag on its left bank. Bulatovich had participated in the campaign of *ras* ↗Wäldä Giyorgis to Lake Rudolf (↗Turkana), and Lieutenant Čertkov took part in the campaign of *ras* ↗Mäkʷännən Wäldä Mikaʾel to ↗Beni Šangul. When a military confrontation between Ethiopia and the British became a real danger in 1899, Bulatovich visited the Sudanese border and proposed military measures to Mənilək in case of conflict. Leontiev received the governorship over the "Equatorial provinces" in 1897, but was accused of abuses, lost all his positions and had to leave Ethiopia. A Russian geological expedition led by the mining engineer Nikolaj N. Kurmakov worked in Ethiopia at the invitation of Mənilək in 1904–05. It discovered ↗gold deposits in West ↗Wälläga and organized gold extraction at the state mine in the Meṭi and Birbira river area.

The Russian presence in Ethiopia resulted in growing academic interest in the country. Expeditions yielded a large amount of first-hand information about the cultures and histories of the peoples of Ethiopia, as well as ethnographic and manuscript collections. After Dorn and Bolotov, it was ↗Turaev, who defined ↗Ethiopian studies in R. during the pre-1917 period.

The fact that R. did not have immediate colonial interests in Africa (and the Russian Orthodox Church refrained from any missionary activities), together with its wholehearted support for Ethiopia's sovereignty, helped the Russian mission to grow in importance and to enjoy the favorable attitude of Mənilək. *Abunä* ↗Matewos visited R. in 1902, trying to secure a large Russian credit for Ethiopia and to gain R.'s support in solving problems of Ethiopian possessions in Jerusalem. In 1903, the Russian minister plenipotentiary ↗Lishin came to Addis Abäba. The main principles of the Russian policy in Ethiopia were determined by the instructions of the Foreign Ministry, stressing that "the protection of the independence and territorial integrity of Abyssinia" was to be the fundamental principle of R.'s policy towards Ethiopia.

Despite good relations, Mənilək's hope of a large-scale Russian involvement in Ethiopia was not realized. Thanks to the efforts of the retired Leutenant Nikolaj Šedevr and Russian governmental support, the Ottoman *sulṭān* Abdulhamid II restored the rights of Ethiopian monks in ↗Dayr as-Sulṭān in 1906, though the problem was still far from being solved. It proved impossible to attract substantial Russian investment to Ethiopia (in particular, for gold-mining); in R., some voices were raised against the costly and "luxurious" African involvement of R.'s government. After the defeat in the Japanese war of 1904–05 and the first Russian revolution of 1905, the scale of relations decreased, as did the importance of R.'s diplomatic mission in Addis Abäba. R.'s foreign policy generally turned from confrontation with Great Britain towards an alliance with it. The ↗Tripartite Treaty of 1906 sidelined R.; and in view of the deteriorating health of Mənilək II, R. was not as influential in Ethiopia as before. After Lishin's death, the post of the Russian minister plenipotentiary was cancelled, and the hospital in Addis Abäba was closed. Later, the Russian diplomatic mission was headed by S.A. Lihačov, Skaržinskij, A.I. Kohanovskij, B.N. Čemerzin and N. Vinogradov.

The Russian diplomatic mission in Ethiopia continued till 1919. The principal reason for its closure was the 1917 anti-monarchial revolution in R. An attempt by Soviet R. to resume diplomatic relations in 1921 was rejected by the government of ↗Zäwditu. A small, but remarkable and active Russian Diaspora emerged in Ethiopia in the post-1917 time (such as Admiral D.L. Senjavin; Colonel ↗Konovaloff, s. EAE vol. 5; Captain Buligin). Later, with the exception of the expedition of the Botanist Nikolaj Vavilov in 1926–27, the Horn of Africa occupied only a minor place in Soviet foreign policy. Still, the USSR was the only major power which consistently denounced Italian aggression in 1935, in the ↗League of Nations and elsewhere, referring to the necessity of preserving the collective security system and the equality of the League's members, and refusing to recognize Italian sovereignty over Ethiopia.

The USSR and Ethiopia

In April 1943, during ↗World War II, diplomatic relations between the USSR and Ethiopia were restored. The head of the Ethiopian mission in Moscow was at that time Mihail (Misha) Babichev (the first Ethiopian aviator, a son of Ivan Babichev, who came with the Russian Mission and remained in Ethiopia). The USSR supported the demands of Ethiopia for reparations from Italy as indemnification for the material damage inflicted by the war and occupation.

Political and economic relations between the USSR and Ethiopia in 1943–74, under *aṣe* ↗Ḫaylä Śəllase, were amicable and seemingly balanced. The USSR's involvement was predominantly humanitarian, and gradually expanded, while the Soviet foreign policy in Ethiopia was open, as elsewhere, to any potentials to extend also its political influence.

In 1945 the Russian Center for Science and Culture was opened in Addis Abäba (initially called the "Permanent Soviet Exhibition"). In 1946, during the celebration of the 50th anniversary of the battle of ʿAdwa, the Ethiopian government, in commemoration of the Russian Red Cross Mission, asked the USSR to open a Russian hospital. A permanent Russian Red Cross hospital – today known as the "[*däǧǧazmač*] Balča hospital" – began its activities in 1947. (On 20 September 1997, an agreement was signed to prolong the operation of the hospital for a further 25 years.) Regular teaching of ↗Amharic was introduced in a few universities in Moscow and Leningrad where Orientalists were trained. Various issues of Ethiopian studies were closely attended by such prominent academicians as, e.g., ↗Kračkovskij, Marija V. Rait (cp. Taddia 2009), Dmitrij A. Olderogge (who in 1968 received the prize of Ḫaylä Śəllase I), Sevir Borisovich ↗Chernetsov (s. EAE vol. 5).

Olderogge (right) showing the Ethiopian part of the exhibition to the Emperor; photo courtesy of the Museum of Anthropology and Ethnography of the Russian Academy of Science, St. Petersburg (МАЭ РАН, КIV, оп. 1, 43, no. 58)

In 1959, Ḫaylä Śəllase visited the USSR. In 1962, R. built and equipped the Polytechnic College of ↗Baḥər Dar, as a gift to Ethiopia. Initially, a considerable number of its teachers were Soviet citizens. In 1967 an oil refinery in ↗ᶜAsäb was commissioned. Its capacity was as much as 800 thousand tons of crude oil per year. Still, Soviet involvement was much less in Ethiopia than in ↗Somalia, especially in view of the fact that the ↗United States had a strong position in Ethiopia in the 1960s assisting in many fields, most importantly in the large-scale modernization of the Ethiopian armed forces (↗Army; cp. ↗Peace Corps; ↗Qaññäw). By means of the Soviet presence, Ḫaylä Śəllase strengthened his image as leader of the ↗Non-Aligned Movement and of the ↗Organisation of African Unity.

Relations between the Ethiopian Orthodox and Russian Orthodox churches were resumed in the 1940s. High-ranking delegations of the Russian Orthodox Church visited Ethiopia in 1959, 1966, 1969 and 1974; in 1978, *abunä* ↗Täklä Haymanot visited the USSR. Starting from the middle-1960s, the Leningrad Spiritual Academy accepted the first students from Ethiopia.

The period from 1974 to 1991 was the time of the most active Soviet–Ethiopian cooperation and Soviet influence. In the 1970s, in a situation of decreasing American attention to Ethiopia, the diminishing personal power of Ḫaylä Śəllase and worsening internal problems in the country, the USSR largely abstained from involvement in the Eritrean conflict and from supporting radicals in the ↗Ethiopian Student movement (cp. ↗Mäʾison, ↗Revolution). It was not until 1976 that the USSR started to respond enthusiastically to developments in Ethiopia, after Mängəśtu Ḫaylä Maryam had openly proclaimed the country to be developing in the direction of "scientific socialism", and American military aid was fully stopped. A Soviet–Ethiopian agreement on military cooperation followed. While tension between Somalia and Ethiopia was growing and mediation efforts did not succeed, Soviet military aid to Somalia was stopped and Soviet presence there ceased. Despite accusations that the Soviet aid made it possible for Siad Barre to build up a strong military force, the USSR (assisted by Cuba and some others from the "socialist camp") was de facto the only country which provided massive help for the crumbling Ethiopian military forces during the critical time of the ↗Ogaden war of 1977–78.

The period up to the late 1980s, has still not been properly evaluated, and was marked by controversial trends: large-scale military and economic aid from the USSR and other countries of the "socialist camp" (thousands of Ethiopians educated, many dozens of projects realized in Ethiopia) and the grave consequences of attempts to implant the Soviet experience on Ethiopian soil, this being one of the reasons for the fall of the *Därg* (↗Provisional Military Administrative Council) in 1991. Remarkably, Soviet involvement contributed to a surge of Ethiopian studies in the USSR (mostly on development issues and political science), as Moscow hosted the 9th ↗International Conference of Ethiopian Studies in 1986 (cp. PICES 9). After the fall of Mängəśtu Ḫaylä Maryam's government and the dissolution of the USSR in 1991, diplomatic relations between Ethiopia and R. were maintained and are currently positive.

Russian Red Cross Mission

After the main military campaign in the ↗Italian war of 1895–96, the Russian Red Cross Society decided to send a medical mission to Ethiopia, to render medical help to the wounded. Initially, it was decided that the mission should be made up of two teams: one helping the Ethiopians, and another helping the Italians. The mission, headed by General-Major Nikolaj Švedov, included 61 persons. The members were: K.S. Zvjagin, Lieutenant Ju.V. Kahovskij, Lieutenant Colonel E.Ja. Maksimov, "Cornet" (standard bearer) F.E. Krindač, Leutenant ↗Bulatovich. The mission included also doctors F.A. Goltsinger, K.A. Bykovskij, G.V. Bobin, Boleslav Rodzevič, N.P. Brovtsin, D.L. Glinskij; four students of the Military Medical Academy: K.N. Krečunesko, P. Ščusev, G.G. Fjodorov, P.P. Miller; six medical assistants: N.D. Patsukevič, S.E. Sason, P. K. Kuznetsov, V. Filippov, F. Pavlov, M. Rohkovskij, the pharmacists K.L. Ljudvig and A. Vilde, 12 nurses, 21 paramedics, Ethiopian interpreters Ilya Shojskij and Pjotr Stefanos, as well as Hieromonk Alexander (Rait 1956:232f.). The Russian government allocated 150,000 rubles for the mission, which was organized and equiped in less than two weeks. The members were instructed by ↗Bolotov.

When the mission arrived in Odessa, it became known that the Italian government refused to accept its medical help, and forbade the Russians to pass through Eritrea.

On 30 March 1896 the mission left for Alexandria aboard the "Russia" and arrived on 7 April; on 24 April it left aboard the "Nubia" and arrived in ↗Djibouti on 1 May (Švedov 1897:7ff.). On the way to Addis Abäba, the mission stayed in Harär for a while, waiting for the permission of *aṣe* Mənilək II, who initially was cautious about this large group of foreigners (many of them military) and their purposes. A few members of the mission stayed in Harär, to work there under the auspices of *ras* ↗Mäkʷännən Wäldä Mikaʾel. In August the mission arrived in Addis Abäba and was accommodated in the former mansion of the French trader Stevenin, which had been bought by Mənilək.

The hospital was set up in tents and immediately started operating, being the first modern European medical institution in Ethiopia. The efficiency of the professional medical help, which was free and regardless of social status or confession, soon became known, and the popularity of the Russian hospital quickly increased. The

doctors worked with great industry, treating up to 150 people daily and performing surgery; the branch of the mission in Harär (6 May–1 July) operated in the same way.

The mission departed on 25 October, having rendered medical help to some 30,000 sick and wounded (Švedov 1897:20). Rodzevič, Ščusev, Fjodorov, Sason and one paramedic stayed behind in Addis Abäba for the next three months. The mission's activity inspired Mənilək to set up an Ethiopian precursor of the Red Cross Society, which received its first medical equipment from the Russian doctors.

The Russian hospital was frequented by nobles and high-ranking Ethiopians. It was visited by *ras* Mäkʷännən on 26 October 1896, and on 3 November by *ətege* ↗Ṭaytu. Mənilək visited the hospital on many other occasions, and on 2 November he personally observed a surgical operation. Courses for educating medical staff were started in both Addis Abäba and Harär; a guidebook concerning etiology, hygiene and basic methods of medical help was prepared in Amharic (cp. Ščusev 1897).

Mənilək asked Švedov to request the Russian government on his behalf to send fresh personnel, to replace those who had left. This request was granted, and the new mission went to Ethiopia in October 1897 (doctors Brovtsin and M.I. Lebedinskij, pharmacist B.G. Lukjanov, medical assistants Kuznetsov and Sason). In 1899, a new building was built (later it became the Mənilək II Hospital), and the Russian hospital continued to operate until 1906, when the political presence of ↗Russia in Ethiopia started to diminish. The Russian medical presence was resumed only in 1947, with the establishment of the famous Balča-Hospital.

Evgenij Morozov

Ruufoo

R. (b. ca. 1848/49, Gombotaa, Guummaa, d. 23 January 1871, Cairo) was the first Oromo to translate important portions of the Bible into ↗Oromiffa. He was, at the age of eleven or twelve, sold by order of "*mooti* Ončo" (probably ↗Ǧaawe Ončo of Gummaa) to fulfil his parents' tax obligations. After having worked for several years as a slave and shepherd in Goǧǧam, R. was purchased and redeemed in 1865 by German Protestant missionaries at the slave market of ↗Mätämma.

Between 1866–68 R. was given Christian education in Weinheim, Baden, and the Pietist settlement Kornthal, Württemberg. In the same period he translated, in the house of the missionary ↗Krapf, the Acts of the Apostles, St. Paul's Epistle to the Romans, the Gospel of Luke, and also revised Krapf's own translations of the Gospels of John and Matthew as well as portions of the O.T. The translation was based on the Greek Bible and a revised version of ↗Abu Rumi's Amharic Bible. The manuscript which resulted from Krapf's and R.'s collaboration was revised by Krapf after 1868, when another Oromo Bible manuscript was delivered to Krapf (written by *aläqa* ↗Zännäb in Ethiopia, and, as Krapf noted, highly similar to R.'s version). Although at first the Latin alphabet was employed, in 1870 it was decided to print the N.T. in the Gəʿəz ↗script, in view of the Šäwa Oromo, who were already acquainted with it. The first portions of the Bible arrived in Šäwa in 1870/71.

In 1867 R. also worked in the Amharic printing house of the ↗St. Chrischona Pilgermission near Basle, was accepted for a missionary education there and baptized in the church of St. Chrischona on 23 May 1869, receiving the new name "Christian Paulus Ludwig Rufo". In the same year he was proposed for a post at the prospective West-Swiss Oromo mission and sent to Jerusalem to pursue his missionary education. Later he continued his education among the German Protestant community in Cairo where he died of a lung disease.

S

Ṣäᶜada Ǝmba

Ṣ.Ǝ. (**ጸዐዳ፡ እምባ**; also Ṣäᶜada Amba, 'White Mountain') is a historical site and *wäräda* in ↗Šire, Tǝgray, between the rivers Märäb and Täkkäze, ca. 75 km north of Mäq̱älä (for location s. map for Šire). Furthermore, Ṣ.Ǝ. is the site of the monastery Ǝnda Abunä Märᶜawi Krǝstos (to be distinguished from the Ṣ.Ǝ. [Śǝllase] monastery in the vicinity of ↗Kärän).

According to local tradition, Märᶜawi Krǝstos was a monk from Aksum who, during the reign of *aṣe* ↗Yǝkunno Amlak in the 13th cent., brought a *tabot* provenient from Jerusalem to Ṣ.Ǝ. Among the numerous miracles the saintly monk is believed to have performed was assembling 500 followers on the way from Aksum to the new monastery and teaching them reading and writing within three days (EllLusAnt 14ff.; KinBibl no. 103). The place is said to have been visited by *abunä* ↗Täklä Haymanot during one of his journeys in Tǝgray, as well as by his disciple ↗Anorewos (HuntGeogr 71, 84).

Another tradition ascribes the (re)foundation of the monastery at Ṣ.Ǝ. to Danǝᵓel of Tämben, who is believed to have been a 15th-cent. follower of *abunä* Täklä Haymanot's disciple ↗Mädḫaninä Ǝgziᵓ (KinBibl no. 38).

↗Ellero counted 56 monks at Ǝndä Abunä Märᶜawi Krǝstos in the 1930s. According to them, the monastery had been an important centre of ↗manuscript culture, esp. when, after *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī's troops destroyed many religious texts, *aṣe* ↗Fasilädäs sent 171 copyists to Ṣ.Ǝ. to produce new copies (EllLusAnt 14ff.).

In the 17th cent., the area of Š. was used by Iyasu I as a stronghold for launching attacks against "[↗]Šanqǝlla" and Dubani (↗Nara) in late 1692 (GuiIohan 158f.). In December 1935 the neighboring areas (May Ṭǝmqät, Pass Dämbägʷena, Säläk̠lak̠a) witnessed fierce battles between the troops of *ras* ↗Ǝmmǝru Ḫaylä Śǝllase and the advancing Italians.

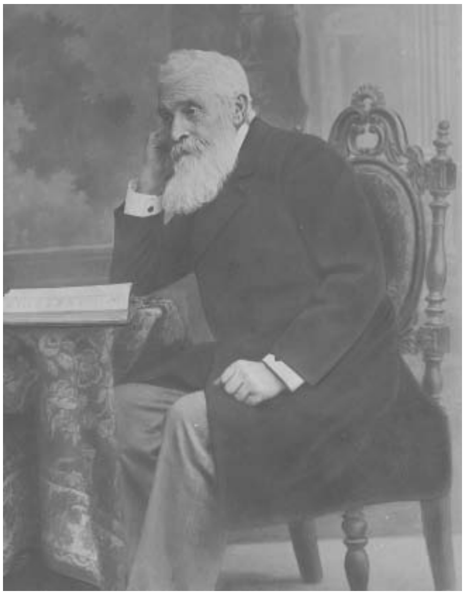
Evgenia Sokolinskaia

Saalmüller, Karl Heinrich

S. (b. 29 November 1829, Heldburg, Thuringia, Germany, d. 1906) was a Protestant lay missionary and craftsman active in Ethiopia from 1859 to 1868 in the mission led by the ↗St. Chrischona-Pilgermission and Bishop ↗Gobat.

Originally, S. was a locksmith; in 1854 he joined the missionary courses at St. Chrischona, graduated in 1857 and then worked in Löwenthal. Due to Tewodros II's demand for craftsmen he was sent to Ethiopia in October 1858 to work for him in ↗Mäqdäla. In 1860 S. joined the craftsmen's colony of ↗Gafat. In his reports S. showed a quite pronounced pessimism towards the possibility of reforming the Ethiopian Church, in contrast to some of his more optimistic co-missionaries (Strebel 2001:148). However, he believed that craftsmanship could help considerably in "civilizing" Ethiopia. Together with the former tsarist soldier ↗Hall and his later brother-in-law ↗Wald-



Karl Saalmüller in his old age, Brumana, Libanon; photo by Adrian Bonfils, ca. 1900, from the collection of Trish Little meier, S. cast the famous cannon "Sebastopol" for the Ethiopian ruler (Smidt 2005a: 307).

In ca. 1866/67 S. was married by Tewodros to Bällätạ̈čč (also Mary; b. 1853 Däbrä Tabor, d. 1 October 1936 Brummana, Lebanon) of Ditäm (mount Guna, Bägemdər), the daughter of the royal advisor *liqä mäkʷas* ↗Bell and Tewodros's eldest grandniece *wäyzäro* Wärqənäš Yəlma Asfaw (b. ca. 1830/32; daughter of *wäyzäro* Wəšän Kənfu, b. ca. 1815, d. after 1855). During the last weeks of Tewodros's reign only Hall, Waldmeier and S. remained on good terms with Tewodros. Unlike the others, they were not chained, but remained his courtiers until the end. This particular relationship may be explained by the fact that they were all married to women of Ethiopian origin, and had cast Tewodros's most powerful weapon (cp. Strebel 2001: 138ff.).

After having been brought out of Ethiopia by the British army under ↗Napier in 1868, S. and his wife joined the mission in Jaffa together with Hall, and, in 1874, Waldmeier's school in Brummana, Lebanon, where he taught craftsmanship to boys (a missionary document of 1883 mentions him in Lebanon "in Syria" in 1881). After his death, Bällätạ̈čč continued to live in Brummana, where she run a "convalescent home", later a family hotel. Their four children grew up there with the children of Waldmeier. Their daughter Stefana (b. 1874, d. 1978, Puerto de Andraitx, Majorca) married the British colonial officer and consul in ↗Gondär, ↗Armbruster (Smidt 2005: 124).

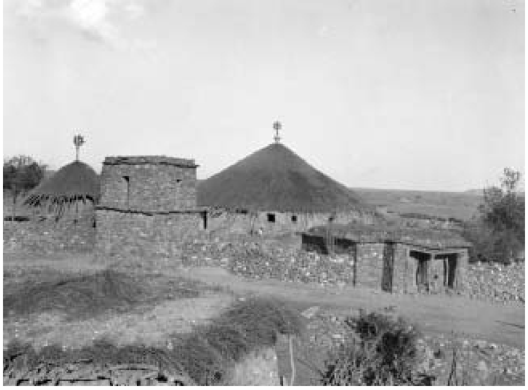
Säᶜatat: Mäṣḥafä säᶜatat s. EAE vol. 5

Ṣäᶜazzäga

Ṣ. (**ጸዓዘጋ**, also Ṣəᶜazzäga, Ṣäᶜadzäga, 15° 20' 60 N, 38° 47' 60 E, 2,269 m A.S.L.), is a village in ↗Ḥamasen, Eritrea, ↗Däqqi Täššəm district, with about 4,600 inhabitants (for location s. map for Ṣänᶜadäglä). It was the seat of the dominant younger branch of the dynasty of Ḥamasen ("*ənda* Ṣäᶜazzäga"), who competed for power with the older branch in nearby ↗Hazzäga.

According to oral tradition, Ṣ. was founded in the early 17th cent. by two younger sons of the local noble Täsfa Ṣəyon (Täsfaṣen) of Hazzäga, Täkkälä and ᶜAggäba. In the mid-17th cent., their descendants in Ṣ. took over control of the ↗Märäb Məllaš, dominating it until the 1870s. Powerful members of this branch were the late 17th-cent. rulers *däğğazmač* ↗Habśəllus and his son ↗Gäbrä Krəstos, who created the law of the district, the ↗*Ḥəggi Hab Ṣəllus Gärä K̠əstos*, which is still in use in Ṣ. and surroundings. The latter's grandson, *baḥri nägaśi* ↗Sälomon Täsfa Ṣəyon, had his seat at Ṣ. and ruled over the whole highlands north of the Märäb. In the late 1850s, Ṣ. was pillaged and burnt by the ↗*Nāʾib*, who extended part of his power over the highlands in competition with the dynasty of Ṣ. (MunSt 174).

The most important member of the Ṣ. dynasty in the 19th cent. was *däğğazmač* ↗Ḫaylu Täwäldä Mädḫən. Occasionally, his rule in Ṣ. was interrupted by appointments of members of the rivalling branch of Hazzäga, especially of his fiercest enemy *raʾəsi* ↗Wäldä Mikaʾel Sälomon. Their feud reached the climax when Wäldä Mikaʾel (having replaced the deposed Ḫaylu in 1875) declared Ḥamasen subject of Egypt in 1876, and Ḫaylu reclaimed rulership with seat at Ṣ. (reinstated in



The main church of Ṣäᶜazzäga photographed during the expedition by Leo Frobenius; photo 1915, courtesy of the Frobenius Institut, Frankfurt am Main (07-8209 M –IP)

March 1876). Ḫaylu's death at the battle of Wäkki Dəbba near Ṣ. in July 1876 ended the rule of the house of Ṣ. The rulership over the Märäb Məllaš passed into the hands of Təgrayan appointees, until in 1889 Ṣ. was occupied by Italy. ↗Abärra Kaśa Ḫaylu, who organized resistance against the Italians, was the last politically important member of the dynasty. Allegedly, ↗Aman Mikaᵓel ᶜAndom from Ṣ., was also a descendant through a side-line.

Ṣ. also plays a prominent role in Eritrean ↗Protestantism. In the late 1860s the priest ↗Wäldä Śəllase Kənfu founded there a local Bible readers movement (↗Täwäldä Mädḫən Gäbrä Mädḫən). In 1872, the Swedish Evangelical Mission (↗Evangeliska Fosterlands Stiftelsen) established a station and a school at Ṣ. Still today a great part of the inhabitants of the area are Protestants.

The main church of Ṣ., St. George, preserves a number of richly illuminated manuscripts, donated by the local dynasty (KolTrad 3, A66), including a manuscript containing the dynasty's genealogy. Traditional oral historiography contains rich accounts of the rulers of Ṣ. Its most important documentation is the **ዛንታ፡ ጸአዘጋን፡ ሃዘጋን** (*Zanta Ṣəᶜazzägan Hazzägan*, 'The Traditions of Ṣəᶜazzäga and Hazzäga'), collected by ↗Kolmodin (KolTrad I–III).

Sab ↗Somali

Sabaᵓ

The best known kingdom of pre-Islamic south ↗Arabia is assuredly the kingdom of S. ($S^1B^ᵓ$), also known on account of its famous queen (cp. ↗Makədda) who, legend claims, travelled to visit King ↗Solomon. In South Arabian ↗inscriptions, S. is the name of a sedentary tribe formed around the cult of a common god, ↗Almaqah; S. is also the name of the territory and the kingdom of the tribe of S.

The heart of this kingdom was the area of Mārib in the *wādī* D̠ana (the ancient D̠ᵓNT). Exceptionally large by south Arabian standards, Mārib was the political capital – the royal palace was there (Ja 644:6–7: *ᵓbyt mlkn S^1lḥn b-hgrn Mryb*) – and it was also the main religious centre of the kingdom. The name of the palace is attested in the titles of the Aksumite kings, usually in the form *S^1lḥnm* (cp. ↗Sälḥen; e.g., RIÉ nos. 185:2, 185bis:2, 186:3, etc.; cp. ↗Sälḥen).

The irrigation works in the Mārib oasis date to the end of the second millennium B.C. or even earlier, according to certain scholars. The most famous of these works is the Mārib dam that was restored in the mid-6th cent. A.D. by the Christian king of Aksumite origin ↗Abraha and is mentioned in the inscription CIH 541. The breach of the Mārib dam and the abandonment of the oasis (apparently at the beginning of the 7th cent.) marked the end of the ancient South Arabian civilization.

The earliest Sabaic epigraphic documentation (cp. ↗Epigraphic South Arabian) dates from the beginning of the first millennium B.C., and inscriptions from that period have been found not only in the Mārib region, but also in south Ǧawf and even further, in Tihāma, along the Red Sea coast and on the Yemeni high plateau. The first inscription in the Epigraphic South Arabian to become known in Europe was found by Henry ↗Salt in Ethiopia. The material collected by explorers and scholars who began travelling to southern Arabia in the mid-19th cent. was mainly composed of Sabaic inscriptions. Furthermore, the earliest archaeological missions to southern Arabia were to Sabaean territory (Rathjens's excavations in al-Huqqa in 1928 and the American Foundation for the Study of the Man mission to Mārib in the 1950s).

The history of the kingdom of S. was long – from the beginning of the first millennium B.C. to the end of the 3rd cent. A.D. when it was defeated by the kingdom of ↗Ḥimyar. The history of its language was even longer – indeed Ḥimyarite inscriptions were written in Sabaic until the 6th cent. A.D.

There are clear signs of Sabaean hegemony in southern Arabia in the first half of the first millennium B.C. and some Sabaean kings attempted to unify the country between the 8th and 7th cent. B.C. A major inscription (RES 3945) regarding the military enterprises of the king Karibᵓīl Watar probably also mentions an expedition planned to the opposite shore of the ↗Red Sea. In the first half of the first millennium, Sabaean kings bore the title of *mukarrib* of S.

A throne of the Ethio-Sabaic period, showing a scene from the court, National Museum of Ethiopia, Addis Abäba; photo 2009, courtesy of Pawel Wolf

Between the 1st cent. B.C. and the 2nd cent. A.D., S. forged an alliance with the Ḥimyarite kingdom to form the kingdom of “S. and ḏū ↗Raydān”. There is an indication of this phase of unification of the two regions in the ↗*Periplus of the Erythraean Sea* (ch. 23). This alliance fell apart at the end of the 2nd cent. A.D., and for over 100 years the two kingdoms waged war against each other in which Abyssinian troops from Tihāma (↗Ḥabašāt) also took part.

There is early 2nd-cent. epigraphic documentation of two Sabaean kings which has emerged as important for understanding the relations between S. and the Ethiopian region at the end of the 2nd cent. A.D. The inscription CIH 308, of the reign of the Sabaean king ᶜLHN NHFN, commemorates a mission to establish peace with king ↗GDRT, probably the same king as GDR commemorated in RIÉ no. 180 in non-vocalized ↗Gəᶜəz: *Gdr ngśy ʾksm*. A Sabaean ambassador travelled to GDRT in ca. 210–30 A.D. during the reign of the son of ᶜLHN NHFN, but as indicated by the inscription (Ja 631) war broke out at that point between S. and the king of Aksum. There are several inscriptions from the ensuing period, in the 3rd cent. A.D., that mention wars between S. and the Ḥabašāt, who were often allied with Ḥimyar.

The earliest known written documentation from Ethiopia, from the pre-Aksumite period (s. EAE vol. 3, 156ff.), points to very close relations between S. and Ethiopia. With certain peculiarities, the language of these inscriptions is close to Sabaic. It is written in an ancient-period Sabaean script, and shows the same attention to text composition typical of South Arabian Sabaic epigraphic documents (cp. ↗Script). Some texts are boustrophedon (RIÉ nos. 1, 8, 9, 10, etc.).The authors of some inscriptions explicitly state that they are from Mārib (RIÉ no. 39: *Lḥy grbyn bn Yqdmʾ[lbn F]qmm ḏ-Mryb*; cp. RIÉ nos. 27: 1–2; 30: 1–2).

Similar to royal onomastics in Sabaic, the royal ↗names are sometimes double but, unlike in contemporary Sabaic inscriptions, the kings did not have peculiarly royal names. In RIÉ no. 61, an altar fragment from ↗Mäṭära, king LMN is invoked together with a king named SMHᶜLY who was assuredly a king of S.

The pantheon of divinities referred to in ↗pre-Aksumite inscriptions is Sabaean (↗Religion: Aksumite). The divine symbols are the same (e.g., the symbol of Almaqah, RIÉ nos. 33 and 34). In RIÉ no. 1 the divinities are invoked in the Sabaean order of protocol: ᶜṮTR (↗ᶜAstär), HBS¹ (↗HWBS), ʾLMQH, ↗Ḏāt-Ḥimyam, ḎT-BᶜDNM. There is a special cult attested for HBS¹ (RIÉ nos. 35, 62, 69, 70). While some scholars hold that HBS¹ was probably a goddess in S., in Ethiopia HBS¹ seems to be a male god (RIÉ nos. 1, 4: *Hbs¹ bᶜl ᶜḏt*, ‘HBS¹ the Lord of *ᶜḏt*”) – but the appellative “Lord” is also attributable to female divinities in South Arabia.

The architecture of the temple of ↗Yəḥa studied by the ↗Deutsche Aksum-Expedition in 1906 and excavated by de Maigret in 1998 during the French mission to Təgray, is reminiscent of similar, early first-millennium B.C. structures in Ǧawf. The similarities between the temple of Yəḥa and the temple of the god NKRḤ in Barāqiš are striking not only in the overall basic architecture but also in the technical aspects of the actual building, the details of how the space for worship has been organized and in the decorative elements.

The objects that the texts are engraved on are similar to those of S.: frankincense burners with a pyramid base with abstract figures (RIÉ nos. 8, 9, 10, 20, 25, 34, etc.) have clear parallels in S. such as the offering tables with a bull’s head protome (RIÉ no. 35). The name for incense-burners – *mqṭr* – is the same as that attested in Sabaic inscriptions. Despite some unique features, there are some very clear parallels with Sabaean statuary from the care with which the face is represented to the position of the arms (RIÉ no. 52). Some of the decorative elements, e.g., the lunar symbol (cp. ↗Moon), the false windows, the decorative dentils in the cornice of the inscriptions, the intertwined ↗serpents and the representation of the ibexes are the same as those on Sabaean objects.

On the other hand, peculiar Ethio-Sabaean artistic elements can be pointed out on artefacts such as the big decorated throne (s. ill.). The institutions are the same: alongside *mlk* ('king'), there is the title of *mukarrib* (*mkrb DᶜMT w-*S^{1}*Bᵓ*). There are clear similarities in these titles, too (for instance the use of the term *mkrb*, which is unknown in other Semitic documentation), but also differences. *Mlk* is never followed by the name of the kingdom as is normal in South Arabia but seems to be a personal title. As in Sabaic, the title of *mkrb* precedes the name of the kingdom; in the Ethiopian inscriptions, S. is associated with the local ↗DᶜMT tribe, where S. is mentioned in second place.

In the royal inscriptions of the Aksumite period, S., together with the name of the royal palace in Mārib remained in the title of the king ↗ᶜEzana (RIÉ no. 185), although he never had control over S. That S. could signify a population and not a territory in South Arabian documentation, too, is demonstrated by the Greek inscriptions of king ᶜEzana in which "king of S." becomes "king of the Sabaeans" (RIÉ no. 270). Later, it again appears in the titulary of Aksumite rulers (↗Kaleb: RIÉ no. 191:9 and WᶜZB: RIÉ no. 192:6) reflecting the victory over Ḥimyar, which by that time had incorporated S.

The hypothesis of the South Arabian origin of the Ethiopians and descendance of Gəᶜəz from Sabaic has long been debated. The origin of Gəᶜəz from South Arabian was first argued by Glaser (1895) and Conti Rossini (CRStor), but the idea was drastically revised by Drewes (1956, 1962). Sabaean influence was then considered ephemeral and an Ethiopian culture prior to the arrival of the Sabaeans was hypothesized.

The issue, however, is both linguistic and cultural. Drewes's reconstruction is based on the "short chronology" which had been imposed on South Arabian studies at the time by Jacqueline Pirenne (s. EAE vol. 5). Sabaic had not been attested earlier than the mid-first millennium and was thus a highly unlikely precursor to Gəᶜəz with its archaic linguistic traits. Now that the so-called long chronology is accepted by all scholars, the presence of S. in Ethiopia can be considered possible from around the early first millennium.

Strong links with an autochthonous element are seen in all the pre-Aksumite inscriptions. The Sabaean presence in the earliest phase of Ethiopian history is not at all to be underestimated but neither can it be simply explained as an act of colonization with peoples from Southern Arabia moving into a cultural vacuum; the presence of Sabaeans in Ethiopia was seemingly preceded by a long history of a "Puntite" civilization (↗Punt).

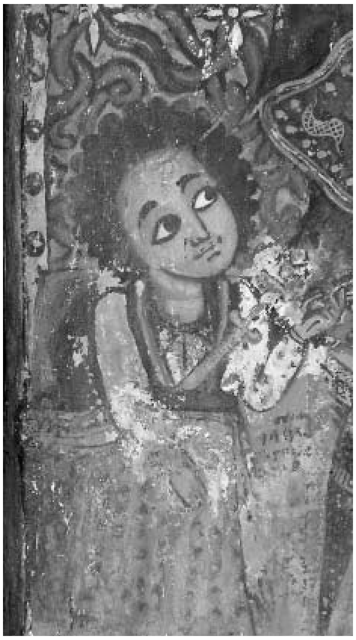
Säbagadis Wäldu

Däğğazmač S.W. (Tgn./Amh.: ሰባጋዲስ፡ ወልዱ, local name: *däggiyat* Subagadis [variants: Subagadiš, Wäldu Subagadis] or, after his horse name: Subagadis *ᶜəlum* Abba Gärräy; b. ca. 1780/85, d. 1831, Däbrä ᶜAbbay) was governor of ↗Təgray from 1822 to 1831. He was the son of the Ḥasāballá-↗Irob chief *šum ᶜagamä* Wäldu Kumälit, who ruled ↗ᶜAgamä from the late 18th to the early 19th cent. S.W.'s name is derived from ↗Sāho *suba* ('victory') and *gaadis* ('to send a razzia [= *gaadu*]', cp. ↗*Gaz*; i.e., 'attack and kill by surprise', Tsegay Berhe 1996: 41).

Šum ᶜagamä Wäldu's legacy was the ascendancy of Sāho-speaking local Irob rulers over Təgrəñña-speaking ᶜAgamä in the 18th cent. (Tsegay Berhe 1996: 47ff.; Pearce 1831, vol. 1, 67; Taddesse Gebre Egziabher 1973: 19). Following his father's death in 1802, S.W. and his four brothers clashed over their respective fiefs. The most disgruntled brother, Ṣäᶜədu, joined the services of the then Təgrayan overlord, *ras* ↗Wäldä Śəllasse of ↗Əndärta, who in turn appointed him ruler over important parts of his father's estates (Tsegay Berhe 1996: 40; Pearce 1831, vol. 2, 291). S.W. remained a dissident contender for most of the 1800s and 1810s. He consolidated his power in ᶜAgamä by foiling a series of punitive expeditions by *ras* Wäldä Śəllase. In 1811, S.W. even rallied several Təgrəñña-speaking vassals (of ↗ᶜAdwa, ↗Šire and ↗Ḥamasen) against the *ras*. By the mid-1810s, S.W. de facto placed the whole of ᶜAgamä under his authority. *Ras* Wäldä Śəllase then confirmed S.W.'s authority in return for his peaceful submission and recognition of the *ras*'s overlordship (Pearce 1831, vol. 1, 178f.; Tsegay Berhe 1996: 50; Taddesse Gebre Egziabher 1973: 20).

After the death of Wäldä Śəllase, S.W. was one of the strongest chiefs seeking to succeed the *ras*. He fought a series of devastating wars with regional contenders and finally acquired the Təgrayan overlordship in 1822 (Tsegay Berhe 1996: 59; Taddesse Gebre Egziabher 1973: 20). S.W. governed Təgray for a decade by appointing loyalist chiefs and members of his family. Assuming the title of *däğğazmač,* he followed the ambitions of his predecessors to remove ↗Yäğğu political supremacy from ↗Gondär. This was particularly the case after the death of *ras* ↗Gugsa Märsa in 1825. To this end, he requested British recognition as well as the supply of military trainers, experts in various fields, and more firearms to boost his army. S.W. also masterminded strong political and military alliances with some prominent regional chiefs in northern Ethiopia, especially *däğğazmač* ↗Wəbe Ḫaylä Maryam of Səmen (at times his son-in-law), *wag šum* ↗Kənfu of Lasta and *däğğazmač* ↗Goššu Zäwde of Goğğam against the Yäğğu ruler in Gondär, *ras* ↗Marəyye Gugsa (RubInd 63, 68; RubActa I, 29; AbbSéjour I, 187; AbPrince 35). He presented himself as a protector of Christianity, accusing the Yäğğu lords of being Muslim agents. He aspired to become the *ras bitwäddäd* and protector of the weak kings in Gondär.



A portrait of Säbagadis worshipping St. Mary, church of Gundä Gunde, Təgray; photo 2005, courtesy of Wolbert Smidt

Neither S.W.'s foreign contacts nor his military pact with Wəbe Ḫaylä Maryam bore fruit. He was soon overtaken by a fresh outbreak of extensive fighting engulfing the whole of northern Ethiopia. Marəyye won Wəbe to his side after initial military encounters that led to the ravaging of his province of ↗Səmen (Parkyns 1856, vol. 2, 96f.; Rüppell 1840, vol. 1, 273; Taddesse Gebre Egziabher 1973: 26; Tsegay Berhe 1996: 70). The Təgray–Amhara coalition, which S.W. had sought to establish against the Yäğğu, was suddenly transformed into an Amhara–Oromo front against the Təgrayan chief. In 1830, S.W. ravaged Səmen, having defeated and even chased Wəbe out of his fortresses called "Amba Tazzan" and "Amba Hay" by Parkyns (1856, vol. 2, 96; Taddesse Gebregziabher 1973: 26f.). S. then retired to Təgray after appointing Wəbe's rival and half-brother, *däğğazmač* ↗Märso Ḫaylä Maryam, as his representative in Səmen (Rüppell 1840, vol. 2, 400; Conti Rossini 1947: 36f.; AbbSéjour I, 187; Parkyns 1856, vol. 2, 97; Combes-Tamisier 1838, vol. 3, 153).

However, this victory triggered Marəyye, in collaboration with the fugitive Wəbe, to launch a vigorous campaign against Təgray. Three Təgrayan vassals of S.W., including his own sons-in-law *däğğazmač* Sahlu of Ḥaramat, *däğğazmač* Gäbrä Mikaᵓel of Dära (↗Wämbärta) and Wädağğ of Šire were also said to have defected. They conspired against S.W. with Wəbe and Marəyye Gugsa (Tsegay Berhe 1996: 67). According to informants, S.W. did not accept the advice to wait near ↗ᶜAddigrat for the enemy to march into Təgray where S.W.'s army would have had plenty of advantages (Tsegay Berhe 1996: 67f.). The two forces met for the showdown in western Təgray near the Täkkäze and the Təgrayans were overwhelmed, losing the bloodiest battle they had ever faced during the ↗*Zämänä mäsafənt* (Gobat 1834: 280; Taddesse Gebre Egziabher 1973: 27; Parkyns 1856, vol. 2, 98).

The battle of Däbrä ᶜAbbay concluded with S.W.'s capture and subsequent execution at the hands of the Oromo soldiers who wanted to revenge the death of their leader Marəyye. ↗Dori Gugsa succeeded his brother Marəyye and appointed Wəbe over Təgray (Gobat 1834: 280; RubInd 69; Tsegay Berhe 1996: 70f.).

S.W.'s sons were Wäldä Mikaᵓel, Ḥagos, Kaḥsay, Səbḥat and *šum ᶜagamä* Arägawi. The latter was actively involved in power struggles in ᶜAgamä. S.W. also established new churches such as Aṣbi Śəllase in Aṣbi and Ǝnda Mädḫane ᶜAläm in ᶜAdwa (Nosnitsin 2006: 18) and was closely connected to the monastery of Gundä Gunde, whose patron he was. His descendants ruled over ᶜAgamä until the 1974 ↗Revolution.

Tsegay Berhe

Sabaic ↗Epigraphic South Arabia

Ṣäbäl

Ṣ. (Amh. **ጸበል**, commonly also **ጠበል**, *ṭäbäl*, s. KaneDic 2142, 2252f., GuiVoc 816; borrowed into Orom. as *xabala*, Hinsene Mekuria 2005:484) is generally a designation for sacred ↗water containing a specific curative power (cp. ↗Healing). Sometimes also the expression **ማየ፡ ሕይወት** (*mayä ḥəywät*, 'water of life', Amh. *mawat*, *mawot*, *mäwat*; KaneDic 307f., 318), referring to the water which flowed from Jesus's side (Jn 19:34) is used with the same sense as Ṣ.

The original meaning of the Gəᶜəz word Ṣ. (**ፀበል**, *ṣ́äbäl*) is simply 'dust, earth', apparently devoid of any peculiar property (DillmLex 1276; Bausi 2003: 12 n. 48). In Təgrəñña Ṣ. primarily refers to 'dust, dry earth', but can also indicate [sacred] 'earth collected from a church carried on the body [...] or dissolved and drunk with water' (BassDic 960). A distinction between Ṣ. ('dust') and *ṭäbäl* ('holy water used for [↗]baptism and sacred healing water') is registered by Kidanä Wäld Kəfle (KWKDic 591, 741f.). The two elements are juxtaposed in a definition of Ṣ. as 'earth or water that people rub on or drink as a medicine' (*Mäzgäbä qalat təgrəñña* 1996/97: 915f. *s.v. ḍäbäl*; cp. KaneDic 2142).

One may surmise that an extension of the semantic field of Ṣ. from 'dust' to [sacred health-giving] 'water' took place: this could have been caused by the fact that dust collected in churches and holy places was mixed with water and drunk for magical and medical purposes. The evolution of the meaning may also have been directly influenced by the idea – widespread in Christian and Muslim Ethiopia – that different kinds of water can *per se* heal sickness. Some common spring waters, church blessed water (**ማየ፡ጸሎት**, *mayä ṣalot*; **ማየ፡ ዮርዳኖስ**, *mayä Yordanos*) as well as ritually clean water for Islamic ablutions are considered to be effective remedies for diseases of both body and mind; their many devotional, apotropaic and therapeutic qualities can be deduced from their widespread use (Leiris 1934: 69; Rodinson 1967: 48–55).

Many springs, brooks or pools, specifically called Ṣ. are reputed to have the capacity to heal almost any kind of somatic, psychosomatic or psychological suffering or illness. Ṣ. water sources are always considered to have a supernatural origin. Sometimes they are associated with the Jordan River whose sanctifying power they mysteriously reproduce when they flow or trickle (e.g., in the caves of ↗Lalibäla). Mostly, Ṣ. is thought to rush forth thanks to the miraculous intervention of a Christian ↗saint (for a first critical typology of miracles linked to spring waters s. Marrassini 1981: LXXVIIIf.) or a Muslim ↗*walī* (e.g., *al-ḥāǧǧ* Bušrā in Täsfaye Bərhanu 2006/07: 27f.). Sometimes the touch of a saint or his blessing is sufficient to transform water or dust into Ṣ. To enjoy the beneficial power of Ṣ., one has normally to drink it but sprinkling the water may also have beneficial effect on the human body and mind.

Hot springs and pools of hot water are also often classified as Ṣ. In this case, their natural curative properties are explained by a hagiographic tradition and strengthened by the aura of sacredness that surrounds them. Such thermal baths are the most widespread remedy for syphilis (Pankhurst 1990: 121–31). The faith in the therapeutic power of Ṣ. is still very popular and it seems that it is getting more and more widespread.

A particular use of the term Ṣ. can be found in the expression *Yärufaʾel ṭäbäl* (DTWDic 535, lit. 'the *ṭäbäl* of [St.] Raphael', i.e. the rain falling on 3 *Ṗagʷəmen* (the feast of Archangel Raphael), which seems to be particularly propitious.

Finally, the term Ṣ. is currently used to refer to various effervescent mineral springs in Ethiopia (e.g., ↗Ambo or Babillee).

Ṣäbate

Ṣ. (**ጸባቴ**, also *ṣ́äbati*) is an ecclesiastic title, which exists only in the monastery of ↗Däbrä Libanos of ↗Šäwa. The S. is the second in rank below the *mämhər* of the monastery, on the level of ↗*mäggabi* (in fact, in most cases the Ṣ. is the *mäggabi* of the monastery); he is usually described as "senior administrator" (AmhChurchDic vol. 4, 153).

It is not clear when the office was introduced into the monastery. One speculates that the ↗title is somehow linked with the root *ṣ́bḥ* (Gəᶜəz: 'to pay, collect duties, taxes', LesCDic 545f.; cp. THMDic 1350a), and was created probably in relation to the "pact" between *aṣe* ↗Yoḥannəs I and "the House of Täklä Haymanot" in Azäzo (the ↗*Täwaḥədo* party), according to which the community of Däbrä Libanos could claim tribute from "one third of the land" of the kingdom (cp. ↗*Bəᶜəlä nägäśt*). A certain Ṣ. Fälaskinos was appointed head of ↗Ḥamärä Noḫ in 1719. The annals for 1721 record the name of Ṣ. Səᶜəlä Krəstos, associated with Azäzo, although the function of his office is not described (some of the proposed explanations do not seem to be substantiated enough, s., e.g., DombrChr 303; BegCron 121). Thus, Ṣ. could indeed be the "collector of tributes" of the community. In this sense, Ṣ. was a deputy of ↗*əč̣č̣äge*, i.e. the head of the monastery of Däbrä Libanos (Bairu Tafla 1986: 30), or "vicar" (GuiVoc 862), with administrative and ensuing judicial prerogatives.

Sabbath

The observance of the S. (Gəᶜəz **ሰንበት**, *sänbät*, from Hebrew *šabbat*, Syr. *šabbəta* 'cease, desist, rest', s. LesDic 506, Nöldeke 1910:37) as a day of rest and worship has its origins in Biblical religion. In the ↗Bible, the S. is associated with rest on the final day of a 7-day week in commemoration of the completion of creation and the Exodus of the children of Israel from Egypt. In spite of appearances, it is not clear precisely under what circumstances the early Christians began to observe the S. on Sunday. Important factors include Pauline abolition of Saturday as a day of rest, a desire of Christians to distinguish themselves from the Jews, and remembrance of the Lord's resurrection on a Sunday (cp. Rordorf 1962: 174–233, 1972: xiv–xxi).

The Saturday S. is known both as **ሰንበተ፡ አይሁድ** (*Sänbäta ayhud*, 'the Jewish S.'), **ቀዳሚት፡ ሰንበት፡ ቀዳም** (*qädamit sänbät qädam*, 'the first S.'), and **ንኡስ፡ ሰንበት** (*nəᵓus sänbat*, 'the small S.'); as opposed to the Sunday S.: **ሰንበተ፡ ክርስቲያን** (*Sänbäta krəstiyan*, 'the Christian S.') or **እሑድ** (*əḥud*, 'first'), or **ዐቢይ፡ ሰንበት** (ᶜ*abiy sänbät*, 'the great S.').

There are a number of literary works with the theme of the Saturday-S., including the ↗*Senodos*, ↗*Didəsqəlya*, the ↗Anaphora of Athanasius. There are also several works known as ↗*Dərsanä sänbät*, the best known of which is traditionally attributed to ↗Jacob of Serug. ↗Giyorgis of Sägla was an outspoken advocate of the S.

In the 14th cent., the issue of the S. was the focus of a major controversy within the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC). St. ↗Ewosṭatewos defend the observance of Saturday as a holy day like Sunday referring to the *Senodos*. From his Acts it is unclear whether Ewosṭatewos sought to introduce a hitherto unknown practice or defended an ancient one. The initiative to reject the observance of Saturday as a "Jewish" practice might have come from the Metropolitan and his entourage. Ewosṭatewos left the country, presumably to search for support; his followers in Ethiopia were persecuted. However, after a period of clemency under *aṣe* ↗Dawit II, they regrouped and severed relations with the Metropolitan. ↗Däbrä Bizän and its daughter monasteries in Ḥamasen became centres of the movement of ↗Ewosṭateans. In 1450 *aṣe* ↗Zärᵓa Yaᶜəqob summoned a Church council at ↗Däbrä Məṭmaq which resolved the problem by conceding the demands of the dissidents (CRRicBerhan II, 145–53; TadTChurch 209f.). The Emperor himself favoured the observance of the S. rest on Saturday. The Ewosṭateans were granted lands and were asked to evangelize the neighbouring regions. For their part, they agreed to accept ordination from the Metropolitan.

Although this appears to resolve the issue of the S. within the EOTC, it resurfaced in the confrontation with the ↗Jesuits. In defence of the EOTC practice *aṣe* ↗Gälawdewos denied that the Saturday S. was a Jewish practice noting that, "as to the pretext of our observing (lit. honouring) the day of the earlier Sabbath, it is not that we observe it like the Jews, who crucificed Christ [...] We, however, honour it [the S.] by offering up on it the sacrifice (eucharist) and perform on it the supper (agape) as our fathers, the Apostles, have commanded us in the Didascalia" (tr. Ullendorff 1987: 171f.).

The devotion of the ↗Betä Ǝsraᵓel to the Saturday S. is one of the most notable themes of their religious life. Whether compared to "normative" ↗Judaism as practised elsewhere in the world, or to the Orthodox Church in Ethiopia, Betä Ǝsraᵓel observance is extreme. Preparations for the S. begin Friday afternoon: bathing, washing of clothes and preparation of food. Work stops. The S. observance is particularly strict: no fire is lit, no work or journey undertaken, sexual relations (unlike other Jews) are forbidden. If a fast day falls on the S. it is not observed. Special bread called *bäräkät* or *mäśwaᶜət* is consumed. The S. is also the subject of several Betä Ǝsraᵓel literary works, particularly ↗*Təᵓəzazä sänbät* where it appears as a semi-divine mediator. In the *Nägärä sänbät* ('The Discussion of the Sabbath', so far unpublished), and the homiletic work ↗*Abba Elyas*, the S. is a feminine figure who intervenes on behalf of her devotees if they sin. In the words of *abba* Yəsḥaq, a 19th-cent. Betä Ǝsraᵓel holy man, "Mary is the mediator of the Christians, the S. is ours" (Luzzatto 1852: 345). Every seventh S. is celebrated with a special liturgy.

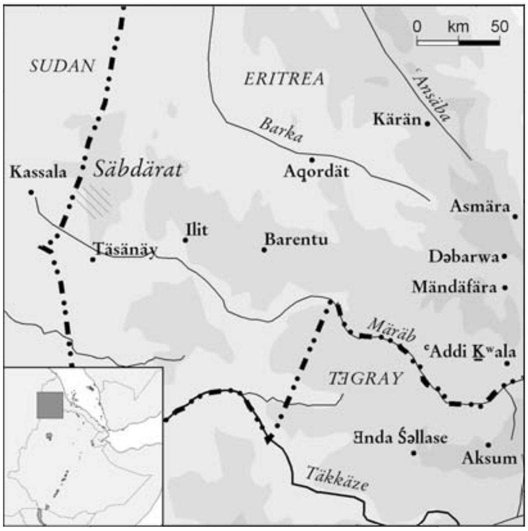
Steven Kaplan

Säbdärat

The S. (ሰብደራት) are a small ethnic group in Eritrea inhabiting the Sudanese border area in the Gaš region, some 30 km east of ↗Kassala and about the same distance north of ↗Täsänäy. The S. are ↗Təgre and Arabic-speaking agro-pastoralists, today usually counted as belonging to the Təgre ethnic group, even if traditionally being socio-politically autonomous, as were many other Təgre groups. All S. are Muslims, followers of the Mālikī legal rite. According to tradition the S. originally formed part of the ↗Marya. Their name derives from the Təgre word *säb* ('people') and Dära, a stream flowing into the ↗ᶜAnsäba River, where, it is believed, the founders of the group had lived at some point in the past, before moving west to the Sudanese border area (PollEr 187).

Italian ethnographic descriptions from the late 1930s noted that although the S. were pastoralists, they were settled and cultivated *dura* and *bultug* ('pearl millet') for local consumption as well as trade. They bred camels and, in the past, horses. S. women specialized in weaving mats from date palm leaves, used as carpets or beds and sold in the markets of Kassala and ↗ᶜAqordät (PollEr 189).

Historically, the geographic situation of the S. on the Sudanese borderlands has placed them in a position of extreme vulnerability, forcing them to seek pragmatic political alliances in their struggle for survival. From the early 1820s Egyptian expansionism in the area was reflected in expeditions to and raids on the ↗Beǧa groups of the ↗Taka area (for cattle and slaves), including the region inhabited by the S. In late 1823 for example, Egyptian forces under the command of *daftardār* Muḥammad *bāy* Ḫusraw reached S. but soon after withdraw westwards. In 1831–32, ᶜAlī Ḫūršīd led a force of 6,000 soldiers against the ↗Haḏánḏowa, aiming to reach and take S. but the Haḏánḏowa were able to fight back and defeat the Egyptian forces (Hill 1959: 64). A few years later the Egyptians occupied Taka, and took Kassala in 1840. It is not clear when the S. converted to Islam, but it seems that when the Egyptians occupied Kassala they were under the protection of a family of *ašrāf* who, through marriage, gradually intermingled with the S. (who now collectively claim descent from one of ↗Mecca's *ašrāf* families).



During the Mahdīya revolt the S. fought the ↗Mahdists for many years, especially under the leadership of ᶜAli Nūrīn. Mahdist attacks forced the S. to leave their area in 1883–84 and settle temporarily around ᶜAqordät. They continued to fight the Mahdists, this time siding with the Təgrayan leader, *ras* ↗Alula, but were able to return to their lands only in July 1894, after the Italian general ↗Baratieri had conquered Kassala. In subsequent years the S. continued to fight the Mahdists alongside Italian colonial troops (Longrigg 1945: 125, 129; PollEr 187f.). The S. found themselves again in the crossfire, this time as the British and the Italians fought on the Eritreo–Sudanese border in 1940.

In 1931 the number of the S. was estimated at 1,000 and in the mid 20th cent. the number was put at 3,000 (PollEr 188; Longrigg 1945: 158; TrIslam 170). During the Eritrean independence struggle, the S. area was a crossing point, especially for Eritreans from the western lowlands into Sudan (KilHDic 364). In the 1990s it was noted that some of the S. lived in the "large village" of ᶜAwāḍ, situated close to the border (MuhTarih 233).

Säblä Wängel

Ǝtege S.W. (ሰብለ፡ ወንጌል; b. ca. 1500, d. 30 November 1567 A.D. [25 *Ḫədar* 1560 A.M.]) was the wife of *aṣe* ↗Ləbnä Dəngəl and the dominant female dynast of her time. She came from a noble ↗Goǧǧam Amhara family (GuiIyas 7 [text]), a background which made her the only non-Təgrayan 16th cent. ətege. Before Ləbnä Dəngəl around 1518 chose S.W. as his wife, the young monarch had already rejected a proposed union with a ↗Hadiyya princess because he did not find her attractive (cf. ConzGal 3f.; Whiteway 1902: 15), thereby demonstrating that he would not consider a purely political marriage. For S.W. on the other hand Ləbnä Dəngəl felt a strong affection, apparently throughout their entire married life (ConzGal 3f.).

Francisco ↗Alvares indicates that S.W. in the early 1520s lived a highly respected life at court. It was also during the 1520s that she gave birth to most of her children. This largely peaceful decade thus likely was a happy period in S.W.'s life – in stark contrast to the 1530s which were marked by the unfolding of the ↗*ǧihād* launched against the Christian Kingdom by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ). Its continuous successes compelled the imperial family to seek refuge in ever more northerly parts of the realm, eventually (perhaps in 1537; cp. Whiteway 1902: 14, n. 1) on ↗Däbrä Damo. After losing her eldest son ↗Fiqṭor to the *ǧihād* in April 1539, and after suffering the abduction of Minas only one month later, S.W. there eventually witnessed Ləbnä Dəngəl's death on 2 September 1540 (KrLebD 17, 20, 36 [text]). On Däbrä Damo she also subsequently withstood a major Muslim siege which allegedly was led by Grañ himself (Whiteway 1902: 15).

S.W.'s fate began to turn again in July 1541 when 400 musket-armed Portuguese relief troops under Christovão da ↗Gama landed on the Eritrean coast and sought contact with her. Recognizing the unique chance that lay in their intervention, S.W. with significant personal risk accompanied the Portuguese on their march southwards, counseling them, lending them legitimacy, and re-kindling the indigenous Christian resistance (Whiteway 1902, passim; KrLebD 22 [text]). Ultimately the Muslim threat was averted when joint Portuguese and Ethiopian troops killed Grañ and decisively defeated his army in the battle of ↗Wäyna Däga in February 1543.

The war over, S.W. and Grañ's widow ↗Bati Dəl Wämbära then proceeded to arrange the exchange of their captive teenage sons Minas and Muḥammad, which was effected in late 1544. Ever after Minas to an extraordinary degree seems to have sought the advice and assistance of his mother. It was thus, e.g., at S.W.'s instigation that he in the 1550s married his companion Śəllus Ḫayla (↗Admas Mogäsa) in a full church ceremony (↗Matrimony), and in 1559, after *aṣe* ↗Gälawdewos's death, he relied heavily on S.W.'s support in order to ensure the crown's smooth transition to him (KrLebD 53 [text]).

S.W.'s personal power base lay in east Goǧǧam where she had her residence at a locality called Mängəśtä Sämayat ('The Kingdom of Heaven'), in the vicinity of ↗Däbrä Wärq (GuiIyas 7 [text], KrLebD 53 [text], CRHist 5 [text]). There she probably spent most of her post-*ǧihād* years, and it was from there too that she staged her life's last major political intervention when in 1563, after Minas's death, she helped secure the throne for her 13-year old grandson ↗Śärṣ́ä Dəngəl. She skillfully resisted the powerful lords (↗Ḥamälmal, ↗Täklä Haymanot/Täklo, ↗Yəsḥaq) who aspired to seize or even kill the young monarch, install a puppet Solomonid and become the *de facto* rulers of the country. In the first months of Śärṣ́ä Dəngəl's reign S.W.'s assistance was instrumental in saving him from his persecutors and gaining him time until he had consolidated his own power base (cf. CRHist 3–14 [text]).

For S.W.'s four sons from Ləbnä Dəngəl we know the sequence of their births: Fiqṭor, Gälawdewos, Minas, ↗Ya^{c}əqob. For the daughters by contrast we only have some certain and some less certain names. Indubitably attested are Amätä Giyorgis and Wälättä Qəddusan, less so Tewodada, and Wälättä Ḥanna (BassÉt 21 [text]; CRHist 34, 42, 82 [text]; Kropp 1989: 176f., 179f.). S.W. was for considerable time remembered as one of the great queens of Ethiopia (GuiIohan 7, 11 [text]).

Säblä Wängel

Ǝtege S.W. (ሰብለ፡ ወንጌል; d. 13 January 1690, Hamad Bärr) was the wife of *aṣe* ↗Yoḥannəs I and mother of *aṣe* ↗Iyasu I. She was the daughter of *abeto* Gäbrä Mäsqäl (BassÉt 14), who was the husband of the paternal aunt of Yoḥannəs I. Her marriage to *aṣe* Yoḥannəs was therefore considered incestuous by a council of monks of ↗Däbrä Libanos of Šäwa, followers of the ↗*Täwaḥədo* doctrine, in October 1668. The condemnation did not have consequences, but it was nullified only ten years later, in 1678, by an order of the patriarch of Alexandria (CrumLand 82).

S.W. resided mostly in ↗Gondär, where the royal couple built several castles and churches such as Ṭädda Ǝgziʾabəḥer Ab. During the dry season she accompanied her husband to ↗Aringo and ↗Yəbaba. She owned land and was able to endow fiefs to her preferred churchmen and nobles.

S.W. acted as patroness of the church in several ways. She was well-read in theological books and therefore strongly supported the production of ↗manuscripts. Some sources credit her with the impulse to translate the *Mäṣḥafä* ↗*fäws mänfäsawi* from Arabic in 1687 (however, whilst the oldest manuscripts date from the time of the reign of *aṣe* Iyasu I, the translation was probably much earlier) and the ↗*Fətḥa nägäśt* (BassÉt 298f.).

In the doctrinal disputes during the Gondärine period, S.W. took the side of the Metropolitan *abunä* ↗Sinoda (GuiIohan 174ff.). She donated manuscripts and books to Däbrä Libanos and other *Täwaḥədo* monasteries. She wanted to put an end to the ↗*Qəbat–Täwaḥədo* controversy in favour of the latter. Iyasu, however, also endowed ↗Gonǧ Tewodros, which followed the *Qəbat* doctrine (Bosc-Tiessé 2001: 220ff.).

S.W. possibly died of an infectious disease (ms. Paris, BN 142 mentions "Egyptian death" as the cause; DombrChr 215; BassÉt 143). She was buried as a queen in the royal cemetery on the island of Məṣraḫa in Lake ↗Ṭana, where her husband had built a church and was also buried (GuiIyas 12; DombrChr 333; CrumLand 82).

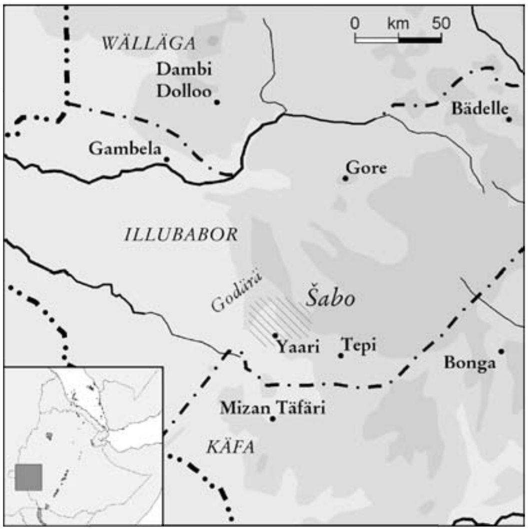
Šabo language

Š. (in literature also known as "Mikeyir", a derogatory name given by the Mağaŋgir) is a moribund language with a number of speakers estimated from 200 to 600 (Daniel Aberra in PICES 14, 1692; ca. 600 speakers according to the present author's data). The genetic classification of Š. is controversial: it may be ↗Nilo-Saharan (s. Anbessa Teferra 1991: 384f.; Fleming 1991: 399ff.), ↗Afro-Asiatic (Dimmendaal in EAE III, 1183), or a linguistic isolate.

Š. speakers live mostly in the districts of Yäki, Maša and Godärä (Southern Nations, Nationalities and Peoples' Region), but also in Salle Noono district (Oromiyaa Region). The Š. are bilingual either with ↗Mağaŋgir or ↗Šakačo with a few speaking ↗Oromiffaa. Š. has some 30 % lexical similarity with Mağaŋgir and some



16 % with Oromiffaa, due to lexical borrowing. Words from ↗Koman also entered the language. Not all Š. speak Š. language as a first tongue, and they increasingly express a desire to learn Amharic (Jordan – Hussein Mohammed – Netzley 2005: 11).

The consonant phonemes are: labials *p*, *b*, *p̣*, *ɓ*, *m*, [*f*], *w*; alveolars *t*, *d*, *ṭ*, *ɗ*, *n*, [*s*], *l*, *r*; palatals *č*, *ǧ*, *č̣*, *ñ*, [*š*], *y*; velars *k*, *g*, *q*, *ŋ*; glottals ʾ, *h*. The phonemic status of the consonants in parentheses is unclear. The phonemic system comprises nine vowels (*i*, *e*, *ɛ*, *ɨ*, *ə*, *a*, *u*, *o* and *ɔ*) of which *i*, *e*, *a*, *u* and *o* have long counterparts. Gemination and vowel length appear to be phonetic rather than phonemic. At least one minimal pair of lexical tone was observed as in *há*, 'kill!' and *hà*, 'meat'.

The presence of ejectives distinguishes Š. from the neighbouring language Mağaŋgir. The segment *p* has free variants [*f*] and [*ɸ*] as in *punqa* ~ *funqa* ~ *ɸunqa* 'ashes'. Free variation is also observed between *č* ~ *s* ~ *š* and between *ǧ* ~ *z*.

The personal pronouns are:

	sg. masc.	sg. fem.	pl. masc.	pl. fem.
1st	*tiŋ*	*taŋa*	*yiŋ*	*ann*
2nd	*kuku*	*kungu*	*sitalak*	*siyakk*
3rd	*yi*	*uŋa*	*otalak*	*odda*
				subak

Object pronouns are marked by *-kak*: *tiŋ-kak* 'me', *yiŋ-kak* 'us', etc. The demonstratives are *ma* 'this' and *ŋatum* 'that'.

There is no morphological number in Š. Plural is expressed by *yero* and *woto* 'many' placed after the noun: *kuro* 'donkey' - *kure woto* 'donkeys'; *ǧuku* 'chief' – *ǧuki woto* 'chiefs'. Possessives are formed by suffixing *-ke* as in *ufa-ke bičča* 'the man's foot'. The numeral system is quinary and involves roots derived from the nouns 'hand' and 'person', e.g., *bap̣-if* 'ten' (cp. *bap* 'two', *ifu* 'hand'), *iŋki-ufe-koor* 'twenty' (*iŋki* 'one', *ufe* 'person', *-koor* 'complete').

Finite verbs consist of an auxiliary (the verb of presence *ɗebe*), a person marker, a lexical base, and a tense-aspect marker. The imperfect is marked by -gg, the perfect (perf.) by *-y* ~ *-e* and the present perfect by *-kkus*. Negative (neg.) morpheme of the imperfect is *-be* (*tiŋ no-be* [I go-neg.] 'I will not go'), and that of perfect and present perfect is *be*-*ge* (*yi am be*-*ge* [he come neg. perf.] 'he has not come').

The conjunction *ŋa* is repeated after each conjoined word. Question words are *neé* 'who?' and *hamma* 'where, which, what?'. The basic word order is Subject – Object – Verb: *kaan*$_1$ *upak*$_2$ *ye*$_3$ 'A dog$_1$ saw$_3$ a man$_2$'.

The ten-word list of Š. is as follows: 'one' *iŋki*, 'two' *bap*, 'three' *ǧiita*, 'fire' *č̣uwa*, 'water' *abuṭe*, 'sun' *oha*, 'moon' *kasipu*, 'blood' *dammo*, 'tongue' *handa*, 'tooth' *kaw.*

Šabo ethnography

The Š. (self-name Sabu; called "Mikeyir" by the Mağaŋir) are a small group of ca. 700–900 people living dispersed amongst the ↗Mağaŋir people in the Käfiččo–Šekačo Zone in south-western Ethiopia, between Godärä and Maša; some live in the Mağangir Zone of Gambela Region. Many Š. live in the villages of Yaari (Yeri) and Duši, although settled life in villages was not common among them.

The origins and ethnogenesis of the Š. remain unresearched. It is not known whether the Š. were settled in the area before the Mağaŋir arrived (cf. Stauder in PICES 3, 109). With the existing pressure on their language, their ethnic group identity is recently undergoing change.

The Š. are organized in a clan structure, are polygamous, and live in family units mostly among the Mağaŋir, having few separate villages. They are hunter-gatherers and beekeepers in the highland forest, forming a caste-like "sub-society" within their Mağaŋir host group. They have now started practising subsistence farming and found employment in nearby coffee plantations. Women produce pottery. Their material culture is simple and not distinct. They have their own songs. The Š. are traditional-religious, but (Evangelical) Christianity is expanding among them, partly because it has an "empowering" function. The Š. dependency relations with the Mağaŋir are in many ways similar to that of the ↗Kʷegu among the ↗Mursi.

There are no ethnological or other studies of the Š. and on their interaction with the Mağaŋir, but intermarriage with them and with other groups is increasing (Jordan – Hussein Mohammed – Netzley 2005: 11). They are connected to others economically in the local markets and via school education.

Sabra

According to ↗Betä Ǝsraᵓel tradition, *abba* S. (**ሳብራ**, also Ṣäbra, Ṣəbra, Səbra) is credited with being the founder of their monastic tradition and many aspects of their religious life. He is said to have been a native of Šäwa. Some traditions say he was from ↗Mədrä Käbd (s. EAE vol. 5), and that he became a monk after having committed a murder. While some traditions date S. to the Aksumite period, most agree that he lived in the 15th cent.

The origins of S.'s name are uncertain. It may be of Cushitic origin; Säbra or Säbriqu may have been the name of a region. Although there are claims that his ↗*gädl* exists, no text has been found to date.

S. is remembered not only for establishing the institution of ↗monasticism among the Betä Ǝsraᵓel, but also for introducing their laws of purity. He is also credited with having composed their religious music and some of their religious texts such as ↗*Bäqädami gäbrä əgziᵓabəher*. S.'s most important disciple was ↗Ṣägga Amlak, who is said to have been a son of *aṣe* ↗Zärᵓa Yaᶜəqob.

S. is associated with the holy sites of Mədraru in Ṣäqqält and Huhʷara, which became the site of the largest Betä Ǝsraᵓel monastery.

Ṣabraddīn I Muḥammad b. Dalḥūy b. Manṣūr

Ṣ. (صبرالدين محمد بن دلحوى بن منصور, r. 1330/31–32) was the ruler of ↗Ifat. With him, the power of the ↗Walašmaᶜ dynasty was restored, after several years of turmoil, during which three usurpers (Abut, Zubayr and Maᵓati Layl) followed one after the other.

Ṣ. tried to free Ifat from its vassalage to the Ethiopian empire. He appointed governors for all parts of Ethiopia in anticipation of his future conquests, and prepared for war. *Aṣe* ↗ᶜAmdä Ṣəyon I warned him and pointed to the sad fate of Ṣ.'s rebellious brother ↗Ḥaqqaddīn b. Dalḥūy b. Manṣūr. Ṣ. ignored the warning and, following the advice of the diviners, mustered troops. He was eventually defeated and his capital destroyed, but he was able to flee.

Although ↗Ḥaydära, ᶜAmdä Ṣəyon's governor of ↗Däwaro, was ready to conspire with Ṣ., the latter – upon hearing that ᶜAmdä Ṣəyon had assembled new troops to pursue him – gave up, and, through the mediation of the queen, offered to surrender. The Emperor spared his life, although the Ethiopian nobles asked to kill him. Ṣ. was deposed, and replaced by his brother ↗Ǧamāladdīn II b. Dalḥūy b. Manṣūr. According to the Chronicle of ᶜAmdä Ṣəyon, this must have happened in 1332. Although the Walašmaᶜ Chronicle reports that Ṣ. ruled for five years, thus till 1335/36, this may include the reigns of Ǧamāladdīn and ↗Naṣraddīn b. Dalḥūy b. Manṣūr (these puppets of the Christian Emperor are not mentioned in the Walašmaᶜ Chronicle at all).

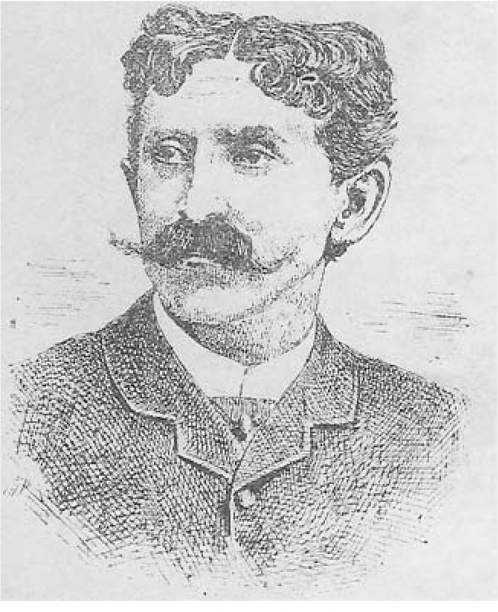
Sacconi, Pietro

S. (b. 11 February 1839, Borgonovo Val Tidone, Piacenza, d. 12 August 1883, Kora Nagott, Ogaden) was an Italian explorer and trader.

S. took part in the *Risorgimento* campaigns under the command of Giuseppe Garibaldi. After the end of the third war of independence, he moved to Alexandria in Egypt. After serving as a volunteer in Candia, he served in the Compagnia Khediviale di Navigazione, in the company for the excavation of the Suez Canal, and in a commercial house in Jeddah. He then briefly returned to Egypt, and from there he departed for Massawa. From there he arrived in the land of the Bogos (↗Bilin) where Giovanni ↗Stella had established his Colonia Italo-Africana at Šotäl. S.'s further advancement was rendered impossible by Werner ↗Munzinger, and S. returned to Suez.

In 1869, S. headed from Aden to ↗Zayla^{c} with a shipment of guns for its governor, *amīr* ↗Abū Bakr Ibrāhīm Šaḥīm, to trade them for local products. S. visited the market towns of ↗Tağūra, Bulhar, ↗Berbera, and ↗Harär. He studied the ↗Somali language, the climates of the interior, the habits of the inhabitants and their products. Soon after his return to Aden, he resumed his travels and visited Ethiopia, stopping at the ↗Colonia di Assab on his way back. On 6 September 1872, not far from Lasgori, S. was attacked by Warsangali Somali. He had to give them all his savings to save his life.



Pietro Sacconi; portrait from *Il Secolo* 1883

Thereupon S. engaged in silkworm import from Japan, but in 1882 he returned to Africa. With his brother Gaetano he arrived in Harär and launched a business there on behalf of the Milanese Società d'Esplorazione Commerciale in Africa. The trade in leather, coffee and other goods flourished, and the S. brothers were soon joined by their nephews Vincenzo and Giuseppe Guasconi. On 13–14 June 1883 S. made an excursion into the surrounding Oromo country, together with Arthur ↗Rimbaud and other companions. His geographical and ethnographical observations were minutely documented.

On 8 July 1883 S. was the first European to cross the border to Ogaden, where he intended to start a new business, but was ambushed and killed shortly after.

Sacra Congregatio de Propaganda Fide

The S. (also known as Propaganda Fide, i.e. '[concerning the] Propagation of the Faith', today Congregation for the Evangelization of Peoples) is a department in the Roman Curia aimed at the organization of the missionary activities of the Catholic Church. Officially founded on 22 June 1622 by Pope Gregory XV, it was in fact a revival of earlier projects longed for by Pope Pius V (establishing a cardinals' commission for the East Indies already in 1568) and by the Jesuit Francesco Borgia (1510–72), and fostered by such writings as Tomás de Jesus's *De procuranda salute omnium gentium* (Antverpiae 1613). Created in the aftermath of the Protestant Reformation, the Congregation aimed at centralizing and promoting the diffusion of the Catholic faith (it thereby absorbed the defunct Congregatio de rebus Graecorum, for the Catholics of the Greek rite, founded by Pope Gregory XIII in 1573) rendering it independent from political power (cf. Metzler 1971: 82ff.). It also engaged in freeing

Christian slaves from the Muslims, in suppressing the cultivation and use of opium, in founding schools for instructing local people and clergy at different levels.

The S. was governed by a body initially of 13 cardinals, two prelates and a secretary, and headed by a cardinal prefect. The first general prefect was Cardinal Antonio Barberini Senior (1632–45), and the first secretary Francesco Ingoli (1622–49), who played a major role in laying its foundations and in organizing it. In 1627, Pope Urban VIII established the seminary known as Collegium Urbanum de Propaganda Fide, an integral part of the Congregation since 1641, and in 1639 cardinal Barberini added to it a school "Pro Nationibus Aethiopum, seu Abissinorum, et Bragmanorum Indiae Orientalis" (Raineri 2006; Fiaccadori in preparation). The Collegium is still extant today as the Pontifical Urbaniana University.

In the beginning, the S., which in 1623 had established a prefecture in Egypt, seldom interfered in the affairs of the Jesuit mission in Ethiopia (cp., though, BecRASO XII, 408). Yet, when the ↗Jesuits were exiled in 1632–33, it changed its policy. In 1634, Ingoli obtained from the S. a decree permitting the ↗Franciscans to send a mission there (Metzler 1971: 225). The Roman authorities were also openly opposed to Portuguese Jesuits resuming their mission from ↗Goa (APF, Indice generale fino ad Aprile 1657, A1: ABCDE [Fondo Acta-Indice alfabetico], vol. 6, 20; Acta: Congregazioni particolari, vol. V, 392r–93r). A series of missions led by Reformed Franciscans and ↗Capuchins was soon to follow.

By introducing the mendicant orders, the S. also wanted to apply softer methods than those of the Jesuits – i.e. tolerance of ↗circumcision and acceptance of the indigenous priesthood. However, the S. was unsuccessful in establishing permanent positions in Ethiopia (Metzler 1971: 624ff.). Most of the appointed missionaries, who travelled by sea from Suez to ↗Sawākin, were not to get any further than the ↗Sudan. Towards 1680, the missions in Egypt and Ethiopia were assigned to the Franciscan Custody of the Holy Land. At the turn of the 18th cent., further expeditions across the *Bilād as-Sudan* were organized, mostly with Franciscans and Jesuits. Being French, the latter enjoyed the support of the French consul in Cairo. From ↗Sinnār, by then the headquarters of all missionary endeavours, a few of them managed to reach the Ethiopian court of ↗Iyasu I at ↗Gondär. Among them were Charles ↗Poncet, the Franciscan friars Brevedent, Joseph, Pasquale da Montella, Benedetto da Atripalda and the Jesuits Grenier and Paulet. In 1703, Joseph, the prefect of the mission, took seven Ethiopian youths for instruction to Rome (Crawford 1951: 203ff., 311). In 1716, three more Franciscans reached ↗Massawa, but were stoned to death. As a result, the mission was suspended (↗Martyrdom).

In 1752, the S. managed to send a small expedition of Franciscan friars headed by Remedius ↗Prutky. In the 18th cent., prominent figures related to the S. were Bishop ↗Ṭobiya Giyorgis Gäbrä Ǝgziʾabəḥer and the prefects Cardinals Giuseppe Spinelli (1756–63) and Stefano Borgia (1770–1804), who also gathered an impressive collection including oriental artefacts and manuscripts, among which were Coptic and Ethiopic examples, for his museum in Velletri. His manuscripts are preserved at the ↗Biblioteca Apostolica Vaticana and at the Biblioteca Nazionale Vittorio Emanuele III in Naples (GreTisVat II 763–858; Fiaccadori in preparation; Buzi 2010; cp. Nocca 2001).

In the mid-19th cent., at the request of Antoine d'↗Abbadie, the S., headed by Cardinal Giacomo Franzoni, resumed work in Ethiopia with missions by the Capuchins and the ↗Lazarists (MasMis^2 vol. 1, 4ff). A twofold strategy for local people was then enforced: the Capuchins were to officiate the Latin rite in the Apostolic Vicariate of the Galla, the Lazarists, the Ethiopian rite in the Apostolic Vicariate of Abyssinia.

In 1862, a special section of the S. was instituted "pro negotiis ritus orientalis", to become independent as the ↗Sacra Congregatio pro Ecclesiis Orientalibus, i.e. "for the Oriental Churches", in 1917.

The S. has promoted geographical exploration for both missionary and scholarly purposes, resulting in linguistic and ethnological studies. Since ca. 1626, it has run a Polyglot printing-office that has published books by Wemmers, ↗Massaja and ↗Sapeto. It was incorporated into the Vatican Typography in 1907 (↗Printing). The earliest Ethiopic works issued there were an Ethiopic syllabarium (1631) and a re-edition of Mariano Vittorio's *Chaldeae, seu Aethiopicae linguae institutiones* (1630). In 1789, an *Alphabetum Aethiopicum, sive Gheez et Amharicum* appeared that was published by Giovanni Cristoforo Amaduzzi (Fumagalli 1893: nos. 217, 292, 1173, 1184, 1321, 1374, 1391, 2292, 2295).

The headquarters of the S., the activity of which is now ruled by the 1988 papal bull *Pastor bonus*, are still in Rome, at the Palazzo di Propaganda

Fide (1634–67, by the architect Francesco Borromini), together with the archives, including several files on the missions to Egypt and Ethiopia.

Andreu Martínez d'Alòs-Moner

Sacra Congregatio pro Ecclesiis Orientalibus

The S. (Congregation for the Oriental Churches, Ital.: Congregazione per le Chiese Orientali) is a permanent body of the Roman Curia responsible for the Eastern Catholic Churches. It has now exclusive authority (also for the Latin rite) over Egypt and the Sinai Peninsula, Eritrea and northern Ethiopia, southern Albania and Bulgaria, Cyprus, Greece, Israel, Iran, Iraq, Lebanon, the Palestinian territories, Syria, Jordan, Turkey, and Ukraine.

The S. began as a section "pro negotiis ritus orientalis" of the ↗Sacra Congregatio de Propaganda Fide that was created on its own by Pope Pius IX on 6 January 1862 (apostolic constitution Romani Pontifices). The organism became autonomous in 1917 under Pope Benedict XV (who also established the Pontifical Oriental Institute in the same year), and its responsibilities were notably increased by Pope Pius XI in 1938, with the motu proprio Sancta Dei Ecclesia, by which the S. "pro Ecclesia Orientali" was formally instituted. More recently, Pope Paul VI (constitution *Regimini Ecclesiae universae*) and Pope John Paul II (*Pastor bonus*) further clarified the scope of the S., which adopted its current name in 1967. Formerly headed by the pope himself, it had a cardinal secretary (since 1967, prefect), who directed and represented it; the number of its members was fixed in 27 cardinals, one archbishop and four bishops. By right and competences, the patriarchs and the major archbishops of the Oriental Churches and the president of the Pontifical council for the promotion of unity among Christians were also included.

In Ethiopia and Eritrea the S. has established friendly relations with the local Orthodox churches. Its experts have prepared the edition of the liturgical books for the Catholic communitiy of Ethiopic rite, and its secretaries and officials have also striven to expand gradually Catholic facilities into those countries. In 1931, a collection of canons was prepared for the S. by Mauro da ↗Leonessa (da Leonessa 1931), at whose suggestion the Pontifical Ethiopian College, depending on the S., was founded in the ↗Vatican City (↗Santo Stefano dei Mori).

The S. had one of its most dynamic figures in Cardinal Eugène-Gabriel ↗Tisserant, its secretary from 1936 to 1959, who succeeded cardinal Luigi Sincero (1927–36). Worth mentioning is also Mgr. Giuseppe Mojoli who, from 1931 to 1960, worked in the liturgical department of the S. focusing on the Ethiopian Church. He contributed to the preparation of Ethiopian editions of the Missal, the Liturgy of the Hours and the Pontifical. In 1957, Mgr. Giuseppe McGeough, from the S., was appointed first apostolic internuncio in Ethiopia, with the aim of (re)opening diplomatic relations between the Vatican and the government of ↗Ḫaylä Śəllase I. He was replaced in 1960 by Mojoli, who conducted an active work in support of missionary stations and Catholic parishes (Mojoli 1973: 86, 98ff.). The current cardinal prefect is the Argentinian Leonardo Sandri.

Sacrifice

Many Ethiopian and Eritrean cultural and religious traditions contain the idea or the actual practice of S. (cf. Levine 2000^{2}: 51), which is defined here in the anthropological sense as a religious act of immolating a valued being, usually an animal, to a deity or other supernatural force that is addressed by humans in order to show deference or awe and ask for blessing, propitiation or forgiveness. The word S. derives from Lat. *sacrificium* ('making holy or consecrated'; from *sacer*+*facere*), and expresses the motivation of the sacrificial act in both traditional and monotheistic religions. S. is a complex phenomenon but may well be a transcultural universal in religion. Indeed, it is seen by some (e.g., in the theory of Girard 1972) as the most important foundational idea of all religion.

In many traditional ↗religions in Ethiopia, S. as a vicarious offering of life force (animal blood) by humans, expresses the respect for, or perceived dependence of people on, life forces deemed to be controlled by supernatural agents. S. usually expresses the desire for communication between the living on the one hand, and the divine ↗spirit(s), ↗ancestors, or forces of nature on the other.

As a result of consecrated killing, an animal, a living being, is transformed into a transcendental object connecting to the sphere of the supernatural, and S. is a powerful "creative" act that defines a cosmology, a structure of meaning, for the sacrificer, himself made "sacred" in the act, and for his people. The consecrated animal or object hence stands for the sacrificers and their community in their attempt to communicate with worlds beyond.

While non-bloody "offerings" could also be considered as S. in the sense of giving something consecrated to supernatural forces or deities, the term S. is usually restricted to "bloody" S., whereby a sacralized stock- or domestic animal is ritually killed for the gods or spirits. In Ethiopian history human S. is rare and not well-attested: only a few examples are known (VSAe III, 108, 353f.; s. also Tornay 2001: 283f.). In these cases, humans appear to have been sacrificed "for the benefit" of a king and his auspicious rule. After the imperial conquest of the South in the late 19th cent. the new rulers forbade this practice.

S. can have many ritual forms and varieties, partly correlating with modes of livelihood (e.g., pastoralist vs. sedentary-agricultural), or type of society (hierarchical, egalitarian, kingdom, theocracy, etc.), but the basic meaning, given above, is the same. However, not all animal killings in ritual are S.: some are "slaughter" (cf. Miyawaki in PICES 13, 711), where an animal is killed without consecration, as, e.g., in divination (↗Oracles and divination) where intestines are "read", or the killing of cattle at burials to honour the deceased.

1. In the monotheistic traditions (Orthodox ↗Christianity, ↗Islam and ↗Betä Ǝsraᵓel, cp. ↗Judaism), traces of the practice of S. are visible. Following Biblical precepts, the Betä Ǝsraᵓel sacrificed a consecrated sheep or a cow at Passover, and also a bull at the *Sigd* festival (Leslau 1957: 70f.; Salamon 1999: 57, 62). On some occasions, the Betä Ǝsraᵓel were asked by Christians to perform a sacrificial ritual to protect their community from a plague (cf. Salamon 1909: 62f.). In the 19th-cent. European Protestant missionaries working among the Betä Ǝsraᵓel immediately rejected their sacrificial rites and tried to eliminate them. The Jewish missionary Jacques ↗Faïtlovitch also condemned the practices since Jews elsewhere no longer performed S.

In Ethiopian Orthodox Christianity there are no bloody S. However, in the Holy Communion (↗Eucharist) the unique, one-time event of Christ's self-sacrifice is commemorated and ritually re-enacted (Luke 22: 19, 20; Aymro Wondmagegnehu – Motovu 1970; Kaplan 2003). The Eucharist is interpreted as an unbloody S., offered on the altar for the salvation of Mankind (1 Cor. 10: 18–21). Furthermore, the religious customs of Orthodox Christians include offerings (**መሥዋዕት**, *mäśwaᶜət*) of bread, ↗*ṭälla* or other ↗food items which are brought to a priest to be consecrated and then consumed (e.g., by the ↗*Maḫbär*). They are meant to support appeals for forgiveness, blessing or humility before God.

Among Muslims, S. (*qurbān*, or *ḍabiḥa*) also exists and is carried out at certain festivals (↗Feasts, Islamic), mainly the *ᶜĪd al-Aḍḥā*, where a sheep or goat is killed, based on the injunction of Allāh to Ibrāhīm to be prepared to offer his son Ismāᶜīl (Sūra 37, 101–07, parallelling the Biblical story of Isaac, cf. Genesis 22). As with the other two religions above, the core of the Muslim sacrificial act is said to be not the killing of the consecrated animal itself, but the sacrificers showing their piety and commitment to God. In these religions, S. is thus a "vehicle" for religious devotion, and is seen as supporting or extending the role of prayer and pious service to God; its main attraction here is the communal aspect.

S. can only be carried out in specific spatial settings (an ᶜ*awd* or holy space near a church or prayer house, a sacred place, e.g., the *mora* among the ↗Konso), a specific hill-top, an *adbär*-↗tree grove etc.), and by designated and capable officiators. In Ethiopian Muslim as well as Christian traditions, the sacrificial rituals often show a hybrid or "syncretic" character as to origin, spiritual message and social significance, which derives from the long interaction between different religious traditions (↗Syncretism).

2. In traditional religions of various ethnic groups across the country, S. is a vibrant part of religious practice, and expresses similar ideas of communion, respect and establishing contact with spiritual forces, the (Sky-)God, or the ancestors. A wide variety of peoples, even if they are partly Christianized or Islamized, maintain sacrificial practices in some form or other. One reason for the persistence and "popularity" of S. may indeed be the element of communal meal after killing the animal, which has a strong integrative aspect, drawing people into a shared religious or community space. S. rituals are often embedded in a cosmology which refers back to underlying ecological and livelihood elements relevant to the particular group.

Some S. are primary religious in nature in that spiritual or natural forces are appealed to in order to ensure cosmic order and the fertility of humans, cattle and crops. Others fuse religious and political aspects, calling for both the blessings of the spirits, the divinity or the ancestors for the well-being of society at large (e.g., with the *kawo* sacrificers among the ↗Gamo groups, s. Bureau 1981; Freeman 2003), or to honour those in authority (cp. Tornay 2001) and for the correct behaviour of the society's members. The installation of a new ruler or officiator in the ritually proper manner is usually effected via rituals of S. as well. This was the case with, e.g., divine rulers (*kati*) or chiefs (*kyaz*) in several southern Ethiopian ethnic groups (such as ↗Maale, ↗Oyda, or ↗Dizi; ↗Kingship, divine). In some societies (↗Suri, ↗Mursi, ↗Dáassanač, etc.), the ↗initiation of new age-grades also required a big S.

Among the ↗Oromo a large variety of forms of S. exists, e.g., the ↗Mäçça sacrifice to the lineage spirit (*ayaana abbaa*) at certain crucial moments in the yearly cycle, or at the acceptance of a new ↗*qalluu* (Knutsson 1967). In the ↗Guǧǧi and ↗Boorana ↗*gadaa* systems, major S. were made at the initiation of men into an important new age grade and at the installation of new *abbaa gadaas* or other high officials (cp. Hinnant 1978). S. here is meant to invoke an auspicious period of rule and the preservation of the social and cosmic order. Similar rites of S. exist among the ↗Sidaama when men are initiated into adulthood in the *luwa* system. The same is done in other groups, where they also perform S. in times of social or natural disaster (cf. Hamer 1996: 534).

In most of these sacrificial rituals, meticulous care is taken that the right procedure is followed, e.g., with unblemished animals, reciting the required words in the right order and performing the proper actions, which indeed form one integrated whole. Ethiopian S. rituals also show a great variety in the ways in which the animal is killed: not only with a knife, but also with a spear, with wooden poles, or via strangling. The places on the body where the animal is hit also vary. All these choices (cf. Miyawaki in PICES 13; Abbink 2003) reveal the intricate symbolism of S.

3. In both the Ethiopian monotheistic and traditional religions, the principle of S. is well reflected in the ritual slaughtering of animals and the common consumption of their meat on important social occasions, e.g., life cycle events such as weddings, initiations or burials, harvest ceremonies, local religious festivals (↗Feasts), ↗ancestor commemorations, healing rituals, possession rituals, or *adbär* ceremonies.

Among many ethnic groups, sacrifices are often made for more "secular" reasons: or personal transgressions, to compensate for wrongdoing or to "cleanse" or re-socialize the culprit of adultery, injury, theft or homicide. In several groups in southern Ethiopia (e.g., the ↗Meᵓen, Oromo), a sheep is killed by a neutral sacrificer and the flow of blood used to reconcile the transgressor and the victim or his/her group (cp. Bartels 1983; Abbink 1992). The sacrificial animal is hereby first, in a metaphorical sense, declared the perpetrator, and then killed and cast out, so that God or the ancestor spirits may produce a cooling of anger as well as a reconciliation. (In addition, compensation is paid to the victim's kin group.) Also here, however, there is a religious dimension, in that reference is usually made to supernatural forces and the cosmic order.

Sadača ↗Afre

Saᶜdaddīn Abū l-Barakāt Muḥammad b. Aḥmad Ḥarb Arᶜad

S. (سعد الدين ابو البركات محمد بن احمد حرب ارعد, r. 1386–ca. 1413) was one of the three sons of the ↗Walašmaᶜ *sulṭān* of ↗Ifat, ↗Aḥmad Ḥarb Arᶜad b. ᶜAlī b. Ṣabraddīn, who were born while their father was in hostage at the court of *aṣe* Nəwayä Krəstos (↗Säyfä Arᶜad). S. succeeded his brother ↗Ḥaqqaddīn II b. Aḥmad Ḥarb Arᶜad, after the latter's death in 1386.

S. continued the ↗*ǧihād* against the Christians. He was once taken prisoner during an unsuccessful battle and brought in fetters to the Christian general, but freed by a Muslim knight. Most of S.'s campaigns were, however, victorious, e.g., his attack against *amano* (here a title, not the ↗Amano, who fought against ↗ᶜAmdä Ṣəyon I) of ↗Hadiyya, the Emperor's vassal. After the conquest of ↗Zälan, S.'s private part of the booty was 40,000 cows which he at once gave as alms to the poor and to the dervishes.

Through these campaigns S. enlarged the territory of Ifat which from then on, for more than hundred years, was named Barr Saᶜdaddīn, 'the land of S.'. The fame of S. among the Christians is testified by the Vita of *abunä* ↗Märqorewos, where he is called Saᵓalädin: *aṣe* ↗Dawit II could not withstand his attacks and had to ask for the Saint's intercession. Märqorewos's prayers were heard by God. Saᵓalädin was killed and his head thrown in front of Dawit.

The *Ilmām* of al-↗Maqrīzī (MaqIlmam^2, the main source on S.'s reign) gives the following account of the end of S.'s reign. When the Emperor sent his general Bārū against him, S. met him with an army of *ǧihād* fighters. The Muslims were defeated and 400 *šayḫs* died. S. fled to the island of ↗Zaylaᶜ. The Christians besieged Zaylaᶜ, cut off the fresh water supply, and with the help of a traitor entered the town. S. fought against them and was stabbed to death.

S.'s children fled to the ↗Yemen where they were welcomed by the Yemenite ruler al-Mālik an-Nāṣir Aḥmad b. al-Ašraf Ismāᶜīl.

The *Ilmām* and the Walašmaᶜ Chronicle (s. Cerulli 1931) agree that S. ruled for 30 years but differ on dates. According to the *Ilmām*, S.'s rule lasted from 1374/75 till 1402/03, followed by a 20-year long Christian occupation of Ifat. The Walašmaᶜ Chronicle says that S. ruled from March/April 1386 till 16 February 1415, and the interval until the return of his son Ṣabraddīn from Arabia was only one year. The dates of the Walašmaᶜ Chronicle seem more accurate (s. Cerulli 1931:49, n. 18, also confirmed by the *amīr* lists, s. Wagner 1976). Even the date 1415 should probably be corrected by at least two years: according to the Christian source, S. was killed during the reign of *aṣe* Dawit who died on 6 October 1413. This must be the *terminus ante quem* for the death of S.

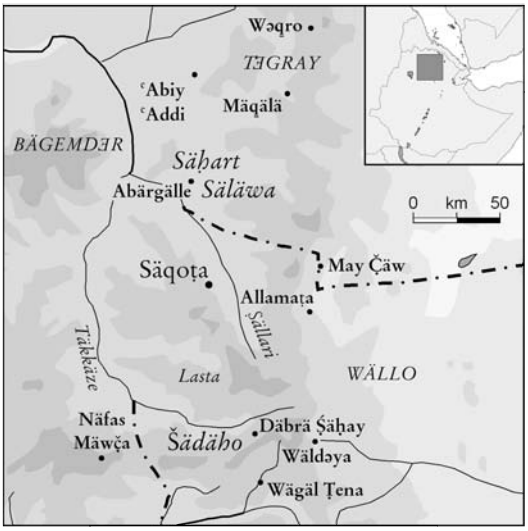
Ewald Wagner

Šädäho

Š. (ሸደሆ) is a lowland region in Mäqet, ↗Lasta, which is generally referred to as Š.-Mäqet. It is largely inhabited by Muslims, whose main occupation is weaving (↗Weavers and weaving). The market place of Däbäkko is known for its cloth. It is a meeting place for Muslim ↗weavers who come from highland and lowland areas to exchange their commodities. They travel seasonally into other parts of Lasta, ↗Wag, ↗Yäǧǧu, Wadla and Dälanta, and beyond Š. to ↗Bägemdər to work as weavers.

Š. is mentioned in sources at least from the 17th cent., e.g., in 1620 ↗Susənyos campaigned in the area (PerChron 247f.). Local tradition indicates that *aṣe* ↗Fasilädäs established the land tenure system of Š.-Mäqet (Assefa Maru 1995: 10, 56, 78f., 98). During the period of *aṣe* ↗Bäkaffa, a certain Ayyo, a warrior from Bägemdər, settled in Däbäkko, supported by Gubala, the local ruler of Lasta and a rebel against the court of ↗Gondär. Ayyo is also believed to have established a number of churches in Š. When Bäkaffa campaigned in Lasta in 1725, to suppress the rebellion of Gubala and subdue another rebel, ↗Amməḫa Iyäsus, a distant relative of the king who had taken refugee in Š., the king's army sacked the property of Ayyo at Däbäkko for having sheltered Amməḫa Iyäsus (ibid.).



Again in 1726, Bäkaffa mobilized the Ǧawi and Baso Oromo warriors and devastated Š.-Mäqet. Bäkaffa's chronicler indicates that the region was plundered because the people of Lasta concealed their property in Š. *Däǧǧazmač* ↗Wänd Bäwäsän, a regional ruler in Lasta and one of the king-makers in Gondär in the early period of the ↗*Zämänä mäsafənt*, is said to have established the church of Däbäkko Maryam.

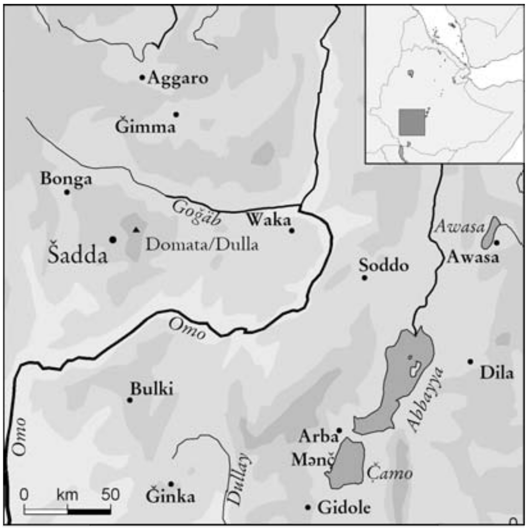
Šadda

Š. (ሻዳ; 7° 1' 60 N–36° 30' E) is one of the oldest towns in ↗Käfa (9,192 inhabitants in 2007). It is located (2,401 m A.S.L.) to the south-west of ↗Bonga between two valleys on the foothills of the mountains of Butta and Domata/Dulla at the confluence of the Bitino and Merro rivers. From the Bonga–Waka–Soddo road Š. can be reached by a track which branches off in Butta town. Š. belongs to the Gimbo *wäräda*, a division of Käfiččo–Šäkiččo zone in the Southern Region.

Š. was known historically as the place of coronation of the early kings of Käfa, and the first Käfa king was said to have come from Š. (Lange 1982). It was abandoned as chief residence by the "Bonga ↗*tato*", probably identical with King Boretta (r. 1565–1605), in the early 17th cent. in favour of Bonga. The burial grounds of all the Käfa kings were near Š., at the Šoša hill. Until the defeat of Käfa in 1897, the town remained the place of a secondary royal residence where the king stayed during certain religious holidays and performed important royal sacrifices (Lange 1982: 279). Together with the other royal compounds it was destroyed in 1897. No trace is left of its earlier structures.

According to Bieber (1920), who was in Käfa in mid-1905 and in 1909, it used to be a significant market, but started to decline after the Ethiopian conquest. De Brun, also travelling in Käfa in 1905, did not mention it in his account. Today,



Š. is a small local market town in an area where livelihoods are mainly based on subsistence agriculture and some forestry.

Ṣadəqan

The Ṣ. (**ጻድቃን**, 'The Righteous'), are a group of monks of "Roman" (Byzantine) origin who are traditionally considered, alongside the ↗Nine Saints, ↗Libanos (Mäṭaᶜ) and Yoḥanni of ↗Däbrä Sina in Sänḥit, to be the main protagonists of the so-called "second Christianization" of the Aksumite kingdom (↗Aksum). The tradition might reflect the arrival in Ethiopia in different waves (from the end of the 5th through to the beginning of the 6th cent.) of a number of monks.

According to the traditions preserved in several hagiographic writings, the Ṣ. arrived in Ethiopia as a group and lived together in Aksum; one year after their arrival, they split into smaller groups and scattered throughout the highlands. Each group was subsequently named after the place in which they settled. Their exact number as well as their personal names are unknown. Unlike the Nine Saints, the Ṣ. remained together in groups till the end of their lives.

The available sources allow us to identify different groups of Ṣ.:

(a) The "Ṣ. of Baräknaha" (**ጻድቃን፡ ዘባረክናሃ**) were active in the region of Šəmäzana. This group is particularly known from the churches of ↗Mäṭära and Baräknaha, where their relics, already noted by the Portuguese in the mid-16th cent. (Whiteway 1902:26f.; cp. CRAxum no. 27), are still venerated.

Their story has been preserved in the *Gädlä Ṣadəqan zäBaräknaha*, attested in five mss.:

(1) a ms. from the church of Baräknaha (publ. Conti Rossini 1903, tr. Raineri 1979, 1996a); (2) the ms. Roma, ANL, Conti Rossini 78, fols. 12r–31r, 20th cent. (Strelcyn 1976:203f., no. 78; consulted by Raineri and added in the footnotes of his edition); (3) a missing ms. from the church of Baräknaha preserved in a copy in the church of Mäṭära (a fragment is publ. by Schneider 1963; the variants and the *mälkəᶜ* tr. by Raineri 1980); (4) the ms. Cambridge University Library, Bible House Library, Ethiopic 191, fols. 1ra–20va, 19th cent. (Cowley 1982:108f.; the same recension as [2]); (5) a ms. photographed by Emilio Ceccarini (Raineri 1996b:372, no. 64).

According to their Vita, the Ṣ. left their country ("Rom") and, by way of ↗Jerusalem and ↗Egypt, arrived in Ethiopia during the reign of ↗Əllä ᶜAmida. There they split into different groups and moved to various places. They took shelter in clefts in rocks and ate only grass. 30 years later, a rebellion broke out in the region of ↗Bur (Beccari 1912:133f.; CRStor 259; Ricci in MiscAethKur). On that occasion, God opened a passage through the earth so that king ↗Kaleb and his army were able to reach Mäṭära from Aksum without being seen. The king killed all the rebels and destroyed the town. Some time later, while the Ṣ. were eating grass in the region of Ṣiʾatä Männa, one of them was wounded by an arrow shot by the owner of the field. Thereafter they stopped eating and starved to death in their shelter. There, "a king" erected a wonderful church and a spring of healing water flowed out east of the church. The ↗*Sənkəssar* celebrates them on 19 *Ṭəqəmt*.

(b) The "Ṣ. of [the river] Kädiḥ" (**ጻድቃን፡ ዘከዲሕ**) are remembered in a number of sources:

(1) a text on the *Qəddusanä Kädiḥ* transmitted in ms. EMML 1479, fols. 283r–85v, 1459/60 (EMML vol.

IV, 597; Getatchew Haile in PICES 8, vol. 1, 653ff.); (2) a hymn from the collection ↗*ᶜArke* in ms. EMML 1279, fol. 72r (EMML IV, 303); (3) a hymn from the collection *Nägś* in ms. EMML 204, fol. 74r, ascribed to ↗Giyorgis of Gasəçça (EMML I, 215); (4) a hymn from the ↗*Zəmmare* in ms. Paris, BN Éth. 372, fol. 49rb–va (GrébGriaule III, 130, no. 68).

The text of their Vita is corrupted in several places to such an extent that it is sometimes hard to follow the plot. On 18 *Taḫśaś*, the Ṣ. left the town of Abᵓaza and reached the Kädiḥ. There an angel sent by God told them to spend the night by the river. They fell asleep on 24 *Taḫśaś* and never woke up. The news spread everywhere and numerous people, including clergymen and the faithful, flocked there, singing songs and offering up incense and prayers to God. Their bodies remained exposed to wild animals for five days, but were miraculously untouched. Those who gathered there buried them and built a church dedicated to Mary over their tomb. A golden cross was found at the tomb. They are commemorated in the *Sənkəssar* on 24 *Taḫśaś*.

(c) The activity of the "Ṣ. of ↗Ḥawzen" (**ጻድቃን፡ ዘሐውዜን**) is attested in the region of that name. The only source of information about them is the *Gädlä Ṣadəqan zäḤawzen*, transmitted in a recently discovered manuscript, which dates the coming of the Ṣ. to the 20th year of Anbäsa Wədəm's reign, "year of mercy 910" (1194 A.D.), after the reign of "Gudit, queen of Aksum" (↗Ǝsato; Brita 2008:6). The *Sənkəssar* remembers them on 24 *Ṭərr*.

(d) The "Ṣ. of Qaḥen" (**ጻድቃን፡ ዘቃሔን**) are so named after the area between ↗Wəqro and ↗Mäqälä, where two churches are dedicated to them.

Their Vita is transmitted in three recently discovered mss.:

(1) a ms. containing a short story which presents the same text as the *Gädlä Ṣadəqan zäBaräknaha* (1); (2) a ms. containing the *Zena kidanomu läṣadəqan zäMäṭära wäzäQaḥen* and the *Gädlä Ṣadəqan*, 1948 A.M. [1955/56 A.D.]; (3) a ms. of the *Gädlä Ṣadqan zäQaḥen* (Brita 2008:7).

(e) A church dedicated to the "Ṣ. of Dägʷe" (**ጻድቃን፡ ዘደጔ**) is located in the environs of Aksum. Their Vita, transmitted in a recently discovered manuscript, set their arrival in Ethiopia from "Rom" in the time of "Asfəḥ son of Abrəha" (Brita 2008:8). They are commemorated in the *Sənkəssar* on 29 *Ṭərr*.

Additionally, the tradition remembers other groups of Ṣ., whose hagiographies are not accessible at present: the Ṣ. of Abräntant (*Ṣ. zäᵓAwran Ṭant*; cp. ↗Däbrä Abräntant), the Ṣ. of Wäsif (commemorated in the *Sənkəssar* on 17 *Ḫədar*), the Ṣ. of Däbrä Asa (commemorated in the *Sənkəssar* on 5 *Ḥamle*), the Ṣ. of Qʷaᵓat, the Ṣ. of Tänkäḥe, the Ṣ. of Mädära, the Ṣ. of Akofin.

Antonella Brita

Sadiq al-Muᵓayyad al-ᶜAzm

S. *paşa* (Ottoman: ᶜAzm-zâde Sadik el-Müᵓeyyed; d. 15 October 1910, Istanbul) was born as one of the many grandsons of Aḥmad al-Muᵓayyad (1806–88), founder of the Muᵓayyad branch of the famous al-ᶜAzm family of Damascus. He entered military service in the Ottoman army and rose to the rank of a *farīq* [*ferik*] (lieutenant-general). Furthermore, he became *yaver* ('aide-de-camp') to the *sulṭān* Abdülhamid II. (r. 1876–1909).

In 1886 and 1895 (cp. Yılmaz 2004: correctly converted from Rumī-date), S. was sent to Benghazi upon the *sulṭān*'s orders, to make contact with the local leaders and sheikhs of the inner Sahara. These missions can be seen not only as a reaction to the ambitions of the Italians in Tripolitania, but also as part of the *sulṭān*'s "Islam politics" by which he tried to influence Muslim groups and movements which were not under the authority of official Ottoman religious institutions, especially in Arab countries and in North-Africa. S.'s diary, which he kept on his second journey, was published in 1314 H. [1896 A.D.] under the title *Afrika Sahrayı Kebirinde Seyahat* ('Journey in the Great Desert of Africa'). Later, S. supervised the construction of the Ḥiğāz telegraph line and, in 1901, became vice-director of the Directorate for Building of the Ḥiğāz Railway.

In 1904, after an Ethiopian diplomatic delegation had come to Turkey (1903; s. Orhonlu 1974: 165, year 1896 A.M. = 1903/04 A.D.), it was decided to send a small delegation in return to Ethiopia. S. was appointed as head of this delegation. In Addis Abäba he learned that the Muslims in this town had no great mosque for Friday Prayer. S. promised to ask *aṣe* ↗Mənilək II for a mosque and a cemetery. He was granted audience twice by the Emperor, where the Monarch explained that he loved his Muslim subjects like his Amhara subjects, and awarded S. the "Order of Solomon" on 13 June 1904. But in S.'s travel account, there is no mention of any promise by Mənilək to build a great mosque in Addis Abäba, unlike what is found in the secondary literature (ErlEth 77, 79, 106; Erlich 2002: 93; EAE vol. 3, 1031). S.'s diary was published under the title *Habeş Seyahatnamesi* ('Journey to Abyssinia') in 1904. After his mission to Ethiopia, S. was Commissioner in Bulgaria until 1908, and thereafter governor of Jeddah.

In 1905, another Ethiopian delegation came to Istanbul to negotiate about the monastery of ↗Dayr as-Sulṭān. During the talks, the question of building mosques was brought up in order to gain concessions. The Ottoman Cabinet Council even worked out a proposal on this matter (Orhonlu 1974: 165f.). But when the Ethiopians did not obtain their goal, Mənilək is said to have shelved the "promise" (ErlEth 77) mentioned above.

In 1908 an Arabic translation of S.'s itinerary was pulished in Cairo; however it is not a mere translation, but a revised and enlarged version of the Turkish original. S.'s journey marked a turning point in diplomatic relations between Ethiopia and the ↗Ottoman Empire, and his book, especially the Arabic version, is one of the most comprehensive accounts of a non-European visitor to Ethiopia at that time. In Turkey today where interest in the "Osmanlı" has increased and an edition in modern Turkish was printed in 1999.

Ṣafī b. al-ᶜAssāl, aṣ- ↗Ibn al-ᶜAssāl, aṣ-Ṣafī

Šafiᶜism

Š. (Arab. *al-maḏhab aš-Šafiᶜī, Šāfiᶜīya*) is one of the four schools of jurisprudence (*fiqh*) in Sunni ↗Islam. Š. is associated with the eponymous Muḥammad b. Idrīs aš-Šafiᶜī (also known as *imām* aš-Šafiᶜī; 767–820 A.D.) who began as a member of the School of Medina (cp. ↗Mālikism), before developing a set of methodological principles that gradually became the foundation of jurisprudence making a pivotal contribution to the systematization and institutionalization of Islamic legal science.

More a theoretician than a legal practitioner, aš-Šafiᶜī developed his methodology of jurisprudence as a response to the opposing tendencies of the mainly Kufa-based *ahl al-ḥadīṯ*, or the "Traditionists", who believed that the ↗Qurʾān and the Ḥadīṯ were the sole sources of the law on the one hand, and the Medina-based *ahl al-raʾy*, who took into consideration established practices ("what is commonly done") in specific areas as a basis for a rule of law, on the other. Aš-Šafiᶜī sought a synthesis between the two tendencies that would create uniformity across the *Dār al-Islām* ('Abode of Islam').

In his *al-Risāla fī uṣūl al-fiqh* (‘Treatise on the Foundations of Islamic Jurisprudence’) aš-Šafiᶜī revolutionized legal thought by theorizing and systematizing the methodology of jurisprudence and raising it to the status of a science. While he was more inclined to the *ahl al-ḥadīṯ*, his methodological synthesis systematized the other sources (*uṣūl*) of *fiqh*, namely *qiyās* (‘analogical reasoning’) and *iğmāᶜ* (‘consensus’) by grounding them in the revealed sources (Qurᵓān and Ḥadīṯ) which he understood as possessing the final authority in expounding law. He criticized Mālik and Abū Ḥanīfa (↗Ḥanafism) and came out against *taqlīd*, or the acceptance of the views of legal scholars as authoritative. This position might be perceived as somewhat contradictory since aš-Šafiᶜī’s authority is identified with the existence of a school.

The origins of the *maḏhab* as a separate and well defined school is still unclear and subject to debate among scholars. Aš-Šafiᶜī himself worked in Iraq, the Ḥiğāz, Yemen and later in Egypt where his teachings gained greater success. Recent revisionist scholarship argues that aš-Šafiᶜī was not the founder of a *maḏhab* but that a group of followers who referred to him can be traced to about one century following his death in Baghdad. This group was led by Abū l-ᶜAbbas b. Surayğ (d. 918) who also composed a *muḫtaṣar* (manual summing up general rules of law) and who is considered as the actual founder of the *maḏhab* (Melchert 1997: 68–115). The Iraqi legal scholars based much of their work on the Egyptian *fiqh* scholars who studied with aš-Šafiᶜī in Egypt, especially Abū Ibrāhīm Ismāᵓil al-Muzānī (d. 878), Abū Yaᶜqūb Yūsuf al-Buwayṭī (d. 846) and Abū Muḥammad al-Rabᶜ Murādī (d. 883/84) (Chaumont in EI², vol. 9, 186f.). Aš-Šafiᶜī also authored the magisterial *Kitāb al-Umm* in which he developed his legal thought and theories.

In its initial phases Š. spread into many areas of the Middle East and was able to establish itself in Egypt, Syria, Iraq, Ḥiğāz, Yemen, Iran, and Central Asia but competition with other legal schools, especially the Ḥanafiya, later shifted its distribution and influence in specific areas. Nowadays, it is the prevalent legal school in Lower Egypt, the Ḥiğāz, parts of Yemen and is practically the *maḏhab* of the Indian Ocean rim, from the Red Sea littoral, East Africa, the west coast of India and the vast majority of Muslims in South East Asia.

To a great extent, the diffusion of Š. along the Indian Ocean coasts went hand in hand with the circulation of Yemeni traders, itinerant scholars and migrants who introduced Š. *fiqh* texts and manuals from East Africa to South East Asia. The learned members of the *sādah* and *mašāyḫ* stratum were intensively engaged in the spread of Š. around the Indian Ocean (Bang 2003: 23; Martin 1971, 1974). This is also true in north-east Africa where the introduction and diffusion of Š. in Somalia and Ethiopia can be historically traced back to the centres of Š. learning in Yemen, especially in ↗Zabīd and Tarīm in ↗Ḥaḍramawt.

Among the very early known sources concerning the history of the legal schools in north-east Africa, al-Dimašqī (1256–1327 A.D.) signalled the presence of Š. in ↗Berbera. When ↗Ibn Baṭṭūṭa visited ↗Zaylaᶜ in 1337 he noted that the Somalis were Š. (CerStud I, 46). In the 14th cent. (1342–49), al-↗ᶜUmarī noted that while the inhabitants of the Muslim states of ↗Däwaro, ↗Arabäbni, Šarḫā, Bali (↗Bale), Dära and ↗Hadiyya were Ḥanafi (whose influence in the Ethiopian area also originated in the Yemen), the majority of the population of ↗Ifat (Awfāt) followed Š. This is corroborated by al-↗Qalqašandī who based his information on al-ᶜUmarī and noted that the majority of Muslims in the region follows Ḥanafism except in Ifat, where the Š. *maḏhab* was predominant (CerStud I, 44f.). Oral traditions collected in the late 20th cent. associate the presence of Š. with the ancestors of the ↗Argobba in Ifat as early as the 12th cent. Other oral data suggest that one of the possible early centres of diffusion of Š. was the locality of Qorare. A certain Ismāᶜīl Aḥmad is credited with its expansion in the area. Traditions relate of an older centre of Š. diffusion at ↗Mafud, where a local scholar, who died before the time of ↗Aḥmad b. Ibrāhīm al-Ġāzī, had brought the *maḏhab* from Egypt (HusIslam 65ff.)

In 1432 al-↗Maqrīzī noted in his *Kitāb al-Ilmām* that although the Š. are predominant in Ifat, a Ḥanafī minority was growing there. Other evidence suggests that a certain shift towards greater Š. influence to the detriment of the up to then Ḥanafi predominance might have occurred around the 15th cent.

Some clues as to the dynamics of the spread of Š. can be gleaned in the Arabic hagiographies of *šayḫ* ↗Ḥusayn of Bale, who had probably lived at the end of the 13th cent. The *Rabīᶜ al-qulūb* and the *Nuzhat al-asrār* describe two disputes of a juridical nature over the question whether beer and hydromel were permitted to drink. While the Ḥanafīs permitted their consumption *šayḫ* Ḥusayn adopted a position which declared these beverages *ḫarām*, or forbidden. According to the texts, the disputes ended with *šayḫ* Ḥusayn's position in advantage. The *Nuzhat al-asrār* also reports the introduction of two Š. manuals of jurisprudence widely used in Yemen, the *Kitāb al-tanbāh* and the *Kitāb al-Muhaddab* of al-Šīrāzī. They were introduced by one of *šayḫ* Ḥusayn's followers, *faqīh* Mūsā al-Muqrī who had studied in Yemen with Aḥmad Mūsā b ^{c}Uǧayl (d. 1291) and Ismā^{c}īl al-Haḍramī (d. 1298). Once *faqīh* Mūsā returned to Bale he was able successfully to spread Š. in the region (with the intercession of *šayḫ* Ḥusayn, according to the hagiographical account). Yet it seems that the effective success of Š. over Ḥanafism in southern Ethiopia took more time, possibly associated with strong links with Š. centres in Somalia such as Merka (Gori 2006: 203–06; CerStud II, 26).

Š. is prevalent in the lowland areas of ↗Wällo while the highland areas are inhabited by followers of Ḥanafism. On the basis of oral tradition Š. was propagated in Dawway thanks to the efforts of *muftī* Dāwūd b. Abū Bakr (d. 1234 H. [= 1818–19 A.D.]) who, following his training as a jurist in Zabīd, returned to Wällo and established a school in Gaddo (HusIslam 67).

It is known that Š. legal texts were present in the libraries of learned scholars and jurists in places such as ↗Harär (Drewes 1983: 68–79). Š. manuals, especially those used in Yemen or composed by Yemeni jurists, are known to be in circulation in Ethiopia and Eritrea nowadays. E.g., in the 1990s Gori noted the presence in ↗Asmära of *al-Muqaddima al-ḥadramīya fī fiqh as-sādati aš-šāfi^{c}īya* by ^{c}Abdallāh b. ^{c}Abdarraḥmān Bā Faḍl al-Ḥaḍramī and printed in Singapore (Gori 1995: 96f.).

It seems that Š. has had a long presence in Massawa, and oral traditions in the town point to the so-called Š. mosque as the oldest. With Ottoman expansion in the area in the mid-16th cent. and the propagation of Ḥanafism – the official Ottoman *maḏhab* – it became the prevalent legal school in the port town and the wider area. In the broader Eritrean context, Š. was prevalent among certain ↗Ǧäbärti, the coastal ^{c}Afar and some Təgre-speaking groups (^{c}Ad Sawra, ↗^{c}Ad Mä^{c}allim). In 1931 a census reported that 9 % of the Muslim population of Eritrea followed Š. (65 % Mālikism, 26 % Ḥanafism).

In the mid-20th cent. and in addition to the Eritrean followers of Š. it was reported that Š. was prevalent among part of the Muslims in Wällo, the Oromo of south-west Ethiopia, Harär and the surrounding Oromo groups, the ↗Gurage, ↗Səlṭi, ↗Sidaama, ↗Beni Šangul and among most Somalis and Yemeni immigrants (TrIslam 232) Followed by the Somalis and Oromo, Š. is the most prevalent *maḏhab* in North-east Africa.

Safuu

The socio-religious concept of S. in ↗Oromo cosmology specifies the relations between things, and, in so doing, explains how an individual should properly live. The concept of S. includes different connotations of balance, respect, interdependence, distance, avoidance, acceptance of constraint and a given order, as well as perceptions of power and rivalry.

The nature of S. is the result of the cosmic and social order given to the world by the sky-god ↗Waaqa and the Earth (Laafa) from the very beginning (Bartels 1990: 172). Here, every human being, animal, plant, element or object has its own *ayyaana* (spirit) and is thereby distinguished from others by particular characteristics and by a specific place in a set of relations to other things existent in the world. Certain relations are formally perceived as being S. towards each other: water and cattle, ashes and dough, big and small, tree-stumps and toes, man and cattle, thorns and the soles of the feet, elder brother and younger brother, daughter and mother, slave and master, etc. (Bartels 1990: 171). S. relations are marked by distance and the maintenance of boundaries: each should follow its own way and not get mixed up (ibid. 339). Thus, world-order is not always perceived as harmonious; a possible threat of oppositions and rivalries that have to be well balanced is contained here as well. A predictable and functional equilibrium might be kept only by means of avoidance and respect, thereby assuring Waaqa's blessings (Van de Loo 1991: 276f.).

In daily interaction, S. mainly applies to a person's sense of moderation, expressions of which are a gentle style and abstention from disruptive behaviour. Being able to be calm or to calm someone else are said to be a mark of S. (Van de Loo 1991:276ff.). This holds not only for interhuman relationships, but also for the treatment of ones' cattle. In this sense, S. can be perceived as an individuals' mature capacity to accept and handle certain constraints or relations of power, e.g., those between father and son (Van de Loo 1991: 276f.).

What goes beyond human understanding, will and power, things that only Waaqa knows, can be described as S. as well (Bartels 1990: 331f.). *Safuu ḍa* ('it is S.') is also a common expression of astonishment, fear, pain, pity or shame (TilDic 511).

Among the ↗Mäčča Oromo, S. was invoked every eight years in a ceremony preceding the proclamation of the laws (↗*Seera*) of the ↗*gadaa*, since both were seen as the very basis of society (Bartels 1990: 334).

Sägäde

S. (**ሰገዴ**) is a historical region in north-west Ethiopia, near ↗Wälqayt south of the ↗Täkkäze River (for location s. map for Səmen). It is mentioned in a manuscript claiming to be concerned with the time of the legendary ↗Mənilək I (Mondon-Vidailhet 1904: 259–68; Quirin 1992: 23).

By the 14th cent., S. is listed as one of the places where those considered ↗*Ayhud* by the Christian state lived. These *Ayhud* of S., along with those of ↗Wägära, ↗Səmen and ↗Ṣällämt rose in an (unsuccessful) revolt against *aṣe* ↗ᶜAmdä Ṣəyon in 1332 (PerrAmdS 293; Quirin 1992: 49). S. is mentioned again in the 15th cent.: after *aṣe* ↗Yəsḥaq defeated the ↗Betä Ǝsraᵓel of Wägära, traditions assert that some of the people dispersed to S. (Quirin 1992: 55f.).

By the 19th cent., a traveller observed that the Betä Ǝsraᵓel in S. were known as "*fogära*", perhaps a remembrance of earlier Betä Ǝsraᵓel dispersals after defeat in the Lake Ṭana region since ↗Fogära was a historical region just east of the lake (Halévy 1869: 287; Quirin 1992: 65f.).

With the conquest of the Betä Ǝsraᵓel in S., the region was gradually incorporated into the Ethiopian state. In the 17th cent., it was a well-known province of the state and was said to have paid tribute in ↗gold (BeckHuntAlm 13, 15f., 18; PankIntro 187). In 1677, *aṣe* ↗Yoḥannəs I made peace between two warring factions in the region, including the governor of S. (GuiIohan 18). In 1768, *aṣe* ↗Iyoᵓas appointed a *däǧǧazmač* of S. (GuiIyas 243).

In the late 19th cent., according to oral traditions, S. is mentioned with regard to the use of Betä Ǝsraᵓel artisans (Quirin 1992: 171). Thus, although the region was much less significant than either Səmen or Ṣällämt, it did continue to be a location where the Betä Ǝsraᵓel lived into the 20th cent.

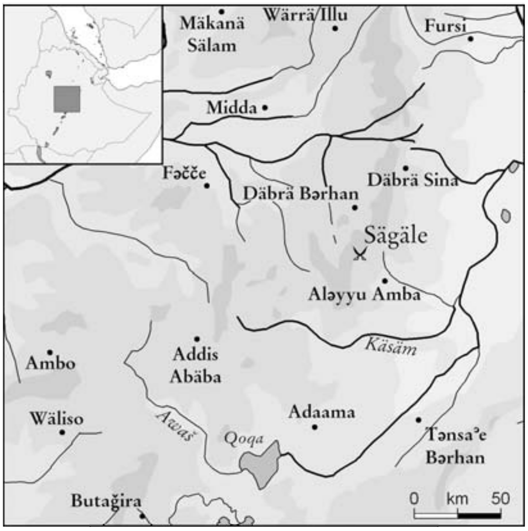
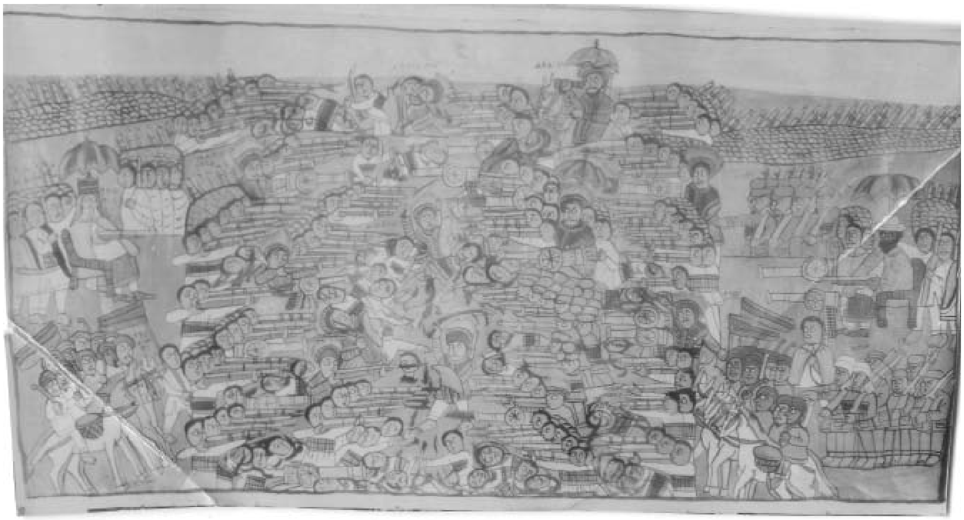
Sägäle

S. (**ሰገሌ**) is the name of a locality in the Ṭarra district of Northern Šäwa, ca. 20 km to the south





Early 20th-cent. traditional painting of the battle of Sägäle; photograph from the collection Carl Haertel, courtesy of Johannes Bohnenberger

of ↗Däbrä Bərhan. It is known as the site of an important battle relating to the ↗coup d'état of 1916 (s. EAE vol. 2, 1081), which resulted in the deposition of *ləǧ* ↗Iyasu and the ascension of ↗Zäwditu. It was fought on 27 October 1916 between the troops of the Šäwan lords headed by *fitawrari* ↗Habtä Giyorgis Dinagde and *ras* Täfäri Mäkʷännən (future *aṣe* ↗Ḫaylä Śəllase I) and the army of *ləǧ* Iyasu's father, *ras* ↗Mikaʾel Ali.

Mikaʾel Ali had moved south from his province of ↗Wällo towards Addis Abäba as soon as the new government was formed. His army counted ca. 30,000 soldiers. On 17 October, at Tora Mäsk, Mikaʾel defeated and killed *ras* ↗Ləʿul Sägäd, whose troops numbered ca. 11,000. They possessed several thousand modern rifles, some cannons and ten machine guns.

Habtä Giyorgis's forces were far less in number, and he therefore waited until Täfäri's troops reached him on 21 October. They arrived on 22 October and camped at Qəmbəbit near Šäno, ca. 10 km to the west of S. Täfäri was accompanied by *əč̣č̣äge* ↗Wäldä Giyorgis who insisted on participating. Thanks to additional help from the rulers of the southern and western provinces, by the time the battle started, the new government's forces were much stronger in number than those of their adversaries.

Habtä Giyorgis and Täfäri Mäkʷännən waited some more days. This gave them the opportunity to relocate to a better strategic position and, at the same time, it weakened the Wällo army which faced problems with supplies.

The fighting was started on 27 October at dawn by *ras* Mikaʾel. He stationed his army officers on the right and left flanks, and positioned himself in the centre. *Ləǧ* Iyasu and his army did not arrive in time to support *ras* Mikaʾel; on the day of the battle, they were in the region of ↗Ankobär.

Fitawrari Habtä Giyorgis led the vanguard and *ras* Kaśa Darge was positioned at the rear of Mikaʾel's forces, other officers on the right and left flanks. In the first clash, the Wällo forces had some success, but Mikaʾel did not manage to develop it. At some point, his machine guns run out of munition, and his artillery was disabled by the Šäwans. *Ras* Täfäri joined battle about midday, when the Šäwan forces were already winning.

At 3.30 p.m. the battle was over; this was announced by telephone to Addis Abäba. The number of dead and wounded was high. *Ras* Mikaʾel tried to resist until the last moment but finally had to surrender.

Täfäri offered an amnesty to the surviving Wällo soldiers, provided they swore loyalty to the Empress Zäwditu. Two Mikaʾel's officers, *ras* Yəmär and *fitawrari* Sirah Bəzu, escaped.

The victorious army, led by Täfäri, entered Addis Abäba on 3 November and was greeted by Zäwditu.

Sagan

The S. River is a seasonal river rising in the northern ↗Amarro mountains east of Lake Č̣amo. From there it flows south and then west to join the Dullay (Wäyto) River. Its course is determined by tectonic forces: the upper part follows the Ethiopian Rift Valley, while the western breakthrough of the river is likely to be in line with the southern boundary of the ↗Konso horst fault (Nowack 1954: 18).

Among the first Europeans to see the S. River and partly follow its course were members of the expeditions of Donaldson Smith (1894) and Vittorio ↗Bottego (1896). In 1893, the Italian explorer Prince Ruspoli (after whom Lake Č̣amo was first named) lost his life in the S. valley near ↗Burği when ↗hunting elephants. In Konso cosmology the S. valley stood for the wilderness per se, however, the valley today has lost its richness in game described by early-20th-cent. travellers (s., e.g., Erlanger 1902: 70; Hallpike 1972: 150, 258, 324, 295). For ritual hunts relating to their ↗*gadaa* ceremonies, Burği and Konso went down to the upper part of the S. valley. Today, Konso have irrigated fields there. The river passes the territories of further ethnic groups, such as ↗Guğği, ↗Boorana, ↗Gawwada and ↗Arbore.

Sasse (1986) demarcated a geographico-linguistic area named the "Sagan language area" (stretching from south of Lake Č̣amo across the valley of the Dullay River to the west and beyond the upper course of the S. to the east, and bounded on the south by the lower course of the S.). The area is inhabited by some 15 groups which have several socio-cultural features in common and are subsumed under the collective term "Burği-Konso cluster". Genetically, their languages belong to four different language groupings (Konsoid, ↗Dullay, Highland East ↗Cushitic, and ↗Omotic), but they share a "considerable number of specific phonological, grammatical, lexical and semantic isoglosses" (Sasse 1986: 340). Therefore, Sasse rejects a strict genealogical tree model and favours instead an areal classification which would parallel with and take account of the exchange of socio-cultural features within the Burği-Konso cluster.

Ṣägga

The Amh. expression **የጸጋ፡ ልጅ** (*Yäṣägga ləğ*, 'Son of Grace'), frequently abbreviated as **ጸጋ** (Ṣ., 'wealth, gift, honour etc.', from Gə^{c}əz *ṣäggäwä* 'to give', cp. KWKDic 743), became a byword for a Christological position (↗Christology) that, by the 18th cent., had grown as a religious, political and geographical affiliation. The label was often deemed to be derogatory by Ṣ. supporters (cp. ibid. 643).

Christology entered a period of full-blown crisis with the ↗Jesuit Mission in the country (1555–1634). Alfonso ↗Mendes and Peter ↗Heyling are both credited by tradition with deliberately planting discord (TSTarik III, 105–08; Conti Rossini 1916: 439, n. 1). The bone of contention between the various groups was essentially on how the "human nature" of Christ was "honoured". The ↗*Karra* party maintained that the union of the Word of God with humanity, implied the glorification of the flesh at the very moment of Incarnation. The ↗*Qəbat* taught that the humanity of the Lord was honoured by the anointment of the Holy Spirit. The followers of Ṣ., in what appears to be a middle way, believed that whilst the flesh was honoured by the union with the Word, through the anointment of the Holy Spirit Jesus was constituted the firstborn of the faithful, priest, prophet and king. Both Ṣ. and *Qəbat* thus accepted the formula **መንፈስ፡ ቅዱስ፡ ቅብዕ**, *mänfäs qəddus qəb*^{c}, 'the Holy Spirit is the ointment'. The term *tä*^{c}*aqəbo* ('preservation') was used by the Ṣ. party to underline the co-existence of both the divinity and the humanity of Christ after his Incarnation, the former not suppressing the latter.

The followers of *Karra* recognized "two births" in Christ (↗*Hulätt lədät*). The Ṣ. carried then the banner of *Sost lədät*, or 'three births', from the Father from all eternity, from the Virgin without human seed, and also by the work of the Holy Spirit in the womb of Mary (termed *yägəbr lədät*, 'generation of action'), which restored her to Adam's "natural purity" (**ንጽሐ፡ ጠባይዕ**). There is no solid evidence suggesting that the *Sost lədät* party taught that Jesus received this grace at his baptism in the river Jordan.

The emergence of the Ṣ. teaching seems difficult to date. Guidi (1900–01: 10) found its earliest mention in the second half of the 18th cent., during the reign of ↗Iyoʾas; Ethiopian tradition rather speaks of the reign of ↗Yoḥannəs I, nearly a century earlier. In any case, the controversy did not attract much attention until the ↗*Zämänä mäsafənt*. Ṣ. has always been associated with the monastery of ↗Däbrä Libanos, and its power base was mainly central Šäwa, where it enjoyed the support of regional leaders such as ↗Amməḫa Iyyäsus and attracted several scholars.

The first important council involving Ṣ. took place at ↗Däbrä Tabor under *ras* ↗Gugsa Märsa, where Ṣ. and *Qəbat* stood together against *Karra*. Gugsa favoured Ṣ., but *abunä* ↗Qerəllos opposed Ṣ. and *Qəbat* and excommunicated them. The second assembly was held in ↗Gondär, where church scholars sent by *nəguś* ↗Śahlä Śəllase discussed doctrinal questions before *abunä* ↗Sälama. The metropolitan, a defender of the *Hulätt lədät*, lost and was expelled from the town, seeking the protection of *däǧǧäzmač* ↗Wəbe in Təgray. The metropolitan and his position were rehabilitated with the advent of ↗Tewodros II who, willing to subdue the Šäwans, at the council of ↗Amba Č̣ara called them to repudiate the Ṣ. and *Sost lədät* doctrine in favour of the *Karra* and *Hulätt lədät*. The Ṣ. was briefly reinstated by *nəguś* Mənəlik, until ↗Yoḥannəs IV convened the council of ↗Boru Meda in May 1878. Here, only *Karra* emerged as the Orthodox doctrine. At least two prominent Ṣ. followers received physical punishments at the order of the Emperor: they had their tongues cut off and their upper and lower limbs amputated. Boru Meda represents the beginning of the end of the Ṣ. and *Sost lədät* doctrine.

Though in periods when Ṣ. was forbidden systematic attempts were made to remove it from religious writings, its traces can be detected in several ↗*Andəmta* commentaries (e.g., Tedros Abraha 2001).

Verdicts such as Ṣ. "was a radical heresy […] a tendency towards Adoptionism was clear", or "it effected a sharp degree of subordination and separation within the Trinity" (CrumMis 25f.) and "pro-Nestorian heresy, crypto-catholic" (Getatchew Haile in CE vol. 3, 986) do not seem to do justice to the doctrine (Uqbit Tesfazghi 1973: 82 n. 32). The enthusiastic evaluation of Ṣ. by some Catholic scholars, particularly Ayala Takla-Haymanot (Mario da Abiy-Addi), also needs to be considered with some caution.

Ṣägga Amlak

According to ↗Betä Ǝsraʾel tradition, Ṣ.A. (ጸጋ፡ አምላክ) was a son of *aṣe* ↗Zärʾa Yaᶜəqob. He became attracted to the teachings of *abba* ↗Sabra and converted to the faith of the Betä Ǝsraʾel. He settled with his teacher in Huhʷara. His father offered a reward for information about him and his location and sent his army to find him. God, however, hid the Betä Ǝsraʾel settlement from them. In memory of this event he was named S.A. ('Grace of God'). Ṣ.A. is also associated with other great figures of Betä Ǝsraʾel monasticism, including *abba* Saquyän.

The phenomenon of a Christian monk joining the Betä Ǝsraʾel is attested in the case of the 14th-cent. monk ↗Qozmos. Moreover, there are also traditions of clashes between Zärʾa Yaᶜəqob and his sons, which resulted in the sons joining the ↗*ᶜAyhud*. According to the ↗*Ṭomarä Təsbəʾət* (Getatchew Haile 1991: 67) Gälawdəyos staged a failed coup against his father. He "became a Jew, abandoning his Christianity and denying Christ".

Ṣägga Krəstos

Ǝc̣c̣äge Ṣ.K. (ጸጋ፡ ክርስቶስ, d. October 1696) was a prominent 17th-cent. ecclesiastic and the 25th head of the community of ↗Däbrä Libänos of Šäwa and the "house of Täklä Haymanot" at ↗Azäzo (CerDLib III, 170).

Ṣ.K. was first appointed *əc̣c̣äge* during the reign of *aṣe* ↗Yoḥannəs I, in 1680/81 (Perruchon 1899: 175). Two years later, in 1682/83, he was dismissed by the newly crowned *aṣe* ↗Iyasu I, a victim of the new ruler's pro-↗*Qəbat* politics (cp. GuiIohan 62 [tr.]; BegCron 55; BassÉt 140). *Abba* Həryaqos of ↗Mägʷina became the new *əc̣c̣äge*.

Ṣ.K. participated in several church councils during 1679–80. The first one concerned the issue of the ↗relics of *abunä* ↗Ewosṭatewos (GuiIohan 40 [tr.]; CerLib II, 178) and favoured Iyasu I's decision to honor the relics, despite the opposition of the monks of Däbrä Libanos. The fact that Ṣ.K. took the same position as Iyasu confirms Ṣ.K.'s bond with the Emperor. During the council of May 1680, the "houses" of Täklä Haymanot and Ewosṭatewos were engaged in fierce argument; Ṣ.K. argued mainly with *abba* Ṭäbdä Krəstos of ↗Gonǧ (GuiIohan 48f. [tr.]).

Ṣ.K. was reappointed by Iyasu on 16 November 1693. He remained in office until shortly before his death in October 1696 (CerDLib III, 178f.). The "short chronicles" do not specify who deposed Ṣ.K. the second time (cp. BassÉt 155), however the Chronicle of Iyasu indicates that this was the choice of the monks (GuiIohan 192 [tr.]; BegCron 70). He was succeeded by *əc̣c̣äge* Yoḥannəs (BegCron 67); after the death he was buried in Däbrä Libanos.

Elsa Rossignol

Ṣägga Zäʾab

Ṣ.Z. (ጸጋ፡ ዘአብ, "Zagazabo" in Portuguese sources, b. ca. 1465–75, d. ca. 1539–45, probably on an unachieved return journey from Portugal to Ethiopia [Andrade 1796, part III, ch. LXXII]) was an Ethiopian Orthodox monk and ↗*liqä kahənat* who twice, in 1520 and 1526, served *aṣe* ↗Ləbnä Dəngəl as his emissary in Portuguese affairs. His second mission even took Ṣ.Z. to Portugal itself where his subsequent collaboration with Damião de ↗Góis produced the *Fides, religio moresque aethiopum* ('The Faith, Religion and Customs of the Ethiopians', ed. Uhlig – Bühring 1994). First published in 1540, the *Fides*, together with Francisco ↗Alvares's *Prester John* which appeared in the same year, is one of the earliest reliable accounts about Ethiopia to have been printed in Europe.

Probably in continuation of a pilgrimage to the Holy Land, Ṣ.Z. already at an unknown time before 1520 had been to Italy. There he had picked up some Italian and even learned a little Latin (BeckHuntAlvar 182, 294, 420). His thus acquired cultural and linguistic familiarity with Catholic Europe, however rudimentary, in 1520 likely played a major role in making him Ləbnä Dəngəl's choice as head of the Ethiopian party that received the Rodrigo da ↗Lima mission in ↗Angot and from there conducted it to the royal ↗*kätäma* in Šäwa. While Alvares in his account does not mention Ṣ.Z. by name, it can contextually be reliably inferred that it was indeed he who led – and supervised – the Portuguese on their way through central Ethiopia (ibid. 419, n. 1).

The relationship between Ṣ.Z. and the Portuguese delegation initially was not free of tensions, with the Europeans being particularly irritated by harsh punitive measures that their guide on several occasions took against subordinates (BeckHuntAlvar 182, 259f.). Ṣ.Z.'s determined attempts to prevent the members of the Portuguese delegation from any outside communication before they had been received and vetted by the monarch and his retinue were a further cause of discord. Here however Ṣ.Z. did not follow his whims but simply executed his orders which themselves followed long-established local procedures. Over the years though the relationship between the Portuguese and Ṣ.Z. improved and even became friendly, as shown by the formers' wholehearted approval when, in 1524, Ləbnä Dəngəl proposed that Ṣ.Z. accompany them as his ambassador to Portugal (ibid. 420).

It was only in April 1526 however that Ṣ.Z. and the Portuguese party left Ethiopia. Sailing via India, they arrived in Lisbon in July 1527. There Ṣ.Z. was received with all honours by King ↗João III and was well provided for. Soon though he became unhappy over the denominational animosity and polemics he experienced in an increasingly self-consciously Catholic country at the beginning of Europe's denominational age (Uhlig – Bühring 1994:[78–86]/256–65, [93]/277f.). Ṣ.Z.'s frustration was further increased by the fact that he was not allowed to travel to Rome and deliver a letter to the Pope that Ləbnä Dəngəl had entrusted to him (ibid. 42, [19]/173, [32]/188).

In 1533 though Ṣ.Z. met and befriended the humanist scholar Damião de Góis. Ṣ.Z.'s role in their subsequent collaboration that eventually produced the *Fides* was much more than that of an informant. Rather he himself in Portuguese wrote a draft version of the text which de Góis then, authorized by Ṣ.Z., edited and translated into Latin (Uhlig – Bühring 1994:32ff., [52f.], 211f., [94], [93]/278).

Ṣäggaye Däbalqe

Ṣ.D. (**ጸጋዬ፡ ደባልቄ**, also Ṣäggaye Däbälke, b. 1937, d. 2 February 1977, Addis Abäba) was a ↗music critic, lecturer, and composer. During the early 1960s, he was sent to Hungary to study music composition. Ṣ.D. taught music theory at the National (Yared) School of Music that trains students to be bi-musical, bi-lingual, and bi-cultural. Ṣ.D. was an intellectual who sought to broaden the scope of *zämänawi musiqa* ('contemporary [art] music' or 'modern [popular Ethiopian] music') by integrating other musical idioms into the basic Ethiopian music structure in intercultural, art, and popular music genres. His composition "Goferie" in *Ančihoy Qəññət* utilized an Ethiopian traditional melody scored for a Western string ensemble incorporating Western fugue and contrapuntal techniques framed by the sonata form. As Music Director of the Ethiopian Broadcasting Service, S.D. recorded music of Ethiopian musicians for its archives in the early 1970s.

Acting as censor, Ṣ.D. took particular care to select music and texts for broadcasts acceptable to *aṣe* Ḫaylä Śəllase I. Married and father of five children, Ṣ.D. was a member of the Creative Arts Center Advisory Committee and the second highest official at the Ministry of Culture, Sports, and Youth. He authored several articles in the *Ethiopian Mirror*, *Ethiopian Herald* and *Yared Music School Annual*, including a criticism of ↗Orchestra Ethiopia. The Ethiopian People's Revolutionary Party was implicated in his murder at home, as it sought to attack the government directly through urban terrorist tactics.

Ṣäggaye Gäbrä Mädḫən

The Poet Laureate Ṣ. (**ጸጋዬ፡ ገብረ፡ መድኅን**; b. 17 August 1936, Boda, 30 km south of Ambo, d. 25 February 2006, New York) was an eminent poet and playwright. His father, *ato* Gäbrä Mädḫən Qawesa, was an Oromo from Mäč̣č̣a, and his mother, *wäyzäro* Fälläqäčč Daññe Ḫaylu, an Amhara from Ankobär.

After receiving a traditional ↗education, Ṣ. went to an elementary school in ↗Ambo (1948–52). His first play, written in English at the age of 13, about the tyrant Dionysius I of Syracuse, was performed at the school in the presence of *aṣe* Ḫaylä Śəllase I.

In 1956, Ṣ. graduated from the Commercial Secondary School in Addis Abäba. In 1959, he received a Bachalor of Law at the Blackstone School of Law in Chicago. In 1959–60, Ṣ. was granted a UNESCO scholarship to study experimental ↗theatre, which enabled him to visit the Royal Court Theatre in London, the Royal Theatre at Windsor, the Comédie Française in Paris and the Opera in Rome.

Upon his return, Ṣ. started his service at the Ḫaylä Śəllase I Theatre, as Acting Director (1961–71) and General Manager (1967–74). After the ↗Revolution he was appointed Permanent Secretary at the Ministry of Culture and Sports (1975–76), and in 1977 became Assistant Professor at ↗Addis Ababa University, Department of Education. He served as Secretary General (1978–79) of the Ethiopian Peace, Solidarity and Friendship House. In 1988 Ṣ. was an Adviser in the Ministry of Culture.

Ṣäggaye Gäbrä Mädḫən ("Tsegaye Gabre-Medhin"); photo 2003, courtesy of the family

Ṣ. was a prolific playwright and poet in Amharic and English, as well as in Oromiffaa. He translated plays by Shakespeare, Molière and Brecht into Amharic (cp. ↗Amharic literature: Amharic drama). Among his various prizes and awards for his literary contributions are: the Ḫaylä Śəllase I International Prize for Amharic Literature (1966); Ethiopia's Golden Red Star Award (1987); the Free Expression Award (granted by the Human Rights Watch Organization in 1994); the Gold Laurel Award with the title of Honorable Poet Laureat (granted by the Congress of World Poets and United Poets Laureate International in 1997).

Ṣ.'s international fame, esp. in Africa, grew steadily. His most significant play in English, *Oda Oak Oracle,* was staged in both African and European countries as well as in the United States. Ṣ. wrote the lyrics for the anthem of the ↗Organization of African Unity in 1986. In 2002 Ṣ. was a candidate for the Nobel Prize for Literature.

The first collection of 52 of his Amharic poems was *Ǝsat wäy abäba* (1973/74). As an author, Ṣ. saw it as his duty to expand and enrich the language. His highly specific and innovative style is full of neologisms and sometimes difficult to understand. The new poetic form generated by Ṣ. is nowadays called **ስምንትዮሽ፡ ቅኔ** (*Səmməntyoš qəne*, 'Eight-syllable ↗*qəne*') or **የጸጋዬ፡ ቤት** (*Yäṣäggaye bet*, lit. 'Ṣ.'s verse').

The poetry of Ṣ. combines elements of various Ethiopian cultures. His plays and poems such as *Ǝsat wäy abäba,* or *Hahu wäym Päpu* (1990), are full of dialectical tensions.

Alongside his literary pursuits, Ṣ. was deeply interested in world history, mythology, philology, anthropology, theology, etc. (cf., e.g., his introduction in Tsegaye Gabre-Madhin – Tessore 1984). His *magnum opus* under the title *Kabara Afraqa* (1997) was devoted to pre-classical African culture.

Ṣ. was actively engaged in the African freedom movements. Throughout his life, he was an adherent of ↗Pan-Africanism and ↗Ethiopianism (cf., e.g., Teklu Tabor 1993). He supported the ↗Revolution in Ethiopia and authored several pro-revolutionary plays. Nevertheless, his relationship with the *Därg* regime deteriorated quickly. In fact, Ṣ.'s plays, essays and poems have repeatedly been subject to censorship and frequently banned by the authorities under all regimes, starting from the 1950s and continuing into the 1990s.

In 1998, Ṣ. went for treatment of his diabetes to the USA, where his children lived. He continued his intellectual productivity and activist militancy.

Ṣ. was survived by his wife, *wäyzäro* Lakäčč Bitäw, three sons and three daughters. He was buried in Addis Abäba, in the ↗Qəddəst Śəllase Cathedral.

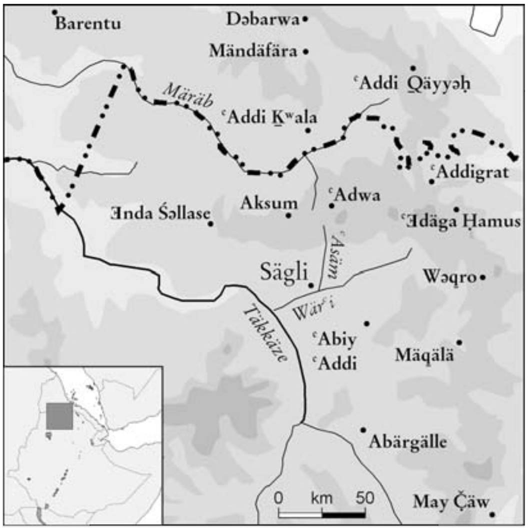
Sägli

S. (**ሰግሊ**) is the name of a village and an administrative district (*ṭabiya*) south of ↗Aksum, which was formerly known for its production of carpets (Tgn. *mənəṣaf*, Amh. ↗*Mənṭaf*) and curtains or hangings (↗*Mägaräğa*). Thus, the term S. is also used to designate hangings produced in S.

S. *ṭabiya* is surrounded by the important provincial border river Wärᶜi and the River ᶜAsäm, flowing from ↗ᶜAdwa. Historically, S. was administratively linked to Aksum. In the mid-20th cent. S. belonged to the Naᶜadär *wäräda* under Aksum, later to May Qänätal *wäräda*. Since the 1990s' administrative reform, S. belongs to Wärᶜi Läk̠ä *wäräda*.

In oral tradition the origin of S. is linked with the Solomonid princess Krəstosawit, the wife of the late 16th-cent. Təgrayan governor ↗Kəflä Waḥəd (genealogies s. Mäsfən Zärabruk̠ Mängäša 1997: 68f.). S. was allegedly given to her as a *gʷəlt* on the occasion of her marriage. According to a manuscript kept in the monastery of Ǝnda Maḫbär, in the princess's period, or later, under *ras* ↗Mikaᵓel Śəḥul, the inhabitants of S. received the privilege of working as craftsmen for monasteries and nobles. Muslims also settled in S., working as weavers (*šəmane*).

Christian inhabitants of S. were active as masons and weavers of ↗silk carpets and hangings (allegorically *ayärä sämayat*, 'the air of the heavens'). These textiles were produced in caves below the monastery of Ǝnda Maḫbär and were delivered to monasteries and churches all over Təgray (cp. Gervers 2004). In addition, there were potters and blacksmiths, called ↗Kayla. In



S. this term seemingly meant both Christian and ↗Betä Ǝsraᵓel craftsmen; they allegedly intermarried with Muslim Yemenite migrants. Local tradition reports that the Kayla were abducted, perhaps in the early 19th cent., by nobles who wanted to use their services. Some descendants of Muslim craftsmen still live in Ḥadduš ᶜAddi near S., but craftsmanship has ceased to flourish.

Gunpowder was traditionally produced from so-called *gunfal* stones in S., mixed with charred wood and sulphur from Dallol (Tewolde Berhan Egziabher et al. 1993). Marble was traditionally mined in Fälafəl in S.

Important centres of worship in S. are the two churches dedicated to Maryam; Ǝnda Iyäsus; Baᵓata; Giyorgis, built by *aṣe* ↗Iyoᵓas I; and the monastery of Ǝnda Maḫbär on a hillside above the ᶜAsäm, in which Mikaᵓel Səḥul is said to have been raised (he was buried in Dagna near S.). Ǝnda Maḫbär, which once hosted around one hundred monks, possesses an important manuscript collection and other historical objects. Ruins on a hill overlooking the lowlands are said to have belonged to an ancient "*nəguś* Inena". Other ruins ascribed to local nobles also exist around S.

Most inhabitants of S. today claim descent from Krəstosawit. S. is known as the origin of several important nobles, who were active in ᶜAdwa.

Ṣäḥafe lam

Ṣ. (**ጸሐፌ [ጸሓፌ]፡ ላም**, also *ṣaḥafe laḥm*, *ṣaḥafä lam*, *ṣaḥaf lam*, *ṣafälam*, *ṭafälam*, lit. 'the one who registers the cows') is an old title, associated with the governorship of a few important provinces (TadTChurch 97). Attested in a document of *aṣe* ↗Lalibäla with no indication of territorial extension or link to a specific region (Ṣ. Səbḥat, s. CRDLib no. 7B), it appears later as attached to the governors of Qəda (a historical region in southern Təgray) and Amḥara (s. EAE vol. 5; MarAmdS 53; KrAmdS 3 [text]). More explicitly than ↗*nägaśi*, ↗*nəguś* and *ḥaṣani* (↗*Aṣe*), this title betrays the original function of the office, i.e. registering and sequestering cattle for royal tribute (which would in turn reflect a conspicuous feature of the economy and "wealth" of those regions, cp. PancSoc 7).

Under *aṣe* ↗Zärᵓa Yaᶜəqob both Amḥara and Šäwa had a Ṣ. as governor (PerrZarY 15f., 101), but in 1453 the Emperor ordered the revenues of the Ṣ. of Šäwa (as well as of other governors) be transferred to ↗Däbrä Libanos of Šäwa (ibid. 101). *Aṣe* ↗Bäᵓədä Maryam put also ↗Damot under a Ṣ. (ibid. 111), while Qəda was still ruled by another Ṣ. (ibid. 145). In the reign of Bäᵓədä Maryam', the Ṣ. of Šäwa was a certain Däbrä Ṣəyon (ibid. 153). In the 16th cent., on the eve of the wars against the Muslim, ↗Alvares observed the same distribution of the title. However, he reports that, in 1521, *aṣe* Ləbnä Dəngəl – like Bäᵓədä Maryam before him – "removed" the Ṣ. of Amhara and "passed on to the churches the lordship" of this region, with ↗Mäkanä Śəllase holding a special position (BeckHuntAlvar 257). How long this new order was to last is unknown, but under *aṣe* ↗Śärṣä Dəngəl, some time after the Muslim wars, the old order was revived with Ṣ. governors for Damot, Šäwa and Amhara (cp. CRHist 49, 83 [text]; cp. also the same order in LudHist lib. II, cap. 17, § 8).

The 8th and 10th position of the Ṣ. in the official "order of precedence" of courtiers and regional governors was confirmed by *aṣe* ↗Iyasu I and *aṣe* ↗Bäkaffa (GuiIohan 145f., 293 [text]). In the 17th–early 18th cent., the Ṣ. of the "new Damot", on the northern bank of the ↗Abbay, was an important official, repulsing the Oromo raids into Goǧǧam and campaigning in several places from the southernmost region of the ↗Gondärine kingdom. These governors seem to have all possessed the rank of ↗*däǧǧazmač*.

In the early 17th cent., under *aṣe* ↗Susənyos, the Ṣ. of. Damot was *däǧǧazmač* ↗Bukko; the Ṣ. of Amhara, appointed probably after *däǧǧazmač* Hafä Krəstos, was *däǧǧazmač* Śärṣo (↗Śärṣä Krəstos), who extended his authority also over ↗Mänz and ↗Atronsä Maryam (PerChron I, 254). The last Ṣ. of Amhara/Šäwa was *däǧǧazmač* ↗Dəmeṭros. With the rise of the local Šäwan dynasty, the governorship of Šäwa was to disappear, as it was split by *aṣe* Iyasu I, who appointed Dəmeṭros over ↗Märḥabete alone (AWTarik 72, n. 39). Likewise, the emergence of a local dynasty in Goǧǧam cast the title of Ṣ. into oblivion there, too, although Damot remained an important part of that province.

Ṣäḥafe təᵓəzaz

Ṣ.t. (**ጸሐፌ [ጸሓፌ]፡ ትእዛዝ**, pl. *ṣäḥaftä təᵓəzaz*, Gəᶜəz, lit. 'scribe of order[s]') is the title of the court official who served as the royal secretary and scribe. The first mention of this title seems to originate from the time of *aṣe* ↗Lalibäla (CRDLib 187 [cp. also 192]; Ṣ.t. Zäkrəstos and "his scribe Hallo Amlakənä, son of Zena Krəstos"); but from that time until late 16th cent., the title is nearly missing in the known sources. Among rare exceptions, cp. Amharized form *ṭafäzaz* in late 15th-cent. ms. Paris, BN Éth. 342 = Griaule 38, fol. 64vb; recent EMML no. 1226, fol. 113a: Ṣ.t. Märqorewos, Ṣ.t. of *aṣe* Zärᵓa Yaᶜəqob(?). In the pre-16th Muslim wars documents of the *Mäṣḥafä Aksum* the occurrence of the title *bäᶜalä mäṣḥaf* (**በዓለ፡ መጽሐፍ**, lit. 'the master of the book/writing') is frequent, sometimes mentioned together with *säḥafi* 'scribe' (CRAxum 38 [text], no. 41; s. Bausi 2006, *s.v.*); it is still unclear if it was equivalent to Ṣ.t. (cp. also *ṣäḥafe Aksum*, lit. 'the scribe of Aksum', the ancient appellation of *abba* ↗Sälama Käśate Bərhan, Getatchew Haile 1979: 314 [text]). In any case, the function of the royal secretary must have existed during these centuries, being executed by a courtier (an ↗*azzaž*, with or without another title), alone, or supported by assistant-scribes (cp. BassÉt 4; s. above), or simply by learned monks (cp. Bartnicki – Mantel-Niećko 1978, vol. 1, 642; DombrChr 304).

Due to the itinerant life, which the Ethiopian royal court had led until the foundation of ↗Gondär in 1630s, the royal bureaucracy was rather limited (cp. ↗*Kätäma*). The royal secretary had few royal orders to write down; most of them were issued orally, and messengers went with oral orders and a small piece of parchment on which the royal ↗seal had been stamped (cp. ↗Post). The secretary was not so much a royal scribe as the keeper of this seal. But he was a man of letters, a fact which imposed some other duties upon him, such as teaching of young princes and, probably, writing the royal chronicle.

According to the ↗*Śərᶜatä mängəśt*, in the late 16th/17th cent. there were several Ṣ.t. occupying a special place in "the order of precedence" (Varenbergh 1915-16: 28). In the 17th cent., the royal court grew and so did its bureaucracy. The tradition of royal ↗historiography had also developed considerably during the period of the ↗Gondärine kingdom; the duties seem to have been divided between at least two officials with the same title (perhaps, royal secretary and royal historiographer, cp. GuiIohan 62 [text]).

The first Ṣ.t. known by name appears to be *azzaž* Täklä Śəllase "Ṭinno" of *aṣe* ↗Susənyos (but the title Ṣ.t. was not explicitely applied to *abba* ↗Məhərka Dəngəl, Ṭinno's precursor as royal chronicler). From that period, other prominent chroniclers are known by name (mentioned with or without the title), such as ↗Ḥawarya Krəstos, Wäldä Haymanot, *azzaž* Zäwäld from Iyasu I's reign; *azzaž* Akasi under *aṣe* ↗Tewoflos; and, later, ↗Sinoda and ↗Kənfä Mikaᵓel (cp. GuiIohan 345 [tr.]; BassÉt 4f.). During the ↗*Zämänä mäsafənt*, regional rulers had secretaries of their own, but they apparently did not appoint any Ṣ.t.

During the reign of *aṣe* ↗Mənilək II another division between his secretaries occurred, when frequent contacts with foreigners demanded a special secretary and interpreter. For this there was appointed the missionary-educated ↗Yosef

Nəguśe, who became Mənilək's personal foreign secretary, while the title of Ṣ.t. was granted to *aläqa* ↗Gäbrä Śəllase Wäldä Arägay who executed the traditional duties of Ṣ.t., i.e. carried out the royal correspondence in the ↗Amharic language (cp. ↗Epistolography), put the royal seal on all letters and charters in Amharic, and also wrote the official chronicle of Mənilək's reign. When on 25 October 1907 Mənilək announced to the foreign powers that he was forming a cabinet of ministers, Gäbrä Śəllase was appointed the first so-called Minister of the Pen (**የጽሕፈት፡ ሚኒስተር**, *Yäṣəḥfet ministär*, cp. MahZekr 646), the head of the Emperor's "secretariat". It was rather an artificial institution, created, in the words of Gäbrä Śəllase himself, "to introduce European order" (GSMen 334 [text], tr. GueCopMen 527f.). Gäbrä Śəllase became the last genuine Ṣ.t., and he was still responsible for writing the Emperor's chronicle (as still was, in fact, his short-term successor ↗Afäwärq Wäldä Maryam). The nomination of Wäldä Mäsqäl (s. GebMolIlyas), and, much later, ↗Wäldä Giyorgis Wäldä Yohannes and ↗Gäbrä Wäld Əngəda Wärq followed a different pattern: the title of S.t. became honorific, but their personal responsibitilies of the functions of the office they headed, the Imperial Scretariat, though quite "modern", were in principle still not quite dissimilar to what Ṣ.t. had done in pre-modern time (PerGov 86, 92, 407f.). Starting from 1961, the title was born by ↗Aklilu Habtäwäld, and abolished after the ↗Revolution of 1974.

Sevir Chernetsov – Denis Nosnitsin

Säḥart

S. (**ሰሐርት**, Tgn.: Säḥarti; Sarte, Sart, Cart in Portuguese sources) is a historical province of ↗Təgray, in eastern ↗Əndärta (for location s. map for Šädaho). Its governor bore the title of *śəyyumä S.* (cp. ↗Šum). In the 20th-cent. administrative division, S. was a *wäräda* within the Əndärta *awrağğa.*

S. is an ancient toponym and ethnonym possibly indicative of early South Arabian settlement in pre-Aksumite Təgray, as suggested by the similarly named Sahartān district in Arabia (CRStor 103, 109). The latter may have been the site of the South Arabian incursion against the ↗Ḥabašat under the Sabaean king Šamir Yuharᶜis in the 3rd cent. A.D. (CRStor 112; s. the inscription ibid. p. 127).

According to the land charters attributed to the half-legendary Late Aksumite ruler ↗Gäbrä Mäsqäl and preserved in the so called *Mäṣḥafä ↗Aksum*, several lands in S. in the then south of the empire were donated as a fief to *abba* ↗Gärima (CRAxum 21, no. 3). Gubərya in S. was accordingly donated by ↗Säyfä Arᶜad to *abba* ↗Mädḫaninä Əgziᵓ (ibid. 24, no. 8).

In the 1270s, the head of S. rebelled against *aṣe* ↗Yəkunno Amlak (Cerulli 1943: 277ff.). ↗Ewosṭatewos passed through S. in his travels enjoying the hospitality of the then governor Fäqadä Krəstos (Conti Rossini 1904: 21). Ewosṭatewos's pupils ↗Märqorewos and ↗Absadi spent time at Däbrä Säqʷərt in S. (ibid. 21, 31; LusStud 76). Another pupil, Gäbrä Mäsqäl, was abbot of May Qʷərqʷər in S. (LusStud 8; possibly the same person as Gäbrä Mäsqäl of Gärᶜalta, the founder of ↗Däbrä Mäᶜar; ibid. 76).

During the reign of *aṣe* ↗ᶜAmdä Ṣəyon I, the area belonged to the northern provinces, and its governor was one of those who was asked to fight the otherwise unknown rebel Nədḫan (MarAmdS 68).

Al-↗ᶜUmarī identifies S. with Təgray (UmMasGaud 22, 34: Aksum as capital of S.).

Aṣe ↗Ləbnä Dəngəl campaigned in S. in 1533, at which time the *śəyyumä S.* was a certain Sämrä Krəstos (CRAxum 85 [text]). A battle took place in S. between *aṣe* ↗Gälawdewos and the forces of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī in 1541. S. was among those regions that sided with ↗Ḥamasen during the impostor ↗Yaᶜəqob's revolt against *aṣe* ↗Susənyos in the early 17th cent. (PerChron ch. 35), and with Əndärta in the revolt of *ras* ↗Fares against *aṣe* ↗Yoḥannəs I in 1677. In 1698, *aṣe* ↗Iyasu I introduced a customs post in S., at Mačure.

The people of Ham in Eritrea claim descent from S. (Conti Rossini 1942: 179).

Evgenia Sokolinskaia

Ṣ́äḥaṭi, Säʿaṭi ↗Dogʿali

Ṣ́äḥay Ḫaylä Śəllase

Princess Ṣ́. (**ፀሐይ፡ ኀይለ፡ ሥላሴ**, baptizmal name Wälättä Bərhan, given name Yäšimmäbet; b. 13 October 1919, Addis Abäba, d. 17 August 1942, Näqämte) was one of the initiators of the first women's movement in Ethiopia. The daughter of *aṣe* ↗Ḫaylä Śəllase I and *ətege* ↗Mänän Asfaw, in her youth she received a private education in the house of reverend Friedrich Flad, son of Johannes Martin ↗Flad, in St. Légier (French Switzerland).

In August 1935, two months before the outbreak of the ↗Italian war, Ṣ́. founded the Ethiopian Women's Welfare Association (**የኢትዮጵያ፡ ሴቶች፡ በጎ፡ አድራጎት፡ ማኅበር**, *Yäʾityopya setočč bäggo adragot maḫbär*) under the patronage of Empress Mänän. Assisted by Lady Barton, wife of the British ambassador, Ṣ́. organized women of the capital to prepare clothes, mattresses, gas masks, bandages, and to pack rations for the Ethiopian troops (Minale Adugna 2001: 23). In 1935, she made a broadcast appeal to the world from Addis Abäba against the Italian invasion and use of poison gas, which drew the attention of several activists in London, among them Sylvia ↗Pankhurst. The Princess also appealed in a letter to the Women's Council of the League of Nations Union on behalf of the Ethiopian Women's Welfare Association, asking its members to protest against the breach of the 1925 protocol by the Italians.

Ṣ́. accompanied Emperor Ḫaylä Śəllase in exile to Great Britain and, having a fluent command of English and French, served him as a secretary and translator (Minale Adugna 2001: 24). In London she made public speeches in support of the Ethiopian cause. As the patron of the Friends of Abyssinia League, Ṣ́. held numerous meetings with its members to garner support against the Italian invaders.

Ṣ́. began her training as a nurse at the Hospital for Sick Children, Great Ormond Street, London, where she qualified as a State Registered Children's Nurse. She worked at the Royal National Orthopaedic Hospital, and proceeded to Guy's Hospital for further training. Upon her return to Ethiopia in response to the Emperor's call, the Princess proceeded with her activities as the leader of the Association, organizing help for the troops and personally caring for the wounded, the sick and the orphaned.

On 26 April 1942, Ṣ́. was married to Colonel Abiy Abbäbä, governor of ↗Wälläga, and died shortly after due to sudden illness. Friends of Ethiopia in Great Britain obtained the approval of her royal parents to establish the Princess Ṣ́äḥay Memorial Hospital in Addis Abäba – the first Ethiopian Teaching Hospital, completed by 20 June 1947 and opened in 1951.

Princess Ṣ́äḥay Ḫaylä Śəllase as a nurse in a children's hospital in London; photo 1930s, private collection of Lothar Domkowski

Ṣ́äḥayu Sägäd ↗Yostos

Ṣ́äḥayäwärq Darge ↗Darge Śahlä Śəllase

Ṣ́äḥayu ʿƎnqʷä Śəllase

Däǧǧazmač Ṣ́. (**ጸሐዩ፡ ዕንቈ፡ ሥላሴ**; b. ca. 1910/15, Märḥabete, Šäwa, d. July 1974, Sälale) was a patriot and later governor of several regions. His father was *grazmač* ʿƎnquśəllase Bantəydaññ in ↗Märḥabete and his mother was *wäyzäro* Fəqərtä Hayläśəllase (FanTarik 554).

During the Italian occupation 1936–41 Ṣ́., his four brothers, among them the well known *däǧǧazmač* Wärqu Ǝnquśəllase, governor of ↗Bale, and their close kinsmen joined the ↗Resistance and rallied the youth of Märḥabete and of ↗Sälale. Ṣ́. is said to have scored many victories against the Italians (Getaččäw Yarom 2007/08: 219). He was also among the founding members of the 'Association of the Patriots of Ancient Ethiopia' (↗*Yäṭəntawit Ityop̣ya ǧägənočč maḥbär*; Ṭəlahun Bərhanä Śəllase 2003/04: 352).

Upon the return of Emperor ↗Ḫaylä Śəllase I to Ethiopia Ṣ́. was appointed governor of ↗Gamo Gofa. During this time several complaints against him were registered, and in 1960 he was transferred to Goǧǧam province. As in Gamo Gofa, also in Goǧǧam Ṣ́. was unpopular with the population who complained of his excessive use of power (Getaččäw Yarom 2007/08: 220).Furthermore, Ṣ́. forced the citizens of Goǧǧam to raise funds to erect a statue of the Emperor. With the excuse of eradicating banditry, he infiltrated spies among the people (Bahru Zäwde 2007: 230). When the complaints resulted in even more repression, the people of Goǧǧam began to rebel. This again resulted in Ṣ́.'s transfer to ↗Käfa in 1968. When the ↗Revolution of 1974 broke out, Ṣ́. was asked by the people of Käfa to surrender. He refused and put up a fight in his residence in ↗Ǧimma. Ṣ́. was then secretly transported to Addis Abäba by his supporters. But even here his protection was not guaranteed. Ṣ́. decided to fight together with his brother and left Addis Abäba. His property was confiscated by the new government. Upon his repeated refusal to surrender, Ṣ́.'s hiding place in Sälale was surrounded, and he died fighting (Getaččäw Yarom 2007/08:219).

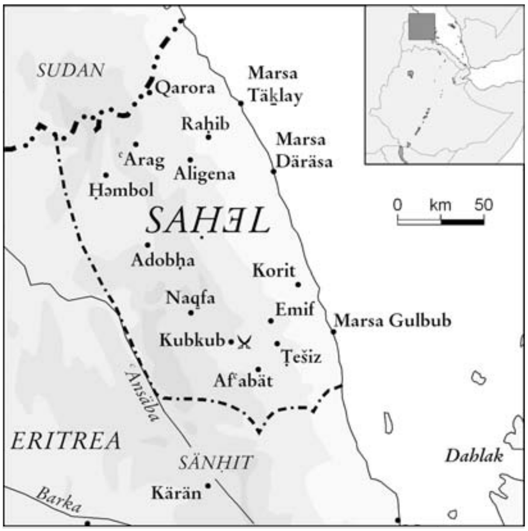
Saḥəl

Until the administrative reform in 1995 S. (**ሳሕል**) was one of the ten provinces of Eritrea which were established during the Italian colonial period in the Eritrean extension of the Sahel ecoclimatic and biogeographic zone. It comprised the area of north-eastern Eritrea – bordering on the Sudan – including the ↗Red Sea coast line with the small harbours of Marsa Gulbub and Marsa Täḵlay and the northern highlands or ↗*Rora* with the major towns ↗Qarora, ↗Afʿabät and ↗Naqfa. Today it has partly merged into the new administrative region Northern Red Sea.

In S. province, signs of prehistoric civilizations and of the Ottoman presence can be found. For example, in the former Italian and now Eritrean customs post, Qarora, there are prehistoric cave paintings, and in the vicinity of Afʿabät there is the



Ottoman fort Kubkub, which was later used as an Italian *residenza*. A decisive battle was fought at Kubkub in 1941, which together with the Battle of ↗Käran led to the withdrawal of the Italians from Eritrea and Ethiopia (↗World War II). An Italian colonial post was set up in Naqfa in the 1890s, which developed between 1940–50 and in which *aṣe* ↗Ḫaylä Śəllase I funded the construction of the big mosque in the early 1960s (KilHDic 321, 322). The Northern Highlands or Rora Mountains – a string of plateaus rising up to 2,700 m in height and running parallel to the coast from northern ↗Sänḥit to the Sudanese border – is only sparsely populated by ↗Təgre-speaking transhumant pastoralists from the ↗^{c}Ad Šayḫ, ↗Bet Asgäde and the smaller ↗^{c}Ad Mä^{c}alləm, ^{c}Ad Sawra and Bet Ma^{c}ala groups (KilHDic 363, 366).

S. province, in particular the inaccessible mountain region, was the military base of the ↗Eritrean People's Liberation Front (EPLF) and of the so-called "liberated areas", in which the EPLF organized an independent Eritrean area, with Naqfa as its symbolic capital between 1978 and 1991. As part of this new Eritrean society the agricultural project of Rora Ḥabab was initiated, a project which stood as a model for the EPLF to educate the rural population and to improve the living standards of all Eritreans. S. was the scene of many battles with the Ethiopian Army and its settlements and towns were mostly destroyed during the armed struggle, but, after Eritrean independence, much investment helped to rebuild the towns of S.

Kerstin Volker-Saad

Śahlä Dəngəl

Nəguś Ś.D. (**ሣህለ፡ ድንግል**, more commonly Śahlu, fl. 1832–55) was the nominal ruler of Ethiopia in 1832–40, 1842–43, 1846–50, and 1852–55, alternately in the 1840s and 1850s with *aṣe* ↗Yoḥannəs III. In his correspondence he styled himself *nəguśä nägäśt* and *nəguśä Ityopya*. In land transactions of the period he is often referred to as *aṣe*. He played but a modest role in events, being the tool of the effective rulers of the country, various *mäsafənt* ('nobles') most notably *ras* ↗Ali Alula, Ali's mother, *yətege* ↗Mänän Libän, and *däǧǧazmač* ↗Wəbe Ḫaylä Maryam. He claimed descent from the 17th-cent. Gondärine ruler ↗Fasilädäs (CRNuov 378). Apparently his only regular income at the beginning of his reign was 300 thalers, which the Muslim merchants of ↗Gondär gave him (RubTew 18).

In 1832, as a spinoff of the doctrinal controversies in Gondär, Ś.D. was excommunicated by the clergy of ↗Azäzo, who belonged to the order of Täklä Haymanot, one of the principal proponents of the teaching of *yäṣägga ləǧ* (↗*Ṣägga*). This led to his deposition by *ras* Ali, who put Gäbrä Krəstos on the throne. After a brief three-month reign, Gäbrä Krəstos died and Ś.D. successfully petitioned to be re-instated. Not long afterwards he was challenged by a certain Əg^{w}alä Anbäsa, who claimed to be the long expected Tewodros (↗*Fəkkare Iyäsus*). Ś.D. confronted him at Qaha, had him beheaded and his head displayed on the main square in Gondär (CRReal 856f.; RubTew 50).

In 1842, when *abunä* ↗Sälama (III) entered Gondär, Ś.D. appears to have welcomed him. In any case, he and Sälama later acted together to maintain the sanctuary of the *abun*'s quarter in Gondär (↗Abun Bet). In 1847 he was one of the Gondär notables sent by *ras* Ali to intercede for the release of Mänän, then captive of *däǧǧazmač* Kaśa (later *aṣe* ↗Tewodros II; CRNuov 393).

In several actions, Ś.D. had at least the appearance of sovereignty. In 1848, he invested ↗Goššu Zäwde of Goǧǧam with the title of *ras*, an action decidedly against the interests of *ras* Ali (RubTew 39). The beheading of an opponent was not a common action by late Gondärine monarchs. In one of the major foundations of the later ↗*Zämänä mäsafənt*, around 1850, Wəbe built and endowed the church of ↗Däräsge Maryam. The charter granting land to this church follows high Gondärine style and suggests, at first, that the issuer of the charter was Ś.D. himself, although Wəbe quickly appears as a major actor (BritLib, ms. Orient. 481, fol. 3v). Ś.D. also appears as the author of several important bouts of international correspondence: in 1838, to King Louis Philippe I of ↗France and Queen Victoria of England (RubActa I, index). Together with the notables, *əččäge* ↗Maḥṣäntä Mikaʾel, *ras* Ali, *däǧǧazmač* Wəbe and *däǧǧazmač* ↗Kənfu of Q^{w}ara, he appealed for military support against what appeared to be the threat of invasion by ↗Muḥammad ^{c}Ali of ↗Egypt. Again, he is the sole author of letters on behalf of the Ethiopian community in ↗Jerusalem, whose long-standing privileges were under threat. He addressed these letters to the Turkish *sulṭān*, the Armenian community in Jerusalem, Samuel ↗Gobat, now Anglican bishop of Jerusalem, Kirakos, Armenian patriarch of Jerusalem, and Kyrillos, Greek bishop of Jerusalem (RubActa I, nos. 109–14). Ś.D. also granted lands to a number of individuals (BritLib, mss. Orient. 659, fol. 100v, 239v; Orient. 777, 16v, 281r; Orient. 778, fol. 4v).

We know the date of neither Ś.D.'s birth, nor his death, which must have occurred sometime during the reign of Tewodros II.

Lit.: RubInd 32, 78, 80, 82, 85, 90, 101; RubTew 18, 39, 50.

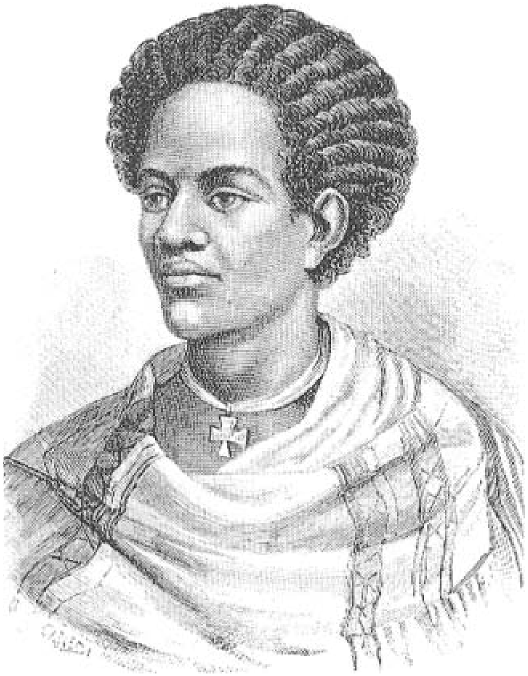
Donald Crummey

Śahlä Maryam ↗Mənilək II

Śahlä Śəllase

Nəguś Ś.Ś. (**ሣህለ፡ ሥላሴ**, horse name Abba Dina; b. ca. 1795, Ges, d. 22 October 1847, Däbrä Bərhan) was a king of ↗Šäwa reigning from 1806–47. He was a son of Zännäbä Wärq, a daughter of a chief from the district of ↗Mänz while his father was *märədazmač* ↗Wäsän Sägäd, the ruler of Šäwa (r. 1808–13). The sources repeat the statement that when his father died, Ś.Ś. was 18 years old and that he was brought from the village of ↗Sälla Dəngay, Mänz, where he had received a traditional education, to be "crowned" (CecZeila vol. 1, 244; AWTarik 28).

Ś.Ś. showed diplomatic skill and military ability from the very beginning, which enabled him to restore order and peace in Šäwa. There had been widespread restlessness, particularly among the ↗Oromo, when news of his father's assassination was heard. The rebels went as far as burning Wäsän Sägäd's main centres of ↗Däbrä Bərhan and ↗Qʷəndi (BTafA 531; CecZeila vol. 1, 244; AWTarik 28). In fact, it was because of these rebellions that the first born son, Bäkurä (or Bäkurye), who was governor of Märḥabete, and supposed to succeed his father, could not arrive on time at the palace to be enthroned. The Oromo of Ǧərru blocked the way (BTafA 533; AWTarik 28; CecZeila vol. 1, 244). Therefore, the dignitaries of the court decided to bring Ś.Ś. from nearby Sälla Dəngay on the grounds that unless succession was quickly effected, the rebellion of the subject peoples would quickly expand (AWTarik 28; CecZeila 244; BTafA 533). Ś.Ś. was made a ↗*ras* upon his assumption of power. He became the seventh Šäwan ruler, counted from ↗Nägaśi Krəstos Wärädä Qal, generally considered the founder of the dynasty.



Portrait of *nəguś* Śahlä Śəllase; from MasMis vol. 9, 99

Ś.Ś.'s political ability enabled him to win over the vacillating elements among the rebels and, with their help, he was able to suppress the rebellions very quickly (Darkwah 1975:20; EgeClass 33). He succeeded in getting the allegiance of the ↗Abbičuu clan of the Oromo. Their chief Märäč̣ became his loyal vassal. The support of the Abbičuu seems to have enhanced his military strength and enabled him to conquer their traditional rivals, the Galaan as well as the Salaallee (cp. ↗Sälale) and other ↗Tuulama clans (BTafA 535; ↗Finfinnee). Ś.Ś. appointed ↗Mätäkko, a capable general of Oromo descent, as the governor (or ↗*abägaz*) over the newly conquered Oromo clans of central Šäwa (BTafA 537; CecZeila vol. 1, 244; EgeClass 33). Šäwan sources and travel accounts agree that Ś.Ś.used skilfully the time-worn policy of "divide and rule" over the various Oromo clans of central and western Šäwa. The rebellion of Mätäkko in ca. 1837 was considered a big challenge to Ś.Ś.; but he was quickly arrested by a combination of ruse and diplomacy and was killed (BTafA 537, 541; AWTarik 28ff.). By about 1827, Ś.Ś. overran the ↗Karrayyuu Oromo and incorporated them into

Šäwa (EgeClass 33). From the newly conquered territories, the army brought back rich booty in cattle and in agricultural products, which further enhanced the prestige of Ś.Ś. By the early 1830s, he had incorporated the plains of western Šäwa up to the ↗Gibe River in the south-west and up to the valley of the Gudär River in the north-west. His increasing territorial conquests seem to have given him the confidence to proclaim himself ↗*nəguś* around the year 1839 and also claimed to be king of Gurage. His inconsistent use of the title (for sometime styling himself as *ras* Ś.Ś. *nəguś* of Šäwa) for sometime showed that he was not yet sure of it (BTafA 535; EgeClass 124). The Wärräsek (↗Yäǧǧu) rulers of ↗Däbrä Tabor never recognized his new title, continuing to refer to him as ↗*märədazmač*.

Another notable feature of the reign of Ś.Ś. was the unprecedented arrival of Europeans, missionaries as well as diplomats and explorers, at his court. He received them well and he took them along on his campaigns. Expelled from ↗Təgray by *däǧǧazmač* ↗Wəbe Ḫaylä Maryam, ↗Krapf and ↗Isenberg went to Šäwa in June 1839 via the ↗Zayla^{c} and ↗Taǧūra route (AWTarik 32ff.; Darkwah 1975:21f.). Ś.Ś. who was keen to establish contact with Europe was glad to receive the missionaries. Indeed, Krapf's letter to the British Resident in Aden asking for a relationship to be established with the king of Šäwa, was instrumental in the coming of a British diplomatic mission led by Captain Cornwallis ↗Harris in 1841 under the auspices of the Bombay government (Darkwah 1975:22). The objectives of the mission included the establishment of commercial links and diplomatic relations, scientific research, and the promotion of the abolition of the slave trade (↗Slavery). It was not able to achieve these goals although it succeeded in signing a ↗treaty of friendship. In fact, "the treaty remained a dead letter" (Darkwah 1975:22). Harris left Šäwa in February 1843.

Another foreign visit of some consequence was that of ↗Rochet d'Hericourt who, for the first time, arrived in October 1839. Upon his return to France, Rochet claimed that he had signed a treaty (on 7 June 1843) with the Šäwan king. Rubenson (RubActa I, 83, no. 66) raised some doubt about the authenticity of the document. Later, however, both the French and *aṣe* ↗Mənilək II accepted it as a genuine agreement and repeatedly referred to it in their diplomatic discussions.

The travellers left behind a corpus of material on the Šäwa of the 1840s. Most of them had seen the conditions in the other parts of northern Ethiopia before they went into the Kingdom of Ś.Ś., were impressed by the peace and prosperity of Šäwa, admired the administration of Ś.Ś. and in general portrayed him in their accounts as a generous and just lord (CecZeila vol. 1, 245; GueCopMen 70f., n. 7). Sources generated in Šäwa also single out Ś.Ś. among all the rulers of the kingdom with the exception of his grandson Mənilək as the most successful, just and generous ruler of the polity (GueCopMen 70f.; AWTarik 28).

Ś.Ś. descended in direct line from Nägaśi Krəstos Wärädä Qal, the earliest historically established ruler of some districts in Mänz. The Šäwan court claimed that Nägaśi Krəstos was the descendant of *abetohun* Ya^{c}əqob, one of the sons of *aṣe* ↗Ləbna Dəngəl. Through marriage alliances (his own and those of his children) he was related to all the important families of Šäwa and beyond.

Ś.Ś. was married to *wäyzäro* Bäzzabbəš, the daughter of Däǧän, the chief of Märḥabete. He had many concubines acquired for political purposes from among the Amhara, the Oromo and Gurage peoples (AWTarik 35), one source giving the apparently exaggerated figure of five hundred (EgeClass 105). A mid-20th cent. Šäwan source with connection to the imperial court gives the names of only six women from whom Ś.Ś. had regognized children. They were Bäzabeš, Wäriga the mother of *ras* ↗Darge, Yemänusal, who gave birth to Tänäññä Wärq, the grandmother of Ḫaylä Śəllase I, and several other children some of whom played important roles, Mäläfiya, mother of Ayahlušim and grandmother of *nəguś* ↗Wäldä Giyorgis Abboye and other notable lords, Ǝtenäš and an unknown woman simply described as the daughter of an Arsi chief. He had two sons from Bäzzabbəš, ↗Ḫaylä Mäläkot and ↗Säyfu Śahlä Śəllase, and a daughter, Wäsän Yäläš (Maḫtämä Śəllase Wäldä Mäsqäl 1965 A.M.: 18–41).

Ś.Ś. rebuilt Däbrä Bərhan and founded ↗Angoläla, which became his principal settlements (BTafA 533; CecZeila vol. 1, 245). His kingdom, according to Cecchi, was divided into four principal provincial units governed by lords who carried the title of *abägaz*. Each province was in turn subdivided into several districts (called ↗*nägarit*) governed by a chief who bore the title of ↗*ato* (CecZeila vol. 1, 249). In his reign Šäwa became a sizeable kingdom which claimed an area extending from ↗Yəfat, Mänz and Märḥabete in the north to the Gurage up to the Gibe River and the Oromo up to the Gudär River (AWTarik 28).

Ś.Ś. died on 22 October 1847 (12 *Ṭəqəmt* 1840 A.M. in AWTarik 35 and CecZeila 248; BTafA 543 gives a different date, 19 *Ṭəqəmt*, but does not give the year; AWTarik 35 gives the same date but a different year, 1848; GueCopMen 76 repeats the day but gives 1838 A.M.) following, according to Cecchi who collected the information from the court in Šäwa, an accidental shooting by his own servant during a hunting expedition. He suffered from the wound for several weeks and died in the town of Däbrä Bərhan and was buried in the Mikaʾel Church of ↗Ankobär, the principal church of the town built by him (BTafA 543; GueCopMen 76).

Ś.Ś. was succeeded by his first born ↗Ḫaylä Mäläkot. At the end of the 1870s, during the floreat of Mənilək, Cecchi collected an apocryphal tradition according to which Ś.Ś. issued a proclamation, upon his deathbed, to all of Šäwa that he had given his throne to his son, Ḫaylä Mäläkot (CecZeila vol. 1, 248; BTafA 541 offers a similar account). His horse name Abba Dina became a household name in the era of his great grandson Ḫaylä Śəllase I (via his daughter Tänaññä Wärq and his grandson Mäkʷännən) when the Emperor named the Police College after it; the criminal investigation bureau of the Police was also known popularly as Abba Dina.

Śahle Ṣädalu

Ś.Ṣ. (**ሣህሌ፡ ጻዳሉ**; b. 30 June 1887, Ankobär, d. 11 April 1971, Addis Abäba) was a prominent 20th-cent. politician.

Ś.Ṣ. was born into a clerical family of some distinction. His father, *aläqa* Ṣädalu Wäldä Täkle, claimed descent from *ras* ↗Gäbre Täsfa; he migrated to Šäwa from Sämen in the last quarter of the 19th cent. in search of better employment. His mother, Ǝnawgalät Abiyä Hoy, belonged to an old chiefly family of Bulga. Ś.Ṣ. had three elder siblings.

Śahle Ṣädalu; photo 1934/35, from Rikli 1935: 19

Ś.Ṣ. completed all stages of his traditional ↗education at Marqos church in ↗Sälla Dəngay, where he was ordained ↗*diyaqon*. In 1904/05 Ś.Ṣ. moved to Addis Abäba where he was employed in the provincial branches of the Customs Office. Three years later, he was transferred to the Ministry of Pen and then, also briefly, to the Secretariat of *ətege* ↗Ṭaytu. In 1907, Ś.Ṣ. was among the first 80 students recruited to the newly founded ↗Mənilək II Secondary School. There, Ś.Ṣ. studied French, English and Arabic, and met the young aristocrats who attended the school. In 1910 Ś.Ṣ. was appointed translator to a French physician of *ləǧ* ↗Iyasu. He later worked in the same capacity for the Municipality. In 1914/15, he became Secretary of the Ministry of Foreign Affairs, and from 1916 till 1927/28 he served as Director General of the same Ministry.

In 1919/20 Ś.Ṣ. was sent to Paris for a year on a commercial mission. He did the groundwork for the grand European tour of *ras* Täfäri Mäkʷännən (the future ↗Ḫaylä Śəllase I) in 1924, and then accompanied the Heir Apparent.

While in Europe, Täfäri sent Ś.Ṣ. on a diplomatic mission to Germany. In 1924/25 he was sent on a diplomatic mission to the ↗League of Nations.

In 1928/29, Ś.Ṣ. was appointed Director General of the Ministry of Education and was given the task of reorganizing the institution with a view to placing it on a modern footing. The same year he became head of the Ethiopian delegation to Alexandria for the final negotiations concerning the consecration of Ethiopian monks as bishops.

Following the proclamation of the ↗Constitution and the creation of ↗Parliament in July 1931, Ś.Ṣ. became Vice President of the Senate. From 1932 to 1935 Ś.Ṣ. was the Minister of Education and particularly promoted primary education.

Ś.Ṣ. surrendered to the Italians in June 1936 and remained in Addis Abäba until he was deported alongside other notables and intellectuals in the aftermath of the ↗Graziani assassination attempt in 1937. He stayed in Italy until 1939 and continued working for the Italians until the Liberation in 1941.

According to family sources and his friend ↗Märsəᶜe Ḫazän Wäldä Qirqos, Ś.Ṣ. was sick for several years after 1941, and this unspecified illness kept him from government service. However, his absence from public life may well be due to his collaboration with the Italians (Marcus in HSLife II).

Ś.Ṣ. returned to public life in ca. 1955 when he was appointed President of the Board of Directors of the Dərre Dawa Cement Factory. In 1956 he became the Chief of the National Library and Museum. In 1959, Ḫaylä Śəllase gave him the sinecure post of Senator.

His funeral at Mänbärä Nägäśt Qəddəst Qʷəsqʷam church in Addis Abäba was attended by the Emperor, the Prime Minister and other high ranking officials.

Śahləkä

Ś. (**ሣህልከ**, lit. 'Your clemence', referring to the *incipit* of Ps 50) is a type of ↗*qəne*. It is the short subtype of the ↗*zäyəᵓəze qəne*. It has three *bet*-verses and is always sung in ↗*gəᶜəz* chanting mode. There is also a ↗*Dəggʷa* element of the same name, usually performed together with Ś. *qəne*.

Ś. is performed only during the ↗*Mäwäddəs addärarä*s (Sunday office); it is inserted if the ↗*Arbaᶜət* does not provide ↗*məlṭan*. The singers chant the text of the *qəne* 22 times. The aim of Ś. *qəne* is to pray for the rulers or local authorities, either civil or religious.

Its performance used to be followed by the ↗litany of the *mästäbqʷəᶜ* type for the king (*bäᵓəntä nəguś*, Yəḫeyyəs Wärqe 1967/68: 16, Alemayyehu Moges 1973: 106), but has now been replaced by the intercession 'for peace' (*bäᵓəntä sälam*).

The Ś. is composed by elderly people, well versed in *qəne* tradition, in interpretation and in history. The Ś. is never practised at the ↗*qəne bet* schools, but rather during religious services.

Sāho

Sāho language

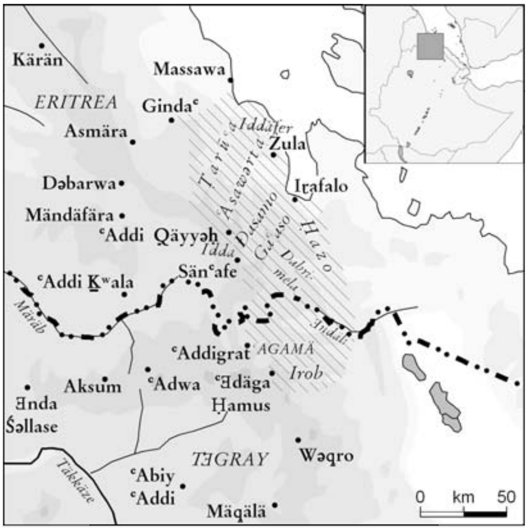
S. language (*Saahót waaní* 'language of the S.' or *Saahót lux'á* 'id.') is the term used for the group of varieties spoken by the S. in central and south-eastern ↗Eritrea and north-eastern ↗Təgray. Together with the ↗ᶜAfar language they form a dialect continuum that is commonly regarded as a subgroup within ↗Lowland East Cushitic.

Northern S. dialects distinctively preserve *z in several inherited East Cushitic words, e.g., *mízga* 'right (side)' vs. southern S. and ᶜAfar *mídga* (and *mígda*), Somali *midig*, Rendille *miig*, Oromo *mirga*, Điraašša *miskitt*, etc. Some southern S. speakers also have *z* in this and a few other words as an individual variant. Northern S. dialects also have several occurrences of *š* after **i* or **y* in inherited words and morphemes, e.g., *bíšo* 'colour, appearance' vs. southern S. *bíso*, ᶜAfar *bísu*, Oromo *bifa*, Konso *pisa* 'flower', etc.; northern S. *-iš-* suffixal causative root extension vs. southern S. and ᶜAfar *-is-*, Somali *-iy-* ~ *-š-*, Oromo *-s-*, Konso *-š-*, etc. Furthermore, northern and central S. varieties differ from southern S. and ᶜAfar ones in displaying ejective consonants, the velar fricative *x* and palatal affricates, mainly in loanwords from northern ↗Ethio-Semitic languages, Arabic and Italian (cf. also Morin 1994).

The S.-ᶜAfar dialect continuum extends from south of ↗Massawa to ↗Awaš in central Ethiopia, and counts ca. 1,300,000 native speakers according to Lewis (2009), of which ca. 191,000 speakers of S. in Eritrea and ca. 23,000 in Ethiopia (↗Irob). S. is also spoken in diaspora communities in Sudan, Saudi Arabia, Egypt, the United Kingdom, the USA, etc. Most S. speakers in Ethiopia are bilingual in ↗Tǝgrǝñña and occasionally use an adapted form of the *fidäl* for writing S. Yet there are very few publications; children use mainly Tǝgrǝñña at school. In Eritrea, liberation movements opted for a Latin orthography for S. already in the early 1980s and introduced it in elementary schools (cf. Banti – Vergari 2008:70). There, a written form of S. mainly based upon the northern dialects established itself in the following decades and is now used in S. schools as well as in several publications. There are still several monolingual speakers of S. in Eritrea, especially in smaller settlements and among the female population. Performances of S. ↗oral literature are common during feasts and other celebrations, and audio recordings of popular S. secular and religious singers can be found in music shops in Asmära as well as in the S.-speaking areas. S. music and dramas are produced both in Eritrea and Ethiopia and in the Diaspora.

The first data on S. are short word-lists in accounts of European travellers from the beginning of the 19th cent. (e.g., SalTrav 404ff.), but the first comprehensive descriptions of the grammar and lexicon of this language were produced by ↗Reinisch (1878, 1878, 1890), who also published the first extensive collections of texts (1889). S. lexicography has since been advanced in recent years by Vergari – Vergari (2003), who are also preparing a major dictionary. A new reference grammar of the written language and of its major dialects remains a desideratum.

All varieties of S. have long and short *a*, *e*, *i*, *o*, *u*, and the diphthongs *ay*, *ey*, *oy* and *aw*, *ew*, *ow*. The consonant phonemes common to all varieties are (differing Eritrean Latin spelling in brackets): plain stops *b*, *t*, *d*, *k*, *g*, ʾ (-); retroflex stop *ḍ* (*dh*), realized as *ṛ* (*rh*) after vowels and in a few other contexts; fricatives *f*, *s*, *z*, *ḥ* (*x*), ᶜ (*c*), *h*; nasals *m*, *n*; liquids *l*, *r*; glides *y*, *w*. The consonant phonemes that occur only in northern and central S. are: *ṭ* (*th*), *q*, *č̣* (*ch*), *ṣ* (*ts*), *q̱* (*qh*), *ḫ̣* (*kh*), *č* and *ǧ* (*j*). Vowel length and consonant gemination are phonemic.



Hayward (1997:69ff.) describes central and southern S. varieties as having a system of pitch accent with either high or low tones on short vowels and also falling and rising tones on long vowels. Only one syllable generally bears a high, falling or rising tone in each word, and tonal sandhi operates within complex noun phrases (NPs).

Personal pronouns have separate nominative (or subject) and oblique forms: (nominative) 1st pers. sg. *anú*, 2nd pers. sg. *atú*, 3rd pers. sg. masc. *usúk*, 3rd pers. sg. fem. *išé*, 1st pers. pl. *nanú*, 2nd pers. pl. *atín*, 3rd pers. pl. *usún*; (oblique) 1st pers. sg. *yí*, 2nd pers. sg. *kú*, 3rd pers. sg. masc. *káa*, 3rd pers. sg. fem. *tée*, 1st pers. pl. *ní*, 2nd pers. pl. *sín*, 3rd pers. pl. *tén*. Dialectal variants of *išé* are *iší*, *isé*, *isí*. Oblique pronouns are used both as direct objects and as possessives: *yí tublé* 'she saw me', *yí baṛá* 'my daughter'. Oblique pronouns are also used with postpositions, e.g., *yí* + *-k* 'to' → *yók* in *yók yén* 'they told me', *ní* + *-lih* 'with' in *nóolih yemeetín* 'they arrived with us'. So-called emphatic forms are used, e.g., as NP predicates and in conjoining: *yettá*$_1$ *kinní*$_2$ 'it's$_2$ me$_1$', *kóo*$_1$ *kee*$_2$ *kw*$_3$*-ábba*$_4$ 'you$_1$ and$_2$ your$_3$ father$_4$'.

Demonstratives lack gender and number agreement and occur only as modifiers. Three of them are strictly deictic: *tá* 'this' (near to the speaker), *tó* 'this' (near to the addressee), *tóo* 'that' (far from both). *Amáa* ~ *tamáa* is anaphoric. The main interrogative words are: *míya* and *íyya* 'who?', *áy* and *áyim* ‘what?’, *áymih* ‘why?’ (*áyim* + the postposition *-h*), *aagínah*, ‘how?’ (*aa* ‘which’ + *gína* ‘kind’ + *-h*), *áwla* and *álle* ‘where?’, *mánda* and *ánda* ‘when?’.

The cardinal numbers beyond those shown below in the ten word list are: *afár* ‘4’, *kǒon* ‘5’, *líḥ* ‘6’, *malḥín* ‘7’, *baḥár* ‘8’, *sagál* ‘9’, *táman* ‘10’, *lamaatánna* ‘20’, *soddóm* or *sazzám* ‘30’, *marootóm* ‘40’, *kontóm* ‘50’, *laḥtám* ‘60’, *malḥintómon* ‘70’, *boḥortómon* ‘80’, *sagalatáman* or *bool ságla* ‘90’, *bôol* ‘100’, *šíiḥ* ‘1000’.

The two genders, masculine and feminine, are marked on nouns, personal pronouns and 3rd pers. sg. verb forms. Several nouns and indefinites distinguish sg. masc. from sg. fem. tonally, e.g., *báɣa* ‘son’ vs. *baɣá* ‘daughter’, *ta-tíya* ‘this one (masc.)’ vs. *tá-tiyá* ‘this one (fem.)’. There are two numbers, singular and plural. Pl. forms are derived from sg. ones by means of suffixes or internal modification: *^{c}éela* masc. ‘well’ vs. *^{c}éelit* masc. and *^{c}elwá* fem. ‘wells’, *^{c}okká* fem. ‘ear’ vs. *^{c}ókkak* masc., *anráb* masc. ‘tongue’ vs. *ánrub* masc. ‘tongues’, *ábba* masc. ‘father’ vs. *ábbub* pl. ‘fathers’. It appears that pl. verb agreement occurs mainly with pl. nouns indicating humans, whereas other pl. forms take either masc. or fem. agreement. Number-indifferent nouns such as *okólo* masc. ‘donkey(s)’ have singulative forms in *-ótta* masc., *-ottá* fem. or in *-átto*, *-attó* like *zellátto* ‘male monkey’ from *zellá* fem. ‘monkey(s)’ in northern S., while central and southern S. have *-óyta*, *-oytá* and *-áyto*, *-aytó*. The core cases are absolutive (for direct objects, N predicates, etc.). nominative and genitive, that are distinguished by means of inflectional endings and tonal alternations. Other syntactic relationships are indicated by means of postpositions.

Like ^{c}Afar, S. has three major inflectional classes of verbs: prefix-conjugated verbs (C1), suffix-conjugated verbs (C2) and stative verbs (C3). Almost 42 % of all verbs are C1, and mark subject concord by means of prefixes and suffixes, like *ublé* ‘see’. Ca. 50 % of verbs are C2, and mark subject concord by means of a set of suffixes, like *abé* ‘do’. C3 verbs are ca. 6 % and indicate subject concord by means of a different set of suffixes, like *kiḥiná* ‘love, like’. C3 verbs have only a non-past and a participle (simultaneous converb), and express other tenses and moods by means of compound forms; many C3 verbs have adjectival meanings like *^{c}adó* ‘be white’ or *^{c}ilišá* ‘be heavy’. (There are no adjectives *stricto sensu* in S., cf. Vergari 2008). C1 verbs have stem ablaut, e.g., *y-ablé* ‘he sees’ vs. *y-ublé* ‘he saw’, or *n-amiïté* ‘we arrive’ vs. *n-emeeté* ‘we arrived’.

non-past	*ublé* ‘see’	*abé* ‘do’	*kiḥiná* ‘love’
1st pers. sg.	*abl-é*	*ab-á*	*kiḥin-iyó*
2nd pers. sg.	*t-abl-é*	*ab-tá*	*kiḥin-itó*
3rd pers. sg. masc.	*y-abl-é*	*ab-á*	*kiḥiná*
3rd pers. sg. fem.	*t-abl-é*	*ab-tá*	*kiḥiná*
1st pers. pl.	*n-abl-é*	*ab-ná*	*kiḥin-inó*
2nd pers. pl.	*t-abl-ín*	*ab-tán*	*kiḥin-itín*
3rd pers. pl.	*y-abl-ín*	*ab-án*	*kiḥin-ón*

C1 and C2 have a considerable number of simple and compound forms both with and without subject agreement: e.g., non-past, past, subjunctive, jussive, imperative, etc. [-compound, +subjct.agr.], infinitive and invariable participle [-compound, -subjct.agr.], future [+compound, +subjct.agr.], etc. Most tenses and moods have completely different affirmative and negative forms: e.g., aff. impt. sg. *áb* ‘do!’, pl. *ába* vs. neg. impt. sg. *mâabín* ‘don’t do!’, pl. *mâabína*; aff. jussive 3rd pers. sg. masc. *yablôo* ‘he should see!’ vs. neg. jussive 3rd pers. sg. masc. *ablé wâw* ‘he should not see!’ (infinitive + aff. jussive of the auxiliary *wayé* ‘lack’).

Like all Cushitic languages, S. has a system of stem extensions for deriving verbs from other verbs and nouns. The most important categories are causative, middle, passive and inchoative. In most cases C1 verbs have prefixal stem extensions while C2 verbs have suffixal ones. Many C3 verbs have C1 or C2 incohatives, from which other derived verbs are formed. For instance, C1 *igdifé* ‘kill’ → C1 *isgidife* ‘cause to kill’, but C2 *^{c}aré* ‘grow up’ → C2 *^{c}ariše* ‘rear’; C3 *ḍeeɣá* ‘be long’ → C1 *eɣeeɣé* ‘become long’ → C1 *eyɣeeɣé* ‘lengthen’. Multiple stem extensions can co-occur as in C2 *baabé* ‘aggregate’ → C2 *baabiše* ‘cause to aggregate’ → C2 *baabišité* ‘cause to aggregate for one’s own benefit’.

Word order is strictly Subject-Object-Verb both at NP and at sentence level. E.g., *káa*$_1$ *inahí*$_2$ *migá^{c}*$_3$ ‘his$_1$ mother’s$_2$ name$_3$’; *ḥán*$_1$ *baaḥá*$_2$ *ḥiyawtí*$_3$ *yemeeté*$_4$ ‘the man$_3$ who brings$_2$ the milk$_1$ arrived$_4$’ where the heads are always NP-final; *zizzaalé*$_1$ *agiirá*$_2$ *kin*$_3$ *kaddámte*$_4$ *kinón*$_5$ ‘bees$_1$ are$_5$ skillful$_2$ (lit. ‘that are$_3$ skilled persons’) workers$_4$’.

The suffix *-m* converts a sentence into a subject/complement clause or a free relative, e.g., *tamiité*$_1$*-m* *kó*$_2$*-h*$_3$ *me^{c}é*$_4$ ‘it’s better$_4$ for$_3$ you$_2$ that (*-m*) you come$_1$’, *béera*$_1$ *tamiité*$_2$*-m* *mangón*$_3$ ‘those who (*-m*) come$_2$ tomorrow$_1$ are many$_3$’. Focalization is generally expressed by means of (pseudo-)clefts with free relatives marked by *-m*, as in *béera*$_1$ *tamiité*$_2$*-m* ^{c}*Alíi*$_3$*-kee*$_4$ *Roblé*$_5$ *kinón*$_6$ 'it is$_6$ Ali$_3$ and$_4$ Roble$_5$ who (*-m*) come$_2$ tomorrow$_1$' (also ^{c}*Alíi-kee Roblé kinón béera tamiité-m*).

Like most languages in the Horn of Africa, S. has ideophones indicating particular sounds, movements, tastes etc., that form complex transitive or intransitive predicates with the help of auxiliaries (*išé* or *išišé* 'do' for transitive predicates, *eṛḥé* 'say' or *é* 'id.' for intransitive ones). E.g., *sík*$_1$ *káa*$_2$ *iššé*$_3$ 'she silenced (lit. 'did$_3$ *sík*') him$_2$'; *baská*$_1$ *basák*$_2$ *ta*$_3$ *ma*^{c}*aašá*$_4$ *kinní*$_5$ 'honey$_1$ is$_5$ a sweet (lit. 'that says$_3$ *basák*) food$_4$'. Such constructions are generally treated as a fourth conjugational (C4) class in S.-^{c}Afar linguistics.

The ten-word list for S. is: *iník* 'one'; *lammáa* 'two'; *adóḥ* 'three'; *girá* 'fire'; *lay* ~ *layé* 'water'; *álsa* 'moon'; *ayró* 'sun'; *biiló* 'blood'; *anráb* ~ *arráb* 'tongue'; *ikó* 'tooth'.

Sāho ethnography

Introduction

The S. (Sāhó, sg. masc.: *Sāhóyta*, fem.: *Sāhoytá*) are an ethno-linguistic formation, composed of sometimes quite distinct groups. The most prominent of them are ↗Tarū^{c}á, ^{c}Asawərta/^{c}Asaurta (↗Asaorta), ↗Dabrimēla, ↗Minifire, ↗Ḥazo, ↗Irob, ↗Idda and ↗Iddäfer. The ethnonym S. is probably linked to the ^{c}Afar verb *sahha* ('to be refreshed'), referring to the mountainous zone (*Sāho-t ḥangul*) from where the S. traditionally move towards the coastal grazing lands in winter. S. refers to both the language and the people. Language and ↗Islam are important aspects of S. ethnic identity but the Dabrimēla (Labhale-t ^{c}Are clan) and the ↗Irob, the southernmost S.-speaking group, are Orthodox Christians. The S. practise mixed subsistence economy with a high importance of transhumant animal raising.

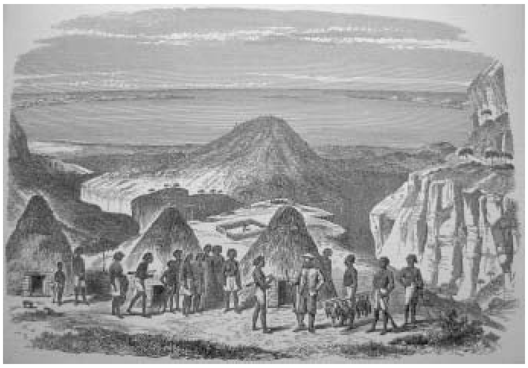
Today the majority of the S. lives in ↗Eritrea, although some S. communities are also found in Ethiopia, especially in ↗^{c}Agamä, Təgray (Irob and partially Ḥazo). Most Eritrean S. inhabit the former province of ↗Akkälä Guzay (and in the Đasamó plain partially belonging to ↗Säraye). Several S. groups live near the coast at the northern borders of ↗Ḥamasen and others in ↗Sämhar. A small number of S.-speakers is to be found in the eastern Sudan. They are known as *Sab Lālit* ('people of the highlands') and have their own chief (*nāẓir*). The S. Tarū^{c}á and the ^{c}Afar ↗Ḥasōbá, in the southern ^{c}Afar-speaking territories (↗Awaš valley in Ethiopia, Djibouti), share genealogical links (MorDicAfar 190).

As a consequence of the long Ethio-Eritrean conflicts and the dispersion of refugees who returned from Sudanese refugee camps after Eritrea's independence many S. today do no longer live in their original homeland.

Population structure

The S. speak a variety of dialects collectively referred to as S. language and belonging to the ↗^{c}Afar language continuum of ↗Lowland East Cushitic (s. the subarticle). Each of the main S. groups speak one or more of the three S. dialects along with other languages, such as Təgrəñña or Arabic. Northern dialect: Tarū^{c}á and ^{c}Asawərta; Central (Mina, Minifire) dialect: Đazamó/Đasamó, Ga^{c}asó and Dabrimēla; Southern dialect: Ḥazo and Irob.

Many groups have experienced language change, e.g., the now ↗Təgre-speaking Iddäfer



Scene in a Sāho village in the mountains above the Zula Bay; from *The London Illustrated News* 1463, vol. LII, 4 January 1868, page 1

who have genealogical links with the Bet Kalīfa of ↗Zula. This bilingualism explains why S. groups and their sub-units might have been identified by scholars as Təgre-speakers. In fact, the S. have, along with the ↗Beğa, been the major ethnic element in the constitution of Təgre-speaking groups, such as the ↗Mänsaᶜ (Bet Ǝšḥaqan), ᶜAd Ḥā, ↗Marya (who may have a S. origin) or the Inḍa ᶜIğlo among the Ḥazo, who have genealogical links with the ↗Beni ᶜAmər Eğeylab (Beğa: *ağīl,* 'tenant', Morin 1995: 20).

The Italian census of 1931 provides the earliest information on the demography of the S. With a total of nearly 39,000, the respective percentages of the S. sub-groups are: ᶜAsawərta (58.4 %); Tarūᶜá (6.7 %), indicating that Northern S. speaking groups were already in the majority (this may explain why the Northern S. dialect became the written variety after independence in 1993); Mina (Đasamó, Gaᶜasó and Dabrimēla: 27.1 %); Southern (Ḥazo: 7.8 %). The Irob living in Ethiopia were not included in the census but the role they played in Ethiopian history may have exceeded what could be expected of a relatively small population, especially at the time of ↗Säbagadis Wäldu (Irob Ḥasaballa ᶜAre), the early 19th-cent. Christian chief of ᶜAgamä. The socio-linguistic situation is complicated by the ᶜAsawərta's claim of speaking *Sāho-t zīḍo* and not *Sāho-t wāni* (*zīḍo* meaning a separate language).

The Government of Eritrea estimates the S. at 5 % of a total population of some 3.5 million, i.e. ca. 175,000. On the other hand, in the colonial statistics of the 1950s, the S. were estimated at 8.25 % (82,500) of a total population of then 1 million (UN Commission for Eritrea 1950).

Scattered on the borders of the traditional S. grazing area, and traditionally considered as inferior, are the Idda, Iddäfer, Baraddota (900 people; PollEr 267) in the area of Akkalä Guzay, peoples who speak both S. and Təgre. The Hassabat ᶜAre (with four lineages: Alet ᶜAre, Sandage, Mekengit and Ḥummad Abisa) may be of "Ḥabäša" (i.e. Gondär) origin (PollEr 268). They numbered ca. 1,300 in the 1931 Italian census (4 % of the S.-speaking groups).

It is believed that the present distribution of the S.-speaking groups in Eritrea is the result of repeated movements of Cushitic- and Semitic-speaking groups in the Horn of Africa. Historically the people referred to as S. occupied the ↗Red Sea coast including the Gulf of Zula (Sāho: Zola), the Sämhar region, and the southern region of the highlands (Akkälä Guzay, Säraye). ↗Iṭāfálo on the Gulf of Zula is the boundary between the S. and the ᶜAfar Ankāla as well as the Dammohóyta of the ↗Buri peninsula. The ancestors of the S. were among the first to be exposed to the South Arabian migrations, which, over a long period of time, crossed their territory, e.g. through the Buri Peninsula to the highlands (PollEr 26).

The political formation of the S. cannot be traced back beyond the 15th cent., during the reign of *aṣe* ↗Zärᵓa Yaᶜəqob. By and large, scholars have concluded that the homeland of the S. as well as that of the ᶜAfar must have been the Eastern region of the Horn of Africa (Tadesse Tamrat 1977: 135; Seligman 1930: 125f.; AbPrince 123; Fleming 1964:93); nevertheless, it had been impossible to explain how they concentrated in today's Ethio-Eritrean border.

Socio-economic and political structures

S. social and economic system is based on kinship and descent. The larger groups are divided into a number of sub-groups, defined as genealogical branches sharing descent from a common ancestor, and patrilineages. The various terms used for such sub-units or clans, e.g. *kišo* (Northern ᶜAfar: *kido*, Southern: *kedo*), *mela* (also in ᶜAfar), *dik*, *ᶜáre* 'house' (ᶜAfar: *ᶜári*), *gaysa,* refer to the various ways in which these groups were formed. In the case of *ᶜare* (also *dik* and *ḥarak*), the concept is close to the *bayt* of ancient Yemen (Beeston 1972: 256), referring to both the lineage and the land.

Each sub-group occupies a well-defined area, where they graze their flocks or set up their seasonal camps during the winter, where they cultivate the land and pasture their animals (NadEr 28f.). A complex political equilibrium between the groups, such as between the ᶜAsawərta of the mountains (*agani* ᶜAsawərta) and those of the lowlands (*gubi* ᶜAsawərta) regulating the seasonal move to the coast (Morin in WenDAE 1, 78).

Among the Muslim S. groups certain religious lineages possess an important role in the organization of religious, social and cultural life. A good example of such a "holy family" are the Malḥina Miᶜimbara (or Meᶜembara) 'the seven who have a talisman [*bará*]' (MorDicAfar 222). Their ᶜAfar and S. descent refers to the coming of seven *shayḫ* from Yemen via ↗Zaylaᶜ. The S. count the following groups as descendents of the Malḥina Miᶜimbara: 1. Intile Šek ᶜAre, 2. Ironnaba who belong to the Ḥazo ᶜAsaᶜalīla of ᶜAgamä, 3. *šek* Laḥlaḥa together with the Tarūᶜá of ᶜAylät, 4. *ḥağği* Abkur who are part of the northern S., 5. *ḥağği šek* Dimbago together with the ᶜAsawərta ᶜAsa Lēsan, 6. ᶜAsa Sēka with ᶜAsawərta Lēliš ᶜ*are*, 7. Das Šēka with the Ḥazo ᶜAsaᶜalīla.

The S. organize themselves according to a pattern of relations in which family and kinship play significant roles. A number of extended families work jointly together to perform important functions and they choose a leader from among the family heads. This interdependence of families and clans through cooperation and social integration establishes the broad patterns through which social order is maintained and social solidarity is promoted (Brons 2001: 20).

The extended family is the basic economic unit and it is within such family units that the basic management of resources and social life takes place, e.g. economic co-operation (especially during times of drought and famine), inheritance of cattle, marriage arrangements, re-marriage of widows, care of the elderly and of orphans. The principle of this association of families is primarily the egalitarian agnatic system and the leaders of the different sub-tribes form the basis of the entire political structure of the society. This leads to a balance of power between the sub-units and segments, headed by male family heads, living from their herds and from subsistence agriculture.

The Northern ᶜAfar and Southern S. share common cultural traditions and common challenges such as security, and they enjoy a de facto autonomy, According to the traveller ↗Raffray (1876) the S., which he called "Šoho", and their neighbours nominally acknowled the Ethiopian emperor but only paid tribute when he sent a strong enough army. Administrators sent by him were assassinated by the S. whose egalitarian political system only accepted the authority of councils of elders.

Abdulkader Saleh Mohammed – Didier Morin

Sāho literature

The majority of literary works in the ↗Sāho language belongs to the domain of ↗oral literature. As for the published pieces, most of those are texts (usually just a few short sentences) added to grammatical sketches, or included in dictionaries and in ethnographic surveys, starting with those of ↗Conti Rossini (1904, 1910, 1913). He worked with Northern Sāho-speaking soldiers of the Eritrean Third Battalion. Before him, ↗Reinisch (1889) published what is still the longest collection of texts in different Sāho dialects. After World War II, European religious zeal resulted in the translation of St. John's Gospel (Mahaffy 1964) and other religious texts by the American Evangelical Mission. With the Independence of Eritrea (1993) and the definition of a Sāho orthography, a new S.l. (in Northern Sāho) has developed, mainly pedagogical (Vergari 2005), along with official translations such as the Eritrean Constitution (*Eretreyat Dastor* 1997). Since 2008, *Xanlake* ('Cloud'), a non-printed journal dedicated to Sāho culture and literature has been issued in ↗ᶜAddi Q̱äyyəḥ.

New data on oral ↗folktale literature (both in Northern and Southern dialects) are found in Morin (1995, 1999). In the latter, examples of ᶜ*adar* (Sāho orthography *cadar*) are found. The ᶜ*adar* (which in ↗ᶜAfar means any poem and is a synonym for *gad*) is in S.l. a poetic genre in which a single singer quotes in the direct style the arguments of the protagonists of a former dispute. The contest (joust) consists of their juxtaposition in a rhymed and sung form in opposition to any spoken narration. The poet selects his quotations according to a political balance which always makes it controversial. It prevents the joust from being taken over by a larger group than the singer's one and his allies. The ᶜ*adar* only exists as a mode of composition which may be analyzed along the same lines that Conti Rossini (1906a: 340f.) used for describing popular recitation in Təgray: "Rhythmic recitation […] ignores syllabic scansion or our classical metric foot […] It is less music than recitative […]". This poetic rule, based on adjusting fragments of former recitatives, which become part and parcel of a new ᶜ*adar*, has a regional dimension, and is also characteristic of ᶜAfar but also Təgre and Təgrəñña (cp. the short narrative of the battle of ᶜAddi Qäläto in Conti Rossini 1906b). In the example provided below (Morin 1999: 87), with the final rhyme [e], the singer recalls the divergence among the Sāho during the revolt of February 1891:

[…] *Afad nok an Casa Leesan e*	[…] We know that the ᶜAsa Lēsan [killed them]
Cinxa Cumarto bedel male	The ᶜInḍa ᶜUmarto commit no injustice,
Ye ras Sibxat	said *ras* ↗Səbḥat [Arägawi]
Kue Cagaameyta kue duuda yee	You scions of ᶜAgamä! You fool!
Sanaadir taslibe dooda yee	Whose camps have taken up arms
Iyyir maakin dagum kuuda yee	Who only have few cartridges
Sartim gamdee kee xuduuda yee	Dressed in rags and hides,
Casa Leesan terhxe	[teḍḥe] said the ᶜAsa Læsan
Kela Tilyanii sinah marta	The Italians will not help you always
Nabam rabtado cindham carta	Even if the old die the young will rise,
Ye ras Sibxat […]	said *ras* Səbḥat […]

The convention which organizes the contest is based on this arrangement without any pause in the rhymed fragments. As in ᶜAfar, the change in final rhyme is the indication of the transition from one piece to another or is conclusive as in this auto-glorification by ↗Faḍé-k Ôbe (Morin 1999: 94, revised from Reinisch 1889: 291):

Farhekoobe cangi gide	Faḍé-k Ôbe is like big game
Ma yaxruse	He doesn't cultivate
Ma yangide	He is not a caravaneer
Garin sinraa yakidkide	He eats people's bread
Marcad qaadih yammiggide	He looks like a *qādi* at a wedding
Reedod nugusuh yammiggide	He looks like a king at his wedding
Dakxako inki luqmayto kaa gide	From the collective meal he only takes his share
Taae ishel [išel] cadare yen	So he sang about himself
Dhasamom margada	The Ḍasamo rhythm maker
Farhekoobe Maxammad	Faḍé-k Ôbe, son of Muḥammad

Faḍé-k Ôbe's poetry, however, was perceived as controversial (cp. EAE vol. 2, 483), mostly owing to the lack of consensus esp. as far as the dialect in which literature must be promoted is concerned. The northern dialect which has been standardized since the independence of Eritrea is counterbalanced by older poetry through which the Mina dialect was promoted, starting with Faḍé-k Ôbe of the Đasamo tribe (↗Minifire). This historical importance of the central dialect in Sāho studies is also illustrated by the translation from ᶜAfar to Sāho by ᶜAbdallah "Đasamóyta" b. ᶜAli (Reinisch 1886: 6–109); by the Sāho traditional narratives collected from the same ᶜAbdallah "Đasamóyta" (Reinisch 1889). The southern ↗Irob dialect (starting with Reinisch 1878, Conti Rossini 1910, Plazikowski-Brauner – Wagner 1953) must not be forgotten since it was the native language of the legendary chief of ᶜAgamä ↗Säbagadis Wäldu (d. 1831).

Sai ↗Gumuz

Saᶜīd

S. *bāšā* (b. 1822, d. 18 January 1863) was the fourth son of the Egyptian Viceroy ↗Muḥammad ᶜAli. S. succeeded his older nephew Abbas I (r. 1848–54) as the Ottoman Viceroy of ↗Egypt (r. 1854–63). During his tenure, he had occasion to become involved in Ethiopian affairs. Some border tribes and districts, for example, had trade links to Egypt and Ethiopia. ↗Mätämma, one of the more influential trading centers, paid tribute to both countries. The inhabitants of ↗Sämhar around Ottoman ↗Massawa depended on the Ethiopian highlands for grazing.

S. lowered administrative costs by reducing or withdrawing troops from outlying posts such as ↗Kufit, after which some Ethiopian governors in the border area took advantage of this situation by moving their positions forward. The British Consul, Walter ↗Plowden, sought to avoid hostilities between the two countries by an abortive offer of Massawa and by warning Ethiopia that peace with Egypt was a condition for Britain's friendship. However, Tewodros objected Plowden's efforts to dictate a policy toward Egypt.

In December 1856, the Coptic Patriarch, Qērilos IV (Kyrillos), arrived in Ethiopia with a letter from S. The Patriarch's visit focused on resolving some ecclesiastical problems and improving Ethiopian-Egyptian relations. Qērilos, however, alienated Tewodros by drafting a reply in Tewodros's name to S. requesting "many things and many workers". It is reported that the latter had asked the Viceroy to send Coptic soldiers (cp. Middle East Christian Association n.d., 22, but cp. also Meinardus 2002: 69ff.) and three Turkish officers to discipline Ethiopian troops as well as shipments of "cannons and muskets" as well as enlisting the help of doctors, engineers, sappers, and other skilled personnel. In return, Ethiopia would provide 40 mules for S.'s artillery force. However, Martin ↗Flad maintained that the request afforded S. an opportunity to release some Copts who had been forced to join the Egyptian Army. Additionally, Egypt sent 30 workmen to Ethiopia to replace British and German workers in the country.

In 1857, S. visited the Sudan which alarmed Tewodros who feared an Egyptian attack. However, by November 1857, it had become clear that S. had no intention of attacking Ethiopia. Given the lessening tensions between the two countries, Tewodros sent *aläqa* Gäbrä Iyäsus, a trusted priest, who visited Egypt to deliver a letter to S. whose purpose was to solidify relations between the two countries. In February 1859, the Ethiopian delegation arrived home with many gifts from S., including four cannons, 100 double-barrelled guns, and five tents. However, by late 1861, relations between Egypt and Ethiopia had deteriorated again as Tewodros had failed to answer a letter from S. He was succeeded by his nephew *ḫidīw* ↗Ismaᶜīl (↗Ottoman empire).

Thomas P. Ofcansky

Saint Simonians

The S.S. were a group of young early 19th cent. French idealists. Disciples of the Utopian Socialist, Count Claude Henri de Rouvroy de Saint Simon (1760–1825), they were deeply influenced by his book *Le Nouveau Christianisme*. In it he demanded the transformation of society "to ameliorate as promptly and as completely as possible the moral and physical existence of the most numerous class".

Taking advantage of the freedom resulting from the French Revolution of 1830 the S.S. founded a daily newspaper *Le Globe*; formed a sect, with their own distinctive dress (which symbolically required two persons to put on); and rallied behind Barthélemy Prosper Enfantin (1796–1864), whom they addressed as Père, or Father. Combining his own idiosyncratic ideas of Socialism and Feminism (which embodied a strong belief in the equality of the sexes), he claimed that God had given him "a mission to call the poor and women to a new destiny".

The S.S. were attracted to the Orient with the idea to discover the "female Messiah". During their travels, which included the Ottoman Empire and Egypt, several S.S. became interested in Ethiopia. Two of them, Edmond ↗Combes and Maurice ↗Tamisier, the first 19th-cent. French travellers to the country, went there, virtually penniless, as missionaries. Apparently embarrassed by the sect's eccentricity, they underplayed their ideology in the published account of their travels. Nevertheless, this account briefly reports on their preaching to the ↗Oromo, whom they regarded as "the most beautiful and most interesting people of Africa". They also believed that Šäwa, under *nəguś* ↗Śahlä Śəllase, was destined to unify Ethiopia (Combes – Tamisier 1838: 163, 242f.). A third ardent S.S. active in Ethiopia was Théophile ↗Lefebvre.

Richard Pankhurst

Saints, Christian

S. (Eth. **ቅዱሳን**, *qəddusan*; sg. *qəddus*) in Ethiopian Orthodox ↗Christianity are holy persons who are recognized as such by the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC) and enjoy posthumous liturgical veneration. Their individual sanctity emanates from the immanent holy quality possessed by God alone. As in other Christian traditions, the image of S. as human beings who have achieved the fullest realization of Christ's commandments and therewith a high degree of grace is pivotal for Ethiopian Orthodox Christianity. Besides, the veneration of S. in Ethiopia generated a number of cultural phenomena important for the study and understanding of the local civilization.

The EOTC today distinguishes the following formal categories of S.: ↗Angels, Old Testament ↗Prophets, Apostles, saint martyrs (cp. ↗Martyrdom), and the wide group of the "righteous ones" (*ṣadəqan* [not to be confused with the 5th–6th cent. anonymous group, s. ↗*Ṣadəqan*], the latter group including indigenous Ethiopian S.; EOTC 1996: 53–59). The Church refers to the S. as those distinguished by the spiritual power of miracle working, granted to them by God, and by the power of intercession (Amh. **አማላጅነት**, *ammalağənnät*). Anyone who calls upon the name of a S. in ↗prayers, celebrates his/her commemoration (↗*täzkar*, ↗*zəkr*), and believes in his/her intercession, can hope for salvation thanks to the ↗*kidan* given to this S. Honouring (Amh. **ማክበር**, *makbär*) is considered appropriate for S.'s ↗relics, which are recognized as transmitting divine power. ↗Pilgrimage to a S.'s veneration centre is considered a highly pious deed.

The "calendars of S.' days" of the EOTC are the ↗*Sənkəssar* and *Mäṣḥafä* ↗*gəṣṣawe* (cp. ↗Calendar). Traditionally, the veneration of a S. is considered fully established if:

1) there is at least one ↗*tabot* consecrated in his/her name, in a church or in a monastery, which entails the regular liturgical celebration (cp. ↗*Qəddase*) of the S.'s ↗feast(s) at this church;
2) a Vita (↗*Gädl*) exists, keeping the memory of S.'s deeds (sometimes extended by a collection of miracles, ↗*Täᵓammər*), as well as ↗*mälkəᵓ* (cp. ↗Hagiography; Fritsch 2001: 65ff.).

Veneration of saints in history

In Ethiopia, the veneration of S. dates back to the time when Christianity was adopted as the official religion of the state of ↗Aksum. One can assume that at least some early Christian S. and martyrs (esp. those whose Vitae are translated from Greek) were known and venerated in Ethiopia in Aksumite time. The forms the veneration of S. had then can only be surmised from the shape taken by this phenomenon in the later period (13th–16th cent. and Gondärine times).

Not unlike other Christian areas on the margins of the Mediterranean world, the first S. venerated in Ethiopia were non-Ethiopians, those who today are known as universal S. On the whole, many Oriental S. (whose deeds are described in such works as, e.g., ↗*Gädlä sämaᶜətat*) became known in Ethiopia. Whilst their names are found in Church books and many of them enjoy wide fame in Ethiopia, most of them are honoured rather than properly venerated, since usually no *tabots* are consecrated in their honour (cp. *abunä* ↗Sälama Käśate Bərhan). The veneration of only a few of them, such as ↗George of Lydda (patron S. of Ethiopia), Stephen Protomartyr, Cyriacus and Julitta (↗Qirqos) that might hark back to the early (Aksumite) period, appears as properly established. Today one can find at least one or two *tabots* consecrated in the name of such S. as, e.g., Basilides, Arsima, St. ↗Anthony, and New Testament S., such as ↗Mary Magdalene, John the Evangelist (Yoḥannəs Wäldä Nägʷädgʷad, 'John Son of Thunder'), and ↗John the Baptist. From the categories of Angels, Prophets, Patriarchs and Apostles, significance is accorded to the veneration of Archangels Michael and Raguel (and to a lesser extent Rufael and Uriel).

Another group of S. is composed of those pious monks of foreign origin who acted in Ethiopia during the Aksumite time (↗Nine Saints; groups of *Ṣadəqan;* cp. ↗Azqir; ↗Nağrān). They brought to Ethiopia examples of the spiritual struggle and pious behaviour; though believed to be ancient, their veneration (in most of the cases geographically limited and linked with single religious centres) can be traced back to the 13th cent. at the earliest.

A large plethora of indigenous S., i.e. those who were born and who lived in Ethiopia ("foreign origin" being retained in the hagiography as *topos*), appeared on the scene and started dominating it later, with the surge of Ethiopian spirituality, ↗monasticism and ↗holy men in the 14th–15th cent. The development of veneration of Ethiopian S. (*ṣadəqan*, following the contemporary EOTC terminology) was a complex phenomenon encompassing developments in religious, political, social and cultural life.

The distibution of the local veneration traditions and the size of their respective geographical areas have been changing. Some S. were known and venerated in large historical districts (↗Täklä Haymanot, "the Apostle of ↗Šäwa" [and ↗Damot]; ↗Yoḥannəs Məśraqawi, "the Apostle of ↗Mänz", etc.). Some are linked specifically to one or more monasteries as founders (cp. ↗Samuᵓel of Däbrä Wägäg, ↗Tadewos of Däbrä Bartarwa, ↗Aron of Däbrä Daret, etc.). Most of the "local S." are linked to only one small locality. Some appear to have a special relation to an ethnic group (e.g., ↗Zena Marqos, the evangelizer of the ↗Gurage; or ↗Mäbaᵓa Ṣəyon, of the ↗Gafat).

No "independent" evidence documenting the beginning of any veneration tradition in Ethiopia seems to exist apart from the hagiographic traditions; in some cases reports concerning relics – *inventio*- and *translatio*-accounts – provide additional landmarks for its chronology.

In the context of Ethiopia, the veneration of S. strengthened Christianity as the dominant religion, but also stressed the country's cultural (and political) heterogeneity rather than worked for religious "uniformity" (there is no evidence that *aṣe* ↗Zärᵓa Yaᶜəqob promoted the veneration of local S., contrary to Heyer 1998:10). On the other side, at least from the 16th cent. onward, veneration of a few S. developed beyond regional boundaries, e.g., Täklä Haymanot, ↗Gäbrä Mänfäs Qəddus, ↗Samuᵓel of Waldəbba, ↗Ewosṭatewos, ↗Zämikaᵓel Arägawi, ↗Zärᵓa Buruk. Today, they are sometimes referred to as the "national S." of Ethiopia. Nowadays, the proliferation of hagiography and religious painting through prints and mass media plays an active role in promoting the veneration of different local S., whose fame easily extends beyond the former limits.

In the course of history, a number of veneration traditions was discontinued (in many cases, after the respective ecclesiastical centres ceased to exist), their only witnesses remaining chiefly hagiographic works.

The available data concerning Ethiopian S. are incomplete, collected with more attention to the literary aspect of veneration (hagiography) and mostly based on this latter (cp. KinBibl; EncSan; Aklilä Bərhan Wäldä Qirqos 1950/51:72–82; EMML no. 1601; AmhChurchD), and with less concern about the proper "hagiographic dossiers" and "hagiographic coordinates" of S. (such studies being still in fact difficult in Ethiopia).

In the 20th cent., the EOTC attempted to regulate and unify the liturgical veneration of S. (this policy may be exemplified through the Church edition of the *Sənkəssar* and Acts of different S.), but in reality local veneration traditions have not been affected. Today, the EOTC celebrates annual commemorations of a few of the most venerated S. as solemnities, and, in addition, "commemorates" them on the respective days of each month, not all feasts being of equal popularity (cp. Fritsch 2001:70ff.):

The Ethiopian S. of the monthly cycle of the Sanctoral: on the 2nd of each month, ↗Guba (main commemoration on 29 *Gənbot*); 5th, Gäbrä Mänfäs Qəddus (*Ṭəqəmt* and *Mäggabit*); 13th, Zärʾa Buruk (*Ṭərr* and *Ḫədar*); 14th Zämikaʾel Arägawi (*Ṭəqəmt*); 17th, ↗Gärima (*Säne*), and ↗Ǝsṭifanos (*Ṭəqəmt*); 18th, Ewosṭatewos (*Mäskäräm*); 24th, Täklä Haymanot (*Näḥase*, also *Taḫśaś*, *Ṭərr*, as well as 12 *Gənbot*); 26th, *abunä* Sälama Käśate Bərhan (*Ḥamle*).

The non-Ethiopian S.: on the 2nd, Thaddeus (2 *Ḥamle*); 4th, John the Evangelist (*Ṭərr*); 5th, Peter and Paul (*Ḥamle*); 8th, ↗Kiros (*Ḥamle*); 9th, Thomas (*Ṭəqəmt*); 11th, Hanna the mother of Mary (*Ḫədar*), and ↗Gälawdewos [Claudius] (*Säne*); 12th, St. Michael (*Ḫədar* and *Säne*); 14th, ↗Gäbrä Krəstos [Alexis] (*Ṭəqəmt*); 15th, Qirqos [Cyriacus] (*Ṭərr*, s. also 19 *Ḥamle*); 18th, Gabriel (*Taḫśaś*); 23rd, George of Lydda (*Miyazya*); 25th, Mercurius (*Ḫədar*); 28th, the three Patriarchs Abraham, Isaac and Jacob (*Näḥase*); 30th, Mark (*Miyazya*).

Commemorations of other S. are not festive celebrations but simply consist in reading the respective notice in the *Sənkəssar* (containing more than one commemoration a day) and, should Mass be celebrated, in reading the N.T. readings of the day as selected in the *Mäṣḥafä gəṣṣawe*, in relation with the S. listed in the notice for the day. Locally, a celebration as annual feast takes place only for a S. in whose name the main *tabot* is consecrated. In a monastery, the feast of its founder is celebrated as annual feast even if there is no *tabot* consecrated in his name.

Sanctity

From the hagiographic works, ethical conditions of "sanctity" typical for the Ethiopian tradition can be deduced (only partly overlapping with the qualities of holy men), having been realized in the idealized characters of Ethiopian S. Over the centuries, they deeply influenced religiosity and personal piety, as well as the mentality of the faithful.

Most Ethiopian S. come from the monastic ambience, and are depicted as reaching their high status through a lifelong monastic career. Probably with the only exception of *abba* Sälama Käśate Bərhan, no metropolitans or other officials of the EOTC were venerated as S. ("saintly bishops"), though the names of many of them are included in the *Sənkəssar*. There are some indications that within a few well-established communities (↗Däbrä Libanos of Šäwa, ↗Gundä Gunde, ↗Däbrä Bizän) each head was posthumously venerated as a S., within the premises of the monastery. However, they were mostly distinguished for their charisma, personal piety and spiritual merits, and thus their sainthood was not conditioned by their administrative positions.

Based on hagiography, one can assume that in Ethiopia – as elsewhere – the noble origin (and relationship to the political elite) were frequently, though not always (cp. ↗Aristocracy), linked with the sainthood. The notion of S. as pre-elected by God is very strong (that sainthood is reserved for those elected only). A S.'s great future is recognized at least from birth, and foretold by signs and prophecies. S. are directed by divine power throughout their entire lives. This power gives them the ability to work miracles including levitation and control over nature.

In the images of Ethiopian S., *vita activa* clearly dominates over *vita contemplativa*. The historical conditions of Ethiopia shaped the picture of a S. as a dynamic personality, actively engaged in evangelizing or establishing monastic life. Some S. are shown as close allies of the royal power but many appear independent or even boldly confront the supreme lay (or ecclesiastical) authorities. The topic of conflict with worldly powers is a recurrent theme in Ethiopian hagiography and alludes to the ideal image of martyrdom. Equally, S. are supposed to suffer during the continuing universal battle with the ↗devil and ↗demons (↗*Däsk*), in which S. always emerge victorious.

The images of such non-Ethiopian leaders of eremitic monasticism as St. Anthony, Kiros, Paul "the first hermit", Abib, and Latṣun exercized less influence on the local (Ethiopian) "type of sanctity". Historically, eremetic monasticism has always been prominent in Ethiopia; nevertheless, though revered as holy men *par excellence*, ↗hermits (cp. ↗*Səwwuran*) occupy a special position within the EOTC and only a few are venerated as S. (cp. Gäbrä Mänfäs Qəddus; ↗Ṗänṭälewon). Instead, an ascetic component is accommodated in images of most Ethiopian S., with a lengthy period of time spent in wandering in the "desert" and a notion that the "angelic nature" of S. excells in fighting temptations and in abstinence: ↗fasting, praying and overcoming of the carnal nature. Typically, ascetic exercises are shown as developing into extreme self-mortification, hardly thinkable in real life (also despite of the facts described in Bushell – Baidemarian Desta – Bushell in PICES 11, vol. 2).

The mystic component is also strong in cases of most S., since nearly all of them had visionary experiences and saw "heavenly mysteries"; but only in exceptional cases (cp. ↗Habtä Maryam, but also ↗Krəstos Sämra) "mysticism" dominates the image of a S. However, a S.' very close, nearly "intimate" relations with God (such as speaking to Christ in person, or even arguing with him) are strongly emphasized.

Saintly kings are present, but are not central in the Ethiopian tradition. These are the brother-kings ↗Abrəha and Aṣbəḥa, who introduced Christianity into Ethiopia; King ↗Kaleb, the conqueror of South ↗Arabia; as well as the kings of the ↗Zagʷe dynasty: ↗Lalibäla (cp. ↗Mäsqäl Kəbra), ↗Ḥarbay, ↗Yəmräḥannä Krəstos, ↗Näʾakkʷəto Läʾab (contrary to the present situation, the veneration of the Zagʷe kings appears to have been formerly limited to ↗Lasta). ↗Gälawdewos and ↗Iyasu I, the martyred kings, provide further examples of saintly monarchs. There are indications that some other Solomonic emperors were considered S. (e.g. ↗Yəkunno Amlak), but their veneration never reached a noticeable scale.

A few Ethiopian S. appear as repented sinners (Krəstos Sämra; ↗Bäggəʿu). With the exception of Krəstos Sämra, the type of Ethiopian holy woman seems to have emerged from the context of the struggle against ↗Catholicism and subsequent religious controversies (cp. ↗Fəqərtä Krəstos; ↗Wälättä Ṗeṭros).

Most of the Ethiopian S. suit the broadest frame of the Ethiopian "sanctity type". Noticeable deviations are relatively rare (cp., e.g., ↗Yared), though individual stories of S. show great diversity in realization of the hagiographic *topoi*.

Most of the Ethiopian S. suit the broadest frame of the Ethiopian "sanctity type". Noticeable deviations are relatively rare (cp., e.g., ↗Yared), though individual stories of S. show great diversity in realization of the hagiographic *topoi*.

Saints and their believers

The underlying principle of the veneration of S., as in other traditions, appears to be the relation of patronage established between a S. – an intercessor having a special relation to God – and his/her devotees (cp. Taddesse Tamrat in PICES 7). Patronage is based on an explicit or implicit "contract", according to which believers are expected to duly perform services in the context of S.'s veneration. The main duty is regular participation in the S.'s annual feast which is a symbolic "renewal" of the relationship. It is supposed to take place first of all in the local ecclesiastical centres of veneration, especially where the S. is buried. These places are considered best for communication with a patron S., the local clergy bearing full responsibility for that.

In addition to liturgical veneration reserved for ecclesiastical centres, there are a few popular forms rooted in the laity, which aim to establish and strengthen patronage relations between members of a community and its patron S. (cp. ↗*maḫbär*; ↗*səlät*). Popular religiosity links legends of S. to different sacred places – places of veneration and sources of miraculous power (springs, rocks, ↗trees etc., cp. ↗*Ṣäbäl*).

The requirements of veneration are flexible and encompass a range of options (formulated in the *kidan*) which make it accessible to a person of any social status and means. He who commissions a copy of a S.'s Vita or donates land to a church or monastery, and he who can only afford to give a cup of water to the thirsty, both are equal in their position as "clients" of their S., and both can hope for the S.'s intercession and help.

The relationship between S. and their adherents is reciprocal. S. are expected to protect the faithful in their earthly life and guarantee the salvation of their souls. Vitae and Miracles aim to prove and illustrate the power of a S., who is really "present" for his community and whose help and intercession are decisive for achieving a secure supply of food, success in war, health or recovery from illness, the successful procreation of progeny etc.

The scale of veneration of a S. was linked to the prestige of his or her centre (monastery, church) enjoyed in the country. Historical landmarks for the status of specific S. appear to have been episodes recounted in the hagiographical literature showing how at crucial moments the supplications of the faithful were responded to and their expectations were met. One recalls such events as the campaign of Kaleb against Finḥas (↗Yūsuf Asʾar Yaṯʾaṛ) in South Arabia, which was won thanks to the miraculous help of *abba* P̣änṭälewon (the episode is reinterpreted in the Vita of Zämikaʾel Arägawi), or the campaign of *aṣe* ↗Bäʾədä Maryam against ↗Dobaʾa won thanks to Täklä Haymanot through the supplication of *abunä* ↗Märḥa Krəstos, Täklä Haymanot's "representative" on earth (cp. also PerrZarY 58). The Ethiopian emperors' custom of taking *tabots* on campaign might have had a similar function. Among recent events, the Battle of ↗ʿAdwa must be mentioned, which coincided with the feast of St. George, whose role in the outcome of the battle was never doubted (cp. ↗Gännätä Ṣəge Giyorgis).

On the other hand, Vitae and Miracles teach the faithful that disrespect to a patron S., or lack of loyalty to him and interruption of the "contract" may cause the S.'s rage and lead to harsh punishment (death and perdition of the soul). If a misdeed was forgiven, bodily death but salvation of the soul was still considered a favourable outcome. "Inactivity" of a S. in decisive situations would in the first place hint to moral deficiency of his servants, especially ecclesiastics, and their inability to fulfil their part of the "contract".

Canonization

It is commonly thought that canonization is a feature assumed by the EOTC in recent times, with the establishing of the Holy Synod (Aymro Wondmagegnehu – Joachim Motovu 1970: 86). Formerly, canonization did not exist as a process consisting of checking the identity of a S. and his/her hagiography, conducted in accordance with specific criteria. Quite the opposite, as in other Eastern Christian traditions, veneration started as a consequence of a spontaneous decision of the faithful wishing to honour a pious miracle-maker; popular veneration was *de facto* the main (and apparently strict) criterion for a person to be considered a S. It seems that consecration of the first *tabot* in honour of a S., which could be done only by the metropolitan (↗*P̣appas*), marked the formal acceptance of his/her sanctity and approval of the veneration. As the tradition has it today, there is no S. for whom no *tabot* is dedicated (Fritsch 2001: 67). Another kind of formal recognition of a S. might have been his/her acceptance into the *Sənkəssar*, yet it is also commonly stated that the book encompasses only stories of S. "who are known", whereas there are many holy persons who (still) remain unknown. In any case, in the 20th cent. the EOTC canonized only a few personalities: the late Ethiopian Patriarchs (↗Basəlyos, ↗Tewoflos, ↗Täklä Haymanot); *abunä* ↗P̣eṭros (killed by the Italians; a church in his name was built in ↗Fəčče, his birth place); the victims of "↗Graziani's massacre" who were proclaimed martyrs.

Šakačo

Šakačo language

The Š. language (self-name: *Šekki noono*, lit. 'Šekka language'; the name Moča is seen as derogatory; not to be confused with ↗Šeko, a ↗Dizoid language) is spoken by the Š. people (also known as Šekačo or Šekičo) in the forested highlands of south-west Ethiopia (the Šekka zone of the Southern Nations, Nationalities and Peoples' Region). The two major towns in the Š.-speaking area are Maša and Geča (for location s. map for Šeko). According to the 1998 Census, there are ca. 54,900 mother tongue speakers of Š. (cf. Gordon 2005: 118).

As a South ↗Gonga language (Fleming in BendNonSLang), Š. is a member of the ↗Afro-Asiatic, North ↗Omotic language family. It is closely related to ↗Käfa with which it exhibits a lexical similarity of 69.5 % (ibid.). Although these two groups share a common history and culture, there is a definite feeling of separate identity among the Š. people.

Š. has 21 consonant phonemes (cf. Leslau 1959; Fleming in BendNonSLang): plosives *p*, *b*, *t*, *d*, *k*, *g*, ʾ, ejectives *p̣*, *ṭ*, *č̣*, *q*, affricates *č*, *ǧ*, fricatives *s*, *š*, *h*, nasals *m*, *n*, a trill *r* and approximants *w*, *y*. The sounds *f* (allophone of *p*), *w*, *r*, *š*, *y*, ʾ, *h* are never geminated; *p*, *l*, *ǧ* only occur intervocalically and geminated; *s*, *č*, when intervocalic, are geminated. Š. has a five-vowel system with contrastive short and long vowels: *i*, *e*, *a*, *o*, *u*. The area of tone and stress in Š. needs further research.

Most nouns end in -*o*, e.g. '*aš-o* 'man'. The normal plural marker is -*noši*, e.g. '*aš-o-noši* 'men'. A small number of nouns denoting female beings end in -*e*, e.g. '*mečč-e* 'wife'. Most proper names and a few nouns end in -*i*, e.g. '*miim-i* 'cow'. In a discourse a noun can be made definite by adding a demonstrative and/or the suffix -*yo*, e.g. '*are* '*aš-o-noši-yo* 'those people'. The adjective marker is -*a*, e.g., '*oog-a* '*kero* 'a big house'. The direct object is marked by the suffix -*n*. The genitive marker is mostly -*i*, e.g. '*aš-i* '*ker-o* 'the man's house'.

The independent personal pronouns are: 1st pers. sg. '*ta*, 2nd pers. sg. '*nɛ*, 2nd pers. sg. polite '*itti*, 3rd pers. sg. masc. '*aro*, 3rd pers. sg. fem. '*are*, 3rd pers. sg. polite '*booši*, 1st pers. pl. '*no*, 2nd pers. pl. *i*'*ttoši*, 3rd pers. pl. '*boonoši*.

Several verb classes are distinguished according to the changes that occur between the basic and the imperative stems. In the following examples, 1 has the imperative marker -*b*- (preceded by a connecting vowel), whereas in 2 and 3, the imperative is marked by the changed stem and the suffix set: 1. '*ter-i-ye* 'he went', '*ter-i-b-e* 'go!' (no change in stem). 2. '*deebb-i-ye* 'he brought', '*deeb-e* 'bring!' (final geminated consonant becomes single). 3. '*uss-i-ye* 'he drank', '*uw-e* 'drink!' (final consonant changes into a "softer sound"). The negation maker is -*aa*: *te*'*r-aa-no-ne* 'he did not go'. The continuative aspect is marked by -*bee*: *ter-i-*'*bee-to-ne* 'he is going'.

The suffix set for the perfective aspect is: 1st pers. sg. -*owe,* 2nd pers. sg. -*ine*, 2nd pers. sg. polite -*ite*, 3rd pers. sg. masc. -*e*, 3rd pers. sg. fem. -*ane*, 3rd pers. sg. polite -*oone*, 1st pers. pl. -*one*, 2nd pers. pl. -*ote*, 3rd pers. pl. -*eete*. For the imperfective aspect it is: 1st pers. sg. -*taane*, 2nd pers. sg. -*neene*, 2nd pers. sg. polite -*ittine*, 3rd pers. sg. masc. -*ne*, 3rd pers. sg. fem. -*ine*, 3rd pers. sg. polite -*none*, 1st pers. pl. -*noone*, 2nd pers. pl. -*ittošine*, 3rd pers. pl. -*nošine*. For the imperfective negative the language sometimes employs special short forms. Of particular interest here is that the expected imperfective suffix set is replaced by the perfective suffix set for these short forms: *di*'*h-aa-čč-eyo-nošine* 'they will not fall' (standard), *di*'*h-aa-čč-eete* 'they will not fall' (short form).

The basic word order of the language is Subject–Object–Verb: '*uro*$_1$ '*baaro-n*$_2$ '*šookki-y-e*$_3$ 'The man$_1$ sowed$_3$ maize$_2$'.

The basic ten word list for Š. is: 'one' '*ikko*, 'two' '*gutto*, 'three' '*keeǧǧo*, 'fire' '*qaaqqo*, 'water' '*aač̣o*, 'sun' '*aabe*, 'moon' *a*'*gano*, 'blood' '*damo*, 'tongue' '*hɛč̣awo* and 'tooth' '*gašo*ʾ.

A Latin alphabet of the Š. language was established in 2007 and work on literacy and literature has started.

Jacob Haasnoot

Šakačo ethnography

The Š. (also Šekka) people, who speak an Omotic language, live in south-western Ethiopia, in the former Moča district, were until 2007 part of the new "Käfiččo-Šäkičo" Zone in the Southern Ethiopian regional state, but are now in the "Käfa zone". While not mentioned as such in the 1994 Ethiopian census, the Š. were listed there under the name "Mocha" (CSA 1998: 66). In 2007 the Š. numbered 77,678 people and the entire Käfa zone had 880,251 inhabitants (CSA 2008:78), most of them Käfiččo people (↗Käfa). The main towns are Geša and Maša. The Š. are often confused with the ↗Šeko. Together with the Käfiččo, the Š. form part of the ancient ↗Gonga people and share many socio-cultural characteristics with them, including a royal tradition (although the Š. cannot be said to have had "divine" ↗kingship), cosmology, spirit medium cults, and social organization in status groups and patrilineal clans. As in Käfa, the Š. royal elite was from the Bušašo clan from ↗Anfillo, established in the late 16th cent. Nevertheless, armed conflicts occurred between the two peoples.

Orthodox Christianity has also been present in Š. since the 16th cent. Oral traditions emphasize the arrival of northern immigrants at this stage (e.g., from ↗Wällo, both Christians and Muslims). After shaking off their tributary status to the ↗Ǝnnarya kingdom in the early 17th cent., the Š. fought a major but unsuccessful war with the Oromo around 1650 and lost their statehood; this was followed by a migration of many Š. to Käfa. They regained their statehood after ca. 1750, but this was ended in 1898 with the conquest by *aṣe* Mənilək II's forces under *däğğazmač* ↗Täsämma Nadäw, who, after stiff local resistance, deposed the last Š. king, Tečči Goečči. Severe socio-economic decline set in after the conquest, and Š. remained an impoverished country. The Š. were known for their resisting external conquest and oppression, and did not hesitate to take up arms when threatened, e.g., in the time of villagization during the *Därg* period.

Historically a strongly hierarchical and stratified society (Lange in PICES 5), the Š. are now a sedentary agricultural people with few significant wealth and power differences between them. They live in small dispersed settlements in a forested area of the Ethiopian south-west and cultivate ↗*ənsät* and other root crops, cereals, coffee and lentils; they keep small livestock, they hunt and practise apiculture, selling the honey. Work in the fields is often done in collective work parties called *dafo*. The forest ("Šeko Forest"), extends into the Benç̌ and Šeko areas; the Š. have lived in and looked after this forest over a long period of time and it is one of the few remaining primal forests of any significance, in recent years under threat from illegal logging and new plantations.

A Šakačo woman punding *ənsät*-pulp in a pit; photo 2005, courtesy of Art Pabst

Most of the Š. people are Christian, but they also adhere to traditional practices and cults (↗Religion, traditional). The role of spirit mediums or *eqos* (↗*Eqo*), giving treatment in cases of illness or misfortune, is still significant. These specialists had their own plots of farmland (*maddo*), cultivated by followers. The main local spirit cults are the Bullafo and Addamočči. The ↗Ethiopian Evangelical Church Mekane Yesus has, however, been gaining adherents since ca. 1986.

The Š. are traditionally divided into six status groups (*gumbo*), each with a different social and historical background. They are the *donğo* (the highest group), *čabäro* ('serfs'), *manno* (potters and tanners), ↗*manğo* (*manğa*, hunters), *qeğo* (blacksmiths) and the *guğği*. The last two were predominantly of Käfa origin. They were marked by certain socio-economic specializations and were largely endogamous units. Clans exist within these six groupings. Authority is traditionally carried by the 'clan leaders' (*gepi* ↗*tato)* and the 'elders of the land' (*šawo geno).* Each of the six status groups has a dual structure of *ṭasso*s, which are apparently marriage classes. Polygamous marriage is known but limited (ca. 16 % of households); when men marry they provide bride-wealth to the family of the bride, previously one head of cattle, nowadays an equivalent sum of money.

As among many neighbouring societies, the craftsman group are the *manğo*, who used to be of lower status, followed different dietary rules and rarely intermarrying with the rest of the Š. The large majority of Š. are still peasant cultivators, with a growing proportion receiving education in the school system and entering administrative jobs or trading. Serious tensions about borders between ethnic zones and *wärädas* have regularly caused violent conflict in the post-1991 period, e.g., in March 2002, when the town of

Tepi was attacked and several hundred people were killed in the ensuing clashes. Unresolved problems between Š. and *manğo* sub-groups have also caused abuse and violence.

A new university was founded in the town of Tepi some years ago, but the general economic situation of the area remains dire.

Šala

The crater lake of Š. (**ሻላ**, also Lamina; area: 250–409 km²; basin area, 3,920 km²; 1,567 m A. S.L.; max. depth 250 m), is the deepest lake of the Ethiopian ↗Rift Valley. It belongs to the lakes of the Arsi group (s. also ↗Langano). The major inflowing river is the Gida or Diğğo River which drains the highlands of Aliččo-Wuriro, parts of ↗Səlṭi and ↗Wəlbaräg. The lake is separated to the North from Lake ↗Abyata (or Abğata) by a narrow strip of land which is part of the caldera rim that surrounds the lake. There is a periodical overflow from Abyata, while Š. itself has no outflow. In its vicinity are several geothermal wells and its waters are fed by sulphur springs on the lake bed. While the alkaline water is not potable for humans, the ↗Arsi Oromo cattle breeders living in the area use the lake to water their herds. The nine small volcanic rock islands in the lake are uninhabited. There is no fishing activity. Lake Š. is part of the Šala-Abyata ↗National Park and famous for its rich bird life (pelicans, flamingos, cormorants).

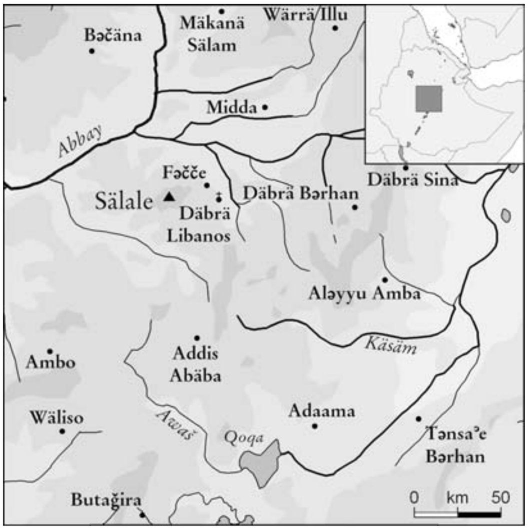
Sälale

S. (**ሰላሌ**, Orom: Salaale) is a mountain in ↗Šäwa (3,111 m A.S.L., 09° 42' N, 38° 38' E), to the west of the monastery of ↗Däbrä Libanos. The name was also used for the vast surrounding region, stretching between the ↗Abbay and its two tributaries ↗Ğämma and ↗Mugär.

In the 14th–16th cent., the area of S. was a part of the so-called old province of Šäwa. During the migrations of the ↗Oromo, the region was inhabited by an Oromo clan with the same name, which, together with Oborra, Gombečču, Yakaa, Gulaale, Badi and Mulla belonged to the Torban Obbo ('Seven Obbo') confederation of the ↗Tuulama Oromo. By the beginning of the 19th cent. the S. Oromo were agriculturists, growing crops in the fertile *wäynä däga* zone stretching from the S. mountain slope to the Ğämma valley. They were also well known for their ↗weaving products.

Šäwan influence reached S. during the rule of *märᶜəd azmač* ↗Asfa Wäsän and increased under ↗Wäsän Sägäd. S. was ultimately annexed by ↗Śahlä Śəllase in 1839. The victory was achieved with the help of the neighbouring ↗Abbičuu Oromo who had sided with the *nəguś*.

During the reign of ↗Ḫaylä Mäläkot, S. was governed by ↗Säyfu Śahlä Śəllase. A campaign in S. was undertaken by *nəguś* Mənilək (later *aṣe* ↗Mənilək II) as part of an initiation rite. Since then, S. was under constant control, and further military marches southwards passed through the area. On 20 March 1878, an agreement on spheres of influence was reached between Mənilək and



aṣe ↗Yoḥannəs IV at S., the former receiving the title of ↗*nəguś*.

When Mənilək became emperor, he gave S. to *ras* ↗Darge Śahlä Śəllase as ↗*rəst*. It was later inherited by Darge's son Täsämma.

Upon ↗Mäkʷännən Wäldä Mikaᵓel's death in 1906, the 13-year-old Täfäri (the future *aṣe* ↗Ḫaylä Śəllase I) was appointed governor of S.

In the 20th-cent. imperial administrative division, the region formed an extensive and important *awraǧǧa* with the administrative centre in ↗Fəčče, its historical capital.

Sälam

S. (**ሰላም**, lit. 'peace', but here meaning 'salutation, greeting', cp. the derived verb *täsalämä*, 'to greet') is a type of short ↗hymn in ↗Gəᶜəz, which is akin or almost identical to ↗*arke*. The difference is only that S., beginning with the words **ሰላም፡ ለ/ሰላም፡ እብል፡ ለ** *sälam lä/sälam əbəl lä*+[name of the saint], 'Hail to …/I say hail to …', is always found in the ↗*Sənkəssar*, while the term *arke* refers to a hymn outside of the *Sənkəssar* (even if it is the same S. rearranged in another collection, or another hymn on its basis). In the *Sənkəssar*, a S. follows the commemorative notice devoted to the saint. It summarizes the account and exposes, in poetic mode, the essence of the saint's spiritual deeds, stressing the most peculiar episodes of the saint's life. The object of a S. may be also an event (feast) remembered in the *Sənkəssar*.

The S. is always composed of five verses rhymed in the same way, in one stanza. Despite identical beginning, S. should not be confused with ↗*mälkəᵓ*-hymns which have completely different structure and function (though some define S. as "generic term", ChRep 183ff.).

The origin of the S. must be Ethiopian; the time of creation of the first S. is unknown, but hymns very similar to S. appear already in one of the ↗*Ǝgziᵓabəḥer nägśä* collections which is ascribed to *aṣe* ↗Zärᵓa Yaᶜəqob, e.g., in the 15th-cent. ms. EMML no. 3128 (Getatchew Haile 1983: 42a, 43, 45, 47, cp. also 32, 35). The S.-hymns appear in the second version of the *Sənkəssar* from the second half of the 16th-cent. (though not in every manuscript), attached to most of the notices, even if these recall only the name of the saint and contain no account about him or her. In the recent Church edition of the *Sənkəssar* a S. is attached to almost every notice, but has got the subtitle *arke*.

Sälama (Käśate Bərhan)

S. (**ሰላማ፡ ከሣቴ፡ ብርሃን**; or Abba S., 'Father S.', [I], b. Tyre, fl. 330/40, d. Aksum [?] after 356 A.D.) is the name by which Frumentius (Gr. Φρουμέντιος, *Phrouméntios*, Eth. **ፍሬምናጦስ**, *Fərem[ə]naṭos*, also *Fəremonaṭos*, *Fəre Mənaṭəyos* and *Fəre Mänṭəyos*), the apostle and first bishop of Ethiopia, become better known in local tradition. S. is itself a proper name, but *Abba Sälama* was sometimes erroneously translated as 'Father of Peace' (cp. Getatchew Hayle 1979: 311

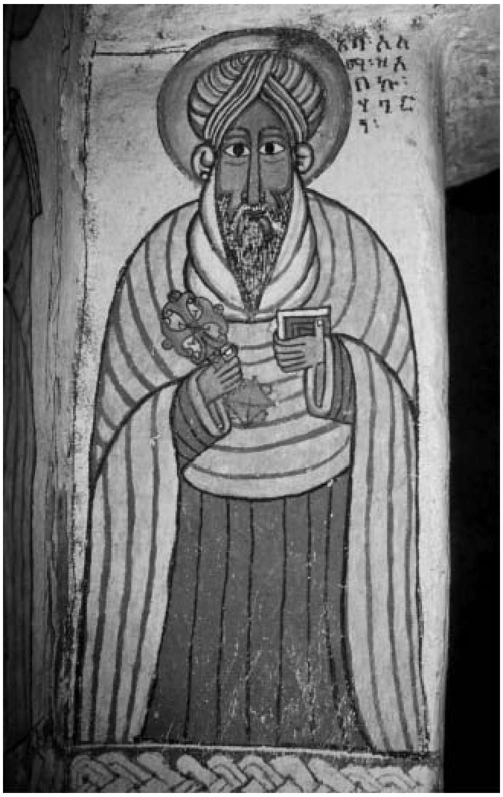
and n. 3). Responsible for the introduction of ↗Christianity to ↗Aksum, he was also called Käśate Bərhan (‘Revealer of Light’, ‘Illuminator’). He is considered a ↗saint not only in the ↗Ethiopian Orthodox (Täwaḥədo) Church, where he is still revered as a founder of the faith, and feasted on 26 *Ḫamle*, but also in the Roman Catholic and Greek Orthodox Churches, commemorating him on October 27 (arbitrarily) and November 30 resp. (s. Sauget 1964: 1292f.).

The main source about S.’s personal circumstances is the account on the Christianization of *India ulterior*, i.e. Ethiopia (s. ↗“India” as name of Ethiopia), followed by the story of the conversion of “Caucasian Iberians” in the *Ecclesiastical History* by Rufinus of Aquilea (I, 9 and 10), which was completed in 402/03 A.D. Rufinus heard about those events from S.’s brother and, up to a certain time, companion of adventures, Aedesius, known in Ethiopia as Adəsyos (**አድስዮስ**; s., e.g., DillmChr 33) or Sidrakos (**ሲድራኮስ**). On Rufinus’s account such later chronicles as those by Socrates Scholasticus (*Hist. eccl.* I, 19), Sozomen (*Hist. eccl.* II, 24), Theodoretus (*Hist. eccl.* I, 23) and Nicephorus Callistus (*Hist. eccl.* VIII, 35), as well as ↗John of Nikiou (*Chron.* LXXVII, 111f., *Afrudiṭ* being here a deformation, via Arabic, of Frumentius’ name), depend more or less directly, while making no significant additions to it (s. Thelamon 1981: 41f.; ↗Historiography: Ancient Greek and Roman historiography). The received version of the story can be compared and integrated, on the Ethiopian side, not so much with the rather fantastic *Acts of Abunä Sälama* (summarized in Schneider 1987) as with the *Homily* (*in Honour*) *of Frumentius* preserved in the 14th-cent. mss. EMML nos. 1763 and 8508 (s. Fiaccadori 1989: 150 [and n. 3], 161f., ill.), which possibly draws on Greek sources (depending in turn on Rufinus), its text harking thereby back to Aksumite times: among other things, the author claims to have seen that the name of Frumentius – commemorated here, however, on *Taḫśaś* 18, day of his deposition (cp. Getatchew Haile 1979: 318 n. 3) – “was the first on the diptychs [*wəsṭa dəbdiqon*]” (Getatchew Haile 1979: 315f.), i.e. on the lists of “living and dead” proclaimed by the deacon during the consecration of the ↗Eucharist (s. Bausi 2008: 553 n. 151; ↗*Qəddase*). His name ranks first, accordingly, in the traditional lists of metropolitans (Chaîne 1925: 266).

In the same “ancient” line are the much later account of ↗Giyorgis of Sägla (YaqBeyGiy I, 116–25; cp. Conti Rossini 1948: 18), who had still access to Aksumite sources (Bausi in PICES 15, 536); and, indirectly though, the text rendered by Pedro ↗Páez after an “ancient book” of ↗Aksum Ṣəyon (BecRASO II, 351f., cp. 349), which passed then into the narrative of Manoel de ↗Almeida (ibid. V, 135f.), in turn abbreviated by Balthasar ↗Tellez (1660: 73ff.). Interestingly enough, the entry of the ↗*Sənkəssar* for 26 *Ḫamle* (GuiSyn II, 428), deemed to be the “classic form of indigenous tradition” (CRStor 151f.), is nowhere to be found in the Coptic Synaxarion (Sauget 1964: 1293), and rather derives from previous Ethiopian evidence, namely from the above *Homily* (Getatchew Haile 1979: 309ff.), onto which local elements were subsequently grafted – e.g., the joint-kings ↗Abrəha and Aṣbəha, paired with S. also in later Ethiopian legends on the Christian origins of Aksum (CRStor 258). A peculiar form of S.’s story is found in the 16th-cent. Däbrä Libanos redaction of the Vita of *abunä* ↗Täklä Haymanot (Budge 1906, ch. 5; cp. CRStor 152f.).

As it can be reconstructed from the available sources in spite of their differences, the story has it that Meropius (Eth. *Mero[bo]p̣əyos*), a “philosopher” (or a trader) of Tyre, was returning from a voyage to ↗India with the two very young brothers, who were his relatives and pupils. For some material needs, the ship they were travelling on had to put in at an unknown port of another “India” (*India ulterior*), likely to be on the ↗Red Sea coast, but was attacked by the “barbarians” living there, informed by the neighbouring people that the *foedus* (‘agreement’) with the Romans had been violated: i.e. that, against it, a ship had reached a coastal point outside the only authorized calling-place and emporium of the kingdom – the “port of trade” of ↗Adulis. Rather than being a relation treaty with those barbarians, as more often understood, the *foedus* at issue was in fact an agreement in the matter of administered trade (cp. Fiaccadori 2004: 108, 112, 118ff., 136ff., 154). Meropius and the ship’s crew were killed, whereas the two youths, on account of their age, were spared and handed over to the local ruler. According to the homily, this was Ǝllä Aläda, i.e. ↗Ǝllä ^{c}Amida (I), father of ↗Ǝllä Azg^{w}ag^{w}a, i.e. ↗^{c}Ezana (Getatchew Haile 1979: 314; cp. the aforesaid *Sənkəssar* commemoration, with Ǝllä A^{ɔ}əda for Ǝllä Aläda).

The king was so impressed by Aedesius and Frumentius as to appoint the former “his cupbearer”, the latter “his treasurer and secretary”: so for Rufinus, whereas in the *Homily* – which



Abba Sälämа, 17th-cent. wall painting from Maryam Dəngəlat, ʿƎdaga Ḥamus, Təgray; photo 2002, courtesy of Michael Gervers

might have exaggerated Frumentius' importance – they become resp. *mäggabe betä qäṭṭin*, 'steward of the palace', and *ʿaqqabe ḥəgg zawəʾətu ṣäḥafe Aksum*, 'guardian of the Law, that is secretary [lit. 'scribe'] of Aksum' (Getatchew Haile 1979: 314; cp. Bausi 2008: 553 n. 151). Frumentius was the only known figure "who approaches the position occupied by the freedmen of the Roman Imperial government" (MHayAksum 147). In this capacity, he availed himself the opportunity of organizing the Christian community formed by the merchants trading with(in) the Aksumite kingdom, most of them based in Adulis (likely to be the *meśyaṭ*, 'emporium', hinted at in the *Homily*, ed. Getatchew Haile 1979: 315; cp. Fiaccadori 2007: 75 and n. 12), and have some cult places arranged and/or constructed for them.

Upon the king's death, his consort was left with a small child, Ǝllä Azgʷagʷa, i.e. ʿEzana, who had been designated for succession (the probably short reign of ʿEzana's elder brother, ↗Ousanas I, being here symptomatically omitted), and Frumentius and Aedesius managed to obtain leave. Yet, the widower queen, regent for his young son, asked them, particularly the more gifted Frumentius, to share the cares of government with her, and to watch out for her son while he was a minor. When the new king attained maturity, Aedesius went to visit his parents and relative in Tyrus, where he became eventually a priest – to be later met by Rufinus in Palestine (Thelamon 1981: 44f.). Frumentius journeyed to Alexandria, informing there the patriarch, ↗Athanasius I (cp. ↗Coptic Church), on the progress of Christianity in Ethiopia, and asking him to appoint a bishop over the many Christians already congregated and the churches built in the country. Athanasius, who "had recently assumed the episcopate" after a fierce struggle with the Arians, consecrated Frumentius as bishop and sent him back "to (the land) whence he had come" – by which the Ethiopian custom was started of receiving a bishop from Alexandria that continued until the past century (↗*Ṗappas*). An interesting memory of S.'s Syrian origins is polemically kept, however, in the *Vita* of ↗ʿEzra of Gundä Gunde, while claiming priesthood in Jerusalem from the patriarch of Antioch (1486–89): "[…] I shall tell you the truth: this is our [patriarchal] see, as we are the children of Abba S. the Syrian" (ed. Caquot 1961: 79).

Frumentius' appointment took place, therefore, between 328, when Athanasius was elected to the See of St. Mark, and 335, when his first exile was enforced at the Council of Tyre (s. Desanges 1978: 353f, 356f., and Martin 502ff.). Likewise, the so called "short chronicles" mention that S. came to the country as a bishop 333 years after Christ's birth (BegCron 2; DombrChr 33; cp. the more developed lore in Conti Rossini 1918: 704), i.e. in 340/41 A.D., which is the traditional date for this event (TedEthPrel I, 999). Apart from other local computations (MHAlex [I], 140f. and nn. 423–24), Ethiopian chronological tables, sometimes, credit him with establishing Christianity at Aksum much earlier, in 252/53 A.D. (Grébaut 1918–19: 325; cp. TadTChurch 36 and n. 3).

As a matter of fact, when Frumentius returned to Aksum, king ʿEzana was reigning, whose "conversion" could be dated, accordingly, to ca. 330; and was since progressively officialized in his ↗inscriptions and coins (↗Coinage), from monotheism (a single all-powerful god as in DAE no. 11 = RIÉ no. 189) to a clearly Christian and trinitarian religious viewpoint, with an explicit profession of faith that echoes the contemporary anti-Arian (↗Arius) polemics in which S. was certainly involved (RIÉ nEo. 271; s. Black 2008).

In 356, the pro-Arian emperor Constantius II wrote a Greek letter to ᶜEzana and his brother ↗Śəᶜazana (who might well have been later confused with the mythical Abrəha and Aṣbəha), asking them to send S. to Egypt, so that he be confirmed in his see by the Arian Bishop George of Cappadocia (356–61), who was installed at Alexandria to replace Athanasius, deposed and exiled then for the third time. Copied by Athanasius within his own correspondence (Apol. ad *Constantium imp*. 31, ed. Szymusiak 1987: 158ff. = ed. Brennecke et al., 304ff.; cp. 29, ibid., 152f. = 302f.), the letter had very little or no response. It was an attempt at swaying the Aksumites towards the Byzantine Emperor's religious policy, but had apparently no effect either on S.'s own position or on the Aksumites' adherence to the orthodox Alexandrian creed as championed by Athanasius.

S. was thus still alive in 356, but nothing is known about his further activity in Aksum or in the kingdom's territories; he must have been on tenure, however, at the time of the (failed) Arian mission to Aksum by Theophilos the Indian (between 341 and 346; s. EAE vol. 5) – indeed not the bearer of Constantius II letter (s. Fiaccadori 1992: 7 and n. 11).

According to an isolated local tradition, S. was buried at the remote monastery of ↗Ǝnda Abba Sälama in ↗Tämben (cp. CRStor 258), which claims foundation from him – his ↗relics as well as his two ceremonial ↗crosses would be kept there – and is still the well-attended destination of annual pilgrimages.

The qualification *wäldä Däbrä Fərem*, '(spiritual) son of Däbrä Fərem', given to *ḥaśani* ↗Danəᵓel in the inscriptions he left at Aksum towards the end of the 10th cent. (DAE nos. 12–13 = RIÉ no. 193 I–II) could indicate the existence of an ancient monastery dedicated to Fəremənaṭos (to be only later S.) not too far from there: possibly, at the historical site of ↗Fəremona, six km north-east of ↗ᶜAdwa (Fiaccadori 1990: 329–33).

Historically, S. enjoyed a comparatively small veneration: his proper hagiography (the aforesaid *Acts*, still unpublished) seems to be known in very few exemplars (one from Ǝnda Abba Sälama, s. Schneider 1987: 155f.; cp. KinBibl no. 129: *Gädlä Abba Sälama*); nor is he frequently mentioned in liturgical books (but s., e.g., the ↗*Zəmmare* to his name, *Amməstu ṣäwatəwä zemawočč* 1972/73: 441*c*–42*a*; cp. also KinBibl 87f.). He is today, however, one of the most important saintly figures of the Ethiopian Church.

Gianfranco Fiaccadori

Sälama

Abba S. (**ሰላማ**, also known as **ሰላማ፡ መተርጕም**, *S. Mätärgʷəm*, 'S. the Translator', sometimes **ብርሃነ፡ አዜብ**, *Bərhanä Azeb*, lit. 'the light of the South', or S. II) was Metropolitan (↗*Pạppas*) of the ↗Ethiopian Orthodox (Täwaḥədo) Church from 1350 (Conti Rossini) or 1348 (Chaîne), under *aṣe* ↗Säyfä Arᶜad, to 1388 or 1390, respectively (for a date before 13 August 1388, s. Fiaccadori 1989:151, 163). He succeded *abunä* ↗Yaᶜəqob, who had been expelled in 1344, and was followed by *abunä* ↗Bärtalomewos.

At the very beginning of his career, S. was involved in protecting *abunä* ↗Filəppos of Däbrä Libanos of Šäwa from the exile to which he had been condemned by Säyfä Arᶜad; this fact, in turn, must be viewed in the framework of the tie established between Däbrä Libanos and the ↗Coptic Church, in an anti-Ewosṭatean (anti-↗Sabbath) function (cp. ↗Ewosṭateans). S.'s predominantly "Egyptian" activity, amply demonstrated by his restless activity as translator or promoter of translations of texts from Egyptian Arabic into ↗Gəᶜəz (which brought him his nickname *Mätärgʷəm*), should be considered in the same perspective.

We possess very little information about S. According to ms. EMML no. 1942 (between fols. 76r and 77v; 20th cent.), his birth name was Fiqṭor. There are some scattered notices on S. in EMML 2514 (EMML VII, 13: S. honours Däbrä Hamlo; a manuscript copied under him); a note on him in EMML no. 2580 (VII, 35); perhaps a prayer for him in EMML no. 2358 (VI, 424); a note on him, quoted but later erased, in ms. VatLib Etiop. 21, fol. 15v (prayers of the 15th cent.); S. is considered a contemporary of St. Śämrä Krəstos (s. EAE vol. 5) in ms. ANLin no. 88.II (StrANL 231).

Apart from a great number of translations from Arabic into Gəᶜəz, S. is credited with one original writing, the "Homily on the deceased" (*incipit* in Conti Rossini 1904: […] **ድርሳን፡ ዘቅዱስ፡ ወብፁዕ፡ አባ፡ ሰላማ፡ ሊቀ፡ ጳጳሳት፡ ዘብሔረ፡ ኢትዮጵያ። ዝንቱ፡ ዘይትነበብ፡ ላዕለ፡ ምውታን፡ እምድኅረ፡ ጸሎት፡ ላዕሌሆሙ፡ በሰላመ፡ እግዚአብሔር፡ አሜን** '[…] The Homily of the holy and blessed *abba* Sälama, Archbishop of the country of Ethiopia. This is read over the dead, after the prayer upon them, with the peace of God. Amen'). It was first published by Conti Rossini (1904:248–52, no. 18). This work is inserted in all copies of the *Mäṣḥafä* ↗*gənzät*. Ca. 125 manuscripts of the homily are known, most of them fairly recent (18th–20th cent.), except for a few from the 17th–18th cent. (EMML nos. 3838 and 3898) or 17th cent. (EMML nos. 3815, 4602, 4666, 4668; VatLib Etiop. 151; Ṭānāsee 20); only one seems to be fairly old (Paris, BN Éth. 80 [ZotBNat 86f.], 16th cent.).

The translations ascribed to S. are the following:

I. Hagiography (mostly Lives included in the ↗*Gädlä sämaᶜətat*, [here *GS*], or in the *Gädlä qəddusan*, [here *GQ*], cp. also Bausi 2002:10ff. for a complete list):

- Nob (vL 400): BN d'Abbadie 179 (CRAbb no. 163); BN d'Abbadie 54 (CRAbb no. 169) with note fol. 25r, 15th cent.; EMML no. 1826 with note fol. 184r; 17th cent.(?);
- Yəsṭos, Aboli and Tawəkləya (vL 400): BN d'Abbadie 179 (CRAbb no. 163), note fol. 229v (?).

II. Homilies (↗*Dərsan*)

- of ↗Jacob of Serug on the sacrifice of Abrəham (vL 400f.): BritLib Add 16,250 (DillmLond no. 22), with note fol. 222r (DillmLond 31, n. *d*), undated but copied for Krapf; BritLib Orient. 597 (WrBriMus no. 207), with note fol. 190v (?), 15th cent.; EMML no. 1765 with note fol. 139v, 15th cent.; tr. from a text belonging to S. in EMML no. 2868 fol. 197r, 17th/18th cent.;
- of Cyriacus of Behnesa on the Assumption (↗*Laḥa Maryam*; vL 400): BritLib Orient. 604 (WrBriMus no. 216) with note fol. 127v (?), 18th cent.; BritLib Orient. 775 (WrBriMus no. 341) with note fol. 207r, 18th cent.; BN d'Abbadie 91 (CRAbb no. 57) with note fol. 29v, 15th cent.; Ṭānāsee 10 with note fols. 187v–189r, 15th cent., EMML no. 1765 with note fol. 169v, 15th cent.; EMML no. 1939 with note fol. 83r, 14th/15th cent.; EMML no. 1956 with note fol. 52r–v, ca. 1400;
- of ↗Cyril of Jerusalem on the Assumption (vL 400) BN d'Abbadie 158 (CRAbb no. 56) with note fol. 154v, 18th cent.;
- of Athanasius on ↗Pachomius (not in vL) EMML no. 1844 with note fol. 203v, 16th cent.

III. Other works

- *Mäṣḥafä ↗gəbrä ḥəmamat* (vL 401), according to BritLib Orient. 597 (WrBriMus no. 207) with note fol. 259v, 15th cent.; and BritLib Orient. 601 (WrBriMus no. 211) with note fol. 259v, 18th cent.;
- ↗*Filkəsyus* (vL 400; here S. is frequently called *liqä eppisqopposat zäᵓazeb*) BN d'Abbadie 37 (CRAbb no. 121) with note fol. 66r (rhymed prose in *-qo*); BN d'Abbadie 172 (CRAbb no. 122) with note fol. 193v, 18th–19th cent.; BN d'Abbadie 132 (CRAbb no. 232) with note fol. 12r, 18th–19th cent.; BritLib Orient. 761 (WrBriMus no. 268), 18th cent.; EMML no. 1387 with note fol. 81r, 18th cent.; EMML no. 2157 with note fol. 100r, 19th cent.;
- *Letters of Bädran*, the son of Simon the Armenian (a theological work; vL 401) BN d'Abbadie 77 (CRAbb no. 208) with note fol. 75, 18th cent.

According to van Lantschoot, the translation of the *Testaments of the Three Patriarchs* (*Gädlä ↗Abrəham, Gädlä ↗Yəsḥaq, Gädlä ↗Yaᶜəqob*; vL 401) should be attributed to S., on the basis of a fragment in ms. VatLib Etiop. 270, fol. 5r.

Among the most important activities of S. is the revised translation of the Gəᶜəz ↗Old Testament. This revision, called since Dillmann the "Vulgar recension", was made during the 14th cent. on the basis of an Arabic text, which itself was revised after the Syriac version (*Pšīttā*) and therefore gives a false impression of original "Syriac" readings (cp. ↗Bible translation; ↗Syrian influences).

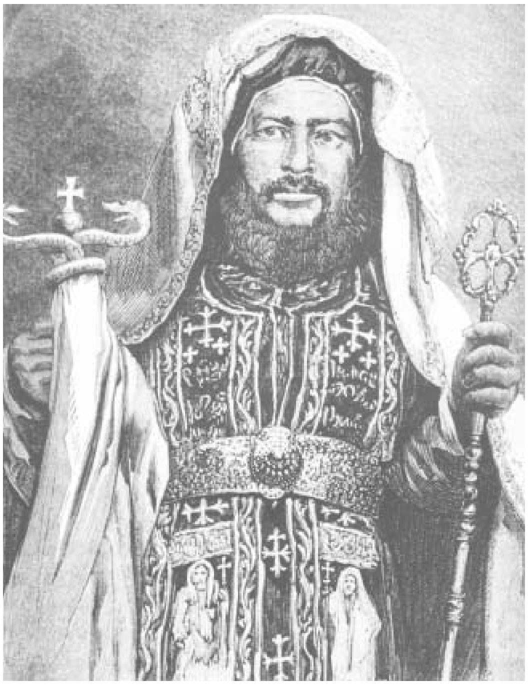
Paolo Marrassini

Sälama

Abunä S. (**ሰላማ**; d. 25 October 1867) was the 107th metropolitan of the ↗Ethiopian Orthodox (Täwaḥədo) Church (also known as S. III), from 1841 to 1868 (Guidi 1899: 14). His birth date is not known, but since he was consecrated by Buṭrus VII, Patriarch of Alexandria, at the exceptionally young age of 21, he must have been born ca. 1820 (CrumMis 85f.).

The first 14 years of S.'s episcopacy occurred during the ↗*Zämänä mäsafənt*, a period of disunity and conflict, in which doctrinally-inspired sectarianism internal to the Ethiopian Orthodox Church played an important role. S. became deeply embroiled in the theological controversies between the advocates of ↗*Qəbat*, *Yäṣägga ləğ (↗Ṣägga*) and *Wäld qəbᶜ* (known to its opponents as ↗*Karra*), which brought him suffering and abuse. However, with the rise of *däğğazmač* Kaśa Ḫaylu (the future Emperor ↗Tewodros II), his fortunes improved, if only temporarily. He ended his life a captive on ↗Mäqdäla.

S.'s arrival in Ethiopia was the result of a diplomatic mission sent by *däğğazmač* ↗Wəbe Ḫaylä Maryam, then the dominant political figure in northern Ethiopia, who, immediately thereafter, went to war against *ras* ↗Ali Alula, using S. in a propaganda campaign against Ali, whom he depicted as a Muslim. Wəbe's defeat at the Battle of ↗Däbrä Tabor in February 1842 brought S. under the patronage of Ali. He took up residence in ↗Gondär, but soon found himself locked in doctrinal conflict with *Yäṣägga ləğ* partisans, led by *əč̣č̣äge* Maḥṣ́äntu, who was backed by *nəguś* ↗Śahlä Śəllase of Šäwa. S.'s efforts to refute the teaching of this school and to re-establish strict Alexandrian doctrine (*Karra*) proved unsuccessful and, in a move initiated in Šäwa, but acquiesced in by the authorities in Däbrä Tabor, he was expelled from Gondär in June 1846 (Crummey – Getatchew Haile 2004).



Abunä Sälama; from Pankhurst – Ingrams 1988: 81

He spent the next eight years in Təgray in an uneasy relationship with *däǧǧazmač* Wəbe, who resisted S.'s attempts to undermine Wəbe's protection for Roman Catholic ↗Lazarist missionaries, whom Wəbe valued as a link to France. The death of Śahlä Śəllase in 1849 brought a rapprochement between S., *ras* Ali and the new ruler of Šäwa. However, S. did not return to Gondär until June 1854, when he was brought back by *däǧǧazmač* Kaśa, who restored his authority and organized a council at ↗Amba Č̣ara, near Gondär. This council condemned the *Ṣägga* doctrine, re-affirming the Alexandrian teaching of *Karra*. Kaśa then re-asserted the precedence of the metropolitan over the *əč̣č̣äge* and gave him control of the office of ↗*liqä kahənat*, with broad authority over the clergy (Crummey in PICES 4, vol. 1, 427–42), took the title of *nəguś* for himself and married his wife in a binding church ceremony. This was part of a policy of restoring what Kaśa saw as the Solomonic model of kingship, which entailed a close relationship between church and state to which the unity of the church was an essential ingredient. The culmination of this process was the crowning of Kaśa by S. as *nəguśä nägäśt* Tewodros on 11 February 1855.

A close alliance between church and state proved, in the short run, elusive. Tewodros and S. came into conflict over episcopal authority and church lands as early as September, 1856 (CRNuov 412; ZanLitTheod 29f.; MonVidTheod 25–28), and, thereafter, their relations steadily worsened. This, however, had the consequence of enhancing the metropolitan's authority over the Ethiopian clergy, whose principal champion he had now become. In 1864 relations broke down completely, with S.'s internal exile to Mäqdäla, where he died (CrumMis 141). However, the pattern of relations established between S. and Tewodros at the beginning of Tewodros's reign proved normative for succeeding rulers of Ethiopia.

Sälamä qəddusan

The S.q. (**ሰላመ፡ ቅዱሳን**, 'Salutation to the Saints') is a hymnological composition in ↗Gə^{c}əz by the 16th-cent. monk *abba* ↗Baḥrəy (Getaččäw Ḫayle 2002: 49ff.). It is known from the only copy in ms. BritLib Orient. 534, fols. 153r–84v (WrBriMus 84). The full title as provided by this manuscript is "Salutation to the Saints and Martyrs, for each day of the year, from 1 *Mäskäräm* to 6 *P̣äg^{w}əmen*". It was composed between 1583/84 and sometime after 1597.

The S.q. is a collection of ↗hymns in the tradition of ↗*Ǝgziʾabəḥer nägśä* (Getatchew Haile 1983: 1ff.).

The author's identity is embedded in the concluding hymn for the month of *Yäkkatit* (fol. 168v). It contains two puns (cp. ↗*Sämənnä wärq*): line 2: **አርክነ** (*arkənä*) which can be understood as 'our friend' on the one hand and as ^{c}Arke or ↗^{c}Arkä Śəllus, the famous author of hymns, on the other hand; and line 4: **ባሕርይነ** (*baḥrəyənä*) which can be understood as 'our nature' on the one hand and as 'our Baḥrəy' on the other. Baḥrəy indicates by his words that he would like the

↗ saints to call him “our nature”, i.e. “our kind”, just as they would call ^{c}Arke “our friend”.

^{c}Arke’s *Mäzmurä fəśśuhan wäṣälotä təkkuzan* is indeed much larger than the S.q., which often only contains one ↗ *sälam* for a given saint, to rhyme with the line dedicated to the next saint of the same day (cp. 5 *Mäskäräm*, fol. 153v: one line for Mamas, one, surprisingly, for *aṣe* ↗ Ləbnä Dəngəl, three for Sophia).

Toward the end of his collection (30 *Näḥase*, fol. 184r), Baḥrəy gives the year in which he started the work (1583/84) and indicates that for the order of saints he referred to the ↗ *Sənkəssar*. The expression used in the last line, *zämän iśəhəlt* ‘unforgiven time’, is only rarely testified in ↗ Gə^{c}əz literature (DillmLex 229) and is a testimony to the author’s excellent command of the language and tradition. The year he gave for the composition of the *Sənkəssar* (960 “year of Martyrs” [1243/44 A.D.]) differs slightly from what is preserved in the known *Sənkəssar* manuscripts (963; s. ColSyn VI, 326). On the other hand, the data in the hymn in honour of *aṣe* ↗ Gälawdewos for 27 *Mäggabit* (fol. 170v) shows that Baḥrəy must have used sources other than the *Sənkəssar* and even the Emperor’s chronicles (cp. ConzGal), unless his copy of the *Sənkəssar* was much larger than those used for Colin’s edition.

Baḥrəy took over 14 years to write the S.q. (cp. the explanation of his slowness in the introductory hymn for *Yäkkatit*, fol. 166r), as he dedicates a posthumous hymn to *aṣe* ↗ Śärṣä Dəngəl (d. 1597), for 24 *Mäggabit* (fol. 170v).

Apart from their literary value and the historical information some of the hymns provide, they are valuable witnesses of the theology of the ↗ Ethiopian Orthodox [Täwaḥədo] Church during the time of the author, as can be exemplified by such hymns as for 15 *Yäkkatit* (fol. 167r), speaking of the ↗ *Kidanä məḥrät*; 13 *Näḥase* (fol. 182rv), on relationship between a Christian and God; 29 *Mäggabit* (fol. 171r), on the manner of Incarnation of the Word (↗ *Karra*); 28 *Säne* (fol. 178v), on why Oriental Christians are called ↗ Jacobites (an unusual explanation, as Baḥrəy claims the name comes from Dioscorus whose original name was Jacob); beginning of *Yäkkatit* (fol. 166v), the celibacy. In the concluding hymn for Ḥamle (fol. 181r), the author explains the purpose of his toil in the composition: to glorify the Church so that it may forgive his sins.

Šaläqa

Š. (**ሻለቃ**) is a traditional Ethiopian military title. The term is derived from the Amharic words *ši* (‘thousand’) and ↗ *aläqa* (‘chief, leader’) and is to be literally translated as a “commander of a thousand”. There is also another title **ሻምበል** (*šambäl*) with the same meaning.

Originally a Š. was a head of a royal regiment. This was the main distinction between a Š. and other commanders, who usually fought alongside their own warriors. Despite the name, the regiments commanded by a Š. did not always consist exactly of one thousand soldiers and usually contained only a few hundred soldiers.

The title Š. dates back to Gondärine times and is mentioned already in the first extant royal chronicle of this period, namely that of *aṣe* ↗ Yoḥannəs (e.g. GuiIohan 45 [tr.]). The title persisted into ↗ Mənilək II’s times, though by then it had decreased in importance. The Russian K. Arnoldi, author of a detailed description of the Ethiopian military system at the beginning of the 20th cent., mentions Š. as one of three junior military titles, alongside *amsa aläqa* and *mäto aläqa* (commanders of 50 and 100, respectively). He writes that the holders of all three ranks were appointed from the ordinary ranks by their superiors. According to Arnoldi (1907: 21f.), Š. is “a commander of a little bit more than three hundred people, which does not correspond to his name”. In the modern Ethiopian army the title Š. came to mean a “commanding officer of a battalion”, or a “major” in the army, or a “commander” in the navy.

Some Š., however, succeeded in rising further to prominent military positions. Among them were Adanäw, Gäbäyyähu and Täkle, all of whom started their military careers as Š. during Mənilək’s reign. The first one became *liqä mäk^{w}as*, and the others *fitawrari*.

Säläśt ↗Psalter

Säläwa

S. (**ሰለዋ**; in Portuguese sources Çalaoâ or Salaoa) was a historical province in northern Ethiopia, and until the 1970s a *wäräda*, south of ↗Tämben and of ↗Säḥart, west of ↗Wäğğärat, at the southern borders of central ↗Təgray (for location s. map for Šädäho). In Ethiopian chronicles it appears as a territory under its own governors, the *šum säläwa*. In 1964 its main town was Samre. Today S. is situated in the Dəbub (South) Təgray zone, Ǝmba Alaǧe *wäräda*.

The "short chronicles" inform of *aṣe* ↗Ləbnä Dəngəl fighting at S. in 1539, during his war against ↗Aḥmad b. Ibrāhīm al-Ġāzī (BegCron 23). During a campaign in Zobəl Ləbnä Dəngəl left in custody a number of objects from Aksum to his chiefs, among whom one S. *šum* Fares (CRAxum 85). Later, S. was one of a number of areas that *aṣe* ↗Susənyos placed under the rule of *däǧǧazmač* ↗Yolyos (PerChron 117, 130, 250). In the 18th cent., S. was one of several localities whose rulers *aṣe* ↗Iyasu I interrogated in 1698 about the taxes levied in Təgray (GuiIohan 206ff.), while *aṣe* ↗Iyasu II is reported to have visited the district in 1749 (GuiIyas 262).

S. was repeatedly associated with the leaders of Təgray; at times, it was part of the realm of the ↗*təgre mäkʷännən*, such as in the time of ↗Robel in the early 16th cent. It featured by Manoel de ↗Almeida in the early 17th cent. as one of the Təgrayan regions (BeckHuntAlm 11, 13, 15f.) it is also listed in Ludolf's subsequent account of Təgray (Ludolf 1682: 17). In the late 18th cent., S. *šaläqa* Wäldä Mikaʾel was associated with *ras* ↗Wäldä Śəllase(CRAxum II, 64). In the 19th and 20th cent. S. was governed by the descendants of *aṣe* ↗Yoḥannəs IV, *ras* ↗Gugsa Arʾaya and his son ↗Ḫaylä Śəllase Gugsa. In the 1930s it was a sub-district of Tämben province.

There are several ↗rock-hewn churches in S. Not all have been well documented, such as one in Gawi. In oral tradition, S. is remembered as the original homeland of the ↗Adkämä Məlgaʾ, an important ↗Təgrəñña-speaking subgroup of Agäw origin.

Wolbert Smidt – Richard Pankhurst

Sälḥen

S. (**ሰልሔን** [RIÉ nos. 188.3–4, 189.3]; SLḤ, SLḤN in Gəʿəz unvocalized ↗inscriptions; SLḤ-m, SLḤN-m, SLḤN in Gəʿəz "pseudo-Sabaic" inscriptions; Σιλεῆ, Σ[ιλ]εῆλ in Greek inscriptions; SLḤ-m in Old Sabaic, SLḤN in Middle Sabaic; Arab. Salḥīn, Silḥīn) is the name of the palace of the Sabaean kings in Mārib included in the titulary of the Aksumite kings ↗ʿEzana and ↗Kaleb. S. is usually enumerated directly after Sabaʾ (in RIÉ no. 185bis I.2 – before it) with the exception of RIÉ no. 185 II.2 where the names of the royal residences of ↗Ḥimyar and Sabaʾ, RYDN (↗Raydān) and SLḤ resp., are attested separately from the names of the corresponding states. Until the twenties of the 6th cent. A.D., neither S. nor the Sabaean capital as a whole had ever been subjugated by Aksum, although at the turn of the 2nd and/or in the first half and in the middle of the 3rd cent. A.D. this kingdom participated in the struggle for hegemony in South Arabia (↗Monumentum Adulitanum). The occurrence of S. among ʿEzana's titles demonstrates that Aksumite claims to Sabaʾ were still being made in the mid-4th cent., with no relation to real politics of the time, but as mere ideological labels. On the contrary, in the titulary of ↗Kaleb, S. reflected his victory over Ḥimyar, since by that time the Ḥimyarite rulers had annexed the Sabaean kingdom and S. became one of their official residences.

The first mention of S. in Sabaic epigraphic documents goes back to the great *mukarrib* and king (*malik*) of Sabaʾ Karibʾil Watar, son of Ḏamarʿalī (early 7th cent. B.C.) who "built the upper part of his house Salḥ^{um}" (RES 3946.5: …*w-bny/tfrʿ/byt-hw/SLḤ-m/…*). In the texts of the so-called Middle period (1st–3rd cent. A.D.), this palace is frequently attested as the main symbol of the Sabaean royalty: e.g., in the treaty between ʿAlhān Nahfān, king of Sabaʾ, and ↗GDRT (cf. CIH 308.11–14, ca. 200 A.D., where ZRRN seems to be the royal palace of Aksum). In all probability the ceremony of the official entry (*ʾtwt*, *ʾtyt*) of a king into S. marked his formal accession to the throne of Sabaʾ.

In the Arab tradition, S. is celebrated as a masterpiece of the architecture of ancient Yemen, reportedly built by the legendary Queen Bilqīs (cp. ↗Makədda). According to the Arabic Islamic sources, when the Aksumites defeated the Ḥimyarite king Ḏū Nuwās (↗Yūsuf Asʾar Yaṯʾar) and occupied South Arabia in the early 6th cent., they completely destroyed S. This information might be corroborated by the absence of the name of this palace in the titulary of ↗WᶜZB, son of Kaleb (RIÉ no. 192a.5–7) as well as by the reference to the burning of the palace of Sabaᵓ (*täᶜkā Sabāᵓ*) in the Gəᶜəz fragmentary inscription from Mārib (RIÉ no. 195 II.18). The remains of S. have not yet been found.

Serguei A. Frantsouzoff

Ṣāliḥ

Ṣ. (صالح, d. 1332) was a Muslim judge (*qāḍī*) who waged a holy war (↗*Ǧihād*) against Christian Ethiopia.

In 1332 *aṣe* ↗ᶜAmdä Ṣəyon I defeated the ruler of ↗Ifat, ↗Ṣabraddīn I Muḥammad b. Dalḥūy b. Manṣūr, deposed him and installed Ṣabraddīn's brother ↗Ǧamāladdīn b. Dalḥūy b. Manṣūr. ᶜAmdä Ṣəyon then devastated Ifat and other Muslim principalities.

In this time of tumult, a holy man, *qāḍī* Ṣ., stood up in Muslim Ethiopia and preached holy war against the Christians. He received much support. The Chronicle of ᶜAmdä Ṣəyon I (which explains his title "*qazi*" as *liqä pappasat*; ↗*Liq*) gives a long list of the rulers and governors who sent troops, among them those from ↗ᶜAdal, ↗Däwaro, ↗Zaylaᶜ, ↗Harär, ↗Ḥarla and ↗Mora. The king of ᶜAdal took over the leadership of the troops. Ǧamāladdīn also offered to join the *ǧihād* but the other princes did not want to share the expected booty with him, so they marched off before Ǧamāladdīn arrived. Again, the war ended in a defeat for the Muslims. Ṣ. was killed. The Emperor ordered his body to be hung on a tree at the entrance of his royal camp (*təᶜəyyənt*, cp. ↗*Kätäma*).

About 300 years later, in 1621, two *šarīfs* from ↗Mecca, Aḥmad b. al-Hādī al-Ḥusaynī and Ṣāliḥ al-Ḥusaynī, arrived in Harär and miraculously discovered the tomb of a certain *šayḫ* Ṣāliḥ at the head of the tomb of ↗Nūr b. Muǧāhid. If *šayḫ* Ṣāliḥ is to be identified with *qāḍī* Ṣ. (but s. CerIslam 203 n. 1), the veneration of this tomb – continued even today – indicates the deep impression which the uprising of Ṣ. must have made on the Muslims.

Ewald Wagner

Sāliḥīya ↗Islamic brotherhoods

Sälik

S. (ሰሊክ, fl. late 16th cent.) was a monk of ↗Däbrä Libanos of Šäwa, of possible Arabian origin. He translated, from Arabic into ↗Gəᶜəz, the theological encyclopaedia *Mäṣḥafä* ↗*ḥawi* (as indicated in ms. Paris, BN Éth. 110, ZotBNat 106). S. apparently collaborated with ↗ᶜƎnbaqom (Cerulli [CerLett 170] maintained, probably due to a misunderstanding, that the latter's original name was S.).

Ricci (RicEnbYoh IV, 166ff.; cp. also *Mäṣaḥəftä mänäkosat* 1927/28:7) attributes to S. also the translation of the ↗*Abušakər*, which is usually credited to ᶜƎnbaqom. As stated in mss. BritLib Orient. 809 (WrBriMus 290, no. 383) and 812 (ibid. 291, no. 384), this translation was made during the reign of ↗Śärṣ́ä Dəngəl. BritLib Orient. 809, fol. 128v, states: **፺ወ፯፡ አባ፡ ገብርኤል። ዘሀሎ፡ ይእዜ፡ በዘመነ፡ ንጉሥነ፡ ሠርፀ፡ ድንግል**, *90wä7 abba Gäbrəᵓel. zähallo yəᵓəze bäzämänä nəguśənä Śärṣ́ä Dəngəl*, '97 *abba* Gäbrəᵓel who is [ruling] now, in the time of our *nəguś* Śärṣ́ä Dəngəl', "97" referring to the last patriarch of the list). According to the colophon of BritLib Orient. 812 (a later ms. adding three more patriarchs after *abba* Gäbrəᵓel), fol. 3r top, ᶜƎnbaqom was ordered by S. to undertake the translation:

ዝንቱ፡ መጽሐፍ፡ ዘአዘዞ፡ ዘአዕለዎ፡ ሰሊክ፡ ዘደብረ፡ ሊባኖስ፡ በእደ፡ ዕጨጌ፡ ዕንባቆም [...], *zəntu mäṣḥaf zäᵓazzäzo zäᵓaᶜläwo Sälik zädäbrä Libanos bäᵓədä ᶜəč̣č̣äge ᶜƎnbaqom* [...], 'this is the book which Sälik of Däbrä Libanos ordered, which he translated through the hand of *əč̣č̣äge* ᶜƎnbaqom'). Ricci claimed that the translation was made by S. with the material cooperation of ᶜƎnbaqom. This interpretation is based on the possibility that **አዘዞ** is not a verb ('he ordered'), but the well-known place of ↗Azäzo (cp. ↗Azäzo Täklä Haymanot), in which the clergy of Däbrä Libanos dwelled at that time (s. RicEnbYoh IV, 165f.).

The *Mäṣaḥəftä mänäkosat* (1927/28:5; cp. RicEnbYoh IV, 166) also maintains S. as the translator of the *Mar Yəsḥaq* (↗Isaac of Nineveh).

Paolo Marrassini

Salimbeni expedition

The S.e. to Goǧǧam was an initiative supported by the Italian government as part of its expansion to the Eritrean hinterland. The expedition was headed by engineer Count Augusto Salimbeni, who conceived it during his previous stay in the region. In 1883 – as a member of the expedition led by Gustavo ↗Bianchi – Salimbeni had stayed at the court of *nəguś* ↗Täklä Haymanot for whom he helped erect a bridge over the Tämč̣a River. Following the success of the project, upon his return to Italy, Salimbeni made a commitment to return with more workers and build a larger bridge over the Abbay River.

On 25 September 1886, in the company of Major Federico Piano, lieutenant Count Tancredi Broscorens di Savoiroux, the latter's son Emanuele, and a number of workers, Salimbeni left Italy. The party, which concealed its military intentions (the officers wore civilian clothing), reached Massawa on 9 October 1886 and Asmära on 7 January 1887. There, *ras* ↗Alula Ǝngəda initially approved the party's journey to Goǧǧam but upon discovering their real identity changed his mind.

Thereafter, the situation escalated. General Carlo Genè sent reinforcements to Wiᵓa and on 6 January Alula demanded evacuation. Genè then sent troops equipped with artillery to Säḥaṭi and Alula jailed the members of the S.e., who were taken to Gindaᶜ. At knowing of the Italian occupation of Säḥaṭi, on 16 January, Alula threatened to execute the Italian prisoners and pass to the offensive. Nine days later he marched on Säḥaṭi where he was confronted by Italian forces and forced to withdraw (Erlich 1996:103f.). After this setback, according to Italian sources, Alula would have killed the members of the S.e. had it not been for the intervention of ↗Lazarist missionaries.

The members of the S.e. were then forced to go with Alula's army to ↗Dogᶜali, where they witnessed the Italian defeat. After the battle the whole party was employed in the care of the wounded Ethiopian troops. In the following weeks Salimbeni, Piano and Savoiroux negotiated their own release by travelling between Asmära and Massawa and taking Alula's requests to General Genè. The party was finally released on 17 March in exchange for a long list of goods, among which were 1,000 rifles – a concession that seems to have cost General Genè his post at Massawa. Savoiroux was freed in August of the same year after the payment of the final reparations.

After spending the following two years in Rome, in 1889 Salimbeni was designated to replace Carlo Antonelli as Italian resident at *aṣe* ↗Mənilək's court. He travelled to Ethiopia in late 1889, accompanying *ras* ↗Mäkʷännən Wäldä Mikaᵓel's returning delegation. Once in Ǝnṭoṭṭo, Salimbeni, who knew Amharic well, was questioned by Mənilək in regard to the Treaty of Wəč̣ale (↗Italo-Ethiopian Treaty of Friendship and Commerce) and found himself in the embarrassing situation of justifying the inconsistencies of Article XVII to the Emperor (Salimbeni 1956:xxiii). He was soon joined by Antonelli, dispatched by the Italian government to find a resolution to the dispute. Throughout the remainder of his stay in Ethiopia S. found himself as a mediator between an increasingly wary Mənilək and an uncompromising Antonelli and recording his frustration in his personal diary. Incapable of finding a common agreement with the Emperor, they both left Ethiopia on 12 February.

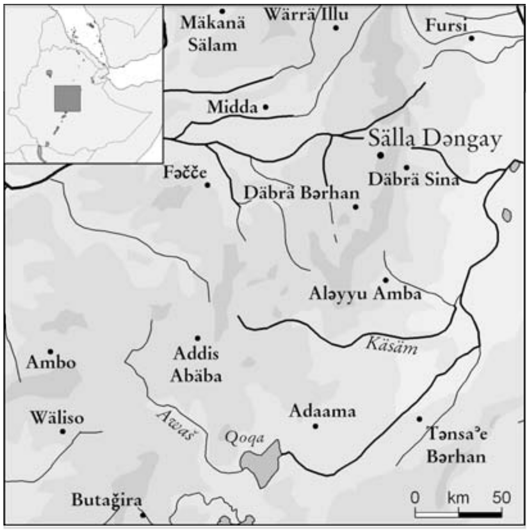
Matteo Salvadore

Sälla Dəngay

S.D. (**ሰላ፡ ድንጋይ**, 9° 57' N, 39° 37' E) is a small town in northern ↗Šäwa, some 35 km north-north-east of ↗Däbrä Bərhan. S.D. is the principal town on the rather extensive mountain ridge between the Mofär and the Gado rivers. S.D. is the northernmost part of ↗Tägulät but is often treated as a separate territory.

S.D. was very closely attached to the Šäwan court. The mothers of both *märəd azmač* ↗Wäsän Sägäd and of *aṣe* ↗Mənilək II lived in S.D., but the town is particularly associated with Zännäbä Wärq, the mother of *nəguś* ↗Śahlä Śəllase. Zännäbä Wärq was a daughter of a notable from ↗Afqära in southern ↗Mänz. She came to court to appeal for justice after her husband had been killed. Wäsän Sägäd was taken by her beauty, and she became pregnant (AWTarik 98). She was probably a concubine rather than his legal wife, and her son succeeded to the throne only by chance. Śahlä Śəllase was brought up at Quro Gädäl, some three kilometres north of S.D., while his older half brother and main heir to the throne lived in ↗Märḥabete. After Wäsän Sägäd was killed, the Oromo revolted and closed the main road to Märḥabete. The Šäwan notables therefore brought the young Śahlä Śəllase and installed him as successor.



↗Krapf passed by S.D. when he left Šäwa in 1842, and gave a quite detailed description of the court of Zännäbä Wärq. He estimated that the town was about one third the size of ↗Ankobär and describes it as "arranged according to the model of the King, only on a smaller scale" (IsKrapf 295). It was, however, a considerable exaggeration that she "governs nearly the half of Šäwa in a very independent manner" (ibid. 292), although she controlled large territories in Mänz and Tägulät.

Svein Ege

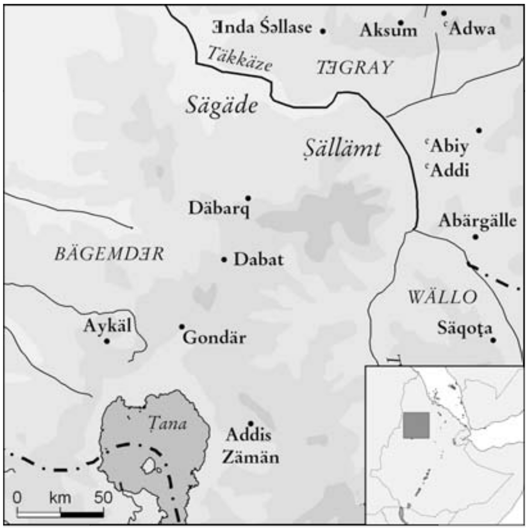
Ṣällämt

Ṣ. (**ጸለምት**) is an ancient geographic region between the ↗Səmen highlands and the southern bank of the ↗Täkkäze River in north-west Ethiopia.

By the 14th cent., Ṣ., along with Səmen, ↗Wägära and ↗Sägäde was inhabited by the people referred to as ↗*Ayhud* (and usually identified as ↗Betä Ǝsraᵓel) who rebelled against *aṣe* ↗ᶜAmdä Ṣəyon in 1332 (MarAmdS 68f.). In the late 1300s, the people of Ṣ. supported the renegade monk ↗Qozmos when he led an attack against Christian churches in the area east of Lake ↗Ṭana. *Aṣe* ↗Dawit II sent the governor of Təgray called ↗Akḥadom to suppress this revolt (Wajnberg 1936: 56, 58; Quirin 1992: 51f.).

In the mid-15th cent., ↗Täklä Ḥawaryat carried out evangelization efforts in Ṣ. and Səmen. Sometime after that, the rulers of Ṣ. (esp. Amba Näḥad), Səmen and ↗Dämbəya revolted against *aṣe* ↗Zärᵓa Yaᶜəqob. This revolt was put down by his successor ↗Bäᵓədä Maryam (PerrZarY 96f., 142f., 172f.; Quirin 1992: 58–61). Nevertheless, the Betä Ǝsraᵓel of Ṣ., along with those of Səmen, remained somewhat independent of the Christian state. During the 16th-cent. wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī, the inhabitants of Ṣ., referred to as ↗Agäw, supported *aṣe* ↗Gälawdewos against the Muslim attacks (BassEt I, 332 [text]).

The regions of Səmen and Ṣ. were again the site of uprisings against the Christian state during the reign of *aṣe* ↗Susənyos, who tried to incorporate



Ṣ. into his realm by appointing Wäldä Ḥawaryat as ↗*šum*. The revolts (cp. ↗Gideon) were finally suppressed in the 1620s (PerChron vol. 1, 150, 283 [text]; Quirin 1992: 83ff.). The major north-south trade route went through Ṣ., and *aṣe* ↗Iyasu I attempted to revise and regulate the collection of taxes that were imposed along this route, including some in Ṣ., thus incorporating the area further into the state structure (GuiIohan 194f. [text]; Quirin 1992: 114; PankIntro 190f.). Ṣ. may also have been a source of silver (BeckHuntAlm 43; PankIntro 228; Barradas ed. 1996: 25).

Though no longer politically independent, Ṣ. remained a significant Betä Ǝsraʾel area into the 20th cent., as did its better known neighbour Səmen. In the crisis of famine and the Mahdist invasions (↗Mahdists) of the late 19th cent., many refugees fled from Qʷara, Dämbəya and Säqqält toward the more northern regions such as Ṣ. (Quirin 1992: 169; Kaplan 1992: 148).

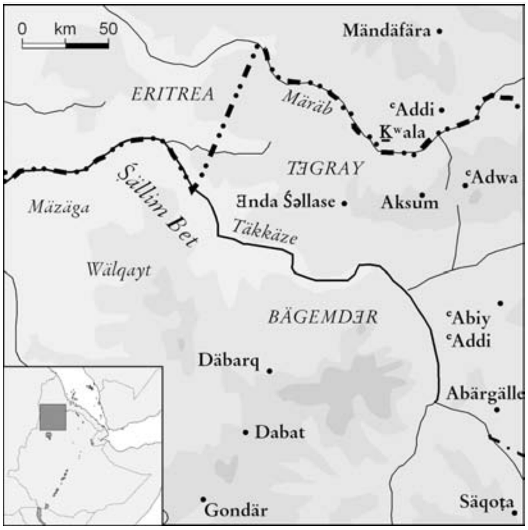
Ṣällim Bet

The term Ṣ.B. (**ፀሊም፡ ቤት**, 'House of the Blacks') designates a Təgrəñña-speaking *bəherä säb* (Tgn. 'ethnic [sub]group') living in the fertile lowlands (*bäräk̠a*) of ↗Mäzäga *wäräda* and, north of it, in Ṣäbri *wäräda*, east of the ↗Wälqayt highlands (within the originally much larger Mäzäga kingdom). The Ṣ.B. usually define themselves as *bəher* ('ethnic group'), due to their origin different from the Ḥabäša (↗Təgrəñña-speakers), and to their different physical shape, which is expressed by their name.

In the strict sense the term Ṣ.B. is today only applied to the local indigenous population, composed of two subgroups, the Č̣are and the Širo. The Širo are named after their apic ancestor, the Č̣are after their spear (*č̣are*). Ṣ.B. is the designation used by themselves in differentiation from the Tägaru ('Təgrayans') or Ḥabäša. Research on their history and culture started only recently (Smidt 2005). In the wider sense the term Ṣ.B. is used by Təgrəñña-speakers in Mäzäga for all "blacks" living in this region, which includes descendants of slaves brought to the area during the last one or two hundred years (among them ↗Mao, ↗Komo, ↗Berta, ↗Nuer, etc.). Occasionally the Ṣ.B. are called Täk̠ʷarir (sg. Tək̠ʷərir; ↗Tuk̠rir). This designation is regarded as pejorative and never used by themselves. As an ethnonym for the Č̣are and Širo, Ṣ.B. seems to be entirely new, replacing the older local term "Bet [↗]Barya" which was still used in the 1980s (Kiflu Tadesse 1998: 434f.). The classical, but very general und fluctuating term Ṣ.B. occasionally also appears in other contexts in

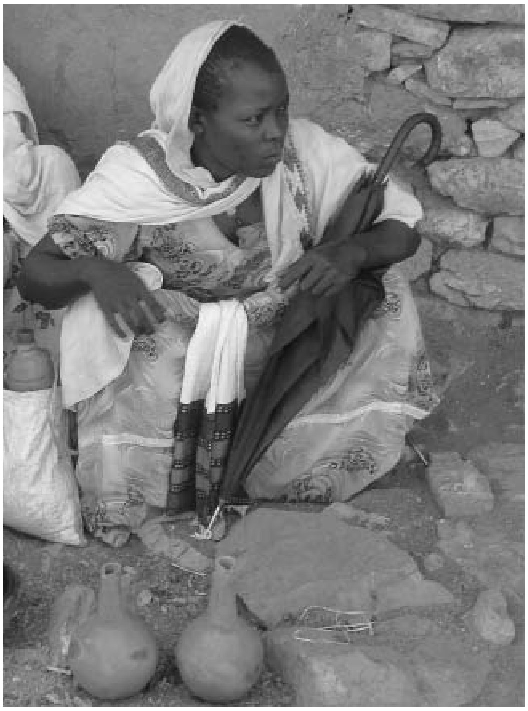


Təgrəñña and in other regions, with no apparent – but possible – connection with the ethnic group Ṣ́.B. For example, the usage of this term (with the spellings "Ṣällim Bet" and "Ṣällim Bayta") is attested quite early in the *Liber Axumae* in the ᶜAdwa and Aksum area (CRAxum 13, 23 [tr.]).

The exact number of Ṣ́.B. (in this article meaning only the Č̣are and the Širo) is unknown, as they do not appear in official statistics, but is probably amounting to over 5,000 families (an estimate of 1979/80 speaks of 1,500 to 2,000 families; Kiflu Tadesse 1998: 434). Different from the Ṣ́.B., most other settlers are newcomers of the last one to two generations. According to their own oral tradition, corroborated by local Ḥabäša tradition, the Ṣ́.B. have settled there long before the arrival of "Ḥabäša migrants", which is attributed to the time of *aṣe* ↗Bäkaffa, who came to the area in hunting expeditions. The Wälqayte hunter Ayanazgi was then appointed governor over Mäzäga in May Gaba, with the effect that the previous local Muslim ↗Balaw rulers submitted and the Č̣are and Širo were reduced to serfdom (↗Slavery). Ayanazgi's ruined castle is a revered place still today. Serfdom has deeply marked the Ṣ́.B. society, even if not all were submitted to "masters" (Tgn. *goyta*, pl. *goytat*). Still well into the 1970s the Ṣ́.B. were tenants of lowland fields of Ḥabäša landlords mainly residing in the highlands.

From these masters the Č̣are and Širo adapted the Təgrəñña language. A few elders still remember, however, words in the Č̣arəñña and Širo languages, which are, according to them, closely related. Until today only a short word list of Č̣arəñña could be collected, which shows a close relation with ↗Gumuz (Smidt, forthcoming). One may conclude therefore, that the Ṣ́.B. belong to an old, once much bigger Gumuz population cluster in the Ethio–Sudanese border regions, which had been separated from each other by slave raids and migration; however, the Ṣ́.B. do not have any knowledge of the existence of the Gumuz, but instead claim a connection to ancient Aksum. Some basic words in Č̣arəñña are: *əmband* ('one'), *wäkäk* ('two'), *sənakʷ* ('three'), *aya* ('water'), *qusəma* ('tooth'), *luquma* ('head'), *pʰēma* ('arm'), *mugʷa* ('house'), *qäläma* ('goat'), *iba* ('father'), *yädäy* ('mother'), *məgəḵma* ('good').

Traditionally, the Ṣ́.B. were strictly endogamic. Since the abolishment of the serfdom in the 1970s, marriage relations with their Ḥabäša neighbours are becoming more frequent. Their religion is Christian, even if in some practices differing from Orthodox dogma; tradition claims that they did not practice Christianity before the 20th cent. Baptism is carried out on holy places at rivers, e.g., at May Ṭəmqät. They settle in several villages close to the Täkkäze in the surroundings of May Gaba, the capital of Mäzäga, up to one hour distance from the river, on its western bank. Some are also living in scattered houses within their farming land. Their main settlements are, among others, May Č̣äᶜa, Taḥtay May Ḥumär, and the town of Mäguᶜ in Ṣ́äbri *wäräda*, where they are a minority; about five percent of the population of May Gaba are Ṣ́.B. Economically, the Ṣ́.B. are depending today on farming and fishing. As farmers they mainly produce sorghum (Tgn. *mäšälla*, Č̣arəñña *kwāč̣a*) and sesame (Wälqayt-Tgn. *säliṭ*, Č̣arəñña *gizuqʷa*), from which oil is extracted with a wooden mill, driven by camels. This high quality oil, sold in local markets, is a basis for their relative wealth. Additionally, men are fishers in the Täkkäze and its tributaries such as the Täwlämbä, Mənmənä and the Qalema. Fishing is done with fishing-hook or sometimes with the help of poisonous liane leaves, which kill fishes. Sesame seeds, sesame oil, butter, dried fish, and sorghum, are brought to the May Gaba market. Sometimes hunting is performed, e.g., on rhinozeros (perceived as "wild pigs", which are forbidden by the church) and elephants. According to local tradition, only a few generations ago they were mainly hunters and gatherers. From



A Ṣ́ällim Bet merchant in traditional Təgrayan garb, offering coffee pots for sale, May Gaba, Təgray; photo 2008, courtesy of Wolbert Smidt cotton, grown by them, women produce clothes. Houses are built of timber and long grass.

Locally the Ṣ.B. are reputed for their elaborated knowledge of the medical capacities of plants, already reported on "Tukrir" in the lands below Wälqayt (= Ṣ.B.?) by Parkyns (1853: 350), their knowledge possibly having been developed as a response to high infant and mother mortality (e.g., due to malaria). Neighbouring Təgrəñña groups search for their help. Also medicine against the evil eye and the "*buda*" is traded by them to their neighbours.

Sälomon I

Aṣe S. I (**ሰሎሞን**, sometimes referred to as "II" when either King ↗Solomon of Israel, putative founder of the ↗Solomonic dynasty, or the 13th-cent. *aṣe* ↗Yagbəʾa Ṣəyon, also known as Sälomon, is counted; r. 1777–79) was one of the rulers during the early ↗*Zämänä mäsafənt*.

Like many other rulers who were to follow, S. was a puppet king, brought from ↗Wähni Amba to replace *aṣe* ↗Täklä Haymanot II in 1777. He was the puppet of *ras* ↗Ḫaylu Yosedeq of Goğğam, of *däğğazmač* ↗Ḫaylu Ǝšäte (both first-generation descendants of members of the *Qʷäräñña* faction, who had controlled the throne during the reigns of ↗Iyasu II and ↗Iyoʾas I) as well as of *däğğazmač* ↗Kənfu Addam of Mäčča and ↗Wänd Bäwäsän of Bägemdər (BlunChr 88 [text]).

From the beginning S.'s rule was challenged by his eventual successor, ↗Täklä Giyorgis. The latter was exiled to Təgray, but returned in June/July 1778, when he was captured and, apparently, confined to Wähni Amba.

S. spent Easter of 1779 at ↗Qaroda with *ras* Ḫaylu Yosedeq and *däğğazmač* Ḫaylu Ǝšäte, following which tension built between the two Ḫaylus and Kənfu Addam. Kənfu turned against S., fetched Täklä Giyorgis from Wähni and proclaimed the latter Emperor on 17 July 1779, at Yəbaba (BlunChr 20, 90f. [text]). In the same proclamation he informed the country that S. had become a monk. Early in 1780, Täklä Giyorgis had S. returned to Wähni Amba. From then on, S. disappears from the records.

Although his reign was brief, and, presumably, dominated by the nobles, S. appears in a number of land grants. For example, he granted lands to various individuals in support of the Gondär churches of ↗Ḥamärä Noḫ (BritLib Orient. 508, fol. 286v), ↗Däbrä Ṣäḥay Qʷəsqʷam (BritLib Orient. 776, fols. 9v and 272r) and ↗Däbrä Bərhan Śəllase (BritLib Orient. 777, fol. 285r). Some of these grants were made jointly with *ras* Ḫaylu Yosedeq, others, according to the record, on his own. The church which appears most frequently in his grants was Aṭṭäṭami Qəddus Mikaʾel, on behalf of which he granted land to various individuals (BritLib Orient. 508, fol. 286v, Orient. 778, fols. 1v, 2v, 5v, 6v, and 9r).

S. was the father of *abeto* Goššu and the brother of *aṣe* Yonas (BlunChr 176 [text]).

Donald Crummey

Sälomon II

Aṣe S. II (or III, if the Biblical King Solomon is counted, regnal name **ሰሎሞን**, birth name Gäbrä Mädḫən; r. 1796–97, 1799) was one of the puppet rulers of the ↗*Zämänä mäsafənt*.

S. was the son of *aṣe* ↗Täklä Haymanot II and father of *aṣe* ↗Iyasu IV. As a young man, he had been entrusted by *ras* ↗Mikaʾel Səḥul to the father of *däğğazmač* ↗Wäldä Gäbrəʾel. Early in 1783 he was brought by Wäldä Gäbrəʾel to *aṣe* ↗Täklä Giyorgis, then in his first period of reign (BlunChr 53). Täklä Giyorgis sent him to ↗Wähni Amba, whence in June 1796, under the aegis of *ras* ↗Märəd Ḫaylu of Goğğam, he was brought to ↗Gondär. On 19 June 1796 S. was crowned by *abunä* Yosab and *əččäge* Wäldä Iyäsus (BlunChr 166).

S. spent *kərämt* of 1796 in Gondär. During the same year, he is noted to have given land to the church of ↗Moṭa Giyorgis; his protector Märəd (now *bitwäddäd*) is also mentioned in the land grant and was, undoubtedly, the real power behind the donation (BritLib Orient. 776, fol. 269r).

S. apparently married a certain Alṭaš, daughter of "his brother" *ras* ↗Ali Gʷangul of Yäǧǧu and formerly a concubine of *aṣe* Täklä Giyorgis, who had allegedly abused her (BlunChr 170).

In *kərämt* of 1797, S. was chased from the throne by *balambaras* Aśrat, who sacked Gondär. Early in 1798 he was brought back to Gondär by *aṣe* Täklä Giyorgis, who was on the throne once again. The ruler received S. with great ceremony and made him a member of the royal court. In June 1799, with the court out of Gondär, S. slipped away and returned to Gondär, where, on 15 June, he was again placed on throne by Märəd and his ally, *däǧǧazmač* ↗Gäbre Täsfa of Səmen, a kingmaker in his own right (BlunChr 180). S.'s second period on the throne was even shorter than the first, as he was deposed only one month later, in July 1799.

Some three years later S. was reported to be in chains in Təgray. Another chronicler lamented that, in September/October 1801, S. was in Təgray, while three other ex-rulers were elsewhere in the country, "dispersed like dust before the wind" (CRReal 870).

Sälomon Täsfa Ṣəyon

Baḥri nägaśi S. (**ሰሎሞን፡ ተስፋ፡ ጽዮን**, also *baḥər nägaš* Sälämon; d. 30 July 1743, Ṣäᶜazzäga), was a governor of the ↗Märäb Məllaš under *aṣe* ↗Iyasu II, and a member of the ↗Däqqi Täššəm lineage. He was a grandson of ↗Gäbrä Krəstos Habsəllus, the ruler of ↗Ḥamasen. His seat was ↗Ṣäᶜazzäga.

S. is mentioned as governor in the Chronicle of Iyasu II for the year 1742/43 (KolTrad III, A19; GuiIyas 118; BruNile II, 643). Tradition claims that he ruled for twelve years (KolTrad I–II, no. 94; III, A19). S. united all the dispersed highland territories north of the Märäb under his rule, apparently as the deputy of his uncle *däǧǧazmač* ↗ᶜAndä Haymanot, the governor of all the territories from southern Təgray to the coast (the ↗Bambolo Məllaš; cp. KolTrad III, A19). It is, however, possible that his uncle rose to power only after S.'s death. Some oral traditions even claim that S. governed only after the death of his uncle (which is chronologically impossible, as S. died before the latter according to the written chronicle of ᶜAddi Nəᶜammən; cp. KolTrad I–II, no. 94, KolTrad II, 217, 229; KolTrad III, A46).

S. was known for his sense of justice. He respected the existing legal plurality, but established control over tributes, taxes and local offices. Oral tradition claims, that one of his officers was ↗Mikaʾel Səḥul (cp. KilHDic 411), who took control over all of Təgray and later usurped the imperial throne itself. S., however, also claimed Təgray. Therefore, he fought a battle with the latter nearby ᶜƎdaga Räbuᶜ, which did not bring any decision. Following their reconciliation, S. was confirmed in his control over the Märäb Məllaš, while Təgray was taken by Mikaʾel Səḥul, later *ras*. S. was succeeded by his son ↗Bok̲ru Sälomon (under *ras* Mikaʾel, s. KolTrad III, A48), son of S.'s legitimate wife Wälättä Kidan (Perini 1905: 253; KolTrad III, A80), also known as *əmməbet* Goytän, the daughter of Qälit *wäddi* Fäto of Qaqəbda (KolTrad I–II, no. 96).

Sälomon Yəsḥaq

S.Y. (**ሰሎሞን፡ ይስሐቅ**, also Solomon Isaac, b. ca. 1890, Säkält province, d. 1921, Marob, Egypt) was a ↗Betä Ǝsraʾel student. He was one of the pupils of Fälaša priests at Guraba. When Jacques ↗Faitlovitch arrived on his second expedition to Ethiopia in 1908–09, he was accompanied by Gete Erməyas, whom he had taken to Palestine and Italy in 1906. Gete introduced his cousin S.Y. to Faitlovitch.

The three arrived in ↗Jerusalem in 1909, where S.Y. joined Gete at the Lemel school. He learned Hebrew, Torah and secular subjects, and pursued an Orthodox Jewish way of life. S.Y. kept a diary, written in excellent Hebrew, in which he provided an eye-witness account of General Allenby's entry into Jerusalem in 1917 and the termination of Turkish rule in Palestine. By 1918, the entries in S.Y.'s diary were becoming increasingly melancholic. He wrote desperate letters to

Sälomon Yəsḥaq (left) and Gete Erməyas (right) with the teacher Asher ben Natan (middle) in Jerusalem; photo 1909, Faitlovitch Collection, Sourasky Central Library, Tel Aviv University

world Jewish leaders asking for help. Finally, in 1920, Faitlovitch managed to return to Jerusalem, accompanied by ↗Täʾammərat Amanuʾel and agreed to take S.Y. back to Ethiopia. However, on the way back S.Y. died in the fortress of Marob in Egypt, probably from hepatitis.

Ṣälotä haymanot ↗Nicaea, Council of

Salt

S. (Amh./Tgn. ጨው, *čäw*, Orom. *sooda*) is one of the major products for internal as well as external ↗trade, and in addition has played an important role as a ↗currency or quasi-money, as well as in local legends and cultural contexts. The term ↗*amole* designates a S. bar (stone S.), while the term አሻቦ (*ašabo*) means S. powder.

Salt currency

Already ancient Aksum traded S. against ↗gold, ↗ivory and even slaves (↗Slavery) in inner Ethiopia. Thus apparently it was at an early stage already that S. became quasi-money and a universal equivalent of exchange (↗Currencies). All of it then originated in the ↗ᶜAfar Depression (Tgn. Ṭəlṭal, Ṭənṭal). Alvares in the 16th cent. praises S. as the best product of Ethiopia and also d'Almeida mentions it, the size of the bars being "nearly a span long" (O'Mahoney 1970: 148). In most of Ethiopia it seized to be used as equivalent of exchange in the mid-20th cent., but still in the 1970s it is reported that S. bars were used further south in North-east-Africa (Gerster 1972: 57). In ↗Mäq̱älä S. is traded in the traditional form of the salt bars even today (Tgn. *gela*, or more generally *amole*, from ↗ᶜAfar *amo*, 'head', s. MorDicAfar), in the traditional form of the ancient S. money (Smidt in preparation). It was used as "small money" all over Ethiopia until the 19th cent. (in Təgray itself silver dollars were preferred, s. Rohlfs 1883: 161), and in some southern regions still in the 20th cent. Oral tradition of ↗Sāho shows that it was used as currency also by them, i.e. close to its origins.

A report from the ↗Gonga market in ↗Käfa of the late 19th cent. shows that the main equivalents of exchange used there were S. bars, bullet casings and ↗Maria Theresa thalers (the latter, however, being less valued by them than by Amhara or even not accepted, different from S. bars). S. bars could be exchanged against thalers by a *nagado* (i.e. a trader) specialized in the S. trade, in Gonga twelve S. bars corresponding to four thalers, in ↗Andärača four S. bars to one thaler (Recking 1936: 304f.). Around the same time, S. bars and bullet casings were the current "small money" in Addis Abäba (Recking 1936: 438).

The East-Təgrayan–ᶜAfar salt route

The ᶜAfar Depression S. deposits are among the largest in the world. Due to seismological activities it was separated from the ocean, an arm of the Red Sea dried out and left enormous quantities of S. The northern ᶜAfar and eastern Təgrayans made a considerable income from the S. trade over the centuries. From Mäq̱älä in ↗Ǝndärta the S. route went via the ᶜAfar settlements Beraḫle, and Ab ᶜAle (in Tgn. Šäḵ̱ät) in the lowlands to the S. plains. Mäq̱älä, long before becoming a city in the 19th cent., was a trading post for S. and still today is the main S. market in the north. Ac-

Production of *amole* in the ᶜAfar salt plain; photo 2008, courtesy of Mitiku Gebrehiwot

cording to ᶜAfar tradition it was originally an ᶜAfar grazing area, and thus an ᶜAfar outpost in the highlands. Wägər Ḥariba on the plateau adjacent to Mäq̱älä (close to today's ↗Kʷiḥa) was a traditional halt for S. traders, who had to pay a tax here to the tax station traditionally held by Muslims (until approximately the early 19th cent.). Beraḥle, situated between the high- and the lowlands, is another traditional caravan post and tax station.

The tax records of *aṣe* ↗Tewodros II show that S. from "Ṭəlṭal" was a major source of income for Təgray (Pankhurst 1978: 71). In Mäq̱älä, the tax on S. was 10 % of the market price. Seemingly, in the 1930s these taxes reached roughly 100,000 thalers per year, which shows that the yearly sales of S. at Mäq̱älä amounted to approximately one million thalers (Recking 1936: 305). The traditional system of tax acquisition through tax stations along the road was still in use here until the 1970s, one camel being charged 3 *Bərr*, a mule 1.50 *Bərr*. It was recorded that at that period about 5,000 men were producing the S. bars or trading them, travelling from the lowlands to the highlands about nine times per year; this led to the estimate of ca. 17,000 tons of S. produced per year in the ᶜAfar Depression. About 500 ᶜAfar workers were engaged in breaking the bigger S. bars. 60 bars cost 3 *Bərr* plus food and drink, which should be provided by the traders; in the market of Mäq̱älä the price was already about 20–30 times higher (Gerster 1972). In Beraḥle each camel loaded with S. was taxed 3 thaler, each mule 1.50, each donkey 0.50; one trail could consist of 3,000 camels, 6,000 mules and numerous donkeys (O'Mahoney 1970: 148).

The S. plains of the ᶜAfar Depression attracted foreign political interest starting from the Egyptian expansion (↗Egypt). In 1874 the plains were annexed by the Egyptian governor ↗Arakel *bey* Dabroyan. After Italian colonization, most of it fell, however, to Ethiopia, with the border just north of Dallol.

Salt traders and salt workers in Təgray

Christian ↗Təgrəñña S. traders and leaders of S. caravans are called *arhotay*, after Arho, the main location of S. production in the ᶜAfar Depression near a S. lake (cp. Schimper 1877). The *amole* workers are mainly Muslim ᶜAfar. Today, increasingly also the *arhotay* themselves do this work. The S. layers are excavated with wooden sticks, used like a hoe. The *arhotay* form a Təgrayan socio-cultural subgroup within which the profession is normally inherited. A special group of traditional S. traders lives separately from them, as they trade in "magic S." or "red S." (Tgn. *ašaᶜale*) used for healing purposes.

It is recorded that there was an ᶜAfar subgroup (clan) called Amole (AbbGeogr 446). This is confirmed by Ab ᶜAle (Dahimēla) oral tradition, according to which the Amole merged with other groups a few generations ago. The Amole lived between Dallol and Beraḥle, and gave their name also to a part of the S. region. The mountain ᶜAsale near Dallol is a major source for S. production.

Salt trade in the colonies of Djibouti and Eritrea

The markets of ↗Šäwa seem to have received S. from the ᶜAsal S. lake in the arid Djibouti–Ethiopian borderlands already in the 19th cent. The first border treaty between Ethiopia and France therefore provided access for Ethiopians to the ᶜAsal S. lake (↗Boundaries: Djibouti). After the establishment of the ↗Chemin de fer franco-éthiopien S. from Djibouti started to dominate

The volcano salt lake of Boqee, Boorana; photo 2005, courtesy of Chikage Oba-Smidt

the markets in central Ethiopia. S. became the most important export article from Djibouti to Ethiopia (with 13 million kg S. exported to Ethiopia in 1934), modern S. works at the coast producing S. from sea water (Recking 1936: 305).

Starting from the Italian colonization of the coast, ↗Massawa was developed into a centre of S. trade for ↗Eritrea. Large S. works were established. Eritrea therefore, became virtually independent from S. imports from Ethiopia, even if trade with the ^{c}Afar also continued, mainly carried out by the Sāho. Today, S. is a major export product of Eritrea.

The Sudanese salt route

Another source for white S., especially for western Ethiopia, was Šendi in the Sudan, where S. – personally owned by the king (*al-makk*) of Šendi (↗Nimrab) – was produced from soil near the Nile (Burckhardt 1819: 276; Douin 1944: 44). From Šendi S. was transported by merchants from ↗Sinnār to the market of ↗Ras al-Fil for further transport to Ethiopia, and exchanged against slaves and ↗gold. A great number of slaves originated in the ↗Bärta border region (s. Triulzi 1981).

In the first half of the 20th cent. S. exports from British colonies such as the Sudan and Kenya to southern Ethiopia, including Käfa, increased, which changed the previous price balance (Recking 1936: 305). In the 1930s 300 kg of S. bars corresponded to one Maria Theresa thaler (ibid.).

The Oromo salt route

The ↗Boorana crater lake Boqee (Amh. Ç̣äw Bet, 'house of salt') below the market town of El-Sod or Sooda, near Dubluq, is an important source for distant S. trade and production of S. for local consumption. In the times of *aṣe* Tewodros II S. started to be exported to central Ethiopia. When Ethiopian highlanders raided ↗Guǧǧi and Boorana in the 1860s, they asked for tribute, and according to local tradition it was decided that Boorana would pay in the form of butter and S. from Boqee. According to local tradition, after the incorporation of the Boorana in the late 19th cent., the Ethiopian government introduced taxation on the S. of Boqee, but with the permission that 100 donkey-loads of S. would remain free for the Sabbo and likewise for the Gona. This privilege was probably abolished in the 1960s (Leus – Salvadori 2006: 597). There are two other, less important, crater lakes of the same kind: Magaadoo (lit.: 'soda') south-west of Mega, whose soda was traded widely in the past, and is traditionally mixed with tobacco for chewing. Nowadays, Boorana have to pay taxes for soda from Magaadoo to the Ethiopian government (ibid. 436). Another saline crater lake, producing S. mainly for cattle, is Dilloo in western Boorana (ibid. 149).

After the settler Sava Karagiorgis built a small track into the Boqee crater in the 1940s, S. started to be traded over larger distances due to increasing S. production, and the S. market town of Sooda emerged. At the beginning of the track into the crater people pray to ↗*Waaqa* and leave small pieces of salty mud in order to protect them from danger during the difficult descent. In the rainy season the lake is bigger, and only black S. mud, which is used for cattle, can be produced. During the dry season white S., for human consumption, is produced from deeper layers. The workers are often descendants of immigrants (mainly Konso and Burǧi), but consider themselves as Boorana.

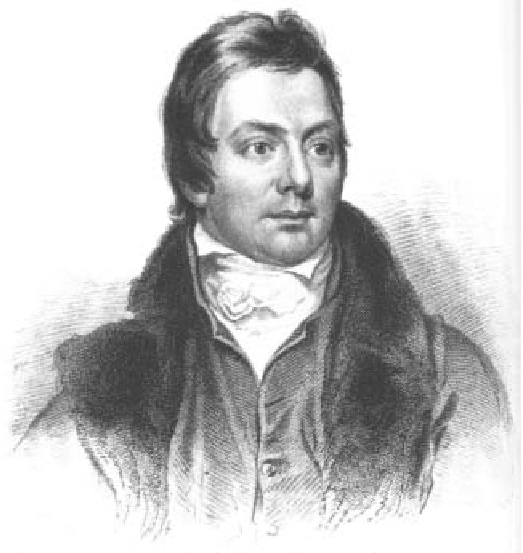
Wolbert Smidt

Salt, Henry

S. (b. 14 June 1780, Lichfield, Staffordshire, Great Britain, d. 30 October 1827, Dessouke, near Alexandria, Egypt) was a British artist, collector of antiquities, Egyptologist, government official, and traveller. He was educated in Lichfield and later at a boarding school in Market Bosworth, Leicestershire. While there, he damaged his spleen, an injury which probably contributed to the many illnesses he suffered during his lifetime. In 1794, he went to Birmingham to study classics but returned to Lichfield a year later to finish his education. S. then went to London to become an artist and to attend the Royal Academy Antique School.

On 4 June 1799, S. met George ↗Annesley. The two became colleagues. In 1802, Annesley appointed him as his secretary and draftsman for the trip to the east. S. accompanied Viscount Valentia on two journeys (1802–06) to the Indies, Ceylon (now Sri Lanka), Ethiopia, and Egypt.



The envoy Henry Salt; from Halls 1834, frontispiece

S.'s 1805 visit to Ethiopia included a trip to the ↗Dahlak islands which proved that James ↗Bruce's account of his visit had contained so many factual errors that it was quite likely that he had never been to the archipelago. S. then called on *ras* ↗Wäldä Śəllase, ruler of Təgray, who approved his request to visit ↗Aksum and ↗ᶜAdwa. During his travels, S. learned that the Christian Highlands, which historically had been ruled by a single sovereign, had devolved into three independent states. *Ras* Wäldä Śəllase governed Təgray while *ras* ↗Goššu administered ↗Amhara. ↗Wäsän Sägäd controlled ↗Ifat and ↗Šäwa. S. also appreciated the fact that Amhara and Təgray were constantly battling one another. Šäwa avoided conflict with its two neighbours because of its remoteness. As S. prepared to leave Ethiopia, Wäldä Śəllase produced letters for George III, purportedly from the ↗Ǝgʷalä Ṣəyon but actually written by himself.

On 26 October 1806, S. landed at Portsmouth and for the next two years, he organized his journals and sketches. On 26 December 1808, he attended a meeting of the African Association (also known as the Society for Promoting the Discovery of the Interior Parts of Africa) and convinced its committee to place £ 500 at his disposal to finance another journey to Ethiopia to procure "useful and curious information".

On 2 March 1809, he left Britain and arrived in ↗Massawa on 10 February 1810, with a letter and presents from George III for the Emperor. Nataniel ↗Pearce, who had helped arrange S.'s first visit to Ethiopia, again rendered service to his mission. Political unrest prevented S. from visiting Gondär but he, along with Pearce, spent time with *ras* Wäldä Śəllase again who complained that the "Mahometans" controlled all trade in the region and urged S. to facilitate "intercourse with Great Britain". The two visitors also toured the ↗Täkkäze River. S. copied several important ↗inscriptions in Aksum (including the Greek inscription of ↗ᶜEzana, RIÉ no. 270, with excerpts from the Gəᶜəz version, RIÉ no. 185 I, II) and in ↗Yəḥa, where he "discovered" ↗Epigraphic South Arabian inscriptions, until then unknown in Europe.

During his Ethiopian travels, S. had an illegitimate son by an Ethiopian woman named "Mahbubeh" (Arab. Maḥbūba).

On 11 January 1811, S. arrived back in Britain and, in 1814, published his *A Voyage to Abyssinia and Travels into the Interior of That Country* (SalTrav), which contains important information on the contemporary Ethiopia, as well as some discussion of ancient history (S. was the first one to draw a distinction between two inscriptions on ↗Monumentum Adulitanum). The book remains an essential study for understanding the early British presence in Ethiopia.

After his Ethiopian travels, S. served in the diplomatic service as Consul-General to Egypt. He subsequently sold many of his antiquities to the British Museum.

Thomas P. Ofcansky

Salvemini, Gaetano

S. (b. 8 November 1873, Molfetta, d. 6 September 1957, Sorrento) was an Italian anti-fascist, socialist historian and columnist who opposed – and wrote academically about – ↗Mussolini's invasion of Ethiopia.

After graduating in literature in Florence in 1896, S. taught history in Messina, Sicily (where he alone of his family survived the earthquake of 1908), and subsequently at Pisa and Florence. In 1911 he launched the magazine *L'Unità*. Born to the great tradition of liberal "meridionalists", he introduced economic and social analysis into Italian scholarship. An advocate of universal suffrage, he fought for the moral and economic rebirth of southern Italy, and against corruption in politics. He sat in the Italian Parliament from 1919 to 1921, but was arrested in 1925 for opposing the Fascist regime, after which he went into exile in France, Britain and, in 1934, the United States.

Denouncing the Italian invasion of Ethiopia in the following year, S. taught for over a decade at Harvard University, before returning to his old Chair at Florence in 1949. His writings included *Prelude to World War II* (1953), an extensive, and unusually detailed, exposé of international diplomacy relating to the ↗Italian war of 1935–36 in Ethiopia.

Richard Pankhurst

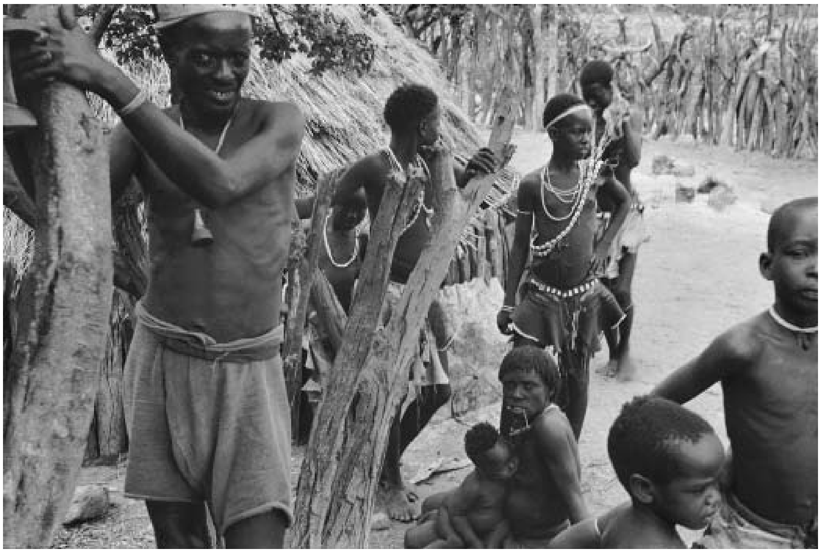
Ṣamakko ↗Dullay, ↗Ṣamay

Samarroon ↗Gadabuursi

Ṣamay

The Ṣ. (self-name: Ṣamakko) are one of the smaller ethnic groups in southern Ethiopia (for location s. Dullay, EAE vol. 2). They speak a language of the ↗Dullay cluster and, additionally, use the languages of the larger neighbouring groups. They live as agro-pastoralists near the Wäyṭo River north of Č̣äw Baḥər and number some 20,000 people (CSA 2008: 67). Their society is cohesive and conscious of its own identity vis-à-vis others, e.g., the neighbouring ↗Hamär, ↗Banna, ↗Arbore, ↗Gawwada, and ↗Ongota peoples, with whom inter-marriage occurs and bond friendships are traditionally maintained. In the recent past the Ṣ. had inimical relations with the ↗Maale, and with ↗Konso and ↗Boorana, across the Wäyṭo River to the east, who used to raid them.

The Ṣ. economy is based on animal husbandry and the cultivation of cereals, lentils and some vegetables and spices. Their physical environment, notably the lowland area (*dawle*) where most of them live, is well-suited to cattle herding but prone to unpredictable rainfall and food scarcity (in times of drought). Trading is limited and done mainly in regional market villages (e.g.,



In a Ṣamay village: the man wears a typical small box for tobacco, made of gazelle horn, around his neck and trousers imported from Konso; the young girls wear cowrie jewellery and leather skirt; photo by Elisabeth Pauli, 1950/52; courtesy of the Frobenius Institut, Frankfurt am Main (23-Pa038-18)

Qäyy Afär). Next to what they see as their main and most valued activity, cattle-keeping, the Ṣ. practise river-bank flood cultivation as well as field rotation in higher areas, with sorghum, corn, some millet, and beans as the main crops. They also collect honey for sale and do hunting and gathering (forest products) on a limited scale. However, some traditional productive areas, e.g., prime dry-season grazing land and cultivation sites, are gradually threatened by outside interference under the auspices of the government, e.g., via a commercial agricultural scheme: a 4,000 ha cotton farm is located in the Wäyṭo valley but few if any Ṣ. work there. Although the local people profited a little from its presence, via a new clinic and partial irrigation of a few hundred local families, this does not offset the undermining of their pastoral economy and bush areas for apiculture. Also, indiscriminate logging took place in the vicinity (Melesse Getu in PICES 13, 751), leading to the depletion of the savannah ↗woodland until then preserved by the Ṣ. A conflict with the farm in 1995 led to the killing of 16 local people, and tensions are still felt.

Ṣ. social organization is characterized by a patrilineal clan structure (seven clans) and age-grades (with six grades), in which all Ṣ. must be members (adults only belong in an age-set after initiation). The entry into the adulthood grade is reached via a ritual called *gore*. Only after this, can a Ṣ. marry. Non-Ṣ. can also participate in the ritual (Melesse Getu 1995:26), as Ṣ. society allows the incorporation of "outsiders". Polygynous marriage exists and bride wealth (*šabe*) is paid, mainly in the form of cattle. Although Ṣ. is a patriarchal society with less sexual and social rights accorded to women than to men, Ṣ. women have crucial economic and social roles and are highly regarded. The woman's voice in choosing a marriage partner is becoming more important. Ṣ. society has a relatively low population growth rate due to rampant health problems, malnutrition and reported regulatory practices of abortion and infanticide in the recent past (cf. Melesse Getu 1995:26, 112), the latter partly related to certain cultural taboos.

Ṣ. political structure is marked by ritual chiefs and councils of (clan) elders, as well as age-grades (↗Age goup systems). They also have local (village) chiefs.

In Ṣ. religion, a sky god or spirit, *Waqo*, is recognized, the term also found among other Cushitic-speaking groups. Spirit mediums called *bogolko* are active as mediators with the supernatural sphere. They also used a black stone oracle for divination. The Ṣ. are traditionally known among neighbouring groups as powerful rain-makers (↗Rainmaking) and ↗healers. Their harmful "↗magic" was feared by groups such as the Hamär (Strecker 1979:23). In general, perhaps due to their smaller number, Ṣ. relations with other groups are cautious.

Socio-political change in Ṣ. during the past 15 years or so has meant a strengthening of government influence and a decline of indigenous social organization, which was egalitarian and non-centralized, and has led to disturbances in their previously well-adapted ecological-environmental management and internal authority structure.

Tourists have come to the area in growing numbers, as the Ṣ. are one of the well-advertised "tribes" of the Ethiopian South, depicted in tourist guides and travel agency brochures. As a result they are much photographed and somewhat over-exposed to foreign visitors. Some of the 16 villages in the Ṣ. country are Enčete, Luqa, Šalla and Gisma, while Wäyṭo is a more recent village mostly populated by newcomers.

Jon G. Abbink

Sämbäl

S. (**ሰምበል**) is an archaeological site located two km north-west of ↗Asmära international airport. Archaeological surveys and excavations in 1998–99 and in 2001–02 by the University of Asmära and the University of Florida revealed that the S. archaeological site is approximately 20 ha in size and comprises an ancient village made of stone built structures.

Six calibrated radiocarbon dates obtained from excavated charcoal and bone material collected in domestic contexts indicate that the ancient village at S. was occupied during the early and mid 1st millennium B.C. Excavations revealed artifacts representative of the 1st millennium B.C. ↗ᶜOna culture of Eritrea, such as bulls' heads lithic figurines, small red ware ceramic cups, burnished and red slipped ceramic vessels, large coarse brown and coarse red ware ceramic vessels and upper and lower grindstones. Rectangular room structures made of fieldstones fitted closely with mud mortar and containing substantial hearth and ash deposits are characteristic of the ancient Ona culture period settlement at S. Analyses of architectural and ceramic data suggest a period of abandonment between 600 B.C. and 500 B.C. in a series of rooms in one ancient house structure.

A number of excavated deposits in domestic contexts, particularly in hearth and ashy soil areas, produced abundant carbonized remains of barley (*Hordeum vulgare*) and a lesser number of carbonized wheat (both *Triticum dicoccum* and *Triticum durum/aestivum*), linseed (*Linum usitatissimum*), and lentil (*Lens culinaris*) remains. These domesticated plant remains, along with significant amounts of cattle and goat/sheep faunal remains, indicate that the ancient Ona culture community at S. practised a mixed subsistence economy of grain and legume agriculture and pastoralism.

Sämənna wärq

S.w. (Amh. **ሰምና፡ ወርቅ**, ‘wax and gold’) is the term for the specific rhetoric used in ↗*qəne*, the traditional Ethiopian poetry in ↗Gəᶜəz. It is commonly described as the art of creating verses with apparent and “hidden” meanings. Indeed, S.w. rhetoric is characterized by the co-existence of two semantic levels within a unit of poetic speech (verse): one level has the literal meaning (“gold”); the other has figurative meaning (“wax”). The words constituting both levels are syntactically interwoven. Both parts of a verse constitute a (hidden) analogy, metaphor or simile, through which the entire meaning of a verse becomes clear. S.w. is commonly compared to the work of a silversmith who pours molten gold into a clay mould; the wax melts away and the gold takes the shape of the wax (cp. Moreno 1935: XII; ᶜAlämayyähu Mogäs 1957/58: 54f.; Schall 1961: 6). In a way, S.w. is the art of “concealing” what one wants to say with what one really says (Mondon-Vidailhet 1907:310f.). Almost any idea can be presented as “gold” and “wax” by means of S.w.-techniques, e.g. (s. Schall 1961: 31, 164f., no. 39):

Yəbe ḥalib bəʾəse bəzuḫ təkkaze
Ṣom ṣälaʾe ziʾayä yəmäwwət maʾəze
Amṭanä gədufä konku wäʾitäradʾanni gize

‘Milk/the man spoke with great sorrow:
When will the fast/my enemy die?
In as much I was left/lost, and the time
did not help me.’

Meaning: one is happy about his enemy’s death like milk is glad when the fasting time is over (when consumption of milk products is not allowed).

Mastering S.w.-techniques is a subject of traditional ↗education in the ↗*qəne bet,* and is possible only after years of exhaustive studies. Many *qəne* do not contain S.w., though they perfectly conform with the *qəne*-metric. The proper S.w. rhetoric is understandable, in fact, only to the masters of *qəne* (for whom *qəne*-verses have, in fact, no “ambiguity”, cp. Alemayyehu Mogäs in PICES 3, vol. 2, 100f.).

The time when S.w. techniques took shape is not known, but they are based on the categories of traditional Ethiopian grammar teaching, ↗*säwasəw*, of which S.w. appears to be a part. The first Europeans describing S.w. rhetoric were Antoine d’↗Abbadie (cp. Mondon-Vidailhet 1907: 307) and Fr. Giusto da ↗Urbino (s. CRAbb 239). The principles of S.w. were first briefly exposed in the *Säwasəw* published in Mənkullu [↗Ǝmkullu] in 1889 A.M. (1897/89 A.D.; s. Guidi 1906: 922), which was used by Mondon-Vidailhet (1907: 306). The chapter on S.w. from another *Säwasəw* edition, by *abba* ↗Yaᶜəqob Gäbrä Iyäsus, was partly translated by Moreno (1941: XV–XXIV). Other expositions followed (cp. KWKDic 159–71 and a bibliography in Alemayyehu Moges in PICES 3, vol. 2, 111f.); today it seems that the limits of S.w., presented more widely than described by Mondon-Vidailhet (1907) and Moreno (1935), are not quite clear (cp. ᶜƎnbaqom Qalä Wäld in PICES 3, vol. 2, 120f.). Still, it is possible (following mostly Mondon-Vidailhet 1907 and Moreno 1935) to systematically present at least some S.w. techniques. The most characteristic are:

1) Some deviations from standard Gəᶜəz grammar (omission of accusative marker in some cases, Moreno 1941: XIX, nos. 1, 2)
2) Occasional usage of single ↗Amharic words and calques.
3) Twofold interpretation of some verbal forms, due to the formal conflation of, e.g., 1st pers. sg. and 3rd pers. pl., like *säbäk(k)u wängelä aḥzab* meaning (depending on the reduplication of *k*), both ‘I preached the Gospel to the gentiles’ and ‘they preached the Gospel to the gentiles’; or of some forms of verbs containing laryngeals. The twofold possibility of verb agreement for collectives and some other nouns, e.g., *śəllase* (‘Trinity’), which may take the verb in both 3rd pers. sg. masc. and 3rd pers. pl. masc., can also give rise to double meanings. Double meaning can be brought about by verbs which can be both transitive and intransitive, like *zäräwä dämmäna*, both ‘he dispersed a cloud’ and ‘a cloud dispersed’, etc.
4) Omission of particles, prepositions, copulas etc.: *mäṣʾa säyṭan* [*bäʾamsalä*] *mänäkos*, ‘Satan, the monk, came...’ meaning, however, ‘Satan came in the appearance of monk …’
5) One of the most important devices of S.w. are juxtapositions and inversions of a headword [noun] and its complement [noun or adjective] (called *baläbet* and *zärf,* resp.) in nominal phrases. Usually, the first member is a figurative word (*säm*), and it is followed by a literal one (*wärq*). Additionally, there are seven types of combinations (Moreno 1935: XX; cp. ᶜƎnbaqom Qalä Wäld in PICES 3, vol. 2, 120). E.g., in the verse *nädayan romawəyan bälᶜu ḫəbəstä Ṗeṭros*, ‘Poor Romans ate the bread of Peter’ (Moreno 1935: XXI), the figurative

headword, *ḫəbəst*, ‘bread’, and its complement Ṗeṭros, ‘(Apostle) Peter’, imply the literal headword *haymanot*, ‘faith’, which does not appear (this figure is called *wəsṭä wayra*, ‘the inside of *wäyra*-tree’, which, if split, changes colour). In the verse (*täbälᶜa*) *haymanot ḫəbəstä Ṗeṭros*, lit. ‘the faith, bread of Peter (was eaten)’, the sequence of two headwords, the literal and figurative ones, the last having a complement, a word with literal meaning, is called *zəmd* (lit. ‘correspondence’). If it is extended by a complement having figurative sense (e.g., … *Ṗeṭros baᶜəl*, ‘Peter, the rich’), it is called *dərrəb* (‘double’) *zəmd*, etc.

6) Passive and active participles, adjectives (primarily of the forms *qətul, qätali, ḥaddis*) can be understood as relative constructions (the figure is called *baläbetənna qäṣl*, ‘headword and attribute’). E.g., *Maryam nəgəśtä amlak* seems to mean ‘Mary, the Queen of God’, but in fact means ‘Mary, over whom God reigns [*zäʾnägśä latti amlak*]’. The participle *aqrabi*, ‘the one who offers’, may be interpreted as *zäʾaqräbä lottu*, ‘the one who offered him’; *zäʾaqräbu lottu*, ‘those who offered him’ etc. Consequently, *ḥewan aqrabit śəllase məḥrät*, seems to mean ‘Eve, who offered clemency to the Trinity’, but in fact means ‘the Trinity who offers [*zäʾaqräbu latti*] clemency to Eve’, etc.

7) Possessive constructions can also be understood as phrases with prepositions or the relative particle *zä-*. E.g., *Krəstos məwwutä Addam* does not mean ‘Christ the dead of Adam’, but ‘Christ dead [for the sake of] Adam’ (the figure is called *mušazär*); the same can be done with infinitives and derived nouns (*sabizär*). Usage of such forms with a direct complement (*täsabi*) is extensive in *qəne*-poetry: ‘eating of bread’ may be expressed as *bəlᶜat ḫəbəstä*, *bəlᶜatä ḫəbəst*, also *bälᶜa ḫəbəstä*, *bəlᶜatu läḫəbəst* etc.

8) In nominal phrases (usually similes), the members are opposed in such a way as to make obscure logical connections between them (the figure called *täzäwari* or *särräz*): *Maryam mäzgäbä Amänuʾel wärq. Wäʾamänuʾel wärqä Maryam mäzgäb*, ‘Mary (is) the golden treasury of Emmanuel; and Emmanuel is the gold of Mary’s treasury’.

9) The rhetoric figure called *anṣar* (lit. ‘oppositions’), which may be a kind of synecdoche; or a kind of antiphrasis, when the sense of the phrase is contrary to what it seems: *əsfəntä ṭəbäbä ᶜoqä Sälomon mäsbaᶜtä abdä*, meaning seemingly ‘How much wisdom Solomon learned, seven times (more than) he became folly’, but in fact it should be translated as: ‘How much wisdom Solomon learned, [yet it turned out to be] seven times as much folly’ (allusion to the story in Kg 11).

Using S.w., the masters of *qəne* can skilfully hide irony and jokes directed eventually against another person or praise him/her, make political remarks etc. Such hints are not rare, though most *qəne*, elaborating topics from the Bible and church literature, connect them with those from everyday (“low”) reality and nature (Moreno 1941:25, no. 44; Schall 1961:34f., no. 46):

Mäwaᶜəlä kərämt wäld läʾardaʾihu azrəʾt əmdəḫrä
tänśəʾa yəbelomu

Ǝskä ḫəlqätä näṭb ᶜaläm əhellu məslekkəmu
Wäʾənzä taṭämməqu bälu basəmä śəllase awraḫ
bärəʾəsä mədr qädimu

‘The rainy season/the Son, after rising [having resurrected], said to his disciples/seeds:
Until the end of dripping/the world
I will be with you;
And while baptizing, initially say: “In the name of the
Trinity/three months [of the rainy season]”, over the
head, the earth.’

Meaning: after the resurrection, Christ promised his disciples to be with them until the end of the world (cp. Acts 1:8), likewise the rainy season will exist for seeds until the end of water dripping. Christ taught the disciples to baptize the people in the name of Trinity pronounced over their heads, likewise the rainy season “instructs” the rain to moisten the earth for three months.

In the 20th cent., the term *qəne* was transferred to ↗Amharic poetry, obviously in the wake of systematizing *säwasəw*-teaching and developing Amharic; attempts were made to create and popularize “Amharic *qəne*” and adapt them to S.w. techniques (e.g., Märsəᶜe Ḫazän Wäldä Qirqos 1955/56:215–20). As a result, the term S.w. acquired a very liberal use also and came to be applied to Amharic folklore poetry (cp. ↗*Gəṭəm*), especially to the songs of ↗*azmari* (cp. LevWax 5–13 [and sharp criticism in Gedamu Abraha 1967:229ff.]; Mattausch 2006:91–102). Even though a few similarities between some S.w. techniques in *qəne* and figures of speech occuring in Amharic folklore poetry do exist, a wide equivalence is hardly possible, due to the different natures and languages of *qəne* and Amharic folklore poetry (as underscored by Alemayyehu Mogäs in PICES 3, vol. 2, 100ff.). However, today S.w. is frequently applied to Amharic oral poetry, specifically to numerous cases where the rhetorical effect of "ambiguity" or double meanings (one of them, the "hidden", possibly ironic or insulting) is achieved by extensively exploiting homophony and/or polysemy of words (pun, paronomasia): cases like ↗*mäsqäl* meaning 'the feast of *Mäsqäl*' and being the infinitive from the verb 'to hang, crucify'; *dəffən yäšäwa säw* meaning both 'all Šäwan people' and 'reckless Šäwan people' (Molvaer 2006: 152f.); *bäre salay*/*bäresa lay*, 'having seen no oxen'/ 'on dead bodies' (Guidi 1891: 61); *šəf(fə)ta* 'outlaw, ↗*šəfta*-rebel' and 'first butter (which appears on the surface of milk)', *ras* 'head' and the title of ↗*ras* (Guidi 1892: 27; the literary technique is designated there, however, as *ᶜaynä wəha* and opposed to that of S.w., though cp. no. 3 above).

Sämhar

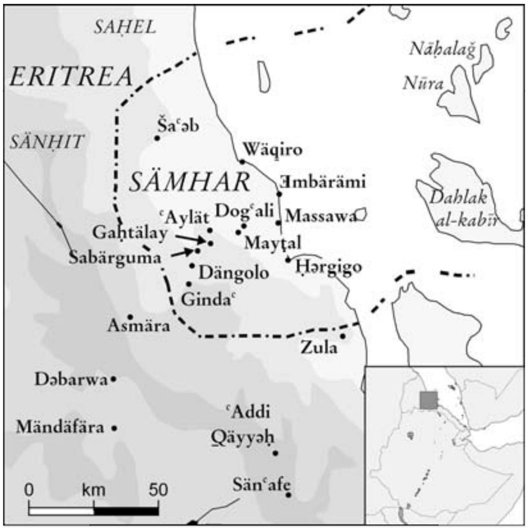
S. (**ሰምሃር**) is the name of an area in the central Eritrean ↗Red Sea coastlands, located today in the southern part of the Northern Red Sea administrative zone of ↗Eritrea. S. extends roughly from the mouth of the River Läbqa in the north to slightly north of ↗Zula in the south, and the edge of the highland escarpment in the west. The port of ↗Massawa is the dominant urban centre of the region, in many ways shaping the region's historical role and evolution. S. was also the name of an administrative unit until the 1995 administrative reform (s. Eritrea: administrative division).

According to popular etymology the name S. derives from a variant of the Arabic words *šams* ('sun') and *ḥar* ('heat'). In ↗Təgre, the word *šamhar*, which is the jussive form of the verb *šamhara*, has also the meaning of 'tranquil, calm and peaceful' (oral informant). In contemporary Eritrea many girls and some boys – including highlander ↗Təgrəñña-speakers – are named S.

Mostly a plain, S. is characterized by a great diversity in landforms within a very limited space, ranging from arid quasi desert areas, through plains and fields covered by seasonal and sparse vegetation and enjoying relatively good precipitation during the rainy months (especially November–January), to fertile valleys where some cultivation is practiced.

Aptly referred to in the literature as a "mosaic of tribes" (TrIslam 169), the population of S. is characterized by its diversity. S. is a linguistic and cultural contact zone, shaped by its particular geographic situation between the highland plateau and the Red Sea. The formation of the today entirely Muslim and Təgre-speaking population of S. is the result of the mixing between groups and individuals whose mother tongue was Təgre, ↗Beğa, ↗Sāho and ↗Arabic. In addition some ↗ᶜAfar, ↗Somali and descendants of liberated slaves – from the Oromo areas and the Nilotic Sudan (↗Slavery) – and West African Takrūrī (↗Tukrir) also inhabit S. The main direction of the trend has been assimilation into Təgre, socially, culturally and linguistically (from Sāho, Beğa and Arabic to Təgre), though some groups are bi-lingual to varying degrees (e.g., among the ↗Iddäfer: from Təgre to Sāho). In terms of political organization, most groups have councils of elders who elect a ↗*šayḫ* or chief.

The inhabitants of S. may be divided into urban and village dwellers on the one hand, and agro-pastoralist groups (*qabāʾil*, 'tribes'), on the other. The settled areas are notably Massawa, ↗Ḥərgigo, ↗Ḥəṭumlo, ↗Ǝmkullu, ↗Ǝmbärämi, ᶜAylät, Gumhot, Asus, Damas and ↗Gindaᶜ. The



groups characterized by seasonal mobility are the ᶜAd Ha, ᶜAd Šuma, ᶜAd Askär, Nabarra, Aflända, Warya, Mäsḥalit, Iddäfer, Gädäm Sikta, Ṭəroᶜa Bet Muše and the ↗Rašāʾida. In the dry season the *qabāʾil* migrate with flocks and cattle herds in search of grazing land, especially to the highland escarpment, beyond the boundaries of S. After the rains they return to the lowlands for grazing and small-scale cultivation along the rivers. They are joined by groups from the Saḥəl who descend to the S. pastures in the winter months.

In some cases one ethno-linguistic element constitutes a more prominent nucleus in the formation of a specific group. For example, the Warya and Aflända originate in Beǧa (↗Hadándowa) and the ᶜAd Ha, ᶜAd Askär and Iddäfer trace their ancestry back to Saho. Some villages are inhabited by individuals and groups whose major tribal grouping lies elsewhere, beyond S. This is the case of the ↗ᶜAd Mäᶜalləm in Zaga, the ↗ᶜAd Təmaryam in Asus and Gumhod, and the ↗ᶜAd Šek in Ǝmbärämi.

Interestingly, in the mid-19th cent. some inland pastoralists referred to S. simply as *mədūn* or *mudūn* ('settled urban area', 'land or urban settlements'; MunSt 106). At that period observers also noted conspicuous social, cultural and religious differences between the agro-pastoralist communities of the interior and the urban dwellers of Massawa (MunSt 114-28).

From a historical perspective the role of the ↗Balaw ↗*nāʾibs* in controlling and consolidating politics, ↗Islam, and the formation of villages in S. is significant. Based in Ḥərgigo and appointed by the ↗Ottomans as their representatives (↗Ḥabeš *eyaleti*), the *nāʾibs* practically controlled the area and the various groups inhabiting it from at least the 17th to the 19th cent. At the height of their power, between ca. 1750 and 1850, the *nāʾibs* effectively spread their hegemony over S. and its various communities. They dominated tribal politics, appointed chiefs, collected tribute, fostered commercial operations and had a considerable influence on the dramatic religious dynamics operating in S. in the 19th cent. Their role in the region resulted in the formation of several villages (e.g., Zaga) and "tribes" such as the ᶜAd Askär. Since the mid-19th cent., S. came under Egyptian (1865–85; cp. ↗Egypt, relations with; ↗Massawa Governorate), Italian (1885–1941), British (1941–52) and Ethiopian (1952/62–91) control.

In the first years of the 20th cent., Salvadei (1913) estimated the population of S. at 17,000. In 1910 the figure rose to 25,452, including Europeans (Odorizzi 1911:221), and in 1931 the population of S. was put at 33,895 inhabitants of whom 64 % were Təgre-speakers, 14 % Sāho, 10 % Arabic, 5 % Təgrəñña, 5 % ᶜAfar and 2% various other languages (PollEr 216). In 1993 the region had 77,000 inhabitants (KilHDic 373).

Since the independence of Eritrea the government has engaged in various construction and reconstruction efforts aimed at developing the area economically (agriculture, fishing and tourism).

Sämon

S. (**ሰሞን**) is derived from the same Amharic root as *sämmənt* ('week'), and refers to the weekly rota of duties performed in service of the church (GuiVoc 151f.). The individuals performing these duties were given grants of land to support them and a ሰሞነኛ (*sämonäñña*) was the holder of such land. Therefore S. can be seen as a type of church ↗land tenure (cp. ↗*mädäriya*; ↗*rəst*; ↗*rim*).

This terminology was particularly associated with Šäwa and the expansion of the Ethiopian state during the reign of *aṣe* ↗Mənilək II (Mantel-Niećko 1980: 111f.) and it does not appear with reference to church land in Goǧǧam, Bägemdər or Təgray. In those territories, where Gondärine traditions of land grants were in play, the corresponding term was የደብተራ፡ መሬት (*yädäbtära märet*; CrumLand 89).

In both traditions the land was held on an individual basis in return for liturgical services. Mantel-Niećko (1980) notes how the ↗measurement (s. EAE vol. 5) of land was introduced in the areas conquered by the Šäwan state, following which state appointees founded ↗*däbr* churches, fixed the size of their clerical staffs, and provided land to support the staff. Such foundations could have as few as five and as many as 500 *sämonäñña*.

Berhanou Abbebe (1971), who like Mantel-Niećko draws heavily on Maḫtämä Śəllase Wäldä Mäsqäl (MahZekr) and on Gäbrä Wäld Ǝngəda Wärq (1955) claims that S. land, strictly speaking, was in the domain of the state and that its primary holders were ↗*gäbbar* farmers, who paid the royal tithe. In this account the *sämonäñña* held over-rights and collected tribute (Berhanou Abbebe 1970: 64, 66f., and ch. 2). S. lands were typically administered by a ↗*gäbäz*.

The extent to which S. resembled, or deviated from, Gondärine *yädäbtära märet* awaits detailed studies of *däbr* foundations to which S. lands had been attached.

Śämrä Ab ↗Saints, Christian

Samuʾel

Abunä S. (**ሳሙኤል**, whose name before his ordination as bishop was Gäbrä Ǝgziʾabəḥer; b. 1931/32, Gondär, d. 3 June 1975, Zʷay) was a bishop of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), one of the few to have studied abroad.

S. was born to *mämhər* Däggu and *wäyzäro* Ṭəru Wärq. He completed his traditional ↗education in Gondär and went on to receive a modern education in Addis Abäba where he attended Täfäri Mäkʷännən Secondary School (later Ḫaylä Śəllase Secondary School; today Kotäbe Teachers Training College). After graduating with honours, S. was awarded a scholarship to Leningrad (today St. Petersburg), where he studied theology and earned a degree in Divinity. He later obtained a Master of Divinity degree from the University of Hamburg.

S. was sent by the Patriarchate of the EOTC for pastoral service to the ↗United States of America; his diocese included North America and the Caribbean. He was called back in 1968, and served in different positions in the Patriarchate until he was ordained bishop and appointed to the ↗Kämbata province, with the diocesan seat in ↗Zʷay, in 1971.

After the ↗Revolution of 1974, S. was elected representative of the EOTC in the Ethiopian ↗parliament, a difficult task since the parliament wished to limit the influence of the Church, an example of which was its cancellation of three ↗feasts previously celebrated nationally (e.g., 16 *Näḥase*; ↗*Fəlsäta*). As a sign of his opposition, S. walked out, earning the displeasure of the *Därg* officials.

In May 1975, S. withdrew to the monastery of Zʷay, where he continued to boycott the parliament. Several days later, he was found shot in his residence. The official conclusion was that he committed suicide. S. was buried at the monastic church of Zʷay Kidanä Məḥrät.

Mersha Alehegne

Samuʾel Giyorgis

Baldäräba S.G. (**ሳሙኤል፡ ጊዮርጊስ**, also Samuʾel Šoho, Samūʾīl b. ᶜAlī, birth name: Ḥusayn ᶜAlī; b. ca. 1820/22, Sänᶜafä, Akkälä Guzay, d. ca. 1888/89) was a diplomatic envoy of Šäwa, high official at the court of *aṣe* ↗Tewodros II, and at times governor of ↗Akkälä Guzay.

S.G. was the son of a ↗Sāho notable ᶜAlī ᶜUmar (↗Ali Umar). His father, a Təgrayan envoy to Egypt, helped Protestant missionaries to establish themselves in the region in the 1830s. Ḥusayn lived with them in ᶜAdwa, converted to Christianity and was baptized by ↗Isenberg as S.G., after Samuel ↗Gobat. S.G.'s relations with the missionaries allowed him to travel widely after 1838, e.g., to Egypt and probably Jerusalem. Around 1840 he became a favourite of *nəguś* ↗Śahlä Śəllase and was sent as his envoy to Aden. S.G. escorted ↗Harris to Šäwa and was sent as a Šäwan envoy to India in 1841.

In 1862 *aṣe* Tewodros II appointed him envoy to Great Britain, accompanying Consul ↗Cameron to deliver a royal letter to Queen Victoria; but after their arrival in the border region of ↗Bilin, Cameron sent S.G. back. The act was received with suspicion by S.G. and strongly influenced Tewodros's future dealings with Europeans. S.G. then was a confidant of Tewodros, his secretary and interpreter (Moorehead 1962: 223 calls him the "chamberlain"), and, as *baldäräba*, in charge of relations with foreigners. European sources mention S.G. as an intelligent and influential man, whose relations with the Europeans were decisive for their standing at the court. S.G. secretly monitored Europeans' correspondence and translated remarks that were critical of Tewodros. This contributed to the incarceration of most Europeans (Smidt 2005: 15–20). When ↗Napier's army arrived at ↗Mäqdäla in 1868, S.G. was in charge of the negotiations and tried to achieve peace; he also secretly helped several captives to send letters.

Shortly after Tewodros's downfall S.G. acquired a key position in the north, as the appointed governor of Akkälä Guzay, based in his home town ↗Sänᶜafe, and married a former wife of Tewodros. *Däǧǧazmač* Kaśa Mərç̣a (later *aṣe* ↗Yoḥannəs IV) called him *rəᵓəsä mäkʷannənt* ('head of the princes'). But he soon quarrelled with *däǧǧazmač* Kaśa and fled to ↗Massawa. In 1871 S.G. joined a group of notables in a plot to prevent the coronation of Kaśa. The former puppet ruler *aṣe* ↗Yoḥannəs III in Aksum, *däǧǧazmač* ↗Kaśa Golǧa, a refugee in Kärän (claiming to lead the "government of Ethiopia"), and S.G. in Massawa, wrote letters to the French President inviting France to establish a protectorate over Ethiopia, and send arms and soldiers in order to defeat Kaśa. However, these efforts bore no fruit. British documents of the 1870s show that S.G. remained actively in contact with Europeans, trying to defend Sāho interests in the face of an expanding Egypt, but no longer attained any position of influence.

According to a report of the missionary ↗Flad, who believed S.G. to be the main person responsible for the persecution of Europeans under Tewodros, he was arrested by the Italians after their occupation of Massawa. After years in captivity he was extradited to Yoḥannəs IV and received the death penalty (Flad 1922: 380ff.).

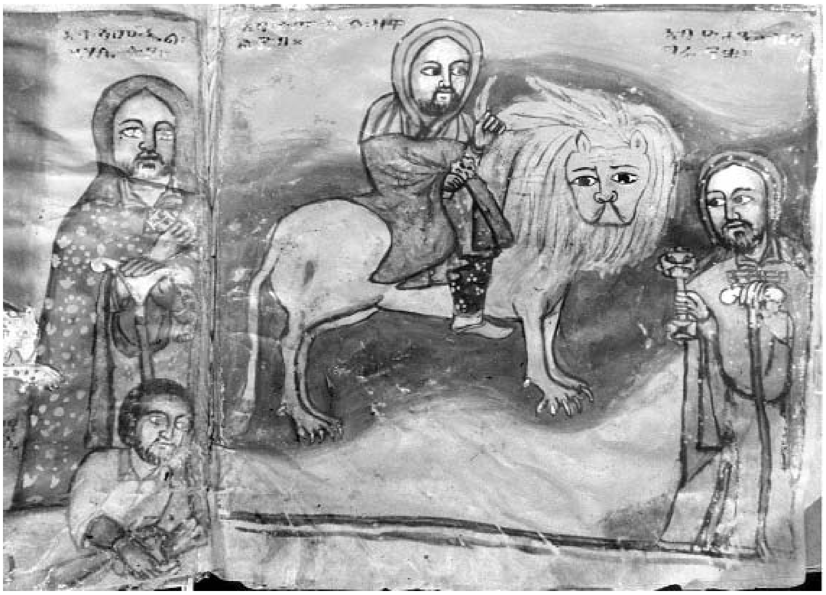
Samuᵓel of Däbrä Halleluya

Abunä S. (**ሳሙኤል**, d. 20 July 1375 [20 *Ḥamle*, 35th year of Mercy] or 1347) was a holy monk from ↗Təgray who lived in Märäta and Torat during the reigns of *aṣe* ↗ᶜAmdä Ṣəyon I and *aṣe* ↗Säyfä Arᶜad. His name and his activities are traditionally linked with the foundation of the monastery of ↗Däbrä Halleluya, where his ↗*täzkar* is still annually celebrated.

The main source for S.'s life is his hagiography (ed. Colin 1990). Four manuscripts of the Acts of S. are reported to exist (KinBibl 88), but the existence of only one is certain (20th-cent. paper ms. ANLin Conti Rossini 2 [fols. 1–49], used for the edition Colin 1990, s. "Introduction" [text]).

According to this text, S. was born in Märäta, to Yəftaḥ Länä Ǝgziᵓ, from a family of priests, and Təqäddəsännä Maryam, the sister of the famous monk ↗ᶜAbiyä Ǝgziᵓ, and he was baptized as Näᵓakkʷəto Läᵓab. As a child, S. followed the order of his uncle, before becoming a monk in the community of ↗Ǝnṭonəs at Däbrä Tänbuk. Ǝnṭonəs gave S. the monastic habit and his monastic name. There, S. excelled in self-mortification and ascetic lifestyle. Ǝnṭonəs eventually sent S. to the desert on mount Halleluya. Here Christ appeared to S. and told him to found a community. The first to join S. on Halleluya was a little boy Ǝnṭonəs (the future ↗Gäbrä Mäsqäl of Gutämala). The new monastery followed the



19th-cent. manuscript illumination showing several Ethiopian saints, Samuʾel of Däbrä Halleluya (left) with a suppliant, ms. *Gädlä Abba Gärima*, fol. 13v, monastery of Abba Gärima, Təgray; photo 2006, courtesy of Michael Gervers

rules of ↗Pachomius and attracted many followers (Colin 1990: 18 [text]). When Ǝnṭonəs of Däbrä Tänbuk died, he chose S. as his successor and asked to be buried at Halleluya. As a result, S. became the head of several monasteries in the region and an important spiritual leader in Təgray. His Acts mention S. meeting such venerated saints of the region as ↗Filmona (ibid. 51) and ↗Samuʾel of Waldəbba (ibid. 76). S. was succeeded by the monk Zäʾiyäsus, who in turn was succeeded by Täṭämqä Mädḫən. His two successors preserved S.'s ↗relics (hair), which were responsible for many posthumous miracles. The relic was later taken by the monks of Däbrä Halleluya on a pilgrimage to ↗Jerusalem and ended up in the hands of a Coptic metropolitan, who placed it in a "silver box" (ibid. 59).

The Vita contains several episodes common with other Ethiopian works of this type (cp. ↗*Gädl*): visions, stories about "heavenly bread", submission of wild animals, and miracles.

Samuʾel of Däbrä Qʷäyäṣa

Abba S. (ሳሙኤል, fl. 14th–15th cent.) was an Ethiopian saint known particularly as a disciple of *abunä* ↗Mädḫaninä Ǝgziʾ and the spiritual father of *abunä* ↗Ǝsṭifanos.

The main source on S.'s life is his unpublished Vita, preserved in a recent (19th-cent.?) manuscript kept in Däbrä Qʷäyäṣa (*Gädlä Samuʾel*, inventory no. CI–IV–161; the information on other mss. recorded by KinBibl 89 is uncertain). According to this text, S. was born in the vicinity of Mäqälä, Təgray. His grandfather, Tomas, was of royal descent, but left the worldly life to become a monk. S.'s father Zämikaʾel was the eldest of the five children Tomas had conceived before retreating into a monastery.

S. started a traditional ↗education in his home parish and was ordained deacon by the metropolitan (of unknown name, probably *abunä* ↗Säläma "the Translator"). His parents tried to get him to marry, but S. refused and went to the monastery of Däbrä Bänkʷäl, near Aksum, where he received the *qobᶜ* and the ↗*askema* from Mädḫaninä Ǝgziʾ.

S. travelled to many monasteries in ↗Šire and to Däbrä Bartarwa until he reached Qʷäyäṣa (Qoyäṣa). After a prophetic dream (EllLusAnt 9), S. established a monastery there – Däbrä Qʷäyäṣa, also called Hanbar Godäbo (Hanbärgʷədəb in the Vita of Ǝsṭifanos). According to some traditions, S. built it alone, without the help of the authorities (Beylot 1990: 7; ms. CI–IV–161). It was only later that, according to his Acts, S. met *aṣe* ↗Dawit II and his son Yǝsḥaq in Aksum, and Dawit granted lands to S.'s monastic foundation (s. CRAxum 22f. [text]).

S.'s Vita features such other venerated saints of Tǝgray as ↗Samuʾel of Waldǝbba and ↗Tadewos of Däbrä Bartarwa, also disciples of Mädḫaninä Ǝgziʾ. It contains many *topoi* and episodes common in Ethiopian ↗hagiography such as visions and submission of wild animals, the saint's distrust of women etc.

S. is still venerated as a saint in Däbrä Qʷäyäṣa where his ↗*täzkär* is celebrated on 12 *Miyazya*, the day of St. Michael.

Samuʾel of Däbrä Wägäg

Abba S. (**ሳሙኤል**; fl. 14th cent.) was a monastic leader and the founder of the monastery of ↗Däbrä Asäbot, venerated as a ↗saint of the ↗Ethiopian Orthodox Täwaḥǝdo Church.

According to his Acts (ed. Kur 1968), S. was a native of Zǝm in the region of Ṣǝlalǝš (cp. ↗Ǝtissa; in ↗Šäwa). He was born to his father Ǝndreyas and his mother Arsonwa, and educated by *abunä* ↗Täklä Haymanot. The latter assumption appears to be part of a broader tendency to associate S. and his monastery with ↗Däbrä Libanos. He is said to have been consecrated as a deacon and later as a priest by *abunä* ↗Qerǝllos. His Vita links S. to Däbrä Libanos and the "house" of Täklä Haymanot associating S. with the persecution of monks by *aṣe* ↗ʿAmdä Ṣǝyon I through his father Ǝndrǝyas, who is said to have received the monastic habit from Täklä Haymanot, persecuted together with the Metropolitan *abunä* Yaʿǝqob, *abunä* ↗Anorewos (a son of Ǝndrǝyas's sister) and others, and died in Ǝnsǝdǝstǝy.

S. enjoyed an excellent relationship with *aṣe* ↗Dawit II, who is said to have given him permission to construct a church upon the site of the remains of his father and provided him with vessels, garments and books for the church. S. is claimed to have been an active missionary in South Ethiopia (↗Damot, ↗Ǝndägäbṭän) and was particularly ardent in his battle against such pagan warlocks as ↗*däsk*.

S. is credited with the foundation of Däbrä Wägäg (↗Däbrä Asäbot), on the south-east fringes of Šäwa. He died in Yäzärzär on 29 *Ṭǝqǝmt*, on which day he is commemorated. His remains were translated to Däbrä Asäbot on 27 *Gǝnbot* by his disciple Śämrä Krǝstos.

Although S. does not appear in the monastic genealogy in the Acts of ↗Filǝppos of Däbrä Libanos (Turaiev 1908: 198f.) he does in the monastic genealogy of the 17th cent. (Getatchew Haile 1982: 28ff.), where he replaces Yoḥannǝs of Kǝlʾat. Similarly the 15th-cent. versions of the *translatio*-reports of Täklä Haymanot do not include S. as one of those present (Budge 1906: 258f.), but a 16th-cent. version does. The Acts of S. date from the 16th cent. and stress his place as spiritual descendent of Täkla Haymanot. Derat (DerDom 124ff.) suggests that these differences reflect the changing status of Däbrä Wägäg.

The Vita of S. has been dated into the first half of the 16th cent., but is known from two recent manuscripts. S.'s hagiography includes also a collection of Miracles (↗*Täʾammǝr*) and ↗*mälkǝʾ*.

Steven Kaplan

Samuʾel of Qalamūn

S. (**ሳሙኤል [፡ ዘቀልሞን**, Qalamon], Arab.: Samūʾīl, b. 597/98, Tkello [Dakluba] near Pelhip, d. ca. 695, Qalamūn) is one of the most remarkable and venerated monastic leaders and saints of the ↗Coptic Church; he is also well-known and venerated in the ↗Ethiopian Orthodox (Täwaḥədo) Church.

The main source for S.'s life is his Vita, known in Coptic, Arabic and Ethiopic versions. Born to the family of an ecclesiastic, at the age of 22 he went to Scetis, where he became a disciple of the monk Agathou. Later, he became the abbot of Wādī n-Naṭrūn. When messengers of the Melkite Patriarch Cyros (al-Muqawqas) came to Scetis to convince the monks to accept the doctrine formulated at the Council of ↗Chalcedon, S. fiercely opposed them, was brutally tortured, lost his right eye (this feature being reflected in his iconographic tradition) and was banned from Scetis to Naqlūn, in the Fayyum oasis. After spectacular events and miracles, S. settled at Qalamūn and stayed there 57 years; he died at the age of 98, on 8 *Kīhak* (8 *Taḫsas*). The monastery of Qalamūn flourished until the 15th cent. and was revived in the 19th cent.

S. does not appear in ↗genealogies of Ethiopian monks, like some other Egyptian monastic fathers (e.g., St. ↗Anthony, Macarius, ↗Pachomius who belong to earlier monastic generations). However, he is well-known in Ethiopia as a fighter against the doctrine of Chalcedon; he, his monastery and disciples feature in quite a number of different Ethiopic texts.

The Coptic Vita of S., attributed to "Isaac the Presbyter", emerged in ca. 8th/9th cent. and is represented in three versions (in Sahidic with traces of Fayyumic [the only complete version to survive, s. Alcock 1983], pure Sahidic, and Bohairic dialects). The Arabic is attested in at least three mss. and is represented probably in more than one recension (the text was edited after a recent manuscript, s. Alcock 1996, 1998; cp. Zanetti 1997: 148ff.). The edited Arabic Vita has some deviations from the Ethiopic but is closer to it than to the Coptic one, and confirms that an Arabic text was the *Vorlage* of the Ethiopic Vita (Alcock 1996: 321f.). The Ethiopic version might have been created in the 14th cent. and is found in a few mss. as part of the ↗*Gädlä sämaʿətat* (cp. 15th-cent. BritLib Orient. 689, fols. 138v–49v; Orient. 687–88, fol. 150ra–57rc; Berlin, Staatsbibliothek Preußischer Kulturbesitz, Or. fol. 117, fols. 64v–114v, apparently used by ↗Ludolf; cp. Halle, Universitäts- und Landesbibliothek, Yb 4°7, fols. 11ra–17ra).

The commemorative note in the Ethiopic ↗*Sənkəssar* (8 *Taḫśaś* [cp. 14 *Ḫədar*]) was derived directly from its Arabic *Vorlage* and appears in the first recension of the *Sənkəssar* (ca. 1400; cp. Pereira 1894: 171–89; GréSyn IV, 655–67).

The ↗*Täʾammərä Maryam* contains a number of accounts about S., his monastery and its monks (the "cycle of Qalamūn", s. CerMaria 157–78; cp. ms. EMML no. 1606 with four accounts; nos. 2058, fols. 27r–29v; 2337, fol. 243r; 2802, fols. 22v, 115v; 3133, fol. 106r, etc.; Budge 1900: 42–46). Translated most probably from Arabic, these accounts are of different origins. One of them – a miracle about the fallen angel (cp. CerMaria 158–63) – has a corresponding story (in two types) in the Ethiopic Vita of St. ↗George (cp. ibid. 163–66, and Arras 1953: 23–27; cp. also EMML no. 2802, fol. 26v). Some manuscripts of the *Täʾammərä Maryam* include miracles which are extracts from the Vita of S. At least two are known: concerning how St. Mary appeared to S. to raise his disciple (the first episode identified in CerMaria 159 n. 2; cp. EMML no. 2058, fol. 164v) and about the death of S. In the manuscripts that have recently come to light some of the accounts related to S. are still to be properly identified: "the captivity of S." – 18th-cent. EMML no. 2058, fol. 163v; 2337, fol. 246v; 2952, fol. 236r; and "the teaching of S.", EMML nos. 2058 – fol. 165r; 2337, fol. 248r.

A few stories about Isaac of Qalamūn (S.'s disciple and the purported author of his Vita) appear in the *Gännätä mänäkosat* (CerMaria 168–72; cp. Arras 1988; cp. ↗Monastic literature). A hypothesis concerning the attribution to S. of "blessings" contained in the *Mäṣḥafä* ↗*gənzät* (GuiSLett 29) has not yet been proved.

The so-called *Prophecy* or *Apocalypse of S.*, written probably in the 10th–early 11th cent. and preserved only in Arabic, refers, among other things, to the kings of "Rūm" (*malik ar-Rūm*) and Abyssinia/Abyssinians (*malik al-Ḥabaša/ al-Ḥubuš*) as ideal Christian heroic rulers together "striking the Ishmaelite" (topics reminiscent of the ↗*Kəbrä nägäśt*, cp. Martinez

1990). The account relates how the Abyssinian king would thereafter marry a daughter of the king of "Rūm" (Ziadeh 1915–17:390, 403; cp. Zaborowski 2003:111, 114; cp. ↗"Rom", EAE vol. 5).

Lothar Störk – Denis Nosnitsin

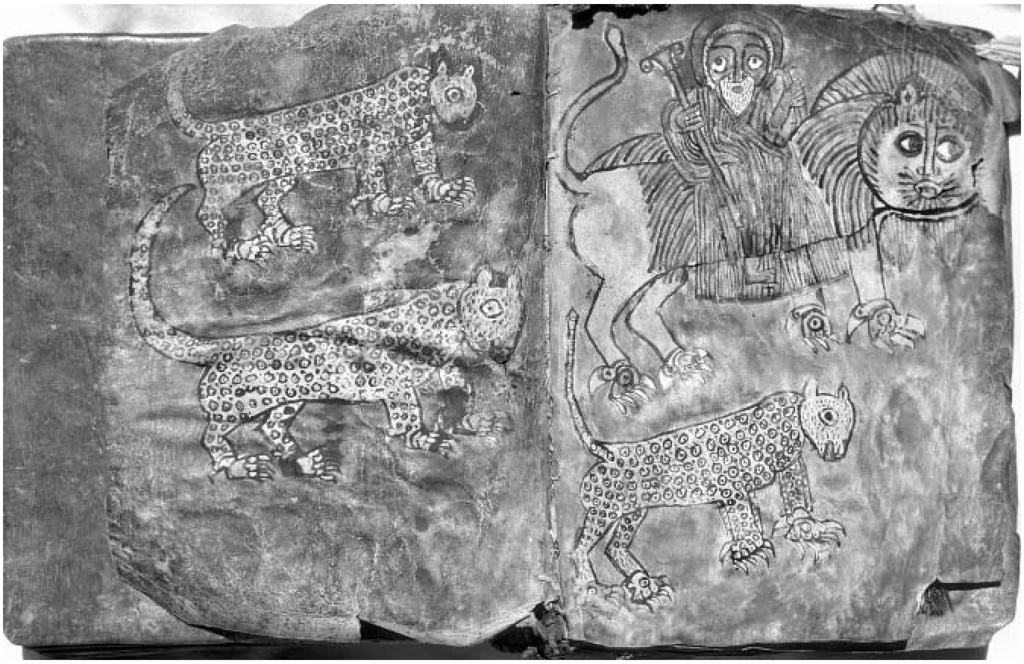
Samuᵓel of Waldəbba

Abba S. (**ሳሙኤል**, fl. 14th–early 15th cent.) is one of the most celebrated Ethiopian ↗saints. His name is traditionally linked with the foundation of the ↗Waldəbba monastic complex.

The main source on S.'s life is his Vita (↗*Gädl*). According to this short 15th-cent. hagiographic work (Turaiev 1902), S. was born in Aksum; his father was Ǝsṭifanos and his mother ᶜAmätä Maryam; he had a brother Gäbrä Krəstos. Having found for her husband "another wife", ᶜAmätä Maryam became a nun. In his turn, S. rejected the woman whom his father and step mother had found for him. He went to Däbrä Bänkʷal, the monastery of *abunä* ↗Mädḫaninä Ǝgziᵓ, and received from him the monastic habit (this relationship was recorded in many monastic ↗genealogies, s., e.g., Lusini 2004:263, 265f., 268; cp. S. as one of the "seven desert stars", a tradition coming probably from the Vita of Mädḫaninä Ǝgziᵓ, BassÉt I, 324). Later, S.'s father joined him, and they both went to the monastery of Wäyna, where S. stayed until his father died. Then he "went into the desert". Later on, the Vita narrates separate episodes common for ↗hagiography: miracles with wild beasts (S. healing, "measuring", taming, feeding, or "chastising" lions, elephants, leopards etc.); extreme reverence for ↗Eucharist; illustrious ascetic deeds (e.g., several months of standing in a pit); miraculous crossing of a river; separating of the waters of the ↗Täkkäze whilst fishing; "heavenly liturgy"; "heavenly bread"; ascension to "the heavenly chamber"; S. miraculously learning that an Ethiopian monk (on pilgrimage?) sinned "with a pagan woman in the land of Rom"; journey "on a cloud" to Egypt, to Patriarch Matthew (1378–1408).

Some historical elements in the Vita are helpful for delimiting the region where S. was active: ↗Wägära, Saf, Bäräka (↗Barka?), Däbrä Lägaso of *abunä* Gäbrä Mäsqäl (whom S. met in Bärzäla), ↗Däbrä Halleluya of *abunä* Zäᵓiyäsus, ↗Ṣäᶜada Ǝmba of *abba* Märᶜawe Krəstos, Talazag, Sire (↗Šire). The Vita relates that he moved to Wali (usually thought to be the same as Waldəbba; cp. Bärrihun Käbbädä 1990/91:41) at the beginning of his monastic life. Historically interesting episodes are: S. visiting *aṣe* Dawit II who thereafter defeated and killed an unnamed "Ishmaelite" (probably *sulṭān* ↗Saᶜdaddīn Abu l-Barakāt, though this would disagree with the traditional chronology of S.'s life); later S. prevented the visit of the Emperor and his troops to Wali. Other episodes are accounts of a meeting between S. and the "pagan black warriors" (↗Kunama-people?) who revered him, and of "a lady worthy of the Heavenly kingdom, in the land of dogs [i.e. cynocephali]", who was brought to S. and became a nun. S. died in the age of 100, on 12 *Taḫśaś* (the local tradition places his death in 1389 A.M.; s. Bärrihun Käbbädä 1990/91:43, 182).

Though not unknown in Ethiopia, the Vita of S. is preserved in a small number of manuscripts,



Samuʾel of Waldəbba, 18th/19th cent. manuscript illumination, ms. *Gädlä Giyorgis*, fols. 1v–2r, church of Gubarǧa Giyorgis, Təgray; photo 2005, courtesy of Michael Gervers

somewhat disproportionate to S.'s popularity. The edition (Turaiev 1902, text only) was prepared on the basis of the 15th cent. ms. Paris, BN Éth. 136 (ZotBNat 204). Containing also a rare version of the Vita of *abunä* ↗Täklä Haymanot, the manuscript is of complex provenance, with a link to ↗Jerusalem, and was written probably outside Ethiopia (for the commissioner of the manuscript *abba* Täklä Iyäsus, cp. CerPal vol. 2, 409, 419, 421 and CerDLib I, 229 n. 1).

Somewhat contrary to the popular image of S., in the published Vita he appears as a hermit (↗*Baḥtawi*) revered even by the ↗*səwwuran*, rather than as a leader of the coenobitic community. He is shown as excelling in his asceticism: that is why he was visited by monks from ↗Gälila (on Ṭana), or invited by Mädḫaninä Ǝgziʾ to celebrate the liturgy in Däbrä Bänkʷal. The Vita mentions Zärufaʾel as S.'s only disciple; it does not refer to Bäkimos whom the Waldəbban tradition describes as the second head of Waldəbba and S.'s main disciple (Bärrihun Käbbädä 1990/91: 186; cp. Girma Elyas 1977: 99).

The Vita of S. is also contained in mss. BN d'Abbadie 32 (dated 1700) and 61 (15th cent.). Turaev (1906: 300–07) studied these and established that both contain a version of S.'s Vita different from the one that he published earlier. It is much longer, with many panegyric inclusions; a few episodes of S.'s life are treated somewhat differently (e.g., it is said that he received the habit in Däbrä Bänkʷal, but from *abba* Adḫani).

Another testimony of a version of the Vita different from the published one is in ms. Berlin, Staatsbibliothek Preußischer Kulturbesitz orient. oct. 1303 (containing also a series of 70 miracles). A very concise story of S. is transmitted in the ↗*Sənkəssar* (mostly coinciding with the Vita, though devoid of all the details locating S. in time and space).

A few episodes from the Vita of S. linked to St. ↗Mary made their way into the ↗*Täʾammərä Maryam* (already by the middle 16th cent., cp., e.g., mss. EMML no. 4618, fols. 117v–20r; no. 1606, fol. 29r; 2999, fols. 243r–44r; VatLib Cerulli Etiop. 267, fols. 175r–78; 288, fols. 93v–94v). A number of other hagiographic works mention S., most importantly the Vita of ↗Giyorgis of Sägla (Colin 1987: 23f.; on this cp. TadTChurch 226; cp. Marrassini 2003: LVI).

By the beginning of the 16th cent. S. seems to have become very popular. His popularity increased further during the ↗Gondärine kingdom, due to the growing importance of Waldəbba, and was particularly promoted by numerous painted images of S. (for an image executed allegedly by ↗Brancaleone, s. Mercier 2001: 115; s. also Chojnacki – Cossage 2000, index).

It seems that the local monastic tradition played a strong role in the development of the popular narrative about S., going far beyond the written hagiographic accounts. Here, S. appears as re-founder and re-vitalizer of the monastic life of the region (cp. Bärrihun Käbbädä 1990/91: 53f.; Girma Elias 1977: 99); he is credited with the re-establishing of ↗Däbrä Abräntant and founding of ↗Däbrä Abbay. Reportedly, he was buried first in Waldəbba, at a place called Atena, but later his relics were transferred to Däbrä Abbay, from here the story of S. underwent further diffusion (cp. EllLusAnt 19f.; Heyer 1998: 143f., esp. n. 216; BerTarik 251f.) and contributed to S.'s popularity; indeed, sometimes (esp. in monastic genealogies) S. is called "*abba* S. of Däbrä Abbay". Waldəbba Däbrä Dəlšəha (Dalšəh) is said to have been founded by *abba* Gäbrä Mäsqäl, who, together with four others monks, came from ↗Däbrä Libanos of Šäwa (Girma Elyas 1977: 101; for a different explanation of this foundation, as the result of the internal transformation of the eremitic life, s. Bärrihun Käbbädä 1990/91: 73f.). Säq^{w}ar, the third monastery of Waldəbba, was founded later and without S. (ibid. 74). However, all these communities as well as the hermitic movement of Waldəbba invariably venerate *abunä* S. as their saint and main ascetic example.

The reason for the traditional (most probably apocryphal) attribution of a portion of the *Mäṣḥafä* ↗*gənzät* to S. is not known.

Denis Nosnitsin

San Marzano, Alessandro Asinari di

S.M. (b. 1830, Turin, d. 1906, Rome) was a General in the Italian army. He had taken part in the Risorgimento wars and was chosen to become the head of the expedition to restore Italy's prestige in Eastern Africa after the catastrophe of ↗Dog^{c}ali. S.M. lacked previous experience in Africa and his military decisions in Ethiopia prove that he did not join the inner circle of the "African" generals, with their adventurism and colonial rhetoric (Battaglia 1958: 339).

The expedition led by S.M. left on 27 October 1887 and landed in Massawa in November-December. The British, through the special envoy Sir Gerald H. Portal, tried to prevent it but failed (Del Boca 1976: 270). The directives delivered to S.M. by the Ministry of War stated that the aim of the expedition was to show the flag and reoccupy the forts of Säḥaṭi and Wiʾa, which were considered part of the Empire, ruling out a "conquest of Abyssinia" and even more modest targets such as ↗Kärän and ↗Asmära. The construction of a railroad from Massawa to Säḥaṭi would facilitate the advance of the Italian troops and reinforce their control of the territory. The expedition marched about 30 km into the interior and, without meeting any resistance (Chiesi – Norsa 1888: 174), on 1 February 1888, took Säḥaṭi. At that time, the strategy of the Italian General Staff in the Red Sea region was to compensate for their numerical inferiority (20,000 better armed Italians faced 80,000 to 100,000 Ethiopians) by attracting the enemy towards strongly fortified positions.

On 26 March *aṣe* ↗Yoḥannəs IV arrived in the mountains of Sabarguma, six km away from the fort in which the Italian troops were entrenched.

There ensued a final exchange of letters with proposals for a compromise, Yoḥannəs wishing to obtain the support of Italy in his fight against the Sudanese ↗Mahdists. However, the dispute could not be settled mainly due to Italian claims on Ethiopian territory.

When the Mahdist sack of ↗Gondär and Mənilək's (↗Mənilək II) threat forced the Ethiopian army to retreat between 3 and 4 April, S.M. decided not to chase the enemy. This and the low profile of the expedition was criticized by ↗Baratieri (1888), a champion of "offensivism" who was subordinate to S.M. in the expedition (Scarfoglio 1936, vol. 1, 39–43). S.M.'s strategy, however, was fully endorsed by the Minister of War Ettore Bertolè-Viale. Once the expedition had achieved its main objectives it returned to Italy. The only casualties in the Italian camp were victims of the poor health conditions. The initial budget of the enterprise was 5 million Italian lire and later increased to 20 million (Crispi 1914: 24f.), but altogether the costs have been estimated up to 42 million (Labanca 1993: 144).

The expedition led by S.M. was the first mass operation carried out by the Italian army in Africa and it paved the way for a more aggressive chapter of Italian colonialism along the lines of ↗Crispi's neo-imperialist ideology (↗Italian war 1895–96). Moreover, the withdrawal of Yoḥannəs's army opened a vacuum in Təgray while his way of tackling the Italian expedition had undermined the image of a fierce and invincible warrior he had so far enjoyed (Del Boca 1976: 304; BZHist 59). The illness of some animals transported to Eritrea to feed the troops of S.M. caused an epidemic which devastated the entire Horn (Labanca 1993: 96, 2002: 271). S.M. concluded his career as a member of the Senate (1894) and Minister of War (1897–99).

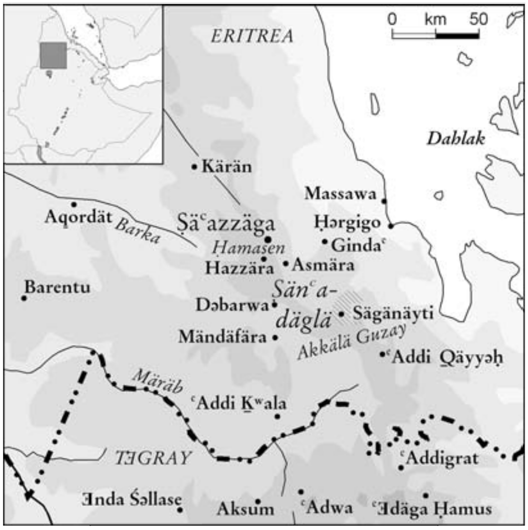
Ṣänᶜadäglä

The Ṣ. (**ጸንዓደግለ**, variant Ṣənᶜa Dägle, Sāho: Ṣanᶜadagle) are a Təgrəñña-speaking descent group, based in and around Sägänäyti in the ↗Akkälä Guzay highlands, adjacent to the lowlands on the Red Sea coast.

They are first mentioned in a document from the period of *aṣe* ↗Dawit of 1400 A.D. mentions them (CRAxum 26, doc. 12). Starting from at least the 17th cent., the Akkälä Guzay districts, autonomous to a large extent, tended not to pay any tribute to Ethiopian rulers. The Ṣ., according to their oral tradition, originally dominating the lowlands as far as Ḥərgigo, even accepted the overlordship of the Ottomans in 1650, and from then on received an annual rent. The rent was paid to the Ṣ. until shortly after 1842 (AbbGéogr 330).

Historical records, including oral traditions, report on several conflicts between Ṣ. and lowlanders, based on claims on lowland territories at the coast. During the reign of *aṣe* ↗Fasilädäs the Ṣ. elected Gilay Filəppos (nicknamed Gilay Aziz) as their leader, and, in revenge for raids, fought victoriously against the lowlanders (Sāho). After this he was appointed ↗*käntiba* by



the ruler (ErDizBio 147). The 19th cent. warrior *baḥri nägaśi* Fəq̱rä Iyäsus Assäč̣äq̱ of a Ṣ. sub-group went even further. Grown up in the time of ↗Wəbe Ḫaylä Maryam, he was first promoted chief of ↗Aḵrur by the peasants, then subdued all Ṣ. and subsequently all the lowlands up to ↗Ḥərgigo (ErDizBio 124).

The Ṣ. were among the most important Akkälä Guzay descent groups to embrace Catholicism. When De ↗Jacobis had to flee from *aṣe* ↗Tewodros II, the Ṣ. leader *baḥri nägaśi* Fəq̱re Iyäsus accorded him asylum in Aḵrur for several years. In 1869 Kaśa Mərč̣a (later *aṣe* ↗Yoḥannəs IV) raided Catholic properties to stop the mission. During that period, the Ṣ. were considered French protégés by the French vice-consul stationed at ↗Massawa. However, the Egyptian authorities, in competition with Ethiopia, also considered them as their subjects.

Disputes between Təgrəñña and Sāho descent groups, mostly over land rights, have marked the history of many areas in Akkälä Guzay. Especially a local conflict between the Sāho Tarūᶜa and the Təgrəñña Ṣ. rose to some prominence in the 20th cent. (cp. KilHDic 408f.). Tarūᶜa pastoralists refused to pay taxes to the Ṣ. for the use of land in the mountainous areas near the sea. But the Tarūᶜa were ordered by a colonial court in 1914 to do so. The conflict, starting again in the 1940s, was only resolved in the 1990s through the introduction of a new "rotational" system of land use.

Sänᶜafe

S. (**ሰንዓፌ**, Sāho: Ḥakír; 2,245 m A.S.L; 14°42' N, 39°25' E) is an important Eritrean trade town in the *zoba* Dəbub ('Southern Zone'). It is located 25 km south of ↗ᶜAddi Q̱äyyəḥ and is surrounded by fertile agricultural land (for location s. map for Šäwᶜattä ᶜAnsäba). S. consists of three villages, Awliᶜ, Ḥaḥayle and ↗Mäṭära, and is the administrative centre of S. sub-region, which comprises 1,139 km^2 and 90 villages (of which 22 are administrative centres) with a population over 88,718. At the time of the Napier expedition, the village had about a dozen houses and some 240 inhabitants (Markham 1968: 21). In 1891 its population had increased to 1,500 and in 1938 to 2,000 (Guida 293). With 12,000 inhabitants in 1998, the town's population has increased with the displacements provoked by the Ethiopian-Eritrean war (Muluberhan Tadese 1998: 11).

The original population of S. were the ↗Sāho. Dominant sub-groups are the Đasamo and Gaᶜasó, branches of the ↗Minifire tribal confederation. S. is located in a region marked by a string of pre-Aksumite settlements (Mäṭära, ↗Käskäse), and an ancient trade route from Adulis to Aksum must have passed nearby or through the present S. Pollera suggests that when the first Arab migration took place in the 15th cent., the immigrants intermingled with the local Sāho people in the areas of Ḥakír and Ḥaḥayle and gave rise to a new sub-tribe, the S. Locals claim that their founder originated from Ṣanaᶜāᵓ (as shown by the name, explained as Sāho *Ṣanᶜá ifé* 'descended from Ṣanaᶜāᵓ; MorDicAfar 184; s. Pollera 1996: 163), while the original name of S. is supposed to have been Ḥakír or Ḥakír Daga ('hill of Ḥakír'). One tradition claims that the Arabs settled at the foot of the mountain known as ᶜAyn S. (Ḥakír Daga), mixed with the Sāho, especially with the Đasamo. Later, a branch of this sub-tribe, the Kundes clan, adopted the name S., which then would have been given to the town.

S. was an important trade centre on the northern edge of the plateau on the caravan-route from ↗Massawa south to ↗Mäq̱älä, but also south-west to ↗ᶜAdwa and ↗Aksum. An early record on S. is on the ↗*Egyptus novelo* map (PankBord 92). In the 17th cent. the Jesuit missionary ↗Barradas informed of the existence of sulfur mines in S. (BecRASO IV: 101). In the late 18th cent., *nəguś* ↗Täklä Giyorgis gave the entire province of S. to his ally *ras* ↗Wäldä Śəllase (CRAxum II, 61). In the 19th cent. *däǧǧazmač* ↗Säbagadis Wäldu extended his authority over parts of the Sāho areas, including S., in order to control the salt trade to Təgray (cf. CRAxum II, 70). Being situated between two cultural spheres, S. was the scene of potential conflicts, mostly between Təgrayans rulers and Sāho speakers. In the second half of the 19th cent. Egyptian expansion and the rise of European interests had an impact on the growth of S. (PankHist I, 231; TrIslam 36; Miran 2004: 76f.).

In 1867–68 S. served as a station for the British ↗Napier expedition against *aṣe* ↗Tewodros II and a road from Zula to S. was constructed for the transport of military equipment (Moorehad

1962: 270). During the Egyptian expansion, S. linked itself with highland Ethiopian princes, but tried to conserve some autonomy (its leader, *ato* ↗Samuʾel Giyorgis "man of S.", was at times involved in a plot against Yoḥannəs IV). Later, S. was an important station of the Italian colonial army before the battle of ↗ʿAdwa in 1895, and a permanent garrison was established in S. in 1902. In the 1930s, when the main Asmära-Addis Abäba highway was built, S. was developed as an administrative centre (KilHDic 373).

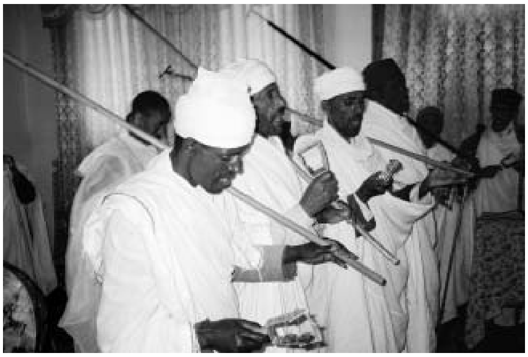
Abdulkader Saleh Mohammed

Ṣänaṣəl

The Ṣ. (**ጸናጽል**; the word is used already in the Ethiopian Bible to render either Gr. κώδωνες, 'bells', or κύμβαλα, 'cymbal'; probably related to Hebrew *ṣelṣəlīm*, Syr. *ṣiṣlā*, 'cymbals', which may be further connected to Gr. σεῖστρον 'sistrum', cf. Cohen 1928–29, LesCDic 561) is a sistrum used for the liturgical music of the Ethiopian Orthodox Church (↗*Zema*). It is not clear whether there is a genetic relationship between Ṣ. and the Egyptian systrum called *sekhem* (cp. MonVidMus 3184); a certain similarity can also be established with the one known from pre-Christian Pompei (Buchner 1980: 52).

The Ṣ. has a wooden, horn or metal handle topped by a trapezoidal frame made of ornately worked iron, copper, silver or gold. Two thin metal bars horizontally connect the two lateral uprights; they each support metal loops or squares which strike each other and bump against the sides of the trapezoid when the cantors shake the Ṣ. There are usually five small metal loops or squares representing the five mysteries of the Ethiopian Orthodox religion: the Holy Trinity, the Holy Incarnation, the Holy Baptism, the Holy Eucharist and the Holy Resurrection. Ṣ. is also seen as a symbol of the apostles, its music representing their speech (Griaule 1932: 4 = 8; Schneider 1988: 81 = 84).



Cantors holding sistrum and prayer sticks, Addis Abäba, Iyäsus church, celebration of the Ascension; photo 2004, courtesy of the author

Each cantor holds a Ṣ. in his right hand and moves it up and down in ↗*aqqʷaqʷam*. Three instruments are used in *aqqʷaqʷam*: the Ṣ., the ↗*käbäro* and the ↗*mäqqʷamiya*. *Aqqʷaqʷam* includes eight modes of performance: ↗*zəmmame*, *qum ṣänaṣəl*, *märägd*, *ṣəfat*, *əngʷərgʷərro*, *wäräb*, *ammälaläs* and *č̣äbč̣äbbo*. The Ṣ. is used in all modes of performance of *aqqʷaqʷam*, except *zəmmame* and *č̣äbč̣äbbo*. In the mode of performance *əngʷərgʷərro*, it is not moved up and down but shaken quickly while the cantors are singing. The usage of Ṣ. is similar for all *aqqʷaqʷam* schools.

The sistrum is played in regular cycles in the mode of performance "*qum ṣänaṣəl*": it is moved four times (down-up-down-up); after each four-part cycle, the sistrum stops. In the other modes of performance, the sistrum is played in irregular cycles but the position of the instrument is important: e.g., at the end of each cycle, the sistrum is moved up in *märägd*, down in *ṣəfat*.

The play of the drum follows the play of the Ṣ. The sistrum is a marker: it indicates when the cycles are finished; the lead cantor (↗*märigeta*) moves his own Ṣ. in a demonstrative manner in order to guide the other cantors; it is shaken quickly by the master at the end of a piece, so that the cantors understand that they have to return to their place.

For the faithful, Ṣ. has a deep meaning as they see the instrument as a symbol for Jacob's ladder (Gen 28:10–17), which in Ethiopian tradition also associated with Virgin ↗Mary. The loops are symbols for the Angels, the horizontal thin metal bars are for the Old and New Testament respectively, and the connecting bow stands for the rainbow God sent to Noah. In the middle of the metal bow, a cross symbolizes ↗Crucifixion as the accomplishment of Adam's hope. The sound of Ṣ. symbolizes the wings of the angels.

Sänbätä Ayhud ↗Sabbath

Sänbätä Krəstiyan ↗Sabbath

Sänbäte

S. (**ሰንበቴ**, Amh. lit. 'my weekend', i.e. Saturday and Sunday, from *sänbät*) is a ritualized banquet celebrated among Ethiopian Orthodox Christians. It takes place after Sunday mass in a house within the church compound called **ሰንበቴ፡ ቤት፡ ደጀ፡ ሰላም** (*Sänbäte bet däǧǧä sälam*, lit. 'weekend house, doorway to peace'). While in some urban centres there is a S. every weekend, in rural areas S. is celebrated only monthly. The banquet is prepared by the local S. association, which consists exclusively of laymen. A S. association may comprise up to some hundred mostly male members of a church parish. Similar associations exist all over the highlands. It corresponds to the Təgrayan village organization *ṣəwa*^{c} *sänbät*, which, however, usually takes place outside the church compound, but follows the same patterns and fulfils the same functions.

The banquet is opened by a prayer and the blessing of ↗food and ↗drink by at least one priest of the parish. In some places, the priests sit inside the *däǧǧä sälam,* while the laymen sit in the church compound; in others, they eat all together. After blessing, prayer and, seldom, a sermon by the priest the banquet is opened. Food and drink, which have been prepared by the families of the members, is distributed to each and every member by plates and jars being handed round in rotation, beginning at the table of the most notable members of the association. The food consists of ↗*ənǧära* with sauce and meat, assuming it is not ↗fasting season, as well as different kinds of bread (Amh., *qiṭa*, *dabbo, annäbabäro* and *gure*). The drink consists mainly of home-brewed ↗*ṭälla*. After the priest's blessing, food and drink are consistently regarded as ↗*ṣäbäl*. The banquet lasts for about one to two hours and is closed by a prayer.

The leader of the laymen is elected for about two years or longer and bears the title *muse* (**ሙሴ**, 'Moses'). Furthermore, the S. association provides for positions like that of a secretary, a money collector, an administrator of finances and an accountant.

In its religious context S. is designed to fulfil Christ's order to take care of the needy like Jesus himself and to give to the poor to be rewarded (Mt. 10:40–42). For its members S. offers through the giving of ↗alms and the blessing of food and drink an access to the state of grace and spiritual satisfaction. Moreover, it enables them to hear the Gospel before the meal and discuss spiritual matters with other faithful laymen while eating.

In the social field S. affords an opportunity for its members to create a corporate feeling among the wider community of the parish and to discuss common social problems with each other. In a quite similar way as in the ↗*maḫbär* associations, it offers security through a mutual help system, which promises financial and technical help, provided especially in the case of death by the arrangement of funerals. Furthermore, S. gives the opportunity to improve one's social position through making contact with higher ranked people. Hence S. even played an important role in politics.

Sändäq Alamaččən ↗Banderaččən

Sandford, Christine

S. (née Lush, b. 1893, d. 1975 Addis Abäba) was the founder and first headmistress of what was in her day Ethiopia's leading private secondary school. The daughter of Herbert Stanley Lush, a British solicitor, she was a keen gardener and farmer. In 1918, she married Brigadier Daniel ↗Sandford, who was to be her partner for 54 years. Living with him in Ethiopia from 1920 until the Italian invasion, she ran a farm at Mulu, north of Addis Abäba.

On returning to Ethiopia after its Liberation from Italian rule, S. began teaching her children at home, but soon opened her doors to a small number of young Ethiopians. She subsequently obtained buildings from the British Council and the Ethiopian Ministry of Education, after which school enrolment rapidly expanded with students working for the Cambridge School Certificate. She was an active supporter of St. Matthew's English Church, in Addis Abäba and also organized, and played the piano at her school, for much appreciated performances of Gilbert and Sullivan light opera.

A keen supporter of *aṣe* ↗Ḫaylä Śəllase I, S. wrote sympathetically of his government. She also produced two popular works on Ethiopian history: *Ethiopia under Hailé Selasse*, which contains an interesting personal account of her husband's involvement with the Ethiopian Patriots (106–13) and *The Lion of Judah Hath Prevailed …*, which is also valuable for its author's autobiographical memories.

Richard Pankhurst

Sandford, Daniel Arthur

Colonel S. (b. 18 June 1882, Landkey, South Devon, d. 22 January 1972, Mulu Farm, Ethiopia) was a British army officer and adviser to Emperor ↗Ḫaylä Śəllase I. The son of a vicar, he attended St. Paul's School and the Woolwich Military Academy. After serving in India, and Aden, he sailed to ↗British Somaliland, and rode mule-back across Ethiopia to Sudan. In 1910 he was attached to the British Legation in ↗Addis Abäba. Rejoining the army in 1913, he served in France and was wounded. In 1919, he became manager of a private British company, the Abyssinian Corporation, which he served until its liquidation in 1921. Retiring from the army in 1922, he leased land formerly held by ↗Mənilək II's adviser Alfred ↗Ilg at Mulu, north of Addis Abäba, and grew strawberries and exported coffee and hides and skins.

Colonel Sandford and Ayyälu Mäkʷännən with patriots during the War of Liberation, 1941; from Seltene Seyoum 1999:326

After Ḫaylä Śəllase I's coronation in 1930 S. was appointed adviser to the governor of Maği, then a centre of the ↗slave trade, which the Emperor was attempting to suppress. However, the Italian invasion soon intervened. S., learning of Ethiopia's defeat, travelled via Kenya to England, becoming appeals officer for Guildford Cathedral.

At the outbreak of ↗World War II S. was attached to the British Middle East intelligence centre in Cairo. After ↗Mussolini's entry into the European war in June 1940, he entered Goğğam, on 12 August, with the rank of Colonel, as head of the British "Mission 101", established to encourage the Ethiopian patriots (↗Resistance), and immobilize Italian forces. S.'s mission, though sometimes ignored by the British high command, prepared the way for Colonel Orde ↗Wingate's subsequent arrival.

After Ḫaylä Śəllase I's return to Addis Abäba, S. became one of his unofficial foreign advisers. This was a difficult position, for British and Ethiopian interests often diverged. Moreover, S.'s brother-in-law, Brigadier Maurice Lush, was then deputy British political officer for British-occupied Ethiopia, and S.'s loyalties were inevitably divided. His position was, however, formalized in May 1942 when, following the signing of the Anglo–Ethiopian treaty of 31 January, he was officially appointed adviser to the Ethiopian Ministry of the Interior. In 1945, he became Director-General of the Addis Abäba municipality, but retired from Ethiopian government service in 1948. He was married to Christine ↗Sandford.

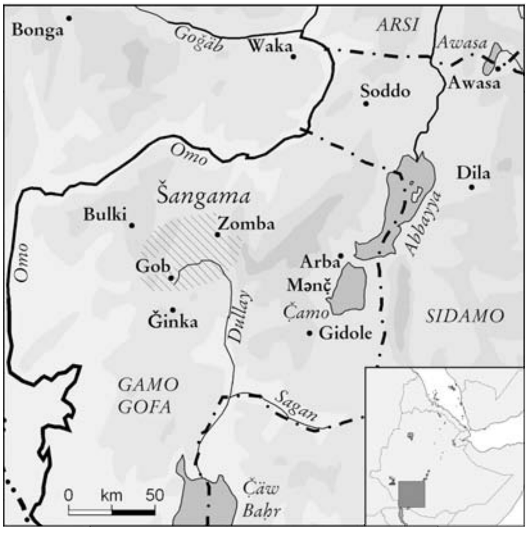
Säne ↗Calendar

Šangama

The Š. (or locally Šangma) are a small ↗Aari sub-group in Southern Ethiopia. There is no significant information on this Omotic language-speaking sub-group, apart from the brief mention by members of the 1950–60s Frobenius Institute expeditions and one descriptive report by Schulz-Weidner (1959), which is unclear and of doubtful quality. The Š. are related to other Aari sub-groups, such as the Argänne and the ↗Ubamär, previously separate chiefdoms, and not defined as a separate ethnic group or "nationality" under the post-1991 regime or before. Š. do not figure in any population statistics, but their number is estimated at some 25,000 from the total of ca. 160,000 Aari people (1998). The main towns are Gob, Zomba and Šangma.



A Šangama man with his water-pipe; photo 1950–52 by Willy Schulz-Weidner, courtesy of the Frobenius Institut, Frankfurt am Main (23-Wd090-09)

The Š. are sedentary cultivators of the *ənsät* complex and live in a cool highland zone, with altitudes ranging from 1,400 to 2,200 m A.S.L. Next to root crops, including taro, they cultivate cereals such as millet, ↗*ṭef*, ↗barley, ↗sorghum and wheat, cabbage, beans, as well as ↗coffee for sale. Until recently they used digging sticks and sickles in cultivation, but ox-drawn ploughs are now predominant. Cattle are kept but not widespread; sheep are more common.

The Š. live in small villages with homestead gardens. Like the other Aari groups, they have a patrilineal clan structure and, according to Schulz-Weidner (in VSAe 126f.), had two marriage classes (*indi* and *ašand*), existing across the clans. Clan names of the Š. are also found among other Aari groups.

The Š. people as a whole were led by a paramount chief or *babi*, with several local sub-chiefs, or *góda*, under him. The seven traditional political sub-groups of Š. are: Gaiča, Derdera, Kaskantamas, Zomba, Gazər, Geza, and one also called Š. After the imperial conquest in the late 1890s the country went into a serious economic crisis and was ruled mostly by Amhara settlers from the north.

The socio-cultural profile of the Š. is similar to that of the other Aari. The clans (*mata*) are exogamous, a marriage is concluded with bride wealth in the form of 4–5 sheep and/or money, and newly-weds take up patrilocal residence. Š. society has occupational castes (*manna*) of tanners, blacksmiths, potters and hunters; these are held in low esteem.

The Š. traditional religious structure has a sky-god called Bäri, and *godimi* ritual specialists or "priests", who, have the functions of, e.g., blessing crops, cattle and people via public prayers and sacrifices, preventing or banishing illness, inaugurating the agricultural cycle, and officiating in life-cycle events, which are complex and highly ritualized. There are also diviners (*zabi bab*), who, as among many other southern Ethiopian peoples, practise livestock-intestine reading, e.g., to estimate chances of recovery of sick people and solving family problems. At present, Orthodox and Evangelical Christianity are well-established among the Š., as among the Aari in general.

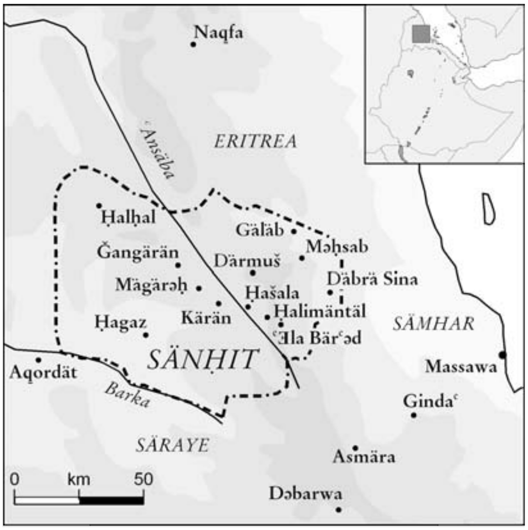
Sänḥit

S. (**ሰንሒት**) is a former province (*awrağğa*) in ↗Eritrea, which was incorporated into the new province (*zoba*) of ↗ᶜAnsäba after the 1995 administrative reform (↗Eritrea: Administrative division of Eritrea). Its capital city was ↗Kärän and its inhabitants were mainly ↗Bilin and ↗Təgre. Its core was the middle ᶜAnsäba valley and the adjacent ↗Mänsaᶜ and ↗Marya highlands, including ↗Ḥalḥal, ↗ᶜƎla Bärᶜəd, Ǧangärän and Gäläb.

Originally, the toponym S. meant only the dominating hill above Kärän and, in extension, Kärän itself. In the Təgre language, the term S. is used to designate the whole area inhabited by the Bilin. When Kärän was included into the Egyptian Red Sea Governorate in 1872 (↗Ottoman Empire) under ↗Munzinger *pasha*, a fort was built on that hill, which appears as as-Sanaḥīt in Egyptian documents. Normally the region was called Bogos, and the Kärän plain Mägarəḥ (Mogaräḥ). It seems, however, that the term S. was also alternatively used for the Kärän region around that time.



During Italian colonialism in Eritrea, S. did not exist as a separate province; it belonged to the province (*commissariato*) of "Sahel" (↗Saḥəl), which was renamed "Cheren" in 1931 (called "Kärän" under the ↗Eritrean–Ethiopian Federation), separate from Massawa. In 1964 that province was split into two, and the new provinces of Saḥəl and S. were established. In 1995 it counted 275,000 people (Hanevik – Kvåle 2000: 1189).

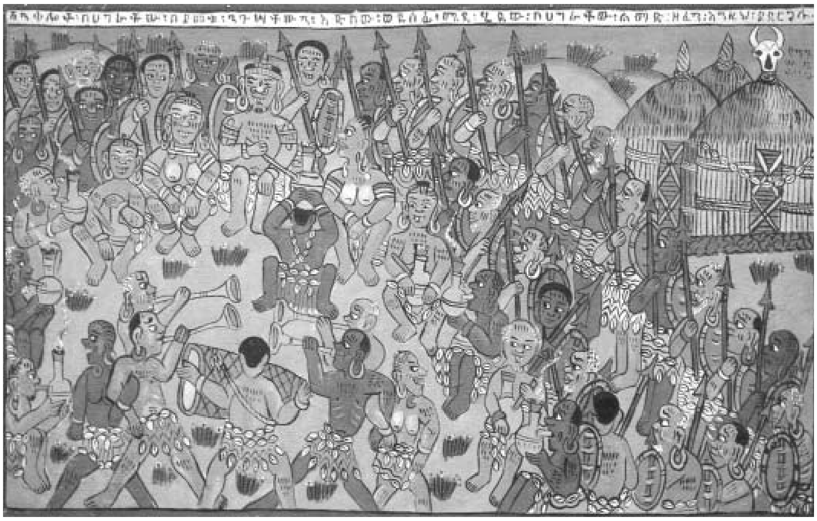
Šanqəlla

The term Š. (**ሻንቅላ**, Amh. variants *Šənqəlla, Šanqilla*, Orom. *Šanqalla*) is a derogatory, imprecise and very general term which has widely fallen out of use. It mainly designated "black"



Ethiopian painting showing "Šanqəlla"; the Amharic caption reads: "Once a year the Šanqəlla gather on the field, show restraint to their king, and sing together with him their traditional songs in this way"; paint on cloth, 82 x 53 cm, ca. 1935, by Bäläččäw Yəmär; courtesy of the Frobenius Institut, Frankfurt am Main (Reg.-No. 647)

lowland populations at the margins of the Ethiopian kingdom, who were regularly victims of slave raids and other predations from highlanders (↗Slavery). The term Š. bore mainly the connotation of 'black slave', in contrast to the likewise derogatory and imprecise term "↗Galla", which also sometimes bore the connotation of 'slave' (GueCopMen 604), but primarily referred to Oromo and occasionally other Cushitic-speaking populations such as ᶜAfar or Sidaama and sometimes also had the connotation of an enemy in war.

In contrast, the term Š. is exclusively applied to ethnically different peoples, living west or southwest of the Ethiopian highlands, and connotes a "different" physical shape and not only colour (hence the translation 'negro' in KaneDic 642, KaneTDic 847). Descendants from unions between highlanders and "Š." were stigmatized (Donham – James 1986: 12f.; cp. GueCopMen 607). The term Š. is to be differentiated from ↗*barya*, 'slave' (e.g., in the names Barya Ǝgziʾabəher, Baryaʾu/Baryaw/Bayru or Barya Gäbrä Mänfäs Qəddus, 'slave of …'), which generally has no ethnic connotation (except in the northern highlands; ↗Nara), and has the wider meaning of anyone who is rather "black", which can also include "typical" highlanders who are only of darker complexion.

It is possible that there is an etymological connection with ↗Beni Šangul/Banī Šanqūl (↗Berta), one of the regions where slave raiding was practiced over a long period. The Sudanese Arabic Šanqūl (pl. Šanāqilah) might have been borrowed from Amharic, or vice-versa (Cerulli 1947: 69).

An Oromo folk etymology explains it with *šan qalla* ('we slaughtered five'). Two related Amharic adjectives mean 'dark skinned' (*šänqalla*, *šənqäla*). The connotation is not always negative, which is shown by the derived term of endearment *šanqo* ('black one'), which can also be a personal name (↗Names and naming systems).

In derivation, the term Š. is also used as a designation for several languages, called "Šanqəlləñña" (cp. ↗Aari, Đáasanač, ↗Gumuz, ↗Komo, ↗Mağaŋgir etc.), but it is never a self-designation. In Oromo, the term is also applied to the Somali Bantu. In Kenya, the ↗Đáasanač are called Šangílla.

The Š. already appear in a 15th cent. praise-song for *aṣe* ↗Yəsḥaq (Littmann 1914: 13). The Š. are listed at the very beginning of the song when the regions and tribes of the kingdom are evoked; they praise the ruler and refer to their richness in goats (this connotes that pastoralists were meant). Historiography reports of *aṣe* ↗Iyasu I that he led campaigns against "the Š." on the north-western borders of his kingdom (in this case ↗Kunama, or ↗Ṣällim Bet; KolTrad III, A37). In the 1840s *nəguś* ↗Śahlä Śəllase included the Š. in his titulature (RubActa I, 81).

The southwards expansion of *aṣe* ↗Mənilək II, directed against Oromo and Käfa, and peoples further south, was also perceived as a campaign of submission of the "Š.". They were regarded as mere savages, without any socio-political order, who were only good for economic and physical exploitation. Consequently, folk paintings show them with drastically exaggerated features as brutish blacks following "pagan" and unholy rituals. A side-effect of this perception was that later governments did not establish a direct administration over much of their regions until the 1960s, but made them subject only to raiding. In the wake of the destructive effects of slave raiding, the establishment of new administrative structures inaugurated a second phase of forced cultural change, but also a new role within the state and the final disappearance of the term "Š." from official discourse.

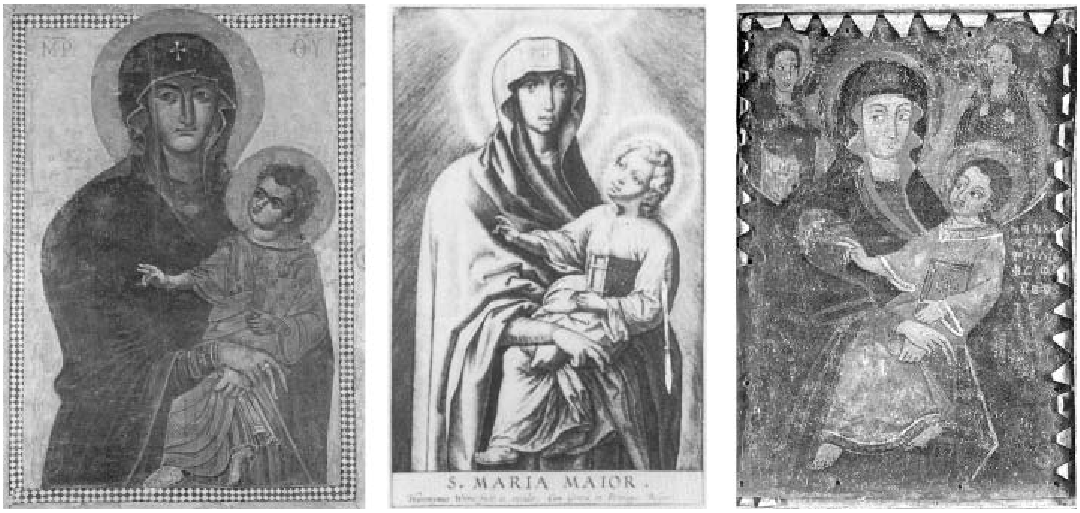
Wolbert Smidt

Santa Maria Maggiore, Madonna of

Known as "Salus populi Romani" (and previously also as "Regina Coeli" [up to the 13th cent.] and "Madonna della neve"), the famous icon of St. ↗Mary in the Cappella Borghese of the Roman basilica of S.M.M. is one of the few miracle-working Marian images possibly dating to the late 6th or early 7th cent. that are associated with a local church. By the year 1200, this icon – mostly surviving in a 12th/13th-cent. over-painting – was considered to have been painted by St. Luke (Amato 1988: 52–60; Wolf 2005: 31–37). Its cult expanded in 1569, when the Jesuit general Francesco Borgia obtained permission from the Pope to have copies – i.e. engravings – of the icon for Jesuit missions (Belting 1994: 320, 485f; D'Elia 1954; Mauquoy-Hendrickx 1982:141f. and ill. 797). The most distinctive element of this Madonna is the gesture of crossed hands with which she holds her son; other specific elements include the extended first two fingers of her right hand, the white *mappa* in her left hand, the book (rather than the more usual scroll) held by the infant, and his sandals.

It is not known when precisely the icon engravings reached Ethiopia, most probably with the Portuguese ↗Jesuits led by Pedro ↗Páez in 1603. Local pictorial copies started being produced soon, and even after ↗Catholicism had been banned by ↗Fasilädäs the iconographic type of this Madonna kept enjoying continuous fortune – possibly not being perceived as a symbol of the Roman faith.

The first documented reference to an Ethiopian copy of the S.M.M. is the 1619 annual letter of



Left to right: 1) Rome, Santa Maria Maggiore, icon "Salus populi Romani", possibly 6th/7th cent. (restyled in the 12th/13th-cent.); photo c; courtesy of Gianfranco Fiaccadori; 2) The Virgin of "S. Maria Maior", engraving by Jerôme Wierix, ca. 1580; from Mauquoy-Hendrickx 1982, vol. 1, ill. 797; 3) Ethiopian icon of "Mary and his beloved Son", left wing of a repainted western diptych, 16th–18th cent., Mäqälä, Cultural Association for Təgray, gift no. 157; from Mercier 2001: 119

the Jesuit province of Goa (D'Elia 1954: 309f.). The earliest known example of an Ethiopian icon that follows the S.M.M. composition is the central panel of a rather large triptych (60 x 82 cm) that may have been painted in the early years of the 17th cent. (Mercier 2000: 118). The pairs of apostles on the wing panels follow an iconographic scheme introduced by the mid-15th-cent. ↗Fəre Ṣəyon (Heldman 1994: 28–31, 172–75); the portrait of the Virgin and Child of the central panel of this triptych is, however, a careful quotation of the S.M.M., quite probably in the form of an engraving, perhaps similar to the engraving of the Madonna of S.M.M. presented by the Jesuit Matteo Ricci to the Chinese court (D'Elia 1954: 305; Bailey 1999: 95, 97f.).

The composition became very wide-spread, virtually replacing earlier iconographic types. However, it does not seem to have been recognized as a faithful copy of the miracle-working St. Luke icon, although by the 16th cent. Ethiopia had been introduced to other iconographic types of miraculous Marian icons ascribed to St. Luke, e.g., a group of Italo-Cretan Marian icons brought to Ethiopia during the reign of ↗Ləbnä Dəngəl (Heldman 2006).

Devotional images of the Virgin in the type of S.M.M. also appear as frontispiece miniatures of illuminated manuscripts, including manuscripts of the Miracles of Mary (Monneret de Villard 1947), and are included within mural schemes upon the exterior wall of the ↗*mäqdäs* of Ethiopian churches.

Later, the S.M.M. type came to be more freely rendered, sometimes only the gesture of Mary's crossed hands remaining. Other iconographic elements were added or replaced: e.g., a bird for the book in Christ's hands (as in Fəre Ṣəyon's icons, s. Heldman 1974: 178f.). A more Byzantinizing version of the same Madonna, with a star and gold fringe on Mary's shoulder, seems to have been introduced in the 18th cent. by means of another engraved copy, which also circulated in Latin America (D'Elia 1954: fig. 6; Bailey 1999: fig. 1).

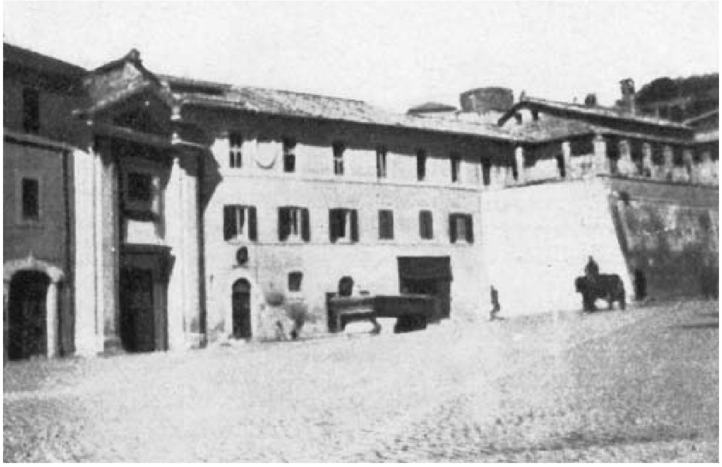
Santo Stefano dei Mori

S. ('St. Stephen of the Moors', with "Moors" meaning "Oriental" or "coloured people", here "Ethiopians", cp. Moors in EAE vol. 5) is the traditional name of a church located behind the apse of St. Peter's basilica in the ↗Vatican – formerly, with the outlying premises of the famous monastery or "hospice" tied to the dwelling of the Ethiopian pilgrims in Rome. Hence its synonymous designations of "Santo Stefano degli Abissini" or "degli Indiani", the latter by virtue of the notorious pre-modern confusion between India(ns) and Ethiopia(ns) (↗"India" as name of Ethiopia). The other designation also found in the sources, but no longer in use, "Santo Stefano in Egitto", alludes not to Coptic monks in residence, but to Egyptian antiquities located there (Proverbio in preparation).

The proper, if not original, title of the church, once much larger (as can be seen by its disaffected apse), is "Santo Stefano Maggiore", i.e. "St. Stephen the Great(er)", as opposed to the smaller vanished church of Santo Stefano degli Ungari, also in the Vatican. Of late antique, albeit disputed, origin, the major church was rebuilt in the 9th cent. and possibly restyled in the 12th (the doorway from this time is still in place). Repaired again under Pope Pius II (d. 1464), it underwent major restorations under Sixtus IV (d. 1484). Other maintenance works can be dated to the pontificates of Innocent VIII (d. 1492), Pius III (d. 1503), and Pius V (in 1568?). The medieval building, severely altered by massive renovations under Clemens XI (1706), was poorly retrieved in 1927–28 and 1931–33 by the architect Gustavo Giovannoni, to whose "purist" taste we owe the present shape of the church, isolated from the surrounding buildings –

completely demolished by him, with the historical hospice, in 1931–32.



The church and the ancient "hospice" of Santo Stefano dei Mori, in the Vatican, as they appeared before the demolitions and reconstructions of 1931–33; from CRStor, pl. I, fig. 1

There are no official documents as to when the church and its premises were turned into a place for Ethiopian pilgrims, who are attested in Rome as early as 1404, if not already 1310 (Lefevre 1967–68: 7–18; 1988; cp. Fiaccadori 2009: 37f.), and usually came from ↗Jerusalem via Cyprus and Venice. In 1404, three Ethiopians introducing themselves as envoys of the ↗Prester John made their appearance in Rome and were hosted by Cardinal Caetani on the Tiber Island. Charged with ascertaining whether the pope had ever received the lavish gifts of their master, they had possibly come with the 1402 embassy to Venice of *nəguś* ↗Dawit II (Lefevre 1988; Fiaccadori 2009: 36f.).

The first actual occasion for establishing an Ethiopian community in Rome is definitely to be sought in the 1481 embassy of *nəguś* ↗Ǝskəndər to Pope Sixtus IV, led by Giambattista ↗Brocchi da Imola (s. EAE vol. 5). Its members may have been accomodated in the monastery located next to the church and attached, although not permanently, to the latter. This was indeed an ancient possession (and residence) of the chapter of St. Peter's, and formally remained such until the end of the 16th cent. In 1497 it was in fact "violated", i.e. occupied against the rights of the chapter, by "Indians", that is Ethiopians, to whom therefore it did not belong yet (Lefevre 1967: 23 and n. 14).

In 1495, a letter of recommendation written by the ↗Franciscans of Jerusalem for two Ethiopian monks who had journeyed to the Holy Land and were then eager to see Rome and the tombs of the Apostles was inserted into an Ethiopic manuscript that was found by ↗Petraeus, in 1656, at S. (now Berlin, Staatsbibliothek, Aeth. 73; s. Mittwoch 1926). It was probably at Santo Stefano, then already "dei Mori", that ↗Potken heard the Ethiopians celebrating mass and studied Gəᶜəz with one of them, Tomas, the "(spiritual) son of Samuʾel the Hermit" (i.e. ↗Samuʾel of Waldəbba). In 1513, thanks to the help of Tomas (not necessarily one and the same as ↗Zorzi's homonymous informant), he was able to issue the first ever printed book in Gəᶜəz, a ↗Psalter (↗Incunabula).

By the pontificate of Leo X (1513–21), the number of Ethiopians in Rome had definitely increased (Lefevre 1964). No one ever questioned those venerable pilgrims to the holy places (and relics) in town about their non-Chalcedonian Christology (↗Monophysitysm; cp. Samuel Asghedom 1974: 393). Regarded as subjects of the most powerful Prester John, they often presented themselves, aptly, as ↗Dominicans or Franciscans (or even Augustinians), claiming affiliations to the great monastic orders they had met and/or resorted to in Palestine (where the Ethiopians, however, enjoyed an undisputed reputation of holiness, cp. ↗*Rədätäbərhan*), for support and recommendation letters before their journey to Rome. A certain "Fra Antonio Abissino", identified by an Ethiopic ↗inscription, was portrayed as "a Domenican friar" kneeling in front of the Holy ↗Trinity on the lost screen of S., frescoed by the Tuscan painter called Schizzone, a companion of Vincenzo Tamagni (d. 1527; s. Proverbio 2009: 388). "Fra Antonio" might be the namesake brother "of the city of Urvuar [Wärwär] in ↗Bugna", also described as a Dominican monk, whose information was recorded by Alessandro ↗Zorzi in 1523 (Crawford 1958: 172f., cp. 95–99).

Since then, the "Abyssinians", mostly monks, were to stay at S. on a less provisional basis, thanks to the attentions of such popes as Clement VII (1523–34) and esp. Paul III (1534–49) who, like his successors, considered them as a part of the pontifical household and provided them with food and clothes. In the church of S., a series of funerary inscriptions for Ethiopian pilgrims who died there are still extant: written in Gəᶜəz, Arabic and Latin, they range from the 16th to the 19th cent. (Gallina 1888; Chaîne 1911: 26–36). In 1539 a house "at the back of St. Peter's" was bought at the order of the Pope "to be used by the Indian Moor friars" (Conti Rossini 1923: 460; cp. Lefevre 1946, nos. XLVIII–IL). A formal recognition, if ever any, of the properly Ethiopian status of the church and the nearby hospice was only granted, however, after 1545: at that time, Paul III was still planning to build a monastery for the Ethiopians in Rome (Lefevre 1946: 33f., no. LIII [cp. n. 1]; CerPal vol. 1, 437 and n. 1; Fiaccadori 2009:35). Such recognition might well have come either in 1551, when the Latin version of S.'s monastic "Rules" (Grébaut 1929–30), drafted in Gəᶜəz (Chaîne 1911: 19–26), was approved by Pope Julius III (and issued in four official exemplars, one of them dedicated to Pietro Paolo Gualtieri, s. ZanBibl 103, no. 185), or three years later, when he inaugurated ↗Barreto as Patriarch of Ethiopia (Davis 1969).

Whatever the juridical status of the complex may have been, S. had then a well-structured if not large monastic community, attested in several documents that shed light on its inner life by hinting at quarrels and controversies among its members or between them and the *rays* ('superior'). In keeping with the provenance of the monks, this community was modelled on that of Jerusalem as to both its charter and its ruling figure; its members were called, likewise, *näggadəyan* ('pilgrims'). The first *rays*, Tomas (not to be confused with either Potken's aid or Zorzi's informant), rather familiar with the Portuguese ambassador who introduced him to the Pope, was elected in 1515, as soon as he had arrived there. He died in 1518 and was buried in S. (Lefevre 1965: 22f.). He was succeeded that same year by ᶜƎnqʷä Maryam (during whose tenure the "pilgrims" numbered 38), later replaced by Täklä Maryam (with only 8 "pilgrims"), who was in turn succeeded by Təwkəltä Maryam, attested in 1527, and then by Yoḥannəs, mentioned in documents from 1531, 1540 and 1551. Later, Ṣəge Dəngəl was appointed, and after him Yoḥannəs "of Cyprus", the "(spiritual) son of Abimos of Qänṭorare", a monastery in ↗Angot. This Yoḥannəs appears as scribe and owner of several ↗manuscripts from S. as early as 1536, and is perhaps identifiable with Giovan Battista Abissino, bishop of the Ethiopians in Cyprus since 1565 (Fiaccadori 1989: 148f. nn. 13–25, 160f.).

With its ancient important manuscripts, chiefly brought from or via Egypt and/or the Holy Land, and with a few cultivated monks and more or less skilled copyists, S. became soon the place in which ↗Ethiopian studies as we know them today were first incubated and fostered. Little more than a generation after the German Potken, the Italian Mariano ↗Vittori (s. EAE vol. 5), there learnt Gəᶜəz from an Ethiopian cleric, the famous ↗Täsfa Ṣəyon (s. EAE vol. 5), and published the first ever Gəᶜəz grammar in 1548. For his part, Täsfa Ṣəyon (whose unique Ethiopic and Latin epitaph is still visible in the church: Euringer 1926), a protégé of Paul III and Cardinal Marcello Cervini, both friends of S., issued the earliest printed edition of the Ethiopic ↗New Testament in 1548–49 – an endeavour to be understood within the framework of the Biblical studies promoted by the so-called Catholic Reformation, in which the community of S. played a peculiar rôle (Fiaccadori 2009: 34; s. ↗Research, historical; ↗Bible: Gəᶜəz editions).

Other scholars were soon to profit of the learned monks of S.: among them Marc'Antonio Marsilio Colonna, whose *Hydragiologia* (Rome 1586) includes some Ethiopic prayers for the blessing of water (↗*Ṭəmqät*: *Mäṣḥafä ṭəmqät*), and Joseph Justus Scaliger, whose universal chronology, the *Opus novum de emendatione temporum* (Paris 1583), drew inspiration from the Ethiopian calendar (↗Research: Historical research). During the early decades of the 17th cent., possibly as a reflection of the situation unfavourable to Catholicism that ensued from the ↗Jesuit mission in Ethiopia, almost no more "pilgrims" arrived at S. In 1628, by order of Pope Urban VIII, the 65 books gathered there were thus transferred to the ↗Biblioteca Apostolica Vaticana, into which several Ethiopic manuscripts had already found their way in the late 15th cent.: both "series", with a few losses, form the kernel of today's "Vaticani etiopici" fund (GréTisVat II, 9–20).

At the initiative of Cardinal Federigo Borromeo, before 1628, five manuscripts from S. had already reached the Ambrosiana Library in Milan, where they are still kept (Galbiati 1963:196f.). A Greek manuscript, now Vienna, ÖNB, Hist. Gr. 123, acquired in Rome by Johannes Sambucus (d. 1584), might also have belonged, interestingly enough, to S. (s. Hunger 1961: 125f.).

In 1630, the first apostolic visitation to S. took place (Archivio Segreto Vaticano, Misc. Arm. VII, no. 113, part III, fol. 873 = fol. 55). After 1634, however, the monastery was repopulated by Ethiopian “pilgrims”, who brought other books and entertained fruitful relationships with a number of important contemporary scholars such as the German Jesuit Athanasius Kircher and his friend, the French Nicolas-Claude Fabri de Peiresc (s. EAE vol. 5), both deeply interested in the language and culture of Ethiopia, and the Belgian Carmelitan Jakob Wemmers, who there found help for the compilation of his Ethiopic-Latin dictionary (1638). The monks of S., among them *abba* Maḥḍäntä Maryam and *abba* Asfa Maryam, composed brief poems in Gəʿəz for Wemmers (Raineri 1981:437, 440), Asfa Maryam also for Peiresc (Chaîne 1933–34).

The monks of S. were also consulted for linguistic, theological and historical matters by the Dominican ↗Wansleben, the aforementioned Petraeus, and above all by ↗Ludolf, who in Rome met the most learned *abba* ↗Gorgoryos of Mäkanä Śəllase. A monk at S., the latter became Ludolf’s teacher of Gəʿəz and main informant.

Over time, though, the number of Ethiopian monks in Rome dwindled to almost none, and the church and monastery of S. closed for some periods. In 1705, they were assigned as a benefit to a familiar of Pope Clement XI, Abbot Silverio Campana, indeed a diligent keeper of the books of the “Moors” gathered there (GréTisVat II, 21). Upon his death, in 1729, these books passed on to St. Peter’s chapter, then to the library of the Collegio Urbano di Propaganda (cp. ↗Sacra Congregatio de Propaganda Fide), and eventually, in 1759, to the Museo Borgiano (also attached to Propaganda Fide), whence a few of them were stolen and found their way into the antiquarian market (Rahlfs 1918; Tisserant 1925; cp. Fiaccadori in preparation). The remaining pieces entered the Vatican Library in 1902, along with the Borgian manuscripts (GréTisVat II, 21). A significant number of manuscripts formerly belonging to S. are now in Milan, but also in Florence, London, Oxford, Paris, Berlin and St. Petersburg (Samuel Asghedom 1974:404f.). Their history, however, has still to be satisfactorily traced.

In 1731, at the suggestion of the Maronite Orientalist Giuseppe Luigi Assemani, Pope Clement XII, granted anew to Coptic monks the perpetual possession and use of the church and hospice of S. with its gardens. Yet, it proved to be extremely difficult to obtain monks or novices from Egypt. In 1782, therefore, the administration of the monastery was again entrusted to priests of the Roman clergy. In 1782, the future bishop of ↗Adulis, ↗Ṭobiya Giyorgis Gäbrä Ǝgziʾabəḥer, was still received at S., where he became a Catholic. In 1806, the Sacra Congregatio de Propaganda Fide, resuming the idea of an Ethiopian mission, invited to Rome, as a student of the Collegio Urbano, a young Ethiopian monk, *abba* Gäbrä Giyorgis from Gäläbbäda (↗Tämben). He had been to Jerusalem and Egypt (where he had met the bishop of Adulis), and later joined the Basilian Greek Melkite order in Lebanon, embracing there Catholicism. For 39 years, until his death in 1845, he stayed on as rector at S. (Chaîne 1911:18; Mauro da Leonessa 1929:336; Raineri 1979). One of the last guests of the house was *däbtära* ↗Kəflä Giyorgis, who revived the learned tradition of the place, becoming an informant and consultant to Ignazio ↗Guidi, Major Ludovico De Vito and other scholars.

In the meantime, the church and the hospice had been transferred to the Barefoot Trinitarian order, which held them until 1919, when the Pontifical Ethiopian College was erected within their premises by Pope Benedict XV (the founder, in 1917, of the ↗Sacra Congregatio pro Ecclesiis Orientalibus, from which the College has since depended), at the suggestion of the Jesuit ↗Beccari. This project, one of the several Roman starting points for establishing a Catholic Hierarchy in the East, was gladly backed by the ↗Capuchins of Eritrea, in particular by the then Apostolic Vicar Camillo Carrara, but the College was not definitely settled until Pope Pius XI decided to build a new and more comfortable seat for it within the Vatican gardens in 1929 (which was canonically founded with the 1930 bull *Curis et laboribus*); and assigned to the College a summer-house at Trevi (Umbria) in 1933. The chapel of the College witnessed the episcopal consecration of ↗Kidanä Maryam Kaśa in 1930.

Originally conceived as a seminary, during the first 50 years of its history, the College was the place of formation of a large number of priests of the Ethiopian rite, quite a few of them attending classes and earning degrees at the Pontifical Urbanian University (former Collegio Urbano di Propaganda).

The College celebrated its golden jubilee in 1969, its 75th anniversary in 2005, and was visited several times by the popes, who always accorded it special attention: so John XXIII (1962), Paul VI (1970) and Benedict XVI (2005). It was also visited twice by the Emperor ↗Ḫaylä Śəllase (1924, while still prince regent, and 1970). Five of its manuscripts (cp. already ZanBibl no. 194), amounting now to 26, have been recently integrated into the Ethiopic collection of the Vatican Library (2008).

Gianfranco Fiaccadori

Säpänhi

S. (sp. varieties: Šipinihi, Shipenao, Scipinao) was an important mid-16th cent. (ca. 1530–70?) king or governor of the prosperous pre-Oromo, ↗ Gonga-speaking Hinnaryo (s. ↗ Ǝnnarya) state during the time of *aṣe* ↗ Gälawdewos and *aṣe* ↗ Śärṣ̌ä Dəngəl, but there is uncertainty about his origin and the events of his reign. He may have been of northern descent, or appointed by the Ethiopian emperor. S. paid tribute to the emperor, mainly in the form of gold, and an important transfer was reported in 1568 at a meeting with Śärṣ̌ä Dəngəl at Däbänawi (in Damot), cementing an alliance between the two. Owing to the substantial tribute paid by him, S. succeeded in warding off imperial slave-raiding (↗ Slavery) in his domain and proved to be a steadfast ally of the emperor (MHasOr 32). Some speculate that S. was an astute and sensible leader who saved his reputed kingdom from the depredations of the imperial army (ibid.), because both he himself and the emperor had an interest in warding off the expanding Oromo. In 1567 S. joined the emperor in his campaign against the neighbouring Boša kingdom. Contrary to the oral tradition cited in Cerulli (CerEt 196; cf. also BeckHuntAlm lxi), other local traditions assert that S. did not convert to Christianity, but remained an adherent of the traditional local religion. His successor, however, converted and made Hinnaryo an ally of the Ethiopian empire. S.’s capital was reported to be at Čerikko, near Mount Čada (CerEt; BeckHuntAlm).

Not much is known about the exact dates and deeds of S.’s rule, despite some references in the chronicles (e.g., of Śärṣ̌ä Dəngəl, cf. CRHist) and in recorded ↗Šeka oral traditions, which relate (cf. Lange 1982) that he was considered a very abusive ruler, "hated" by the people, an enemy of the Ethiopian Orthodox faith, and seen as being "like a foreigner" (likely reflecting misrule and past Šeka subservience to Ǝnnarya). On the basis of these ambiguous oral sources and on information cited in Guidi (1907) and Cecchi (CecZeila) it was suggested that S. might have been of Portuguese descent. Cecchi (CecZeila vol. 1, 164) reported that two Portuguese soldiers, "Sigaro" and "Sapera", who had fought in the campaigns of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, had moved to the south and became important local leaders. The sources, however, are too scant and unclear to confirm this, and none speaks about S.'s skin colour.

S. may also have been the Hinnaryo king who, after having supported the campaign of Aḥmad b. Ibrāhīm al-Gāzī against the Ethiopian Christian empire in the 1530s–early 1540s to ward off his country's destruction, switched sides and paid allegiance to *aṣe* Gälawdewos, who had sent an army to Hinnaryo in 1544 or 1545 (and also later, in 1552) to exert pressure on him. S. died around 1570, allegedly in a (mythical) drowning accident (Lange 1982: 33), and no grave or memorial was made for him. He was succeeded by ↗Läᵓasonhi, who was not his son, but a king allegedly also of northern Ethiopian descent, who became an adherent of Orthodox Christianity.

Jon G. Abbink

Sapeto, Giuseppe

S. (b. 27 April 1811, Carcare, Savona, d. 25 August 1895, Genoa) was a ↗Lazarist missionary and explorer. On 21 February 1832 he took vows in order to join the Lazarist order and in 1834 he left for the college of Antura in Syria. In March 1838 S. arrived in Ethiopia, together with the brothers Antoine and Arnaud d'↗Abbadie, with the intention of carrying out missionary activities. This action met with the opposition of the ↗Sacra Congretatio de Propaganda Fide and Roman authorities, who accused him of having contracted syphilis after sexual intercourse with locals. He was thus called back to Europe in 1844 but was sent again to Ethiopia in 1849. In July 1851, together with his comrade Giovanni ↗Stella, he began a two-month journey through the lands of Mänsaᶜ, Bogos and Ḥabab. In 1855, he carried out further explorations after which he returned to Europe and tried to convince Napoleon III to act in Ethiopia in support of ↗Nəguśe Wäldä Mikaᵓel against *aṣe* ↗Tewodros II (Sapeto 1971). As a consequence, he was engaged as an interpreter in Stanislas Russel's mission to Nəguśe.

In 1862, S. abandoned the priesthood and settled in Genoa, where with several interruptions he was to teach Arabic language and civilization for nearly 30 years in a technical college. During this time he became a supporter of Italian expansionism. In 1863, he was sent to Egypt to meet the British governor of Aden with the intention of purchasing a strip of land on the African side of the Red Sea believed to have coal reserves. Between 1869 and 1870 he played a leading role in the discussions that led to the purchase of the bay of ↗ᶜAsäb by the Rubattino Shipping Company. Between 1879 and 1881, he also mediated in the definitive purchase and settlement of the Bay by the Italian government (↗Colonia di Assab).

During his last years, S. went back to teaching and doing historical research on the cultures and languages of the Middle East and Eastern Africa. Most of the documents he produced remain unpublished and are kept in the manuscript section of the Oriental Collections of the National Library of Rome.

Francesco Surdich

Sapricean, Timoteos Vardapet

S. (Dimotheos Sapritchian) was an Armenian priest from Constantinople who visited Ethiopia in 1867, as a member of a religious-diplomatic mission led by the Armenian Archbishop Sehak (Isaac) of ↗Jerusalem. At the request of the British government they were entrusted with letters of the Armenian Patriarch at Constantinople and Jerusalem appealing to *aṣe* ↗Tewodros II to pardon his European captives at the fortress of ↗Mäqdäla.

In April, the mission travelled from Jerusalem via Alexandria, Cairo, Suez, Jeddah, ↗Sawākin, ↗Kassala and entered Ethiopia at ↗Mätämma in July. Although they managed to send the letters to Tewodros, it was too late to intercede in the conflict.

Back in Jerusalem, S. wrote a detailed travel account, in which he claimed that during their stay in ↗Aksum, they had been allowed to inspect the true "↗Ark of Covenant", reputed to have been brought from Jerusalem. S. described it as a quadrangular, 24 cm long, 22 cm wide, 3 cm thick stone of pinkish marble with a ↗Gəʿəz inscription which, according to him, might go back to the 13th cent. at the earliest. At the edges it was surrounded by engraved flowers about half an inch wide; in the centre there was a second quadrangular line in the form of a fine chain, the interior space being empty, while the space between the two frames contained the Ten Commandments, five on each side.

In his discussion of the Ethiopian culture and religious customs, S. described the Ethiopian Orthodox Church as utterly debased and profoundly corrupt both in its practice and beliefs. Discounting the centuries-old tradition shared by Armenian (↗Armenians) and Ethiopian Orthodoxy he thus followed the pattern of European Protestant criticism.

Marie-Luise Kreuter

Säqoqawä dəngəl

The S.d. (**ሰቆቃወ፡ ድንግል**, 'Lament (Elegy) on the Virgin') is a Gəʿəz poem devoted to St. ↗Mary, which tells of her sorrow and distress caused by various tribulations the Holy Family experienced during the Flight to Egypt. According to the text, the exile lasted 42 months and ended with Herod's death.

The S.d. is attested in at least 15 manuscripts from European collections, the oldest of which seems to be VatLib Aeth. 18, of the 16th cent.

The poem is divided into 53–55 stanzas (the number and sequence varying between different copies) of five (rarely six) lines each. Some manuscripts include additions: three ↗*sälam* stanzas and one *səbḥat* ditto.

The S.d. is performed during the Sunday Matins (↗*Səbḥatä nägh*), during the Season of the Flower. It is chanted on seven days in the northern section of the church as a part of the Liturgy of the Hours (↗*Säʿatat*, s. EAE vol. 5), where it replaces the ↗*mälkəʾ*, and in the *qəne maḫlet*, as part of Sunday ↗*Maḫlet*, following the ↗*Maḫletä ṣəge*. On that occasion the *wäräb zema* is applied accompanied by ↗*käbäro*.

The S.d. evokes episodes of the Flight to Egypt rather than describes them. The author creates a dramatic atmosphere by recalling particularly traumatic events and circumstances which affected the Holy Family and in which he feels personally involved (e.g., hunger and thirst, the theft of Jesus's clothes by two thieves etc.). The lamentations, often presented in direct speech, contain impressions and reflections of the poet about Mary's sufferings and his wish to share them with her. There are many Biblical references to O.T. figures and events, e.g., the Flight is often compared to the Exodus. Some sections are based on such Biblical books as Song of Songs, Psalms and Lamentations.

The S.d. does not seem to have parallels in other Christian Oriental literatures. The most important source of the text is the *Vision of Theophilos*, a Coptic apocryphon ascribed to ↗Theophilos of Alexandria, which recounts the story of the Holy Family in Egypt. Hayoz (1956: 136–41) provides a concordance of the verses of the S.d. with parallel sections of the *Vision*. The S.d. also includes some details known from the other apocryphal texts dealing with the infancy of Jesus.

The S.d. frequently mentions the Monastery on Mount Koskam (↗Qʷəsqʷam) in Upper Egypt. This led Löfgren (LöfUpp 82) to suggest that it was the place of origin of the S.d. However, since Koskam is similarly recalled in the *Vision of Theophilos*, its mention in the S.d. simply confirms the dependence on the translation of this Coptic text.

According to Conti Rossini (1899: 269), the S.d. dates from the 15th cent.; Hayoz (1956: 135) suggests 14th–15th cent. These early dates, considering the age of the earliest witnesses, do not seem improbable.

The text of the S.d. does not provide the author's name. There is a tradition telling that it was composed by a ↗*mämhər* of ↗Däbrä Wärq, ↗ᶜArkä Śəllus, in the 15th cent. According to the 19th-cent. Amharic text known as the *List of Builders of Churches and Authors of Hymns* (Getatchew Haile 1994: 371, 373), a certain *qʷälla šum* Yoḥannəs, a figure otherwise unknown in Ethiopian literary tradition, was the author. This information is confirmed by the 17th-cent. manuscript kept in the monastery of Ǝndäbba Ḥadara, Tämben, where the author is depicted several times. The manuscript (5 x 14.5 x 3.5 cm) is illustrated with 60 miniatures in the style of the first Gondärine school of ↗painting. About one third of the illuminations are displayed on two folios (v–r). Since the painter struggled with the difficulties of illustrating this non-narrative text, many miniatures simply show the Ethiopian version of the Flight to Egypt, i.e. St. Mary carrying the Child accompanied by Joseph and Salome. This basic formula with some additions is also used to depict the episodes recalled in the text (e.g., miracles worked by Mary and Jesus, conflicts between the Holy Family and others).

ቆቃወ፡ ድንግል፡ ቍላ፡ ሹም፡ ዮሐንስ።

Qʷälla šum Yoḥannəs, having prepared the ink, is writing the *Säqoqawä Dəngəl*, 17th-cent. ms., fol. 3v, Ǝndabba Hadärä *gädam*, Tämben, Təgray, 17th cent.; photo 2002, courtesy of Michael Gervers

The same cycle of miniatures appears in another illuminated manuscript of the S.d. (19 x 13.2 x 7.3 cm) which once belonged to the church of Qäbṣəya Giyorgis in ↗Ambalage. It was executed at the end of the 18th cent., and the miniatures represent the second Gondärine school of painting, being more varied and animated.

Säqoṭa

S. (**ሰቆጣ**; 12° 37' 50 N, 39° 2' 5 E; 2,250 m A.S.L.) is the capital city of ↗Wag *awraǧǧa* and the historical seat of the ↗*wag šums*. It is situated ca. 90 km west of ↗Koräm in the mostly lowland region (for location s. map for Šädäho).

The rock-hewn church of Wəqre Mäsqälä Krəstos (↗Wəqro Mäsqäl), the church Abba Yoḥannes Mikaᵓel and the cave church of Sayda Kidanä Məḥrät are located a few kilometres outside the town.

S. lies on the ancient main ↗salt trade route south-west of Mäqälä leading to Gondär in the west, and Lalibäla and Yäǧǧu in the south. In the 1690s, in an attempt to weaken local rebellion and to control the lucrative trade, *aṣe* ↗Iyasu I decreed that salt traders should not pass through ↗Lasta. This affected the market place of S. In 1746 *aṣe* ↗Iyasu II marched to S. (the first time S. is mentioned in sources, as the capital of the *wag šum*; GuiIyas 129), dismissed local rulers and officially appointed others, strengthening imperial power over the region.

In the 1870s, the governor *wag šum* ↗Täfäri Wäsän had a royal church constructed at S. with the help of foreign craftsmen (in particular, the Swiss carpenter Dubois; Raffray 1876:184).

In the 1890s the town had ca. 3,000 residents (Alamanni 1891; Wylde 1901). The governor of the region (*wag šum* ↗Gʷangul Bərru at the time of Wylde's visit in 1896) lived in a three-storied building. The town had two weekly markets on Tuesday and Wednesday, which attracted traders from Təgray, Gondär, Lasta, Yäǧǧu, and ↗Wäfla. The main commodity was ↗*amole*.

Until very recently S. was off the main highway linking Addis Abäba and Mäqälä. It has now a dry-weather road linking it with Koräm in the east, Tämben and Mäqälä in the north, and Lasta in the south. It has a school, a hospital, and a telephone connection. Since 1991, S. has been the administrative centre of Wag-Həmra Zone, with population estimates reaching over 10,000 inhabitants.

Śäräqä Bərhan

Ś.B. (**ሠረቀ፡ ብርሃን**; d. 1403) was ↗ᶜ*aqqabe säᶜat* of ↗Däbrä Ḥayq Ǝsṭifanos during the reign of *aṣe* ↗Dawit II.

Ś.B. appears as the abbot of Däbrä Ḥayq in the Acts of ↗Giyorgis of Sägla, at the time when the latter came to study at the monastery as a child in the 1370–80s. His tenure must have therefore begun before that date.

In the ↗*Täᵓammərä Maryam*, Ś.B. appears among the few ecclesiastics who supported Dawit when most clergy (above all ↗Däbrä Libanos of Šäwa) were asking him to relinquish power. This support gave him a pre-eminent position at the court where he became one of the Emperor's advisers. His influence is particularly remembered in the context of the conflict between Dawit and the metropolitan *abunä* ↗Bärtälomewos on the one hand and the followers of *abunä* ↗Ewosṭatewos headed by ↗Filəppos of Däbrä Bizän on the other. Filəppos was imprisoned at Däbrä Ḥayq.

Manuscripts from the Däbrä Ḥayq monastic library contain few traces of Ś.B.'s tenure, possibly due to the fact that he spent more time at the court than in the monastery. Only two copies of the ↗*Gädlä sämaᶜətat* and a Homily for ↗Lent can be attributed to Ś.B.'s tenure.

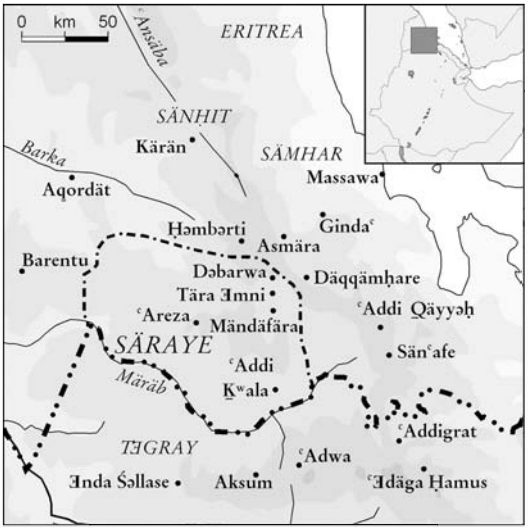
Säraye

S. (**ሰራዬ**, also **ሰራየ**, Särayä, rarely **ሰራኤ**, Säraᵓe, in ancient sources **ሠራዌ**, Śärawe, **ሰራዌ**, Särawe), now incorporated into the large administrative region of Däbub, constitutes one of the three highland historical regions of Eritrea together with ↗Ḥamasen and ↗Akkälä Guzay. S. adjoins ↗Təgray, Ethiopia, along the course of the ↗Märäb, to the south of Ḥamasen and to the west of Akkälä Guzay.

The main centres of present-day S. are (1) ↗Mändäfära (ᶜAddi Wägri), the present chief town, with the sub-districts (1992) of Märaguz, Täḵäla, Təməzzäᵓa, ᶜAnagər, Harfä Gərotto, Gʷəḥçäᶜa, Däbub, Däqqi Dəgna, Tära Ǝmni; the provincial capitals of the homonymous districts



(*nəᵓus awrağğa*), i.e. (2) ↗ᶜAddi Ḵʷala, with the sub-districts of Qʷäḥayn, May Ṣaᶜəda, ᶜAyla Gundät, Ǝnda Azmač Oq̱bit, Däqqi Bäḵʷri; (3) ᶜArräza, with Mədrä Wadd Säbära, Zäyd Akkolom, Kʷəno Räddaᵓ, Qolla Särayä, Afälba, Dämbälas, Däqqi Yəṭaᶜəs; (4) and ↗Dəbarwa, with Ṣəlləma and Säffəᵓa (cp. also Eugenio di Savoia-Genova – Simonini 1940: 85). The ancient chief town of S. was probably ᶜAd Bärraḥ (cp. CRAxum 9f. [tr.], no. I.3).

Even though it has yielded fewer archaeological findings than the other two historical regions, S. is probably one of the oldest sites of Semitic settlement in the Ethio–Eritrean highlands. A possible indication is the similarity of its name to South-Arabian place names, probably due to Semitic immigrants (cp. CRStor 104: "Sarwàn, Saràt, monti dello Iemen"; ↗Topography, historical). Moreover, the rock inscription of ↗Ṣəḥuf Ǝmni, Qʷäḥayn, in ↗Epigraphic South Arabian writing and palaeographically comparable to ↗ᶜEzana's (pseudo-)trilingual ↗inscriptions (even if the text is very obscure), testifies to a role which the region played also in ↗Aksumite times. This is confirmed by the Aksumite foundations of the ancient church of Ǝnda Mikaᵓel, Dəbarwa, on the border with Ḥamasen (CRStor 227; DAE II, 162ff.), as well as by the supposed identification of Dämba Məčč, S., with MḌ⁽ᵐ⁾/Ματλια, a place of deportation of the ↗Beğa, in the same inscription of ᶜEzana (cp. Rodinson 1981; RIÉ nos. 185, 185bis, 270, 270bis). Yet, document no. 2 of the "Golden Gospel" of ↗Däbrä Libanos of Šəmäzana where ᶜAddi S.

is mentioned as *gʷəlt* afforded by king ↗Gäbrä Mäsqäl is probably spurious (CRDLib 185).

Hagiographic traditions credit S. with being an important site during the "second Christianization", when Gʷəḥṣəya (now Gʷəḥčäᶜa) and other sites of S. were purportedly visited by saint ↗Libanos (cp. Bausi 2003: xxf. [tr.] and §§31, 155, 405, 488). According to written and oral traditions, in subsequent times, around the end of the 13th/early 14th cent., the former ↗Balaw (of Beğa origin) and ↗Kunama inhabitants of S. were replaced by the ↗Adkämä Məlgaᶜ, Agäw immigrants from Lasta, who assumed the ↗Təgrəñña language and played a hegemonic role in the area till the 18th cent., when they came into conflict with the ↗Däqqi Täššəm of Ḥamasen and their power and autonomy were substantially scaled down in the course of time.

In the second half of the 14th cent., after the establishment of ↗Däbrä Maryam monastery by Ewosṭatewos's disciple ↗Absadi, the S. became the cradle of the ↗Ewosṭatean movement (cp. LusStud 58–61, 69–122). The foundation of numerous other monasteries (↗Däbrä Dəḫuḫan, ↗Däbrä Ṣəge, ↗Däbrä Dəmaḥ, ↗Däbrä Kol, etc.) and the consequent early establishment of a lasting written tradition, extremely rich both in documentary (feudal acts) and literary texts (esp. ↗hagiography; cp. LusStud 93ff.; Lusini 1996; Tedros Abraha 2007) and ↗genealogies (cp. Lusini 2004), has made S. one of the prosopographically best documented regions in the entire Ethio-Eritrean area (cp. Lusini 1999, 2005, in MiscAethKur; BauEr I, III; Bausi 2001). In particular, we are informed of several governors of S. starting from the 14th/15th cent. (Bägᶜa [or Bägädä] Ṣəyon, Wärasinä Ǝgziᵓ, Gäbrä Krəstos, ↗Bəlen Sägäd [cp. Schneider in EtRicci 253], Gänzay, Zärᵓa Mədr [cp. BauEr I, 29f., 41]), bearing the title of ↗ᶜ*aqaṣən* (cp., e.g., CRAxum 49 [tr.], doc. II, 46) or *śəyyum* of S. (cp. ↗*šum*; e.g., Aron, *ibid.* 30 [tr.], no. I.20), as well as a number of monastic and lay characters. Although S. lands are mentioned in the *Mäṣḥafä* ↗*Aksum* (*ibid.* 24 [tr.], no. II.8, feudal act by *aṣe* Säyfä Arᶜad; 26 [tr.], no. 12, by Yəsḥaq; 30 [tr.], no. 20, by Zärᵓa Yaᶜəqob; 49 [tr.], no. 46, by Ləbnä Dəngəl; for other historical records cp. *ibid.*, 88, 90, 93, 97f., nos. III.6, 7, 8, 12), yet the question of the effective degree of subordination of the S. region to governors of Təgray and even to the Ethiopian monarchy is still open. According to Conti Rossini (1940: 206f.), the region to the north of the Märäb was independent until ↗Mikaᵓel Ṣəḥul's conquest shortly after 1760 (cp. Id. 1947: 206f.). Moreover, Dəbarwa, the chief town of the ↗*baḥər nägaš*, is in present-day S. – in fact, on the border between historical S. and Ḥamasen, along the strategic route from ↗Massawa on the Red Sea coast to the hinterland, through S. and Təgray. The S. region is rich in oral traditions (cp. Conti Rossini 1942; Perini 1895; 1905: 252–82; Gäbrä Iyäsus 1961/62; Schneider in EtRicci) and ↗customary laws, which have been subjected to thorough study esp. concerning the ↗land tenure system (cp. Conti Rossini 1948ff.; Tronvoll 2000; Tronvoll – Tekeste Negash 2001; Bausi 2001).

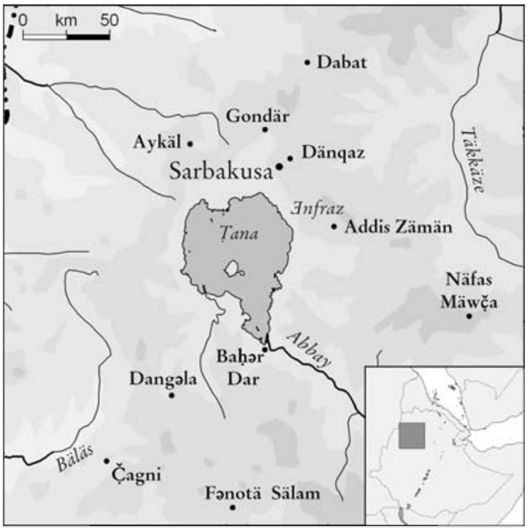
Sarbakusa

S. (**ሳርባኵሳ**, also Sarbakʷəsa, 12° 29' N, 37° 35' E) is a small locality in the district of ↗Ǝnfraz, Bägemdər, halfway between Ṣadda (where *aṣe* Yoḥannəs I is buried, BudHist 408), and ↗Dänqäz, south-east of ↗Gondär. It is prominent as the site of the 1771-battle, in which *ras* ↗Mikaʾel Səḥul was defeated. Many details of the battle are known thanks to the British traveller ↗Bruce who participated in the fight beside *aṣe* ↗Täklä Haymanot II. The battle of S. marked the climax of quarrels and struggles between the parties of Təgrayan, Amhara and Oromo nobility during the ↗*Zämänä mäsafənt*.

Täklä Haymanot II was installed on the throne in 1769 by *ras* Mikaʾel, who had killed *aṣe* ↗Iyoʾas and *aṣe* ↗Yoḥannəs II. Mikaʾel and Täklä Haymanot spent the rainy season of 1770 together in Təgray. This gave a chance to the conspirators, *däǧǧazmač* ↗Wänd Bäwäsan, *däǧǧazmač* ↗Goššu and the Oromo chief *däǧǧazmač* Fasil Wäräñña, to enter Gondär and to install *aṣe* ↗Susənyos II as "counter-Emperor". On his return to Gondär in December, Mikaʾel deposed Susənyos; this was followed by ruthless persecutions and violent repressions of his rivals (BruNile IV, 81). Among others, the ↗*ʿaqqabe säʿat* Sälama was openly executed (BlunChr 228).

The concentration of power in the hands of Mikaʾel Səḥul led to consolidation in the camps of his opponents. In May 1771, the two parties met at S. (BruNile IV, 138): *aṣe* Täklä Haymanot and Mikaʾel Səḥul on the one side, Wänd Bäwäsän, Goššu and *ras* Ayadar, who led Oromo forces, on the other. The army of Mikaʾel Səḥul numbered ca. 25,000 men, including 6,000 musketeers and 12,000 lancers, and another 6,000 from Gondär; a large proportion of these were horsemen (BruNile IV, 63). There was also a contingent of Sudanese soldiers from ↗Ras al-Fil.



The first encounter led to substantial losses for Wänd Bäwäsän costing him 900 men, whereas Mikaʾel Səḥul lost 300 men. Despite the ferocity of the battle, the outcome was not decisive. In the following days, Goššu, Wänd Bäwäsän and Ayadar tried to ally with Täklä Haymanot promising him support if he would sent Mikaʾel back to Təgray (BruNile IV, 151).

The second encounter took place in the early morning of 20 May. Due to a tactical mistake, Täklä Haymanot almost fell into the hands of Wänd Bäwäsän, but managed to escape owing to the military skills of Gäbrä Krəstos and Mikaʾel's nephew Gäbrä Mäsqäl. Wänd Bäwäsän was injured in the course of the fighting. Both sides registered huge losses, nearly 3,000 men perished on the Emperor's side, Goššu and Wänd Bäwäsän lost almost 9,000 men (BruNile IV, 176). The following day, Goššu, Ayadar and Wänd Bäwäsän sent messengers to the Emperor inquiring about his health and safety, paying their respects and asking him to refrain from personal participation in the fighting.

The army of Goššu and Wänd Bäwäsän received support from *ato* Tesfos, former governor of ↗Səmen under Iyoʾas, and his troops; they were encamped in the valley between the opposing camps. Tesfos started attacking the Emperor's army; this evoked a counterattack by Mikaʾel Səḥul's army.

Both armies were becoming exhausted; the Emperor's side suffered from lack of provisions and fresh water, the opposition was affected by fever (BruNile IV, 197).

The third and last clash resulted in tactical changes within both armies; ca. 300 musketeers from Lasta, most probably the troop of *wag šum* ↗Gigar, deserted the Emperor's army. This was another shock for the already weakened forces of Mikaʾel Səḥul.

Goššu and Wänd Bäwäsän managed to cut off the supplies of the Emperor coming from Gondär, leaving his army in great trouble. Thus Mikaʾel Səḥul and Täklä Haymanot decided to retreat to Gondär. Goššu and Wänd Bäwäsän sent a message, promising not to disturb their army on its way back to Gondär. They, however, surrounded Gondär and finally forced the Təgrayan troops of Mikaʾel Səḥul to surrender and to return to their provinces (BruNile IV, 232).

Goššu was made ↗*ras* by Täklä Haymanot. On 4 June Wänd Bäwäsän entered Gondär with 1,000 soldiers and captured Mikaʾel Səḥul. He imprisoned Mikaʾel for a year in Lasta but later set him free. The fall of Mikaʾel Səḥul was a landmark in the further fragmentation of the political fabric of the Gondärine kingdom.

Särgis Abərgawi

S.A. (**ሰርጊስ፡ አብርጋዊ**, 'Särgis of Aberga'), is the Ethiopic title of a polemical text otherwise known as Διδασκαλία Ἰακώβου Νεοβαπτίστου, *Doctrina Jacobi nuper baptizati*, or the *Teaching of Jacob*. It was originally composed in the Byzantine Empire (Palestine, though the narrative is set in Carthage), in Greek, between 634 and 640. The Ethiopic version depends upon an Arabic translation, probably from Greek.

The text records an alleged dialogue between two Jewish converts to Christianity on 13 July 634. The title in Ethiopic, S.A., refers to the name of "Sergius the Governor [Eparch]", who had the Jews of Carthage brought before him to announce that Heraclius (Eth. **ሀራቃል**, Haraqal) wishes them all baptized, and whose office (ἔπαρχος) was misunderstood as a placename (Abərga). Moreover, "Sergius" in the Ethiopic replaces "Georgios [George]" of the Greek and is probably a reminiscence of Sergius Candidatus, Governor of Palestine, mentioned in V 12.

The book claims to have been written by a soldier Joseph, one of the converted Jews. Another convert, Jacob of Acre, demonstrates to him the truth of Christianity and challenges the beliefs of the Jews. Issues raised include the coming of Christ, his birth, the Passion, death, resurrection, ascension and genealogy of the Virgin ↗Mary. The explications contain numerous interpretations of O.T. passages which are claimed to prefigure Baptism, sacrifice of Isaac, Joseph, etc., with abundant use of Christian patristic as well as Jewish sources. Byzantium is compared with the fourth beast of the prophecy of Daniel and the forced baptism of the Jews is also interpreted in the same eschatological perspective. Within the genre of the refutations of Judaism (cp. Dagron 1991a, 1991c; Déroche 1991b, 1991c), the S.A. is considered by some authors a unique work, in so far as deep knowledge of both Christian and Jewish culture clearly emerges, which could also account for a Jewish convert author, or a Jewish-Christian public (cp. Olster 2001).

The Greek text is considered by some scholars to be one of the earliest sources on Islam as it mentions "Saracens" (probably Muslims) as well as a messianic prophet in Arabia, tentatively identified with Prophet ↗Muḥammad (Hoyland 1997). Yet, contrary to the traditional hypothesis (cp. Maas 1911:573, still maintained, e.g., by Dagron 1991b), a dating to the 9th cent. as well as the essentially fictitious character of the composition (cp. Ehrhard 1913:154; GCAL I, 373), based on older materials, but occasioned by the forced baptism of Jews in the time of Byzantine Emperor Basileios I (867–86) has also been proposed (cp. Speck 1997; Berger 2006:105f., 126f.).

The original Greek is preserved in a longer recension (BHG 1322^{m}) and in a shortened one (BHG 1322^{mb}), where less relevant passages are omitted (ed., tr. Déroche 1991a, with careful consideration of the versions; cp. also the good *editio princeps* of the Greek by Bonwetsch 1910, and the very bad partial one by Nau 1912, according to Maas 1911, 1912, and Ehrhard 1913). Yet, the whole Greek tradition is acephalous, whereas the original prologue can be reconstructed only from the versions. The *Chronicle* of ↗*Pseudo-Dyonisius of Tel-Maḥrē* attests to the existence of a Syriac version including the prologue *ante* 775 A.D., but it is rather uncertain whether a complete Syriac text ever existed.

The Slavonic version, probably originating in a Southern linguistic environment, was printed in 1907 on the basis of the ms. edition arranged by metropolitan of Moscow, Macarius (1482–1563) at the middle of the 16th cent. The version is very faithful and of noteworthy importance. Even though deriving from a Greek text which is younger than the *Vorlage* of the Arabic (and Ethiopic) branch (shared innovations consisting in glosses are inserted both in Greek and Slavonic), its textual form is older than the Greek direct tradition and preserves the original prologue. The Greek direct tradition, in turn, is characterised by additional glosses of its own. Some Greek mss. have also replaced the missing prologue with an expansion of the epilogue (cp. Déroche 1991b: 50–60).

An Arabic translation (probably based on a Greek, less likely on a Syriac *Vorlage*) was accomplished not later than the 10th cent. and is known from several manuscripts (GrafLit I, 372ff.; Déroche 1991a: 51ff.), to be classified in three recensions (the second and third recensions being but rearrangements of the first, with the introduction of subdivision into nine meeting sessions [Gəᶜəz *gubaᵓe*, ‘assembly’]), none of which has yet been published:

(1) the oldest recension, most faithful to the Greek text, attested by four, more or less mutilated mss. (cp. in particular ms. Sinai, Christian Ar. 627, of the 12th cent., acephalous, not mentioned by GCAL);
(2) a *Vorlage* of the Ethiopic version (ed., tr. Grébaut 1909, 1917), of which no Arabic witnesses survive, starts at I 2 (like recension [3]) and ends with a summary of V 17–20;
(3) a third recension, starting at I 2 and ending at V 15, is characterized by the title *Kitāb al-burhān*, ‘Book of the Proof’.

In any case, both the Arabic and the Ethiopian translators heavily modified the text, shortening its arguments and omitting passages and allusions his readers may fail to understand (e.g., the passage on the “Saracens” does not appear in Ethiopic version, which could also be due to censorship exerted on the Arabic intermediary). The Gəᶜəz version is a faithful translation from Arabic, dated by Guidi to the time of Zärᵓa Yaᶜəqob (i.e. mid-15th cent.). The extensive occurrence of Biblical quotes does not betray the use of a different Biblical text than the usual one: the citations in the Ethiopic version were definitely adapted to the current textual forms of the Gəᶜəz Bible.

Grébaut (1909) published the Ethiopic text prior to the publication of the Greek and offered no serious discussion of the issues of *Vorlage* or transmission. The identity of the Ethiopic with the *Doctrina Jacobi nuper baptizati* was first noted by Nau (1910). Moreover, the editor had only one manuscript at his disposal: BN d’Abbadie 51. Unlike other rare texts assembled in this late 15th–early 16th-cent. witness from Daga Ǝsṭifanos, such as the *Apocalypse of ↗Peter* or the treatise *On the Judgement of Sinners*, attested by at least one more manuscript (here: Ṭānāsee 35 = Kebrān 35), the S.A. remains attested by a *codex unicus*.

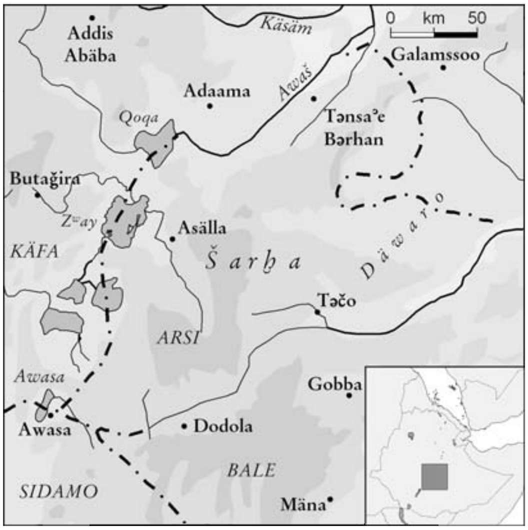
Šarẖa

Š. (Arab. شرخة, also Šarẖā, شرخا, Šarḥā, شرحا, Eth. **ሰርካ**, Särka, etc.), not to be confused with a region in ↗Goǧǧam bearing the same name, is a historical region situated west of ↗Däwaro and ↗Bale, and north-east of the ancient Sultanate of ↗Hadiyya. Š. was one of the seven Muslim city-states in the south-west of modern Ethiopia, assigned by the Arabian medieval historians, under the cover term “the Muslim fringe” (*aṭ-Ṭirāz al-islāmī*), to the Muslim kingdom of az-Zayla^{c}.

Š. must have come under Ethiopian rule in early Middle Ages. The Chronicle of *aṣe* ↗^{c}Amdä Ṣəyon I mentions that a ruler of “Sarka” (for identification with Š., s. KrAmdS 72 n. 342 [tr.]), Yosef (which might correspond to Yūsuf, s. KrAmdS 72 n. 343) took part in the revolt of the population of Däwaro against the Solomonids ca. 1332. After the riot was suppressed, Yosef (Yūsuf) was imprisoned at Bāẖlā, whilst “Sarka” was totally destroyed by ^{c}Amdä Ṣəyon’s troops.

Ibn Faḍlallāh al-↗^{c}Umarī gives a description of Š.: its territory is three days’ journey in length by four days’ journey in width; the army has 3,000 horsemen and more than twice as many footmen; its rites and customs, agricultural production and means of payment are similar to those of Däwaro and ↗Arabäbni; its population belongs to the *Ḥanafī* school (↗Ḥanafism). Summaries of these data are reproduced by al-↗Qalqašandī and al-↗Maqrīzī.



In the ↗*Futūḥ al-Ḥabaša* (BassHist), the Chronicle of the ↗*ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī’s (Grañ) in the first half of the 16th cent., Š. is described as a mostly Christian province. At that time, a conflict took place between two local rulers, *bitwäddäd* Badlafit and *azmač* Islāmū (possibly Islam Sägäd). In spring 1531 the troops of Š. were defeated by Grañ’s army led by ^{c}Addalī. The local elite were taken prisoners, and the Ethiopian governor named Līmū was replaced by an ^{c}Adalite *garād* Ṣiddīq b. ^{c}Alī.

Franz-Christoph Muth

Šarī^{c}a

Š. (Arab.: شريعة, lit.: ‘path, way’; also *šar^{c}*) is the Islamic ↗Law, envisaged as a general and comprehensive system of juridical guidance of the society. Š. is not a code nor a once for all set of laws and rules. It is rather an ideal framework in which Muslims should be able to find a just and harmonious legal regulation of their public and private lives. Š. embodies a superior moral and ethical imperative, which is interpreted as the direct manifestation of the will of God, and aims at realizing the wellbeing of the whole society in this world and leading it to the "supreme victory" (*al-fawz al-aẓīm*, Qurᶜān 4:13) in the Hereafter. In a more recent and politically oriented usage, Š. tends to indicate a corpus of basic rules and laws that should govern the life and development of Islamic society.

The ultimate source of Š. is considered to be the will of God which He revealed to mankind through his messengers. In particular, Islamic Š. was conveyed to human beings in the ↗Qurᵓān and in the behavioural tradition (*Sunna*) of Prophet ↗Muḥammad. Š. is thus definitely a divine based law but at the same time, the study and interpretation of the sources of Š. and the subsequent definition of the rules that guide the life of the faithful in practice are a purely human activity (*fiqh*). As a fundamentally religious law, Islamic Š. is not bound to a specific territory or state but to the status of being a Muslim: it must be respected only by the faithful of ↗Islam and theoretically is exempted from the direct control of a political authority. The scholars of the four Law schools of Sunni Islam (↗Ḥanafism, ↗Mālikism, ↗Šāfiᶜism and Ḥanbalism) are the custodians of the Š. and its acknowledged expounders. Š. extends its field to all the spheres of human existence and deals with both the "forum internum" and the "forum externum" of the individual (for a general description of Š. s. Calder – Hooker in EI²).

In Ethiopia one may surmise that Š. came to be known since the very first spread of Islam. At the same time, Š. had obviously to compromise with the pre-existent local legal traditions: Š. is, generally speaking, quite flexible in accepting ↗customary law (*ᶜurf*; *ᶜāda*, cp. ↗*Aadaa*) as a constitutive part of its corpus of secondary sources. Practices and provisions of local pre-Islamic custom are normally tolerated, provided that they do not overtly contradict the fundamental tenets of Islam (s. also Shaham 2006). Recourse to traditional judges and judicial authorities is not formally interdicted by Š. especially in the case of disputes on family relationships or ownership (s. Layish 2005). Time and social change (especially urbanization and detribalization) normally favours the strengthening of Š. to the detriment of traditional Law (TrIslam 230f.; ↗Law: Traditional legal institutions).

Already in the Sultanate of ↗Šäwa *qāḍī al-quḍāt* Ibrāhīm b. al-Ḥasan (d. in 1255; Cerulli 1941:20f., CerIslam 224) was in charge of the administration of justice. The presence in the country of experts of Islamic Law is also mentioned since the second half of the 13th cent. (Cerulli 1943:276–80, 288ff.; CerIslam 261ff., 274–77). Sources also indicate an early presence of a *qāḍī* in ↗Massawa. However, no detailed information is available in the written sources about the extent of the effectiveness of Š. in the Muslim regions of medieval Ethiopia. The affiliation of the seven Islamic sultanates to the Ḥanafī or Šāfiᶜī *madhab* (TrIslam 73) could be understood as referring only to a numerically limited cultivated élite (Cerulli 1961:323f.). The discussions which took place in Bale between *šayḫ* ↗Ḥusayn and some Ḥanafī law experts prove that Š. had to confront local deeply rooted usage and practices (in the specific case with regard to traditional alcoholic beverages and consumption of ↗*čat*). In an effort to find an accommodation, the interpreters of the Law proposed different possible solutions which were not accepted unanimously by all the scholars (CerStud II, 8–17; CerIslam 335–44). Divergences among Law experts about what in pre-Islamic local custom can be considered in harmony with principles of Š. were and are widespread in Ethiopia: the Ḥanafī school is almost universally indicated as the most tolerant in this respect. Difference of opinion among expounders of the Law on many topics is admitted by Š.: far from undermining its validity, plurality and contradiction in interpretation are considered to be a sign of the mercifulness of God. Moreover, despite this lack of a unanimous uniformity, Š. is commonly perceived as the most comprehensive and important manifestation of Muslim identity (*al-iḫtilāf raḥma*; s. Schacht in EI²).

In ↗Harär and in ↗Wällo it seems that political authorities were inclined to refrain from a scrupulous defence of the tenets of Š. The Muslim ruler who does not respect Š. and hinders its implementation is definitely the worst kind of ruler in Islam. He can no more be considered a believer but becomes an apostate and must repent. The ↗Walasmaᶜ sultans had to face strong internal religiously oriented opposition every time their attitudes were considered not to be in line with Š.

Also the beginning of the politico-military career of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī was an internal *ǧihād* against the deviant sultan of the town and his court (Wagner 1975; Vo Van 2001). In the following years, *amīr* ᶜUṯmān (r. 1568–69) violated some Qurᵓānic tenets in shaping his relationships with the surrounding peoples (basically the Oromo) and caused a revolt by Muslim scholars and the Harari *qāḍī* (Cerulli 1931: 53f. [text], 58ff. [tr.]). However, in Harär the *qāḍī* court apparently continued to function normally until the end of the emirate (for some cases debated in this court s. Garad 1990). In Wällo, the local Islamic learned men were often at odds with the ruling dynasties that showed scant interest in complying with the principles of Š. (HusIslam 115–38).

With the birth of the modern Ethiopian state, Š. slowly found partial recognition in the legal system of the country. After a timid first step under *aṣe* ↗Mənilək II (Kassa Beyene 1966: 15; Singer 1971: 135f.), in 1936 the Italian occupants in Ethiopia extended to the Muslims the legal system already existent for them in Eritrea: accordingly, disputes over civil status, family and personal matters and commercial topics were submitted to a *qāḍī* (Ordinamento Giudiziario per la Colonia Eritrea, Art. 42) whose decision could be appealed against in a newly created High Š. Court in Addis Ababa ("Tribunale o Collegio sciaraitico"; Ordinanza Graziani, 29 May 1936, Art. 5, §2). The High Court was made up of a *qāḍī* and four *ᶜulamāᵓ* (*Annali dell'Africa Italiana* 1940: 726f.).

With the restoration of the monarchy, a Š. court was first instituted in 1942 and then revised in 1944. It was a three level system (↗*nāᵓib*[*a*], *qāḍī* and Š. courts) to deal only with family and personal cases arising among Muslims who wished to have recourse to an Islamic legal authority (Singer 1971: 137ff.). The Ethiopian Š. system was drastically deprived of almost any autonomy in 1960 when the ↗Civil Code was promulgated (ibid.: 151–56) but somehow Š. courts continued to survive and function eventfully (Abdul Wasie Yusuf 1971, esp. 24) until the fall of the *Därg* regime (Hussein Ahmed in PICES 12, 787). In 1991 the issue of the real legal role and scope of the Š. courts in the country came once again into public debate (Hussein Ahmed in PICES 12; Ibrahim Idris in idem.). In 1999, the government issued a "Proclamation to consolidate federal courts of Sharia n. 188/1999" (*Nägarit gazeṭa*, 6, 10, Dec. 1999) which should provide the guidelines to revive the legal system of Š. courts in the country with a three level structure: Federal First Instance Court, a Federal High Court and Federal Supreme Court.

Śärṣ̌ä Dəngəl

Ś.D. (**ሠርፀ፡ ድንግል**, with the regnal name Mäläk Sägäd; b. ca. 1550, d. 4 October 1597, r. 1563–97) was the son (by *ətege* ↗Admas Mogäsa) and successor of *aṣe* ↗Minas.

The following summary of events that took place during his reign is based on the extensive royal Chronicle of Ś.D., the main document of his time. Ś.D. was 13 years old at the time of his father's sudden death. Minas did not proclaim his heir, and the decision to put Ś.D. on the throne was taken by the members of the crown council, upon the instigation of the influential *ətege* ↗Säblä Wängel, Ś.D.'s grandmother. However, Ś.D.'s young age and lack of authority, as well as the exclusion of the most powerful dignitaries and ↗*č̣äwa*-commanders from the decision-making caused indignation and resulted in a large-scale revolt.

The powerful *ras* ↗Ḥamälmal, who wanted to enthrone a certain Täklä Maryam, allied with his brother *azzaž* Rom Sägäd and such notables as *azzaž* Täklo [↗Täklä Haymanot] and *azmač* ↗Ǝslamo. To protect Ś.D.'s life, Säblä Wängel brought him to her residence at Mängəśtä Sämayat (Goǧǧam). The rebels set up a camp not far away, in the vicinities of ↗Däbrä Wärq, and started attracting support of local lords, *č̣äwa*-soldiers, courtiers etc.

Baḥər nägaš ↗Yəsḥaq, who had his own candidate for the throne, Marqos, entered the struggle by sending his messenger, Ḫarbo, to Säblä Wängel in order to arrest Ś.D. Säblä Wängel arranged that Ś.D., his brother Fiqṭor and their mother Admas Mogäsa could escape to ↗Ṣəlalo (s. EAE vol. 5). The royal camp gradually started to consolidate power (the leading role being played by *azzaž* Täklo, who had prudently changed sides), while the rebels failed to reach an agreement. In 1564 Ḥamälmal and Rom Sägäd were compelled to reconcile with Ś.D.

Despite this success, the next years were difficult for Ś.D. who had to deal with rebellious *č̣äwa*-units and their commanders. The most critical episode took place in September 1566, when Fasilo (↗Fasil Gärram) attacked the court and Ś.D. narrowly escaped death. However, Ś.D.'s opponents underestimated him. Already in January 1567 Ś.D. defeated Fasilo; finally, he reconciled also with *baḥər nägaš* Yəsḥaq.

During the main period of his reign, Ś.D. proved to be an extraordinary capable political and military leader. Basing in Šäwa (e.g., ↗Ǝndägäbṭän), Ś.D. first paid attention to the southern end of his realm. He settled new *č̣äwa* (Giyorgis Ḫayle in ↗Mugär) and compelled the local *č̣äwa* to submission (Bätramora). In 1566, he visited Konč; in 1567, he defeated the ruler of ↗Boš(a) and severely punished the ↗Gafat people, allies of Fasilo. In 1568 he received an hommage from ↗Säpänhi of ↗Ǝnnarya. In 1569 he defeated and subjugated ↗Aze of Hadiyya, appointed his own governors in Hadiyya and ↗Waǧ (Täklä Giyorgis and ↗Darägot). In 1571 Ś.D. returned to ↗Gubaʾe (↗Ǝnfraz) where *azmač* Ḥarbo and Yəsḥaq pledged loyalty to him.

Despite Ś.D.'s growing power, the situation in the Empire was precarious. When the Turks (↗Ottoman empire) had resumed their activities from ↗Dəbarwa, Ś.D. left Yəsḥaq to deal with them, and in 1572 rushed to the south, where the Oromo had overrun Waǧ. In 1574 he had to fight the Oromo penetrating Šäwa. In 1576 *sulṭān* ↗Muḥammad b. Naṣīr b. ʿUṯmān of ʿAdal rebelled and declared a new ↗*ǧihād*, but was swiftly defeated by Ś.D.

The animosity between Yəsḥaq and Ś.D. was growing, and a major conflict was only a question of time. Yəsḥaq allied with the Ottomans and was preparing a new plot, having a certain Wäldä Zäṭaʿos as his candidate to the throne. In 1577, Ś.D. faced a serious dilemma: to fight the Oromo in the southern provinces or to deal with Yəsḥaq. Having repulsed the Oromo from Waǧ, Ś.D. rushed to the north, and his campaign of November–December 1578 became one of the biggest military victories of his reign (occupying the entire seventh chapter of his Chronicle). Yəsḥaq was killed and Dəbarwa was captured (some Ottoman musketeers entered the service of Ś.D.). The success was completed by Ś.D.'s ↗coronation ritual in ↗Aksum, many years after his actual ascension to the throne.

In 1579, instead of campaining against the Oromo (who penetrated as far as ↗Angot), Ś.D. had to deal with the rebellion of ↗Rädaʾi and ↗Kalef of the ↗Betä Ǝsraʾel in Səmen, which he crushed despite their stubborn resistance in November–December of that year. In 1586 Ś.D. successfully combatted ↗Gʷäšən, another Betä Ǝsraʾel leader. In the same year, he campaigned in ↗Agäw Mədər and then repulsed the Oromo from Goǧǧam. In 1587 Ś.D. went to Ǝnnarya. In 1587, the Gafat of Šat were baptized; and the alliance with Ǝnnarya was strengthened by the baptism of ↗Bädančo; the governor of Boš(a) was also converted (there are signs that he also tried to spread the Orthodox Christianity in ↗Käfa; s. Ullendorff 1955).

In 1588 Ś.D. had to fight the Ottomans led by ↗Kädawərd *paša*, who had captured Dəbarwa and defeated the northern governor Däragot (bearing the titles of ↗*təgre mäkʷännən* and ↗*baḥər nägaš*). After several skirmishes and the siege of Dähono (↗Ḥərgigo), the Ottomans were expulsed back to Massawa. Ś.D., however, did not try to completely clear the Ethiopian ↗Red

Sea coast. The last of the campaigns mentioned in Ś.D.'s royal Chronicle was the one against the ↗Gämbo, in late 1590.

The "short chronicles" continue the list of Ś.D.'s campaigns up to 1597. According to these sources, his extraordinary career came to an end in Šat (somewhere in the "old" Damot); Ś.D. died on the way back from his usual preventive campaign against the Oromo. Later Amharic ↗historiography elaborated on the event, adding that the cause of death was fish poisoning. Ś.D. was reportedly buried at ↗Rema.

Modern historians proposed different evaluations of Ś.D. and his reign (cp. Bartnicki – Mantel-Niećko 1978: 144–52; Černetsov 1982: 260-87; CrumLand 56). In any case, it seems that, despite formidable problems that Ś.D. faced during his reign, he indeed achieved a certain degree of stability and even a revival of his state. He managed to neutralize, at least for a while, both external and internal threats. Yet, by the late 1580 when Ś.D. was at the peak of his power, his real capacities in financial, military and administrative terms remained limited, and his extensive Empire remained vulnerable. Towards the end of his reign, Ś.D. seems to have had more and more problems with the Oromo who made deep incursions into Ś.D.'s tributary territories and provinces. The Emperor was unable to simultaneously keep the entire country under his control. There are hints that the situation was much more dramatic than the official historiography reports (cp. Varenbergh 1915–16: 21, 37; CRHist 223–31 [text]). Soon after Ś.D.'s death, the large southern part of the Empire was *de facto* lost to the migrating Oromo.

There is no information on any reform attempts undertaken by Ś.D., which appear to have been badly needed in view of the formidable dangers. However, any transformation of the fabric of the traditional society and its institutions was hardly possible in the context. As his precursors, Ś.D. had to rely upon the existing system of social and economic relations and customs (e.g., in the ↗army, he strengthened the discipline of the *č̣äwa*-regiments, and created important alliances with powerful regional lords by marrying them to his daughters). In this situation, the remarkable critical voice was that of *abba* ↗Baḥrəy, who tried to investigate the reasons of the failure of the Christian Orthodox state to defeat the pagan Oromo. What he expresses in his ↗*Zenahu lägalla* may be reminiscent of the critical thoughts circulating in the learned circles of Ethiopia of the time.

Ś.D. reacted to the deteriorating conditions in the south by moving the political centre of the monarchy to a more secure region in the north (repeating the practice of some of his predecessors). In this respect, Ś.D. continued preparing foundation for the ↗Gondärine kingdom, even at the price of large territorial losses in the south. He started submitting regions around Lake Ṭana, in the first line ↗Dämbəya (where he settled *č̣äwa*), and in the late 1570s he established his capital at Guzära/Guba᾽e, on the north-eastern shore of Lake Ṭana, where a castle had been constructed (to the end of his reign, he moved again to ↗Ayba).

Metropolitans contemporary to Ś.D. were *abunä* ↗Peṭros, ↗Marqos II and ↗Krəstodulo I. There is no information concerning any discord in the Ethiopian Orthodox Church, which had just recovered after a turbulent period. Ś.D. appears to have been an ardent adherent of the Ethiopian Orthodox Church, and his reign is marked by new church foundations (like Ayba Kidanä Məḥrät, Maḫdärä Maryam), and a number of ↗*gʷəlt*-donations to churches and individuals (his land charters becoming particularly formalized and legthy).

Remarkably, Ś.D. started the usage of ↗fire-arms in his army, and his residence at Guzära/Guba᾽e was built by foreign artisants. He treated well the Portuguese, who resided in his country, and did not harm the settlement at ↗Fəremona; ca. 1574 he settled a group of the Portuguese in Dambəya, probably in order to strengthen his control over the area. Apparently, he never responded to appeals to embrace ↗Catholicism; but he sent a few missives to the West (cp. Raineri 2005: 140; Martinez 2008: 77) and requested military support (cp. his letter to Philipp II of Spain [who had written to Ś.D. in 1587, praising him for his victories over the Ottomans; BecRASO X, 355f.], dated by 1589; Ludolf 1691: 483-86). But the cooperation with the ↗Jesuits was disrupted by ↗Oviedo's support to Yəsḥaq and his candidate for the throne. Oviedo's requests for military support to facilitate Ethiopia's conversion to Catholicism were not granted (for the Vatican, Oviedo's major ally Yəsḥaq was profoundly compromized by his alliance with the Ottomans). After Oviedo's death in 1577, the mission scaled down its activities.

The reign of Ś.D. was fruitful for ↗Gəᶜəz literature, enriched during this period by such texts as, e.g., ↗*Haymanotä abäw*, *Mäṣḥafä* ↗*ḥawi* (the latter – like probably quite a few other texts – having been translated by ↗Sälik), the second recension of the ↗*Sənkəssar*, ↗*Mäzmurä Krəstos* (by *abba* Baḥrəy) etc. Finally, the Chronicle of Ś.D. is an imposing literary monument of his reign. It was composed by more than one author: chs. 1–7 were compiled upon Ś.D.'s coronation in 1579; ch. 8 was added in ca. 1580 on the occasion of Ś.D.'s campaign in Səmen; ch. 9 relates the events of 1587–90. The "short chronicles" (and later Amharic historiography) provide an account parallel to the royal Chronicle, complementing the latter.

Ś.D. had one wife, *ətege* ↗Maryam Śəna, who did not bear sons to him. Ś.D. had prepared his nephew ↗Zädəngəl to become his heir, but due to the intervention of Maryam Śənä, Ś.D. was succeeded by Yaᶜəqob, his seven-year-old son by Ḥarägo, his Betä Ǝsraᵓel mistress. Another succession crisis followed, worse than that in the begining of Ś.D.'s reign, and was solved only after years of bloody destructive struggle, with the ascension of *aṣe* ↗Susənyos.

Denis Nosnitsin

Śärṣ́ä Krəstos

Ś.K. (**ሠርጸ፡ ክርስቶስ**, d. 4 June 1631) was an Ethiopian lord. He was probably the son of ↗Yämanä Krəstos and therefore grandson of the latter's father and his own namesake Śärṣä Krəstos. Around 1622, he was named ↗*ṣäḥafe lam* of ↗Amhara and *mäkbəb* of ↗Atronsä Maryam and Mänz(əḥ); in 1627 he was *blatten geta* (PerChr 202, 222, ch. 66, 76). In 1624, he met Manoel de ↗Almeida and in February 1626 he accompanied Patriarch Alfonso ↗Mendes on his arrival at the *kätama* of ↗Dänqäz (BecRASO VI, 382, 479).

Ca. 1628, Ś.K. had his first disagreements with ↗Səᶜəlä Krəstos, who was the main advocate of the Jesuit mission. Ś.K. replaced Səᶜəlä Krəstos at least until mid-1629 as governor of ↗Goǧǧam. However, thanks to the mediation of the ↗Jesuits the dispute was settled (BecRASO VI, 39; XII, 394f.). In mid-1629, he fell ill and took confession with the Jesuits at Dänqäz (BecRASO XII, 379); thereafter he was made governor of ↗Bägemdər (BecRASO VII, 43). In October–November 1629, Ś.K. assisted Səᶜəlä Krəstos with his troops in a campaign to quell a rebellion in Lasta.

In October 1630, Ś.K. took part with Səᶜəlä Krəstos in another campaign to quell a rebellion in Bägemdər, but this failed. *Aṣe* ↗Susənyos made Səᶜəlä Krəstos responsible for it and gave the governorate of Goǧǧam to Ś.K. (BecRASO XII, 486ff.). In Goǧǧam the latter initially acted as a devout Catholic, but on 18 May 1631 he started a full-scale rebellion (BecRASO VII, 2; XII, 459f., 488). His army ravaged the ↗Gafat and ↗Damot lands, stole numerous cattle and imprisoned *däǧǧač* "Askadər" (Ǝskəndər) as well as Bellarmino, a son of Səᶜəlä Krəstos (BecRASO XII, 489f.). On 21 May, claiming to be ↗*nəguś*, he admonished people to abandon the Roman faith and the reforms introduced by the Jesuits. Subsequently he tried, albeit unsuccessfully, to capture the missionaries of Liqä Nəguś and Ǝnnäbəsse and storm the residence of ↗Qʷälläla, but on 24 May managed to execute pro-Catholic figures: the abbot ↗Zäśəllase of ↗Ṣəlalo (s. EAE vol. 5), one "*azzaž ədug ras*" and "Ṭəqur" Yämanä Krəstos, a cousin of the same Ś.K. (BecRASO XII, 490ff.). On 1 June, however, he was captured by the army of *abeto* ↗Fasilädäs (the future Emperor) and sent to Dänqäz, where he was executed (BecRASO IV, 66; XII, 496f.; PerChr 247; BegCron 47). He had three children.

Src.: BecRASO IV, 66; VI, 39, 382, 479; VII, 2, 43; XII, 379, 394f., 459f., 486–98; BegCron 47; PerChr 202, 222, 247 (tr.), ch. 66, 76, 92.

Andreu Martínez d'Alòs-Moner

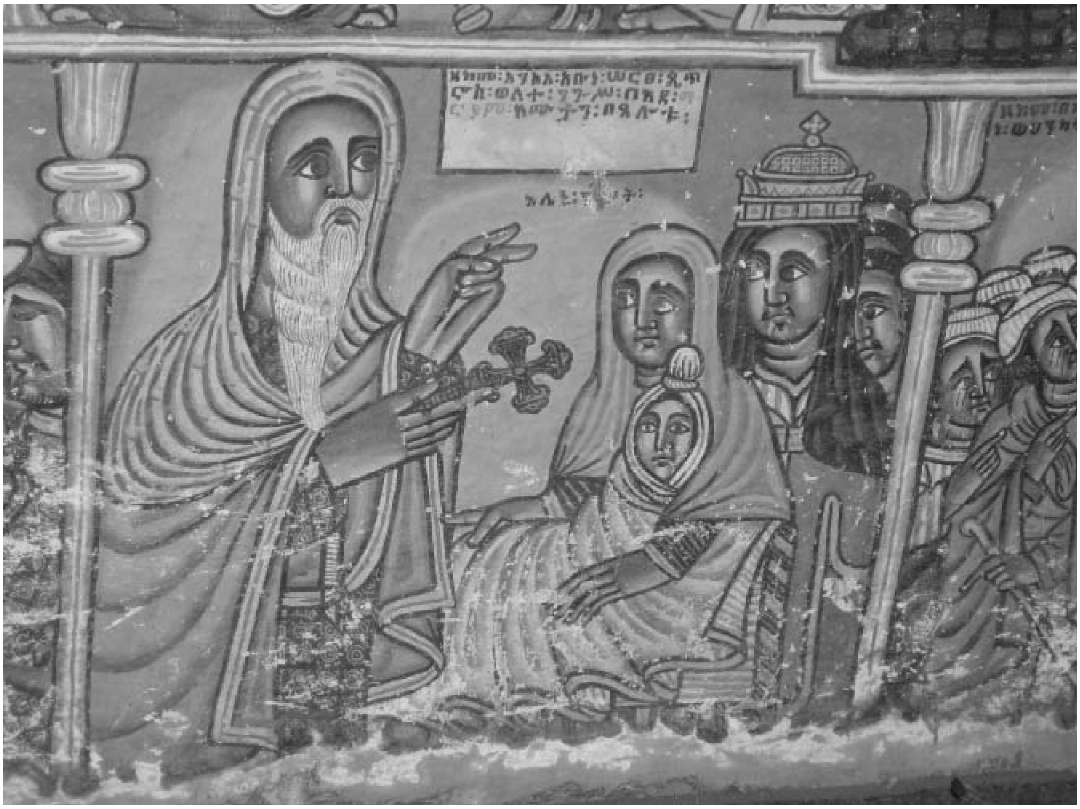
Śärṣ́ä Peṭros

Ś.Ṗ. (**ሡርፀ፡ ጴጥሮስ**; fl. 14th–15th cent.) is an Ethiopian saint. He was a contemporary of several Ethiopian emperors, from *aṣe* ↗Dawit II to *aṣe* ↗Bäᵓədä Maryam I, and is credited with re-establishing the monastery of ↗Däbrä Wärq, destroyed by the Muslims during the reign of *aṣe* ↗Säyfä Arᶜad (according to the ↗*Sənkəssar* of Däbrä Wärq, but according to the monastery's chronicle *Mäzgäbä tarik*, by Gudit [↗Ǝsato] in 851 A.M. [858/59 A.D.]).

The main sources on Ś.Ṗ.'s life are his Vita (↗*Gädl*) and his Miracles (↗*Täᵓammər*), both preserved in one early 19th-cent. manuscript kept in Däbrä Wärq. The local *Sənkəssar* contains a shorter and somewhat different account of Ś.Ṗ.'s life; in addition, many stories about the Saint are preserved in the monastic oral tradition.

According to the Vita, Ś.Ṗ. was born in Ǝnnäbse (northern ↗Goǧǧam) to pious parents, Abrəham and Sara. He was consecrated deacon and; after a while, he received "great ranks" from the metropolitan.

The archangel Michael instructed Ś.Ṗ. to go to the "Jerusalem of Ethiopia" (i.e. Däbrä Wärq). Looking for a place for a new church of St. ↗Mary, *aṣe* Dawit asked Ś.Ṗ. to rebuild



Śärṣ́ä Peṭros, raising the daughter of *aṣe* Bäᵓədä Maryam from the dead, wall painting, 19th/20th-cent., Däbrä Wärq; photo 2008, courtesy of Stefan Wagner

Däbrä Wärq (allegedly founded by Asfaḥ, son of Aṣbəḥa), the monastery "encircled by two rivers". Dawit provided the church with paraphernalia, and Ś.P̣. gathered in it 318 deacons and priests – as many as the Fathers at ↗Nicaea.

Together with his "spiritual brother" Robel, he received the *qobᶜ* and *askema* from *rəᵓəsä rəᵓusan* Täklä Maryam of Märṭulä Maryam (and was included in the genealogies of ↗Ewosṭateans, cp. ᶜAlämnäw Azzänä 2002/03: 22; Lusini 2004: 263f., 266f., 269f.).

Having re-established Däbrä Wärq, Ś.P̣. and Robel set out on the pilgrimage to Jerusalem but on their way they met *abba* Zärᵓa Haymanot who sent them back. After that, in north-eastern Goǧǧam Ś.P̣. and Robel founded ↗Getesemani Maryam (also encircled by two rivers). Robel stayed in Getesemani whilst Ś.P̣. left to build new churches. In Aynä Kärm he founded the third sanctuary, which he named "Jerusalem of Ethiopia" (called in the *Sənkəssar* Däbrä Wärq, but distinguished from "the first Däbrä Wärq"). In the meantime, Ś.P̣.'s disciples at Däbrä Wärq got into trouble with the local peasants (*ḥaqlawəyan*), and Ś.P̣. went to Dawit to ask for protection. The Emperor took the side of the monastery; Ś.P̣. stayed at the court for a while, teaching Dawit the "divine mysteries".

An important episode in Ś.P̣.'s life is linked to *aṣe* ↗Zärᵓa Yaᶜəqob's campaign against ↗Aḥmad Badlāy. After Zärᵓa Yaᶜəqob asked the Saint to pray for him and his troops going into battle, Ś.P̣. predicted the Emperor's victory based on the fact that several threads put on the *Wäynut* (a Marian icon preserved in the monastery until today) were miraculously bound together. After the battle Zärᵓa Yaᶜəqob gave Ś.P̣. "the Muslim" mail and helmet as a reward. Apart from the Vita, the episode is re-narrated in the Miracles of Ś.P̣. and in the ↗*Täᵓammərä Maryam* (Ś.P̣. being substituted here by the phrase "one man", s. Cerulli 1933: 88f.).

According to the *Sənkəssar*, Bäᵓədä Maryam summoned Ś.P̣. when *ətege* Marta, daughter of his son *aṣe* ↗Ǝskəndər (DombrChr 165; KrLebD 17), was bitten by a snake (according to the oral tradition, the daughter of Bäᵓədä Maryam himself). Ś.P̣. together with a certain *abba* Elyas brought her back to life.

According to the Vita, Ś.P̣. died in Däbrä Wärq on 12 *Ṭəqəmt*. Oral tradition, on the other hand, has it that, at the end of his life, Ś.P̣. went to preach, and died in ↗Mänz or ↗Harär. His cross remained at Däbrä Wärq and "cried" when he died. Marta brought Ś.P̣.'s corpse to Däbrä Wärq. Reportedly, Ś.P̣.'s grave is located in the ↗*mäqdäs* of the monastery's church, where wall paintings narrate some of his miracles. His cross and stick are still preserved in the monastery.

↗Abrəha and Aṣbəḥa

Susanne Hummel

Sarzec, Ernest de

(Gustave Charles) Ernest Comte Choquin de S. (b. 11 August 1832, Rennes, d. 31 May 1901, Poitiers; original name Chocquin, later named "de Sarzec" after his newly purchased castle) was an archaeologist, civil engineer and French diplomat in Egyptian ↗Massawa and Ethiopia.

At the beginning of his career, S. was the director of gas supply in Alexandria (1864–68) and then became an employee of the Universal Suez Ship Canal Company. On 8 June 1872 he replaced the Hungarian Franz Hassen, the then acting French vice-consul in Massawa, and successor of ↗Munzinger, the last vice-consul of France in Egyptian Massawa. From the beginning, the new vice-consul S. had to face numerous diplomatic difficulties.

At the invitation of *aṣe* Yoḥannəs IV, S. travelled to ↗ᶜAdwa in 1873, and again in 1875 – after a stay in France in 1874 –, to discuss relations between ↗France and Ethiopia. Despite the strong support of the French government Munzinger had originally enjoyed by the French government, S. distanced himself from his predecessor, now an Egyptian governor of Massawa and considered him a personal enemy of Yoḥannəs IV.

Consequently, S. won the full trust of the *nəguś* who even thought of relying on France in future conflicts with ↗Egypt. They signed a protocol nominating S. not only as Yoḥannəs's representative at Massawa, but also as the "protector of the Christians" in Egyptian territory at the coast, which was based on the ancient claim of France to be the natural protector of the Oriental Christians, and on Ethiopia's claim over the Christian populations of the coast (↗Massawa Governorate; ↗Ottoman Empire). In return, Yoḥannəs promised to stop the persecution of Catholic missionaries of ↗Akkälä Guzay and ↗ʿAgamä. In order to preserve her friendship with Egypt, Paris did not support S.'s "pro-Ethiopian" stand as S.'s policy was not appreciated by the Egyptian *ḫidīw* ↗Ismāʿīl. Following various incidents between Munzinger *paša* and S., Paris decided to relieve S. of his duties. S. left Massawa in December 1875 without having been able to sign a French-Ethiopian treaty of friendship which had been planned (↗Treaties and conventions, s. EAE vol. 5).

Appointed vice-consul in Bassorah in 1875, then in Bagdad, S. won fame as a pioneer archaeologist, who discovered one of the most important cities of the Sumer civilization, and enriched the Mesopotamian collections of the Louvres. In 1899 he was nominated Ambassador plenipotentiary.

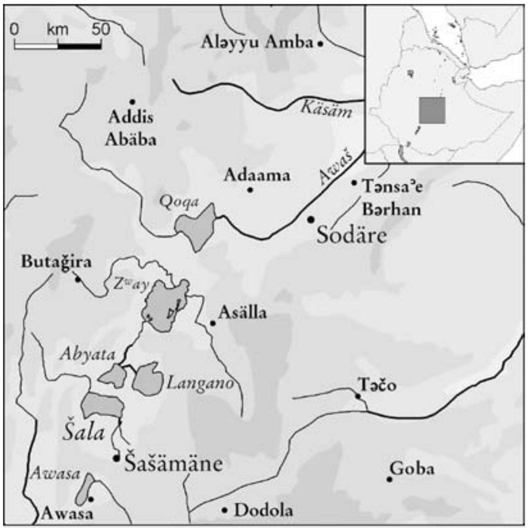
Šašämäne

Š. (ሻሸመኔ, Orom. sp. Shaashamane, 7° 12' N, 38° 36' E) is located in the Məsraq Šäwa zone, Oromiyaa, about 250 km south of Addis Abäba. A folk etymology explains the name as "house [Orom., *mana*] of Šaaš", a woman who welcomed travellers. According to Braukämper the place was called after an ancestor of the Šaašoogo-↗Hadiyya who is said to be buried there, combined with *manna* (Hadiyya: 'people'; s. BrHad 219). A popular market place, it became an outpost for *aṣe* Mənilək II's armies during the conquest of southern Ethiopia. ↗*Näfṭäñña* were invited to settle and war veterans, members of the royal family and entrepreneurs were beneficiaries of land grants around Š. The town was occupied by the Italians and the municipality was founded in November–December 1943.

Š. has always been a hub of migration and its population grew steadily. In 1962 it was estimated at 5,048, a figure which doubled in three years. The 1984 census gave 32,376 inhabitants while a 2009 estimate reached 120,000. Š. has been considered as an ethnic mosaic as migrants came from all over the country, settling in the town and founding various economic niches. Originally in Arsi province, and later in Šäwa province, Š. is today the administrative centre of the most populated *wäräda* of the East Šäwa Zone, one of the 12 zones of Oromiya as established by the 1995 Constitution. Š. town is constituted of 10 *qäbäle*, while Š. *wäräda* has 78 peasant associations.

Š. is known throughout the world thanks to the ↗Rastafari settlement in its northern periphery. In 1950, Ḫaylä Śəllase I granted 5 *gaša* (200 hectares) of land, originally possessed by ↗Arsi, to the Ethiopian World Federation, founded in New York in 1937 by ↗Mälaku Bäyyan, as a reward for their support during the war against the Italians. However, there were few Caribbean or American settlers on this land until the mid-1960s, when Jamaican Rastafarians arrived. With the land nationalization of March 1975, most of them had to flee the country and only a handful remained in Š. New migrants arrived only in the mid-1990s. A 2003 census by the Ethiopian Immigration of-



fice indicated that Rastafarians of 14 nationalities were living in Š. Only 108 adults responded to this census, but as arrivals are continuing, they might now number at least 300 adults and many children. While the Rastafarians have transformed Š. through their economic and educational activities, through their culture and the founding of many Ethio-Caribbean families, they still live in precarious conditions owing to their lack of legal documents. Nonetheless, Š. remains the symbol of the Pan-African policies of Ḫaylä Śəllase I and serves to this day to legitimize the Rastafarians' claim of their right to a land in Africa.

Giulia Bonacci

Šaašoogo ↗Hadiyya

Savoia, Amedeo di, Duke of Aosta

Amedeo di Savoia, Duca di Aosta, as *vicere* of Ethiopia; photo from the collection of Wolfgang Hahn

Cousin of the King of Italy ↗Vittorio Emanuele II, S. (b. 21 October 1898, Turin, d. 3 March 1942, Kenya) enjoyed a lightning career in the Italian army and air force, reaching the rank of General at the age of 36. He distinguished himself during World War I and later fought in Libya. He became familiar with the geography and the problems of Ethiopia in the course of a series of exploratory missions in the 1920s.

From 21 December 1937 till 19 May 1941, S. served as Viceroy of ↗Africa Orientale Italiana. He inherited a difficult situation in Ethiopia largely because of the harsh policies of his predecessor, Rodolfo ↗Graziani. The Duke's closest collaborator was General Nasi, who became his deputy, replacing Enrico ↗Cerulli.

An admirer of British colonialism, S. introduced a policy of co-operation with the Ethiopians trying to promote a form of indirect rule. Among other things, S. closed the hated military tribunals, authorized the appointment of Ethiopians to minor administrative posts, and released 1,000 detainees at Dänane. These conciliatory policies gradually reduced the need for military action throughout Ethiopia but did not succeed in suppressing patriots' ↗resistance. On 4 August 1940, Italian forces invaded and subsequently occupied ↗British Somaliland. In January 1941, allied forces operating from Sudan and Kenya invaded Africa Orientale Italiana. On 16 March 1940, another allied force, operating out of Aden, landed in ↗Berbera. The available sources are not very accurate about the losses suffered by the Italian army in the Africa Orientale Italiana campaign up to the final collapse of the Empire in November 1941. Del Boca (1982:350) estimates that the casualties amounted to 65,000, colonial troops included, equivalent to one fifth of the entire army committed on the battlefield and to four or five times the casualties for the conquest of Ethiopia in 1935–36. The allies suffered only 1,154 casualties. On 19 April 1941, S. formally surrendered at ↗Ambalage. His bravery in the desperate defence of the Empire gained him a gold medal from the Italian government and the respect by the British troops. He died of tuberculosis in a prisoner-of-war camp in Kenya.

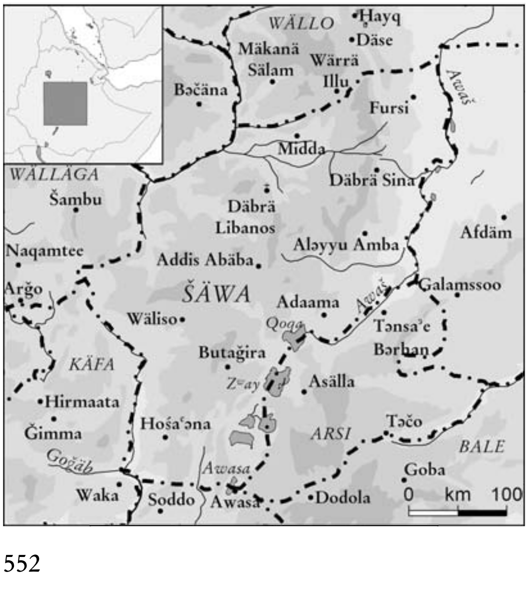
Šäwa

Geography of Šäwa

The core area of Š. (ሸዋ) is characterized by the cenozoic volcanic plateaus and mountains to the north up to the confluence of the ↗Abbay River and its tributary, the ↗Bäšəlo. Mounts Amba Farit (3,975 m) and Abuyä Meda (4,012 m), huge craters worn away by erosion, border with ↗Wällo. The central part of Š. is constituted by the plateau historically referred to as Šäwa Meda. To the east, the edges of the plateaus, which are cut by horsts and grabens, descend to the course of the middle-↗Awaš River. To the west the highlands are carved by the canyons of the ↗Abbay tributaries (Wänčət, Ğäma, Bäto). The ↗Mugär River flows in deep gorges through volcanic plateaus dominated by the cones of Mounts Fota (3,294 m), ↗Männagäša and Wäč̣äč̣a (3,405 m) to the west of the ↗Addis Abäba. The Abbay canyon borders on ↗Goǧǧam, and the course of the ↗Gudär, Mount Tulluu Amara (3,146 m) and younger volcanoes (Dändi, Wänč̣i) in ↗Wälläga.

The 1987 reform of the ↗administrative divisions partitioned Š. into Addis Abäba, West-Š. (↗Wäliso), South-Š. (Zʷay) and North-Š. (Däbrä Bərhan); North-Š. was later divided into North-Š. and South-East Š. (↗Adaama/Nazret). The administrative reform of the 1990s split Š. into several zones which today are part of the Amhara and Oromiyaa regional states. The Gurage, Səlṭe, Kambaata and Hadiyya zones are now part of the Southern Nations, Nationalities and Peoples' Region.



The population of Š. has grown quickly. In 1970 it was estimated at 4,923,906 in an area of 85,500 km^2 (density: 58 inhabitants per km^2). In 1984 it was estimated at 9,503,140 (density: 111 inhabitants per km^2). Addis Abäba attracts migrants from all over Ethiopia. At present, population increase in the towns is especially strong toward the Awaš and the Rift Valley where commercial farms have been established (Moǧo, ↗Adaama/Nazret, Wänč̣i, Mätähara in the middle-Awaš and Mäti, Zʷay, Nagallee and ↗Šašämäne). Ca. 4,000,000 inhabit a regional conurbation bringing together ↗Aqaqi, Qalliti, ↗Däbrä Zäyt/Bišoftuu, Moǧo and Adaama. ↗Eucalyptus forests and market gardens have extended over the area in order to meet the needs of a booming capital. Recently a few foreign firms started cultivating flowers in greenhouses; these are exported by air to the foreign markets. Local entrepreneurs, often in joint ventures with foreigners, profit from good roads and rail services and from an abundant supply of manpower.

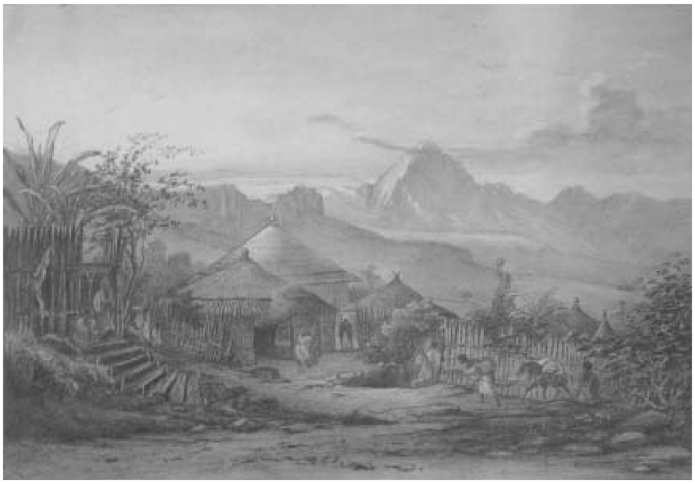
Alain Gascon

History of Šäwa

Š. (ሸዋ) was the name of several polities on the territory of Ethiopia. In the early times, it was the name of a medieval Islamic sultanate; later the name of a province of the Christian Ethiopian empire (“Old Š.”). In the 18th–19th cent., it was applied to the Kingdom of Š. (“Greater Š.”), which became later again the name of an administrative unit within the unified Empire. The shape, extent and ethno-religious composition of Š. changed several times.



Šäwan village in the vicinity of Ankobär, ca. 1841–43, original drawing by Johann Martin Bernatz; from the Bernatz collection of the Frobenius-Institut, Frankfurt am Main

Sultanate of Šäwa

An Islamic state apparently existed in Š. as early as 896/97–1285 A.D. The very existence of a sultanate in Š. and the general outlines of its history are known from a single source: a folio (12v–13r) of a miscellaneous Arabic manuscript on vellum dated 9 August 1863 (colophon, fol. 38r: 23 *Ṣafar* 1280 H.) which Enrico ↗Cerulli copied in ↗Harär in 1936; no further data concerning the location of the original text ever came to light. In 1941, Cerulli published the short text which is simply a concise chronology of events (*ḏikr al-tawārīḫ*). According to the document (sometimes referred to as the Arabic “Chronicle of Š.”), the Sultanate of Š. (mentioned in three different spellings: Šäwá [with final *alif maqṣūra*], Šawah and Šawā) emerged in 896/97 A.D. [283 H.]: that would be the most ancient date in the history of the whole region of Š. However, it is at least a suspicious coincidence that this same date is given in another document found in Harär as that of the birth of the Haräri emirate (Wagner 1976).

The *sulṭān* family allegedly belonged to the ↗Maḫzūmī clan. Some Islamic historical traditions point to the existence of trade relationships between the Maḫzūmī clan and “al-Ḥabaša” (Hinds in EI^2) but the reliability of these accounts has been radically questioned (Crone 2004: 124–29). Local oral sources, probably as a feedback from the written tradition, report an ancient dispute in nearby ↗Ifat between Maḫzūmī and Umayyad parties (Cerulli 1941: 15).

The territorial extension of the Sultanate of Š. is difficult to ascertain. Cerulli surmised that it could be located in the oriental part of modern Š. and in the “central core” of historical Š., that is the highland south of the mountain chain of Ṭarma Bärr up to ↗Ǝnṭoṭṭo, delimited westwards by the Mugär valley and eastwards by Ifat and ↗Fäṭägar. As for Walalah, the capital of the Sultanate of Š., it was tentatively identified by Cerulli with Wäläle, southwards of Šäno (in the valley of the Ǝnk^{w}ay River, in ↗Sälale). However, no traces of ancient Muslim culture have so far been discovered in this specific region.

The document mentions twelve *sulṭāns* who ruled in 1063–1280 but focuses almost exclusively on the latest period of the Sultanate (1231–89). Apart from the foundation of the Sultanate, the oldest event recorded in the text is the death of queen ↗Badīt bint Māyā in 1063. The text mentions five events which occurred in the 12th cent. but relates events of the 13th cent. with greater accuracy. At that time the Sultanate entered the phase of decay; four competing branches of the ruling family fought for power and at the same time launched raids against the neighboring Islamic regions (↗Gidāya in 1233–34, 1268, 1285 and 1287; Gabar-ge in 1263 and 1270–71, ↗Mora conquered in 1264–67, Degun in 1270–71 and 1277).

The internal strife and external wars undermined the strength of the Sultanate. The growing power of the ↗Walašma^{c} family in Ifat became a menace for the Sultanate of Š. *Sulṭān* Dilmārrah tried to appease Ifat and in 1271 married a woman of the Walašma^{c}. The move did not prevent the Walašma^{c} from threatening Š. In 1275/76, Ifat supported the revolt of ↗Dilgāmis. In 1279 Dilmārrah “escaped to the *ḥaṭī* [Yəkunno Amlak?]” and apparently remained under his protection until he was captured and killed by

^{c}Alī b. Walašma^{c} in 1283. Two years later, Ifat troops destroyed both the Maḫzūmī dynasty and the Sultanate of Š.

Scanty information on the ethnic composition of the Sultanate of Š. can be inferred. Basing on the ↗names of places and persons mentioned in the document, Cerulli hypothesized that the inhabitants of the Sultanate were speakers of a Semitic language not unlike those of Ifat. As for the cultural features of the Š. Islamic state, the text reports the death in 1255 of a *faqīh* Ibrāhīm b. al-Ḥasan who was the ↗*qāḍī l-quḍāt* of Š. It may thus be assumed that the Sultanate possessed a well-structured learned elite, and could have been instrumental in catalyzing the conversion to ↗Islam of nearby regions. The relationships of the Sultanate with the broader Islamic world are not proved: the reference to the fall of the Abbasid caliphate cannot be considered anything but a hint to a superficial knowledge of Near Eastern Islamic history by the writer of the text (Cerulli 1941:21).

Finally, the text of the Chronicle of Š. testifies also to the practice of giving names to periodical ↗famines as familiar to Ethiopian Muslims (Cerulli 1941:21).

Alessandro Gori

Province of Šäwa

The old province of Š. (also: Sewa, Siwa) is to be distinguished from historical ↗Amhara country, the domain of the ↗Solomonic dynasty (re-)established by *aṣe* ↗Yəkunno Amlak. In Ethiopian Christian sources, Š. appears only in the 14th cent. and early references to Š. are two-fold: it is mentioned as both a Muslim region (MarAmdS 56f.) and a "frontier area" from where *aṣe* ↗^{c}Amdä Ṣəyon I recruited troops (ibid. 62f.). Š. may indeed have been dominated in some parts by Christians and in others by Muslims, owing allegiance to different rulers (cp. Cerulli 1941:23).

The Ethiopian Christian tradition refers to the gradual spread of ↗Christianity in Š. since the Aksumite period, linking it to the migration of a (Semitic-speaking) population from the north (TadTChurch 36). The precise linguistic identity of these early settlers cannot be established (cp. ↗Gafat). In any case, Š. being the area situated to the south of the chain of districts constituting the historical Amhara (↗Angot, ↗Gayənt, ↗Gəšše), as well as ↗Wäläqa and ↗Märḥabete, came under the firm control of Christian monarchs in the 14th cent., following the victories of ^{c}Amdä Ṣəyon I. In the west, Š. neighboured ↗Damot, in the south/south-east, the chain of Muslim sultanates, of which Ifat was the strongest (cp. maps TadTChurch 65, 133; BrHad 73). The larger province of Š. could indeed have absorbed the former Muslim Sultanate of Š. and adopted its name (*pars pro toto*).

Despite continuing tension on the borders, northern Š. soon became a secure part of the Christian realm, and started to become more important in the 15th cent. The governor of the province had the title of ↗*ṣäḥafe lam*. After his victory over ↗Aḥmad Badlāy (who was able to penetrate the highlands of Š. in 1443), *aṣe* ↗Zär^{ɔ}a Ya^{c}əqob decided to build his residence at ↗Däbrä Bərhan in Š., and was assisted by the "chiefs of Š." (*śəyyumanä Šäwa*; s. ↗*Šum*). Another important 15th-cent. part of Š. was ↗Täg^{w}əlät, where the church of ↗Däbrä Məṭmaq was constructed. Contingents of ↗*čäwa* were settled in Š. (cp. CRHist 53, 132 [text]). Muslim principalities bordering Š. were made vassals of the Christian emperors.

Assisting the consolidation of the Christian royal power, the expansion of Orthodox ↗Christianity in Š. was prompted by monastic settlements and linked with the names of their respective saintly founders, the most important being, e.g., Däbrä Asbo (renamed later as ↗Däbrä Libanos [of Š.]), founded by *abunä* ↗Täklä Haymanot in the late 13th cent.; Däbrä Bəsrat of *abunä* ↗Zena Marqos in ↗Morät (14th cent.), ↗Däbrä Bäggə^{c} of ↗Ḥəṣan Mo^{ɔ}a (14th cent.) and ↗Zəq^{w}ala of *abunä* ↗Gäbrä Mänfäs Qəddus among others. From Š., Christianity and monasticism spread further to the South: Damot, ↗Bale, ↗Gamo Gofa, ↗Gurage, ↗Sidaama (cp. ↗Bərbər Maryam, ↗Däbrä Asäbot, ↗Mäba^{ɔ}a Ṣəyon, ↗Täklä Ḥawaryat, ↗Tulluu Guddoo, ↗Z^{w}ay etc.).

The presence of numerous ↗rock-cut and cave churches is a conspicuous feature of Š.'s early Salomonic period, clearly showing the region's importance and cultural and political affiliation. Though not as sophisticated as similar structures in northern Ethiopia, there are noteworthy examples such as Adadi Maryam (Anfray et al. 1965:13–16, pls. XII–XIII), ↗Yäkka Mikaᵓel, Kistanä (in Soddo, not far from Adadi; cp. Godet 1976), as well some less spectacular examples, today in ruins, such as Däy Giyorgis (probably a foundation of *aṣe* ↗Täklä Maryam; Chojnacki 1969), ↗Ǧəbat, Ǝnṭoṭṭo, Gənbi (Ricci 1976), Ǝnsəlale (Anfray 1965:25f., pls. XXII), both not far from Yärär (cp. GueCopMen 322 n. 3; Conti Rossini 1904:20 [text]; today in the vicinity of Adaama/Nazret; cp. Sauter 1963: 276–79, counting some 31 monuments of this art; s. also Anfray 1985: 15–28).

In the late 15th cent.– early 16th cent., several locations in Š. appear to have been important as sites of the royal "moving capitals" (↗*Kätäma*) or residences, and of ecclesiastical authorities: Däbrä Bərhan and Däbrä Sina (cp. CrawItin 64f.), ↗Bärara, ↗Männagäša (cp. BassHist 215), Yärär, Ǝnṭoṭṭo (by the time of Zärᵓa Yaᶜəqob?; s. GueCopMen 36 n. 5, 40 n. 3). ↗Ǝndägäbṭän was a key-region adjacent to Š. in the south-west (cp. also TadTChurch 274 n. 3; StStud 76 n. 1). A few of these places (such as Bärara, Zəqʷala, etc.) are conspicuous on European medieval maps and itineraries; Š. appears as the "*regno de saba*" on the 15th-cent. map of Fra Mauro (CrawItin fig. 4, 201). However, Š.'s pre 16th-cent. historical geography remains obscure; some place names located in Š. according to old traditions are difficult to identify precisely (Grarya, Kätata, Ṣəlaləš [cp. ↗Sälale], Adamo, Ṣəḥga, Zorare, Yäläbäša, etc.).

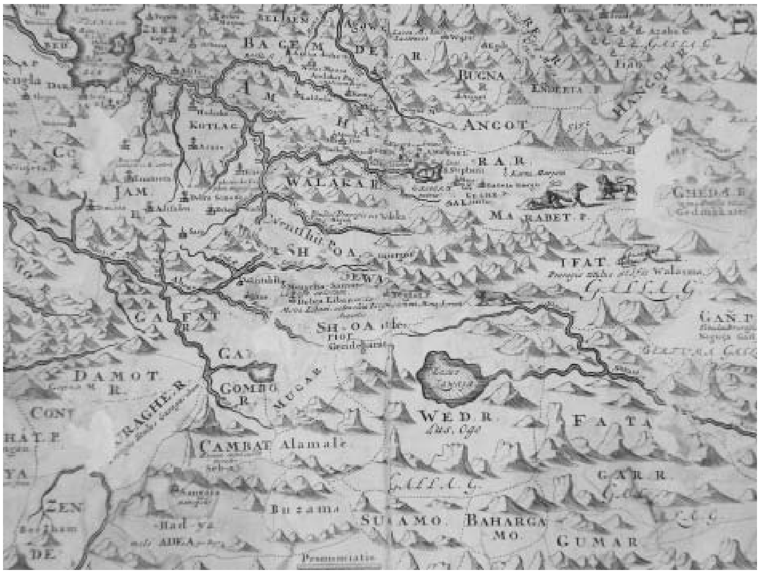
Trade routes are reported to have linked ↗Zäylaᶜ with Amhara and Bärara in central Š. In the early 16th cent., *aṣe* ↗Ləbnä Dəngəl and his court seem to have particularly favoured the southern part of Š. One reason for this was purely economic (the relative richness of the region, abundance of water, grass etc.). Another was the necessity to stay closer to the extensive southern border, controlling the southern Muslim principalities. The 14th-/15th-cent. role of Š. allowed a few scholars to define the period from 1270 to the *ǧihād* of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") as the time of "the Šäwan Kingdom" (Tubiana 1966:165).

During the Muslim war, the army of Aḥmad Grañ easily broke Christian defences in Š. Bärara was captured in April–May 1531; by late October the Muslims had passed all "gates" separating Š. from Amhara (from Ahəyya Fäǧǧi [CrawItin 53] to "Wäsäl" [probably ↗Ambassäl], cp. BassHist 282f., 306).

After the *ǧihād*, the importance of Š. was reestablished for a while. *Däǧǧazmač* ↗Ḥamälmal, *ṣäḥafe lam* of Š., was one of the greatest lords of the Empire. *Aṣe* ↗Śärṣ́ä Dəngəl still operated from Š. according to the old scheme, but massive migration of the ↗Oromo became a new danger. The Robaale-*gadaa* appears to be the first to directly have invaded Š. (in 1572–73, cp. CRHist 226 [text]; cp. DombrChr 181f.). By the end of the reign of Śärṣ́ä Dəngəl Š. *de facto* had been given up. The old population was partly wiped out, partly forced to move into less convenient areas (↗*Qʷälla*). In the first half of the 16th cent., most of Š. was reported to have been taken over by the Oromo (cp. BeckHuntAlm 19). The ↗Boorana penetrated along the western edge of Š. as far as Wäläqa (cp. ↗Boräna). The ↗Tuulama crossed the central Š., while Karrayyuu went along its eastern part as far as the historical Amhara, to create Oromo enclaves in ↗Wällo and ↗Azaboo-Rayyaa.

Kingdom of Šäwa

In the 17th cent., Š. was *de facto* separated from the ↗Gondärine kingdom. The Christian Amharic-speaking enclave embraced a few historical regions in northern Š. (cp. StStud 84). For a while, Däbrä Libanos was detached from it (cp. ↗Ǝnsaro) and completely deserted. The Šäwan tradition (collected by ↗Ḫəruy Wäldä Śəllase; cp. AWTarik 69f.; BTafA 490–95; cp. also StStud 82–91) claims that the late 17th-cent. rulers of some 14 Šäwan districts formally remained subjects of the Gondärine kings, but had no royal governor. Royal annals, however, report that Atanasyos was *ṣäḥafe lam* of Amhara and Š. under *aṣe* ↗Iyasu I (GuiIohan 89 [text]). In 1689 "the people of Š." and the governor ↗Dəmeṭros surrendered power to Iyasu the "imposter" Yaba, who had found refuge in Š. (ibid. 123ff., 133f. [text]). In 1696 Iyasu entered Š. via Däyär, visiting Morät, Aganča, Märḥabete and other places (ibid. 181f. [text]; cp. DombrChr 222), but left in less than a month. In the same year Iyasu was again in Š., probably settling a religious controversy (ibid. 223). In 1699, Iyasu crossed Š. again and visited Däbrä Libanos deploring its ruined state; he had ordered the "princes of Š." to come



The province of Šäwa on the 17th-cent. map after Balthazar Tellez: "Sewa", "Shoa superior", "Shoa inferior"; from LudHist

there, but the Chronicle is not explicit about his aims and about results of the meeting (GuiIohan 199f. [text]; DombrChr 227; the event may be the source of a tradition recorded later by Ḫəruy Wäldä Śəllase, s. AWTarik 70f.; BTafA 494–99). Thereafter, Iyasu partitioned the governorship of Š. (GuiIohan 201 [text]).

The consolidation of Š. and the emergence of the "principality" or "kingdom of Š." seems to have been initiated from ↗Mänz. *Abeto* ↗Nägaśi Krəstos is reported to have achieved an alliance with the *wälasmas* of ↗Yəfat, perhaps under the auspice of Iyasu I, to push back the Oromo (BTafA 498f., 502f.). *Märəd azmač* ↗Səbəstyanos started to extend the power of the dynasty, subduing the ↗*balabbat*-rulers of smaller districts around Mänz and Oromo groups one by one.

In the 18th cent., this process was marked by the gradual moving of Š.'s capitals southwards. Initially based in Aganča, Nägaśi later used Aya Bär; ↗Ayne (Maryam) was founded by him and used by Səbəstyanos. ↗Doqaqit was established by Səbəstyanos; along with ↗Ḥarr Amba, it was used as a residence by Abbəyye. ↗Ankobär, an ancient place, was used by ↗Amməḫa Iyäsus (cp. ↗Afärbayne Täklä Haymanot); ↗Qʷəndi was used by ↗Wäsän Sägäd.

The last tribute from Š. was received by *aṣe* Täklä Giyorgis from *märəd azmač* ↗Asfa Wäsän. For the following nearly 60 years Š. was left alone, generally avoiding from the bloody struggles of the ↗*Zämänä mäsafənt*.

Despite fierce wars with the Oromo, an acculturation pattern emerged early in Š., with Oromo groups and individuals intermarrying with the Šäwan–Amhara, adopting their culture and language and converting to Orthodox Christianity.

It is commonly assumed that an important period in the consolidation of the power of Šäwan rulers was the reign of *nəguś* ↗Śahlä Śəllase. He stabilized the Kingdom after the assassination of *märəd azmač* ↗Wäsän Sägäd; he combined both military and political methods, exploited the internal struggles of the Oromo groups and tried to ally with them, securing large areas under his control (cp. an example of ↗Abbaa Maale). Aiming at religious consolidation, Śahlä Śəllase imposed the *Sost lədät* teaching (of Däbrä Libanos; cp. ↗*Ṣägga*) as the "official" doctrine, punishing those who opposed it (AWTarik 124f.; Darkwah 1975: 46). The administration was built upon the strong personal power of Śahlä Śəllase, who ruled directly or through a system of governors (EgeClass 153–63). As a result, European travellers praised Š. as the most stable and prosperous of the Ethiopian regions.

The political aspirations of Śahlä Śəllase who envisaged achieving supreme power are reflected in his assumption of the title ↗*nəguś* around 1839, and in his attempts to bring the supreme ecclesiastic authority, i.e. a metropolitan (AWTarik 125) to Š. At the end of his reign, the Kingdom of Š. extended from Yəfat, Mänz and Märḥabete in the north to the Awaš and ↗Gibe Rivers in the south. In the west it now included Sälale and bordered on the ↗Gudär River.

As with other Ethiopian lords, the rulers of Š. had realized the importance of acquiring ↗firearms. In the late 1830s Śahlä Śəllase started trying to establish contacts with foreigners and foreign powers, first and foremost in order to acquire military materials and political gains. The first Europeans who visited Š. after a long interlude were ↗Combes and ↗Tamisier (1835–36). In

1839 ↗Krapf and ↗Isenberg moved to Š. from Təgray. In the same year, ↗Rochet d'Hericourt also visited Š., and his contacts with Śahlä Śəllase resulted in a letter to Louis-Philippe I (RubActa I, no. 33); later he was joined by ↗Lefebvre who entered Š. in 1841. Following the takeover of Aden in 1839–40 (cp. ↗Yemen), British interest in Ethiopia manifested itself in their haste to send the mission of ↗Harris (also in response to a letter of Śahlä Śəllase, ibid. nos. 34, 35). Harris was followed by Charles Johnston and ↗Beke. Śahlä Śəllase signed treaties with Harris and Rochet d'Hericourt (ibid. nos. 44, 66; cp. HerTar 115–23), each acting "on behalf" of his respective government. These treaties had no practical consequences, since the enthusiasm of both the French and British subsided as they realized that any involvement in Š. would mean high costs and unclear profits. But Śahlä Śəllase enjoyed a considerable increase in his fire-arms arsenal and the European travellers produced a large amount of literature describing the Kingdom of Š.

The independent political development of Š. was interrupted by the victory of *aṣe* ↗Tewodros II over *nəguś* ↗Ḫaylä Mäläkot in 1855. The latter's son and successor Mənilək (the future *aṣe* ↗Mənilək II) was captured by Tewodros; Šäwans resisted under the leadership of ↗Säyfu Śahlä Śəllase, but suffered significant setbacks in 1859–60, when Ankobär was pillaged and Säyfu killed (Darkwah 1975: 48). However, Tewodros was not able to consistently control Š., being engaged in fighting elsewhere. When Mənilək escaped in 1865, he quickly re-generated the power of the local dynasty and within the next 25 years raised Š. to the strongest position among the regions of Ethiopia.

Having realized the importance of connections with Western countries and the possibilities offered by Western technologies, Mənilək acted pragmatically and did not hesitate to consult individual Europeans and employ them as agents. He kept ↗Massaja for more than ten years, was treated by the physicians ↗Alfieri and ↗Traversi, and allowed a few other expeditions and traders to enter Š. Initial difficulties and setbacks in establishing foreign relations (cp. the 1872 mission of *abba* ↗Mikaᵓel) did not discourage Mənilək.

In 1878, ↗Ilg became Mənilək's closest assistant for a number of years. In the 1880s there was an influx of Europeans to Š., where ↗Italy soon took a leading role. In 1876 ↗Ləṭ Maräfiya was given to the Italian geographic mission (cp. ↗Società Geografica Italiana), while its head ↗Antinori became representative of the Italian government in Š. His successor ↗Antonelli was instrumental in developing relations between Italy and Š. and bringing large supplies of modern fire-arms to Š. (Darkwah 1975: 60). The Treaty of 1883 and the ↗Italo–Ethiopian Treaty of Friendship and Commerce were signed; relations, however, were strained after the Italian occupation of Massawa in 1884 and the Italian encroachment in north Ethiopia; they collapsed in 1890.

Having no superiority in military power to compete with the major Ethiopian lords, Mənilək initially preferred to wait; he abstained from the power struggle which followed the death of Tewodros II and opted to submit to *aṣe* ↗Yoḥannəs in 1875 and 1878 (Darkwah 1975: 83; on harsh conditions, including, e.g., the proclamation of ↗*Karra* as official doctrine). Yet Mənilək did not rush to save Gondär during the ↗Mahdists' attack on Ethiopia, and Š. narrowly escaped the punitive campaign of Yoḥannəs IV in 1889.

When Mənilək claimed supreme power following the death of Yoḥannəs, he had Š. behind him as a strong base. From the early period of his reign, the "reconquista" was carried out on the southern borders of Š. (cp. ↗Gobäna Dač̣i; ↗Mäkʷännən Wäldä Mikaᵓel). This was accompanied by establishing several *kätäma*s in the conquered areas (such as ↗Fəčče, ↗Holäta, ↗Addis ᶜAläm etc.); in 1882, Šäwans stopped the southern advance of the rulers of ↗Goǧǧam in the battle of ↗Ǝmbabo. Over a long period of time, Mənilək had the rich resources of the south at his disposal and was able to increase the ranks of his soldiers by sharing the conquered land among them (cp. ↗*gäbbar*; ↗*näfṭäñña*). He also managed to connect Š. with the Red Sea avoiding Təgray and Eritrea (cp. ↗Djibouti, ↗Obok, ↗Tağūra); this connection was further secured by the occupation of ↗Harär in 1887 (allegedly on an order of Yoḥannəs IV, s. ZewYohan 217) and, in the 20th cent., by means of the Djibouti–Addis Abäba ↗Railway.

Šäwa in 1889–20th century

As Mənilək ascended to the throne in 1889, the policy of the Šäwan kings became the basis of his policy for the entire country, while the Šäwan Amhara nobility (specifically of Mänz) was considered to have become the political elite of the Empire (StStud 119). In the late 19th-early

20th cent., Š. remained the most stable and prosperous region of Ethiopia. The presence of the capital, spreading innovations and generating "an image of the future Ethiopia" (urban, increasingly multi-ethnic and cosmopolitan, with trade and economy clearly growing) gave Š. a special weight and in fact defined its future political role. Däbrä Bərhan, Ankobär and Däbrä Sina remained important Šäwan towns. ↗Aləyyu Amba served as a major piedmont market where Oromo and Argobba, agro-pastoralists inhabiting the mountain slopes, met the ↗ᶜAfar of the lowlands. The town was also the gateway to Š. for the caravans which used to come from the coast. During the 1920s–30s, new towns (↗Ambo, Hagärä Həywät, Wäliso) were established along the road to the ↗coffee-producing regions (↗Wälläga, ↗Ǧimma). Š. played a pioneering role in the ↗urbanization process for the rest of the 20th cent.

After the death of Mənilək Š. once again demonstrated its leading political position when *ləǧ* ↗Iyasu (backed by the "Wällo party") was overthrown by the "Šäwan party" supporting Täfäri Mäkʷännən (the future *aṣe* ↗Ḫaylä Śəllase I). On the eve of the ↗Italian war 1935–36, the southern border of Š. followed the Awaš; the province encompassed six large districts (ZerÉth 25–28). During the war, the Italians met with substantial resistance from the ↗patriots in Š., esp. in its central part. In 1936 the Italians abolished Š. and created a small *Governatorato d'Addis Abeba*. In 1938, it was replaced by the larger *Governo dello Scioà* which was about the same size as Š. in 1935.

After the Liberation, the province was re-established; in 1942 it incorporated Gurageland. The plantations that the Italians had implemented or planned were distributed among Ḫaylä Śəllase I's favourites and, henceforth, became a part of the capital region. Early in the 1960's the ↗Kämbata region and the whole Rift Valley were annexed to Š., which by 1967 encompassed 13 *awraǧǧas* (↗Č̣äbo–Gurage, ↗Ḥayqočč–Butagira, Ǧibat–Meč̣č̣a, ↗Kämbata, Männagäša, ↗Mänz–Gəšše, Märḥabete, Sälale, Tägʷəlät–Bulga, Boräna, ↗Ǧämǧäm, ↗Sidamo, ↗Wälamo). New lands and abundant supplies of manpower were available to urban investors. According to the 1970 and 1984 censuses Š. was the most densely populated region where goods and people of Ethiopia converged. This province had the most important educational, industrial and health infrastructure. In the 1950s, Addis Abäba became the seat of the Patriarch of the ↗Ethiopian Orthodox (Täwaḥədo) Church. As a matter of fact, multiethnic and economically strong Š. kept its leading role within modern Ethiopia into the late 1980s; only in the course of the 1990s' administrative reforms along the lines of the "ethnic federalism" it was split up and given an inferior administrative place.

Denis Nosnitsin

Sawākin

Together with ↗Massawa, S. (19° 6' N, 37° 20' E) was the most important port on the western (African) shores of the ↗Red Sea for most of the second half of the second millennium A.D.

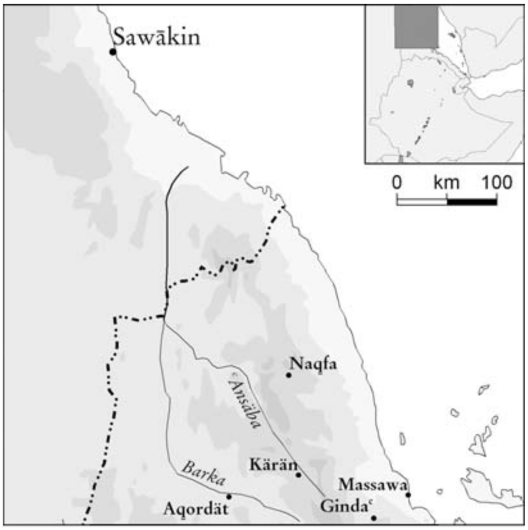
Historically, S. served as an outlet and a gateway for caravans, traders, missionaries, envoys and pilgrims to and from the ↗Nile Valley and the Ethiopian plateau, until the requirements of modern shipping led to its replacement by Port Sudan in the early 20th cent. S.'s fortunes fluctuated in direct relationship to the tortuous and interconnected evolution of politics, commerce and security both in the Red Sea area and in the port's hinterlands.

Situated along the Sudanese coasts, S. was endowed with a deep water natural harbour, and, like Massawa and other eastern African ports, it was built on a small offshore coral island, before a causeway constructed in 1878 connected it to the mainland area, known as al-Gayf. The spectacular architectural style characteristic of the structures built on S. Island shares similarities with that of other Red Sea ports which came under ↗Ottoman and Egyptian control after the 16th cent., most conspicuously Jiddah and Massawa (Greenlaw 1995).

Ethnically S. was dominated by ↗Beǧa and went through a history of urbanization and ethnic diversification partially similar to Massawa (including Arab settlers, and a few ↗Təgre). Organized in patriarchal extended families the urban and urbanized inhabitants of S. served as merchants or trading agents and brokers (*adhārī*) in long-distance international commerce. They developed a communal ethos and a corporate identity that saw itself as socially and culturally separate from the non-urban folk of the mainland (Spaulding 2008: 39ff.).

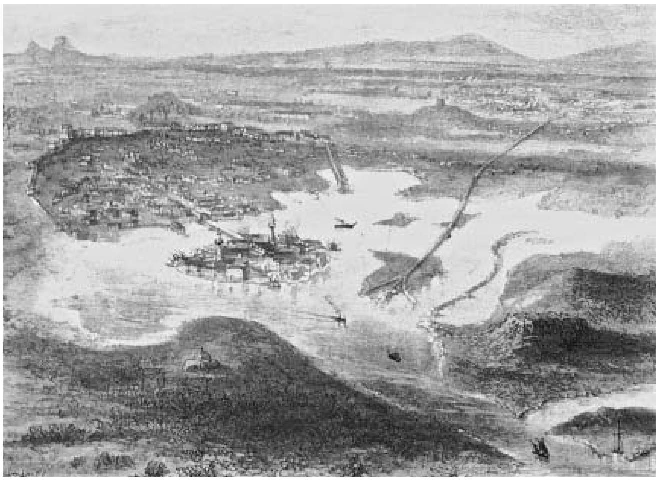
The etymology of S.'s name has given rise to several hypotheses. Some link it to a form of the Arabic word *sūq* ('market') but since S. is spelt with a "*k*", others have associated it with the word *sakan* ('to live', 'dwell'). A popular legend accounting for the origins of S. tells of seven slave girls sent by the king of Ethiopia to that of Egypt, who, en route in S., were impregnated by seven *ǧinns*. Following their arrival in Egypt the king sent them back to S. where their children became the first inhabitants of the town. It was said that the '*ǧinn* had done it' (*sawwa ǧinn*) since it was 'the *ǧinn*'s dwelling' (*sakan al-ǧinn*). Hence Sawāǧinn over time might have been rendered Sawākin (Hofheinz in EI², 87; Bloss 1936: 272f.).

The first mention of the name S. by Arab geographers such as al-Hamdānī and Ibn Ḥawqal dates back to the 10th cent. S.'s rise to prominence is associated with the gradual decline of the chief Egyptian medieval Red Sea port Ayḏab, whose leaders, the Ḥadāriba (a ruling Beǧa family who claimed origins from ↗Ḥaḍramawt), constantly challenged the authority and power of the ↗Mamlūks, who ultimately destroyed it in 1426. S. prospered in the 14th and 15th cent., and the Ḥadāriba moved their capital to the port town. Participating in the Indian Ocean trade and enjoying a degree of political autonomy as Mamlūk power declined, S. established itself as the most important north-east African port, often competing with Massawa.



Following the conquest of Egypt in 1517, the Ottoman Empire became the major power in the Red Sea. After a brief period of Ottoman-Portuguese power-struggles in the Red Sea, ↗Özdemir *paša* occupied S. in the early 1550s. In 1557 the *eyalet* of ↗Ḥabeš was established with its administrative headquarters in the port town. Another factor accounting for change in the 16th cent. was the rise and establishment of the ↗Funǧ sultanate of ↗Sinnār, which attempted to control S. and its hinterlands. Power struggles between the Ottomans and the Funǧ enabled the leaders of the Ḥadāriba to develop some degree of autonomy and maneuver power relations with both powers mainly by means of withholding or paying customs revenues.

S. served as a gateway into the north-east African interior for traders and travelers from far and wide. In the 17th cent. Catholic missionaries, official envoys and European voyagers passed through S. on their way to the Ethiopian



19th-cent. drawing of the Sawākin harbour; from Guadalupi 2005: 306

plateau or when leaving north-east Africa (van Donzel 1979, cf. index).

The decline of Ottoman and Funǧ power in the late 18th cent. translated into greater autonomy for S. and the leading Ḥadāriba families, known in tu-Beḍáwiē as the *artayga* ('patricians'; Paul 1954: 66, 140). In the early 19th cent. the local ruler in S. was known as the *amīr al-ḥadāriba*, who was chosen by the five leading *artayga* families of the Ḥadāriba, and who lived in al-Gayf (Crawford 1951: 119f.; Talhami 1979: 57). In 1814 the population of S. Island was estimated at 3,000 and 5,000 on the mainland (Bloss 1936: 297f.).

In the 17th and 18th cent. S. enjoyed an active role as a long-distance trading entrepot. Its chief export commodities then were ↗gold, slaves (↗Slavery), ↗tobacco, ↗incense, ostrich feathers from Šandi and Sinnār, and durra, mats and ↗camels from ↗Kassala.

In the early 19th cent. the revival of Egyptian hegemonic ambitions in north-east Africa under ↗Muḥammad ʿAlī gradually brought S. under Egyptian control. Between 1813 and 1865 S. and Massawa changed hands several times between Egyptians and Ottomans. In 1865 the Ottomans transferred the administration of both ports to Egypt, and they remained under its authority until 1885.

S.'s 19th-cent. history vacillated between periods of crisis and insecurity, on the one hand, and on the other, decades, or parts thereof, of booming prosperity and urban development resulting from the general commercial boom in the Red Sea following the introduction of steamships in 1829. The abolition of the slave trade affected S., even though smuggling continued and the port's total slave exports for the entire century were estimated at 107,000. S.'s main exports were gum, hides, ↗ivory, butter, ostrich feathers and wax, which was produced in Ethiopia but exported through S. It was not uncommon for commodities to reach S. instead of Massawa. Since mid-19th cent., the ever-fluctuating state of security and stability in the latter and on the roads leading to it often made its usage hazardous and risky.

Following the opening of the Suez Canal in 1869, S. enjoyed a renewed commercial and building boom in the 1870s until interrupted by the Mahdīya (↗Mahdists). S. was never conquered by the Mahdists but a significant part of its population left the town when it became the headquarters for British military operations against the Mahdi's most energetic *amīr* ʿUṯmān b. Abī Bakr Diqna (Bloss 1937: 255–73). The inaptitude of S.'s harbor for modern shipping led to its replacement by Port Sudan, some 60 km north of S., in 1905. A year earlier its population was 10,500 inhabitants. In 1923–25 most S. merchants moved to Port Sudan and S. fell into disrepair. By the mid-1940s most of its beautiful houses had collapsed and the old town was deserted (Hofheinz in *EI*^{2}, 89). Since 1991 some efforts have been made by the Sudanese government to revive S. including the transferal of some of Port Sudan's activities to the ancient port town.

Šäwanäš Abrəha

Wäyzäro Š.A. (**ሸዋናሽ፡ አብርሃ**; b. 1900/01, near Mäq̱älä, Təgray, d. July 1968, Addis Abäba), a daughter of *däǧǧazmač* ↗Abrəha Arʾaya and thus a descendant of the family of *aṣe* ↗Yoḥannəs IV, was a female patriot during the Italian occupation of 1935–41. Her husband was *däǧǧazmač* ↗Ḫaylu Käbbädä, a famous patriotic leader in ↗Wag. Following his death in 1937 and the merciless massacre of the patriots of Wag, Š.A. took over the leadership of the surviving patriotic groups, who moved to Qʷalisa in Bägemdər and continued their struggle. She was supported by her son-in-law, *däǧǧazmač* Taffärä Täsämma, and her son *ləǧ* (later *wag šum*) Wäsän Ḫaylu, who defected from the Italians and joined her in 1938.

Š.A. established contacts with other patriotic leaders in Bägemdər to coordinate their activities against the invading army. To strengthen her forces she married her daughter Zäwditu to *ləǧ* Yoḥannəs Iyasu, son of *ləǧ* ↗Iyasu and a patriotic leader in Bägemdər. Her struggle was, however, sometimes hindered by rivalry and conflicts with other patriotic leaders over provisions and firearms.

With the arrival of Emperor ↗Ḫaylä Śəllase I in Goǧǧam, Š.A. sent her son Wäsän Ḫaylu to meet the Emperor while mobilizing her forces to liberate Wag. The patriots of Wag, supported by *ras* ↗Śəyyum Mängäša of Təgray, occupied Säqoṭa on 28 April 1941. Š.A.'s forces also participated in the battle of ↗Ambalage against the Viceroy Amedeo di ↗Savoia, Duke of Aosta.

After the Liberation Š.A. was decorated with several medals for her patriotic leadership and bravery.

Šäwarägäd Gädle

Š.G. (**ሸዋረገድ፡ ገድሌ**; b. 1885/86, Däbrä Bərhan, d. November 1949, Lalibäla) was a prominent female anti-Italian ↗Resistance fighter.

Born to a noted Šäwan family (her father, *däǧǧazmač* Gädle, was a *bäǧərond* at Mənilək II's court), Š.G. grew up in Addis Abäba. There, at her father's residence in Qäbbänna, she received traditional church education. She married a certain *fitawrari* Dabbočč, who died soon leaving Š.G. childless, and she moved to her father's estate in ↗Addis ʿAläm. She considered becoming a nun and pilgrimaged to ↗Däbrä Libanos of Šäwa and to ↗Jerusalem but had to return to take care of her father.

When the ↗Italian war 1935–36 started, Š.G. became organizer of the Ethiopian Women's Work Association. ↗Tänaññä Wärq Ḫaylä Śəllase became its president, and Š.G. the vice-president. She successfully used the women's forum to encourage women to join the Ethiopian ↗Red Cross, to enlist in regiments for training and to prepare food and medical supplies for war.

During the Italian occupation (1936–41), Š.G. actively involved herself in propaganda, provision of supplies, intelligence work and armed struggle. She used the money she gained from selling her father's land for supporting the fighters.

Š.G. was among the first "inner patriots" (*yäwəsṭ arbäññočč*). Along with others, she kept patriot chiefs informed about enemy positions and their movements in and around Addis Abäba. Š.G. played an active role in the Šäwan patriots' unsuccessful attempt to liberate the capital in July 1936. Following the attack on ↗Graziani, in February 1937, Š.G. was captured and exiled to Italy where she stayed as a political prisoner on Ponza and then on Asinara.

In 1939 Š.G. was repatriated as a result of Italy's appeasement policy and immediately resumed her underground work under the cover name of Wälättä Bərhan Fəssəha.

In 1940 Š.G. managed to establish a secret link between Mammo Ḫaylä Mikaʾel, a high official in the Italian service, and Gäbrä Mädḫən Ḫaylä Maryam, chairperson of the Ethiopian intelligence system. As a result, secret documents could be removed or destroyed before suspected places

Šäwarägäd Gädle; photo courtesy of the IES (no. D-2-1)

or persons could be searched. She also played an important role in the storming and fall of the Italian military forts at Ǧäldu-Mäč̣č̣a (April 1940) and Addis ^{c}Aläm (December 1940). At Bäč̣o, she was received with great ceremony by the patriot chief Bäqqälä Wäyya and his troops. She then headed her own patriots' regiment. While she was in the camp of ↗Gäräsu Duki, the Italians ventured a surprise attack and captured Š.G. She was imprisoned and sentenced to death, but was released by the British liberation forces.

After Liberation, Š.G. lived in Addis ^{c}Aläm, dedicating her efforts to restoring the life of patriots freed from prison and helping the poor and the needy. A devoted Christian, in 1949 she undertook a pilgrimage to ↗Amba Gəšän Maryam and to ↗Lalibäla, where she fell ill and died. She was buried in ↗Däbrä Libanos.

Š.G. is remembered as an example of genuine patriotism; the writers of her time referred to her as the "Ethiopian Joan of Arc," and the "Lion-Hearted Woman" of Ethiopia. She was the only woman patriot honoured when ↗Ḫaylä Śəllase I returned from exile in 1941. A street in Addis Abäba bears her name.

Säwasəw

The Ethiopian grammar treatises of ↗Gə^{c}əz known as S. (**ሰዋስው**, lit. 'steps, ladder') go back to an oral tradition likely to have been fixed in written form by the period of the ↗Gondärine kingdom – an age of artistic and literary renaissance, as well as of "standardization". Liturgical notation was then formally produced (cp. ↗*mələkkət*), exegetical tradition (↗*Andəmta*) written down and codified. Palaeographic evidence, too, points to consistency and uniformity (cp. ↗Palaeography). Within this framework of social and educational changes, the codification of grammar tradition should also be placed.

The remote origins of S. lie in the Copto-Arabic vocabularies or "scalae" (*sullam*, Arab. lit. 'ladder') of the late middle ages, usually provided with a grammatical introduction (*muqaddama*) – a structure well preserved in the S. The S. tradition shares quite a few features with the Copto-Arabic and, even more, the Arabic grammatical traditions. A number of Ethiopic terms used are semantic calques on Copto-Arabic or Arabic equivalents: e.g., Arab. *aṣl*, Amh. *zär*, 'origin, i.e. root'; Arab. *ism*, Amh. *səm*, 'name, i.e. nomen'; Arab. *šaddada*, Amh. *ṭäbbäqä*, 'to stretch, i.e. to double, to geminate [the consonant(s)]'.

Azzaž ↗Sinoda is traditionally celebrated as a composer of S., but no manuscript of S. is known that bears his name. The earliest S. manuscripts date from the 17th–18th cent. (e.g., EMML no. 2092, fols. 68r–82v; 2817, fols. 2r–40), or even earlier (a ms. Paris, BN Éth. 160 [ZotBNat 261–64] with an autobiography of ↗Ṗawlos dated to the 16th cent. contains a S.; s. Conti Rossini 1918:279). ↗Ludolf discussed the S. tradition and published an extract from a S. (1691:209f., 556). ↗Wansleben probably copied one S. in the 17th cent. (s. Bausi 1989:17).

A S. contains glosses of Gəᶜəz lexemes and/or grammatical data. The former are arranged according either to the order of their appearance in the indexed literary works (usually Biblical or liturgical texts) or their meaning. Some S. deal with the vocabulary of such literary works as ↗*Qerəllos* (cf. Weischer 1973:21–24). Some S. pay special attention to loanwords or transcriptions from Hebrew, Latin or Greek; some add corresponding terms from other languages (e.g., from Arabic and Coptic in S. extracts quoted by Ludolf 1691:209f.).

The grammatical part of the S., called **እርባ(ን)**, *ərba*(*n*), or **እርባሕታ**, *ərbaḥta* (conjugation, from *räbḥa*, 'to gain, to augment'), contains information on the inflection of verbs (**ግሥ**, *gəś́*) and noun (**ጥሬ**, *ṭəre*, or **ስም**, *səm*, or **ብትን**, *bəttən*), and on the particles (**አገባብ**, *aggäbab*), as well as examples of various types of sentences. Several conjugational types (**ሰራዊት**, *särawit*) are distinguished and grouped into larger classes (**አርእስት**, *arᵓəst*). Nouns are divided into deverbal (**ጥሬ፡ ዘር**, *ṭəre zär*) and primary (**ጥሬ፡ ነባር**, *ṭəre näbbar*). The deverbal nouns are, in turn, classified according to their derivations. Nouns formed without affixal extension or with a prefix or suffix, resp., are called **ዘመድ፡ ዘር** (*zämäd zär*, lit. 'intimate noun') and **ባዕድ፡ ዘር** (*baᶜəd zär*, lit. 'strange noun'); in some S., the latter term only applies to nouns with prefixes, those with suffixes being called **ምእላድ**, *məᵓəlad*. A number of manuscripts also include additional notes on exegesis (**ፍካሬ**, *fəkkare*) and ecclesiastical poetry (cp. ↗*Qəne*; ↗*Sämənna wärq*).

As is the case with many other such traditions, Gəᶜəz grammar studies were triggered by the sacralization of the ancient language, replaced by vernaculars in everyday life. When the earliest S. appeared, Gəᶜəz had long yielded as a spoken medium to ↗Amharic or ↗Təgrəñña. Only in a very few S. is Gəᶜəz employed in writing about Gəᶜəz itself (as, in fact, the recent work by Täklä Maryam Sämharay 1939): most S. are bilingual, usually Amharic–Gəᶜəz.

The first printed editions of S., usually compiled by Ethiopian scholars also acquainted with the western grammar tradition, belong to the 19th cent. Albeit under European influence, these editions usually retain the method and terminology of traditional S., but are marked by a more systematic arrangement of the material. One of the earliest grammatical compendiums is *aläqa* ↗Tayyä Gäbrä Maryam's, published by the Evangelical Mission at Ǝmkullu in 1897. An extensive treatise of 316 pages, it consists of two parts: a grammatical introduction (*mäqdəm*) and a lengthy alphabetic word list. *Aläqa* Tayyä's work was selectively compiled from an extant corpus of lexico-grammatical writings. As to lexicography, besides the alphabetic one, it provides a thematic list, in the introductory chapter.

Abba ↗Täklä Maryam Sämharay's compendium, consisting of 311 pages, was printed by the Catholic Mission of Kärän in 1906/07. This S., with a modern apparatus of index and footnotes, is organized in the form of a dialogue, followed by both paradigm tables of verbs and nouns and a thorough discussion of key topics.

The compilation of *abba* ↗Yaᶜəqob Gäbrä Iyäsus, of 265 pages, printed by the Catholic Mission of Asmära in 1928, has a similar structure. It also contains an index and footnotes, and is likewise organized into questions and answers, followed by paradigm tables. In addition, it dedicates a separate chapter to the Gəᶜəz syllabary – a rather rare case for a S.

The famous *Mäṣḥafä säwasəw wägəss wämäzgäbä qalat ḥaddis* ('The Book of S. and the Verb and New Dictionary'; KWKDic) by *mämhər* ↗Kəflä Giyorgis (updated by *aläqa* ↗Kidanä Wäld Kəfle and finally published by ↗Dästa Täklä Wäld) contains, as its title indicates, a grammatical description and a dictionary of Gəᶜəz. The former part mostly preserves the traditional terminology and organization, but is arranged systematically, and accompanied by a historical overview. The vocabulary, more substantially deviating from the classical S., is ordered according to the *Abugida* order (cp. ↗*Abugida* and *Hahu*). Each word is translated into Amharic, with information on inflection, a (proposed) etymology and textual references.

Today, the term S. is customarily applied to refer to all works of grammar (cp. Märsəᶜe Ḫazän Wäldä Qirqos 1943; Amanuᵓel Sahlä 1984; Bayyä Yəmam 1993/94, etc.) as opposed to lexicons which are known as *mäzgäbä qalat* (Gəᶜəz, lit. 'treasury of words').

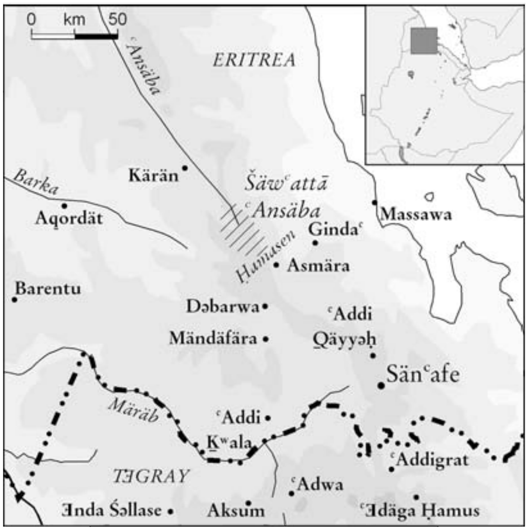
Šäw^{c}attä ^{c}Ansäba

The Š.^{c}A. (**ሸውዐተ፡ ዐንሰባ**, also Šob^{c}attä [^{c}]Ansäba, Šäbattä [^{c}]Ansäba, lit. 'seven [groups of] [^{c}]Ansäba') is a confederacy of agriculturalist Təgrəñña-speaking subgroups in the northwestern extension of the Eritrean highlands (↗Təgrəñña-speakers), and the name of the region they inhabit. The Š.^{c}A. district lies between the rivers ^{c}Ansäba and Gärgär, in Eritrea's Central Region (*zoba* Ma^{ɔ}əkäl), previously Zämat Taḥtay district of ↗Ḥamasen. It borders on ↗Dämbäzan (s. EAE vol. 5) in the east (across ^{c}Ansäba), on ↗Loggo Č̣əwa in the south (across Gärgär), on ^{c}Addi ^{c}Ali Bäk̠it of the Beni Amər in the west and the region of Lamačälli and Bilin in the north.

According to tradition, the Š.^{c}A. originate from different ↗Beğa, ↗Balaw, ↗Təgre (in particular, ↗Mänsa^{c} and ↗Marya), ↗Sāho, and ↗Bilin groups, as well as some Təgray–Təgrəñña groups who immigrated during Zär^{ɔ}a Ya^{c}əqob's expansion in the 14th cent. The migrants formed seven descent groups. Those from highland Akkälä Guzay, the Däqqi Dašəm and the Därsänäy; the Bilin, the Däqqi ^{c}Amdu; peoples of the Barka lowlands of Ḥamasen and Akkälä Guzay, as well as the Amhara, the ^{c}Addi Yoḥannəs, the Mäläṣṣänay, and the ^{c}Addi Na^{ɔ}amən. The Däqqi Šahay are the remnants of an ancient Balaw invasion (Conti Rossini 1940) or the descendants of the ↗Asaorta Sāho (PollEr 123; Perini 1905: 59). The seven groups have also given name to the present-day seven districts of the Š.^{c}A. Some groups inhabit several villages (e.g., the ^{c}Addi Yoḥannəs, who live in the village of ^{c}Addi Yoḥannəs and in that of Däbri; Däqqi Dašəm inhabit Däqqi Dašəm but also Mägärqa and Wärräsäb, s. Perini 1905: 59, PollEr 123).

The first to be inhabited was Mäläṣṣänay (Conti Rossini 1940:349); however, the Däqqi Šahay traditionally claim to have been the most powerful group. The village of the Därsänäy is particular as a part of it, May Däräse, is inhab-



ited by the ↗Ǧäbärti Muslims (PollEr 123). ᶜAddi Yoḥannəs was a historical *gʷəlt* of Däbrä Śəllase of Ṣäᶜada Ǝmba (PollEr 124). Prior to the Italian occupation, the general assembly of the heads of the seven districts/clans took place in ᶜAddi Naᵓamən (Perini 1905: 59; Conti Rossini 1940: 349).

The confederacy of the seven groups was probably formed as a reaction to the strong neighbouring Bilin groups, such as Bet Gäbrä Tärqe and Bet Ṭäqʷe. The confederacy assumed a common law that united them in their political and material interests (Kemink 1991: 56; Conti Rossini 1940: 349). The law, known as Zämat (s. PollEr 124), was initially accepted by all, both the Zämat *taḥtay* ('lower Zämat'), i.e. the Š.ᶜA. proper, with the assembly seat in ᶜAwdi Bərhanu, and the Zämat *laᶜəlay* ('upper Zämat'), i.e. the inhabitants of Dämbäzan; after codification and revision of 1907 it was only followed by the Zämat *taḥtay* (cp. Yaqob Beyene 2002, 2003).

Similar to other sedentary Təgrəñña groups, the Š.ᶜA. identify themselves strongly with land ownership, which is transmitted within one lineage, from father to son. They are known to have paid tribute to the princes of Ḥamasen (the dynasty of the ↗Däqqi Täššəm).

The traditional legal code of the Š.ᶜA. (↗*Waᶜəla Šobᶜattä ᶜAnsäba zämat taḥtay*), a witness to their legal autonomy, was in continuous use locally, occasionally amended by the assemblies of elders (↗*Bayto*), even up to the 1970s (cp. ↗Customary law).

Wolbert Smidt

Sawiros

S. (**ሳዊሮስ**, Arab.: Sāwīrus, fl. 11th cent.) was the Metropolitan of Ethiopia who suceeded ↗Fiqṭor, probably his uncle (his brother according to the Ethiopic ↗*Sənkəssar*, 12 *Säne*). A peculiarity in this situation was that S. seems to have been brought up in Ethiopia and later returned to ↗Egypt, where he was consecrated metropolitan by Patriarch Cyril (1077–92). Promising better treatment for Ethiopian Muslims and gifts, he received the support of *amīr* Badr al-Ǧamalī, a *wazīr* of *ḫalīfa* al-Mustanṣir, and after consecration went to Ethiopia. There, he defeated the usurper-Metropolitan Qūrīl (Cyril) ᶜAbdūn, who, after a short stay on the ↗Dahlāk island, was sent to Egypt and executed there.

According to the *History of the Patriarchs*, S. was successful in combatting the polygamous marital practices of the Ethiopian king and his subjects. Badr al-Ǧamalī was not impressed by the gifts S. sent him via the latter's brother Riǧāl in 1088. However, he was also informed that, as promised, S. had contributed to the construction of seven ↗mosques, which were immediately destroyed by the Ethiopians, and S. was imprisoned by the Ethiopian king. A delegation of Coptic bishops carrying warning letters from Cyril II and Badr al-Ǧamalī was dispatched to Egypt, but the Ethiopian king responded with a strongly worded letter as well. The Ethiopic *Sənkəssar* mentions that S. died after some eleven years in office, and his relics were transferred to Dayr Anbā Maqār in Egypt. In Ethiopia, his successor was perhaps Metropolitan ↗Giyorgis.

Sawiros

Abunä S. (**ሳዊሮስ**, birth name Tädla; b. 26. April 1876, Därra Abunä Ḥara, Bägemdər, d. 7 September 1933, Addis Abäba) was one of the first Ethiopian bishops.

He completed the first two stages of traditional ↗education in his home parish. In 1888 he left Därra Abunä Ḥara and went to Goǧǧam, to be ordained ↗*diyaqon* by the Egyptian bishop *abunä* ↗Luqas. He then entered the monastic life, taking his baptismal name Gäbrä Mänfäs Qəddus as his monastic name. He was further educated in different monasteries of the region.

In 1908, S. went to ↗Däbrä Tabor in the search for financial support towards a pilgrimage to ↗Jerusalem. There he met *ras* ↗Gugsa Wäle and *wäyzäro* (future *ətege*) ↗Zäwditu. He accompanied Zäwditu to Addis Abäba and remained at the court, serving the royal family. He became Zäwditu's ↗*näfs abbat* and was among the monks who performed the last ↗unction for *aṣe* ↗Mənilək II in 1913.

S. was a strong supporter of Zäwditu in the ensuing political struggles. After the overthrow of *ləǧ* ↗Iyasu in 1916, he was rewarded for his loyalty and appointed head of Däbrä Abunä Ḥara and Däbrä Wälättä Ṗetros (probably ↗Rema) in his home region, with the title *mälakä gännät*. In 1917, he was appointed ↗*mämhər* of ↗Gännätä Ṣəge Giyorgis in Addis Abäba. He stayed there until 1924, taking only a short break from his administrative services to visit Jerusalem and the Coptic monasteries in Egypt. On 26 November 1924 he was appointed head of ↗Däbrä Libanos of Šäwa with the title ↗*əččäge* and the name Gäbrä Mänfäs Qəddus. On 18 September 1925 he founded the Holy Synod (*Mänfäsawi guba'e*) of the ↗Ethiopian Orthodox (Täwaḥədo) Church.

Even though in 1928 S. supported Zäwditu in her struggle with *ras* Täfäri Mäkʷännən (future *aṣe* ↗Ḫaylä Śəllase I), he was chosen by Täfäri in 1928 as one of the five Ethiopian clerics to be consecrated bishop by the Egyptian Patriarch John XIX. On the way to Egypt, however, S. fell ill and did not reach Alexandria with the others who were ordained there in 1929. He was consecrated bishop of South Ethiopia, this time receiving the name S., on 10 January 1930, in Addis Abäba, during the Patriarch's visit upon *ras* Täfäri's invitation.

S. was therefore the first Ethiopian *əččäge* to become bishop. Until that time the office of the *əččäge* had always been the Ethiopian measure to adjust the powers of the foreign Egyptian bishops and the patriarchs.

After the death of Empress Zäwditu in 1930, S. remained in office long enough to sign the new ↗constitution promoted by the freshly crowned Emperor Ḫaylä Śəllase. Afterwards, however, S. shared the fate of many of Zäwditu's faithful clerics and was expelled from the palace. He spent his remaining years in the church of Maḫdärä Səbḥat Lədäta Lämaryam, which he had built in the place granted to him by Zäwditu.

Šawwāl ʿīd

Š. (two Arabic loanwords, شوال and عيد, merged according to the rules of Harari syntax; in Harari also *Šuwal id* [Abdurahman Mähammäd Qorram 1984:68]; Səlṭi: *Qalləte fəče*, 'small festival of breaking the fast' [Gutt – Hussein Mohammed Mussa 1997:194]) is the name of the festival (*ʿīd*; ↗Feasts, Islamic) at the end of the supererogatory six day period of fasting (e.g., Səlṭi: *Səddəstočča* or *Səddəsto*, Gutt – Hussein Mohammed Mussa 1997:160) during the tenth month of the Islamic lunar ↗calendar (*Šawwāl*; Wensinck in EI²) which follows the compulsory fast month of ↗*Ramaḍān*. The practice of ↗fasting these six days is based on a couple of prophetic sayings whose most accepted form is: "Who fasts *Ramaḍān* and then six days in *Šawwāl*, it will be as if he had fasted for a lifetime" (Muslim, *Kitāb aṣ-ṣiyām*, *bāb* 39, *Ḥadīṯ* 1164); "Who fasts six days after the *fiṭr*, it will be as if he had fasted the whole year" (Ibn Māǧah, *Kitāb aṣ-ṣiyām*, *bāb* 33, *Ḥadīṯ* 1786). The ideal of *ṣiyām ad-dahr* ('a lifetime fast') was and is deeply felt in mystical Islamic thought and the *Ḥadīṯ* shows the practical way to realize it.

According to the strictest canonical interpretation, the fast in *Šawwāl* does not need to follow a fixed chronological sequence: on the contrary, the faithful could theoretically fast any six days of the month to be granted the reward mentioned by Prophet ↗Muḥammad. Practically, most of the Muslims start fasting immediately after the *ʿĪd al-fiṭr* on the first of *Šawwāl*. The fasting period thus lasts from the 2nd to the 7th.

In the Islamic world, a collective celebration of the 8th of *Šawwāl* to mark the end of the six day fast is apparently attested only in Iran where a festival called *šaša* (lit., 'period of six days') has been held since medieval times (Schimmel 2001: 112).

In Ethiopia the traditional practise of fasting in *Šawwāl* is widespread but the feast to solemnize the end of this fasting period is celebrated with huge mass participation only by the ↗Harari and Səlṭe (↗Səlṭi) peoples. In Harär *Šuwal id* is more important than *ᶜĪd al-fiṭr* and really marks the end of the fast month. It is felt almost as a national feast though other ethnic groups living in the city do not normally participate in the celebrations, at least not with the same enthusiastic feelings. Drumming sessions are organized two days before Š. at the two shrines of Šullum Ahmad (in the area of Argobäri) and *āw* Akbara (in the area of Assumbäri). *Zikri* (↗*Ḏikr*) are chanted and a joyful and multicoloured crowd of both men and women meet to sing and dance. Š. is one of rare town events where males and females are allowed to participate freely: for Harari it thus represents the traditional occasion that young men legitimately use to look for a suitable fiancée among the finely dressed and well disposed females (Gibb 1996: 176ff.).

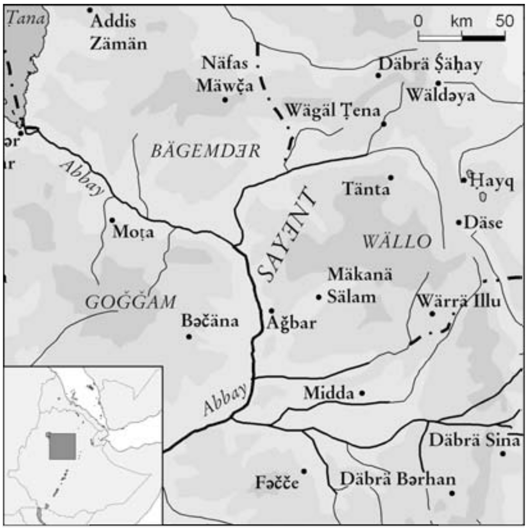
Sayənt

S. (**ሳይንት**, also Amhara Sayənt, Sayənt Amhara) is a small district adjacent to the ↗Abbay River, neighbouring on ↗Mäqdäla and ↗Wäläqa (in imperial Ethiopia a *wäräda* of ↗Boräna *awraǧǧa*, with Aǧbar as its capital; today in the Amhara Region). It is seen as part of the historical core of the land of the Amhara people and their culture, up to the point that ↗Lobo considered this region the first one to have been "colonized" by the Amhara who allegedly Christianized the local people, formerly "worshippers of ↗serpents" (GueCopMen 300, no. 6; cp. BTafA 423). S. was important prior to the 16th-cent. Muslim wars, hosting in particular two royal religious institutions, the churches of ↗Atronsä Maryam and ↗Tädbaba Maryam. ↗Zuramba is also one of S.'s monasteries. S. appears, though not specified, in the "Kingdom of Amhara" of de ↗Almeida (BeckHuntAlm, map), together with Tädbaba Maryam and (Amba) Legot, another historical district (a part of S., s. PerChron II, 239 and 582).



During the *ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), the Muslims penetrated S.; in the 17th–18th cent. S. was exposed to the Oromo raids both from ↗Wällo and from the south. In the mid-19th cent. it was governed by the local ruler *däǧǧazmač* Təkku Bərəlle, who rebelled against *aṣe* ↗Tewodros II but lost, and S. was given to Təkku's sons (BTafA 579, 977). At some point S. was retrieved by the rulers of the Šäwan dynasty, becoming a strategic pass in Mənilək's struggle with *aṣe* Yoḥannəs IV (GueCopMen 256). Later S. seems to have been one of Mənilək's loyal provinces (with Atronsä Maryam being used as the royal prison). For some time in the 1890s S. was governed by *ras* ↗Mängäša Atikam, and by 1895 by *ras* ↗Mikaᵓel ᶜAli (GueCopMen 429, 504). In 1917 S. was given to *ras* ↗Gugsa Wäle, and after his fall was included in 1930 into the governorate of *ras* Kaśa Ḫaylu (GebMolIyas ch. 101). Shortly before the ↗Italian war of 1935–36, S., a part of Wällo, was governed by *däǧǧazmač* Ambaṣo Gässäsä (ZerĒth 327). After the Italian occupation, S. was reduced to the status of a *wäräda*. According to the opinion widely circulating in Ethiopia and the local tradition of S., the population of the region is composed of "pure Amhara" and keeps "pure Amharic culture" (Molvaer 1995: 19). The region still remains poorly studied.

Säyfä Arᶜad

Aṣe S.A. (**ሰይፈ፡ አርዐድ**, regnal names Nəwayä Krəstos, Qʷästantinos [Constantine]; r. 1344–71, d. 10 May 1371) was the son and successor of *aṣe* ↗ᶜAmdä Ṣəyon I. He had two brothers, Saf Sägäd and Baḥrä Asgäd, who was governor of Təgray from 1328 (Fiaccadori 1997: 51). S.A.'s mother's name is unknown.

The "short chronicles" and the commemoration in the ↗*Sənkəssar* for 21 *Ṭəqəmt* praise S.A. for his campaigns against ↗Egypt and ↗Ḥaqqaddīn II b. Aḥmad Ḥarb Arᶜad of the ↗Walašmaᶜ dynasty. According to this text, the Emperor marched into Egypt because of the renewed persecution against the Copts in the 1350s, culminating in the imprisonment of the Patriarch of Alexandria *abba* Marqos (*abba* Mikaᵓel in the *Mäṣḥafä* ↗*ṭefut*, by confusion with an older episode reported in the history of the patriarchs of Alexandria and implying Nubia) by the *sulṭān*. According to the *Sənkəssar*, it was the Egyptian *sulṭān* who sent an embassy to patriarch Marqos, in order to stop S.A. from oppressing Muslims in Ethiopia. This may be a reference to events in ↗Ifat described by al-↗Maqrīzī, particularly the revolt of the son of the Walašmaᶜ *sulṭān* ↗Aḥmad Ḥarb Arᶜad, Ḥaqqaddīn, against S.A. and the subsequent bloody battles with the Christian army.

The texts composed in a monastic context have a less positive view of S.A., whom they accused of polygamy. S.A. broke his pact with the metropolitan *abunä* ↗Yaᶜəqob by marrying three women, and thus aroused the opposition of Yaᶜəqob (consequently expelled to Egypt) together with the monks ↗Filəp̣p̣os, ↗Aron and ↗Anorewos (at least according to their 15th–16th-cent. Vitas, s., e.g., Turaiev 1908: 224, 137 [text]). Subsequently, the conflict with the monks took another turn. The quarrel with Filəp̣p̣os was about the feast of the Nativity (↗*Lədät*), to be celebrated on 29 *Taḫśaś* (Turaiev 1908: 237f., cp. 229f. [text]; Grebaut 1945: 89; RicEnbYoh III, 208ff.). The conflict with Aron resulted from his refusal to let two children of the Emperor leave his monastery (Turaiev 1908: 137f. [text]). One of these children was Princess ↗Zir Ganela (Grebaut 1928: 142ff.).

The relations between S.A. and the monks must be seen from another point of view: since the "short chronicles" speak about his visit to *abunä* ↗Mädḫaninä Ǝgziᵓ in Təgray, a fact possibly confirmed by the land donation preserved in the *Mäṣḥafä* ↗*Aksum* (CRAxum 21f. [text]). S.A. also donated a Gospel to the Ethiopian community at the Qusqām monastery in Egypt (ms. Paris, BN Éth. 32, fol. 1 [ZotBNat 26]).

S.A. died in the 23rd year of mercy (KolTrad III, 23). According to a document preserved in the ↗Kəbran Gospel, his son, *aṣe* ↗Dawit II, ordered that his ↗*täzkar* be celebrated on 15 *Gənbot* (Taddesse Tamrat in PICES 4, vol. 1, 507; Getatchew Haile 1983: 67f.). This *täzkar* is recalled in some of the *Sənkəssar* versions (BudSaint 892 but not ColSyn). S.A. was succeeded by his sons ↗Nəwayä Maryam and Dawit.

Interestingly, S.A. entered Arab folklore, as the principal adversary of the popular epic hero Sayf b. Ḏī Yazan (cp. ed. Jayyusi 1999).

Marie-Laure Derat

Säyfu Śahlä Śəllase

S. (**ሰይፉ፡ ሣህለ፡ ሥላሴ**, b. ca. 1828/29, d. June 1860, Midda) was a son of *nəguś* ↗Śahlä Śəllase of Šäwa and his wife *wäyzäro* Bäzzabbəš. Together with his elder brother ↗Ḫaylä Mäläkot he was largely brought up by Ǝǧǧəgayyähu, who later became Ḫaylä Mäläkot's wife and mother of *aṣe* ↗Mənilək II.

A tradition has preserved the last words directed by Śahlä Śəllase to his sons on his deathbed. Leaving his realm to Ḫaylä Mäläkot, he asked S. not to rebel against his brother, and take the governorship of the lands of his father-in-law Wäldu, i.e. ↗Märḥabete.

Throughout the 1840s–50s S. was the governor of Märḥabete and ↗Sälale. During this period, S. had several successful campaigns against the Oromo of Tuulama and Mäč̣č̣a, thus considerably expanding southwards the boundaries of his domain.

S. offered strong resistance to *aṣe* ↗Tewodros II when the newly crowned Emperor tried to bring Šäwa under his control and appointed ↗Ḫaylä Mikaʾel ↗*märəd azmač*. According to some traditions, Ḫaylä Mikaʾel captured S., who only managed to free himself and flee with the help of his wife, *wäyzäro* Gäbäyanäš, daughter of another leader of anti-Tewodros resistance, Səmu Nəguś.

S. temporarily retreated to ↗Galamso in Č̣ärč̣är where he created an army of Oromo and followers of the ↗*Sost lədät* doctrine. Seeing the growth of S.'s forces, Tewodros had to participate personally in a battle against S. at ↗Ankobär in October 1859. S. offered fierce resistance for several days but was eventually defeated, and had to flee. Tewodros took ca. 500 soldiers of S.'s army prisoner and, following the advise of *abunä* ↗Sälama for treating infidels, punished them by cutting off their right hands and left feet.

S., with his remaining troops of no more than 200 persons, retreated to the Oromo area Yettu, in Č̣ärč̣är. He tried to find asylum in Harärge but the ruler, Amər, did not want to shelter S. S. then tried to hide in Märḥabete, but the representative (*məsläne*) he had left there, *ato* Kəbrät, rebelled and claimed control over the area. For a while, S. was sheltered by the ↗Wäläqa governor Ǝmaro ʿAli.

S. tried to regain control over Märḥabete, but was killed by Kəbrät at ↗Midda. He was buried there on 15 *Säne*. His son ↗Mäšäša Säyfu, a close associate of Mənilək, received the governorate of Märḥabete in the 1870s.

Evgenia Sokolinskaia

Šayḫ

Š. (Arab., شيخ, pl. *šuyūḫ* and *mašāʾiḫ*; lit.: 'white-haired', 'old man'; fem. *šayḫa*; as a loanword in [Leslau 1990:366]: Amh.: **ሼህ**, *šeh*, also **ሼኽ**, *šeḵ* [KaneDic 602, 655]; Tgn.: **ሸኽ**, *šäḵ*; Tgr.: **ሸይክ**, *šäyk*; Harari: **ሼኽ**, *šeḵ* [Abdurahman Mähammäd Qorram 1984 A.M.:70]; Gurage: **ሼኀ**, *šeḫ*, also **ሻህ**, *šah*; Səlṭe: **ሻ**, *ša* [Gutt – Hussein Mohammed Mussa 1977:165]); Orom.: *šeeki* [Hinsene Mekuria 2005:521]) is a respectful title used all over the Islamic world, and the Horn of Africa in particular, for outstanding and honourable individuals. The category of people which can be addressed as Š. is wide. It includes chiefs of tribes, clans, families or guilds, trade, professional leagues as well as heads of and teachers in educational institutions (Qurʾānic schools, *madrasa*, *dār al-ḥadīṯ*, *dār al-ʿulūm* etc.). More recently, in a seemingly less motivated usage, Š. has been attributed to any respectable person occupying a socially, politically or economically high position (e.g., oil tycoons or Gulf area rulers) and to any renowned learned man. Many times "Š." is used in a *status constructus* with other words to clarify its meaning (e.g. *šayḫ al-qabīla*, 'head of a tribe'; *šayḫ al-balad*, 'head of a town, mayor'; *šayḫ al-iqrāʾ*, a teacher expert in Qurʾānic reading).

It is, however, in the field of Islamic mysticism that the use of the epithet Š. is most significant. In the ↗Islamic brotherhoods Š. is the title given to the spiritual master who has completed his mystical education and is thus able to teach the novices and to become their model and guide. The *šayḫ aṭ-ṭarīqa* (*šayḫ as-saǧǧāda* when he is the successor of the eponymous founder) is the outstanding representative of a brotherhood who has completely absorbed its tenets and rules and is entitled to lead it. The strong spiritual power of the mystical Š. makes him a ↗holy man (↗*Walī*) while at the same time his learning qualifies him as a *ʿālim* (s. Geoffroy in EI^2). Likewise, most Ethiopian Muslim learned men are commonly addressed as Š. (e.g., ↗Muḥammad Walī; ↗Muḥammad Ṯānī Ḥabīb). Holy men are almost invariably called Š. (the respectful pl. form *šehočč* is used, e.g., in the case of the venerated Gurage holy man *sayyid* [Muḥammad] Budallā b. Bušrā Abbā Rāmūz al-Abrītī.

In the written sources, Š. is mentioned as the title carried by the Muslim leader Abū ʿAbdallāh Muḥammad (depicted as a kind of miracle performing holy man) who in 1299 fought against *nəguś* Wədəm Räʿad (Cerulli 1943:280–84). In the army of *imām* ↗Aḥmad b. Ibrāhīm, people called Š. were present and took part in battles (*šayḫ* Dāwūd, BassHist I: 37, BassHist II: 87; *šayḫ* Dāwā(h), BassHist I:57, 219, BassHist II: 119, 316; *šayḫ* Zammāla [var. Zammāka], BassHist I: 37, 117, BassHist II: 87, 194). *Qāḍīs* in Harär were also called Š. (Cerulli 1931: 53, 57). From a political point of view, even if *šayḫ* ↗Abādir was also a religious leader of Harär (Wagner 1975: 287), there is no evidence to prove the use of Š. as the title of an administrative rank in Ethiopia as was the case for some time in ↗Mogadishu and ↗Berbera (Fiaccadori 1989).

Finally, Š. is the title given to Muslim ↗*zar* (e.g., *šəh* Anbäso, *šəh* Ǝbabo) and to Muslim *zar* healers (Rodinson 1967: 27, n. 7 et passim).

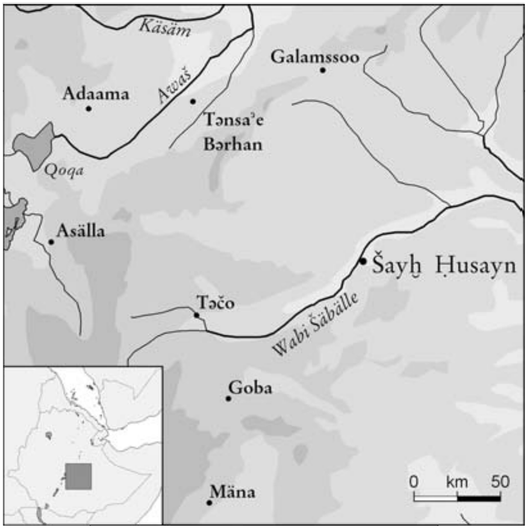
Šayḫ Ḥusayn

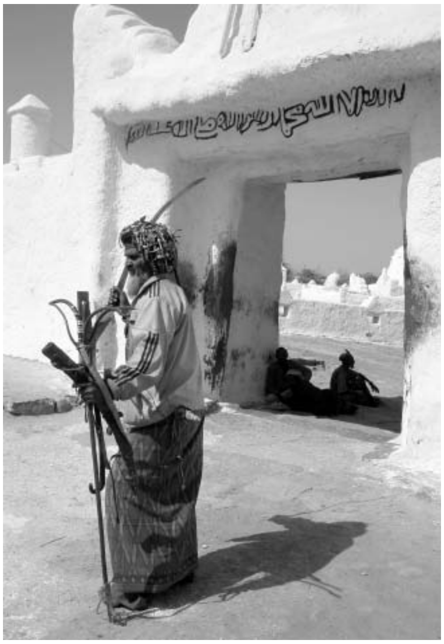
Š.Ḥ. is the place of the shrine (↗*Zāwiya*) of *šayḫ* ↗Ḥusayn, situated in an area called Anaağina or Dirree Šek Huseen (Orom. 'plain of *šayḫ* Ḥusayn') in ↗Bale, ca. 150 km north-east of the town of ↗Robee, at ca. 1,500 m A.S.L. It lies on the edge of a plain above the Qačamsare River, an affluent of the upper course of the ↗Wabi Šäbälle. Topographically, this place is at a juncture between the ↗Oromo highlands and the Ogaadeen-Somali lowlands, and has contributed to spiritual connections between these peoples. In the contemporary administrative framework of Ethiopia, Š.Ḥ. lies in the Gasära-Gololča *wäräda* of the Bale zone (Oromiyaa *kəlləl*). A new gravel road was constructed in 2007 to connect Š.Ḥ. to Mičeta (in West ↗Harärge zone), 170 km to the north.

Š.Ḥ. is the most venerated holy place of ↗Islam in south-east Ethiopia. Twice a year it attracts huge crowds of pilgrims, not only from surrounding ↗Arsi–Oromo areas, but also from more distant regions in Ethiopia and even from Somalia, Djibouti and Northern Kenya.

One of the ↗pilgrimages takes place at the same time as the great pilgrimage to ↗Mecca, during the Islamic month of *Ḏū l-ḥiğğa* up to the celebration of the feast of sacrifice (*ᶜĪd al-aḍḥā*). This parallel with Mecca, corroborated by many other analogies, led authors and concerned communities to consider Š.Ḥ. a local substitute for the *ḥağğ*, or as a "Mecca for the poor".

The other pilgrimage to Š.Ḥ., considered the main one, is performed to commemorate the anniversary of the saint's death. Its date is a matter of confusion between authors. Some incorrectly claim it takes place on a fixed day according to the Oromo solar ↗calendar, in February or in August. Most authors suppose that it corresponds to a day of the Islamic calendar. It is often said to happen during the month of *Rabīᶜ al-awwal*, when the celebration of the birthday of the Prophet ↗Muḥammad (cp. ↗*Mawlid*) takes place. According to informants and through comparison between actual pilgrimages, it becomes clear that the main ceremonies at Š.Ḥ. are performed on the 15th (i.e. the full moon, Orom. *goobana*) of *Ğumādā l-āḫira*, which is called the month of *zaraa* or *zahra* by pilgrims (from Arab. *ziyāra*, 'pilgrimage' or *zahra*, 'flower'?).





The pilgrimage site of Šayḫ Husayn, with the local leading *šayḫ* in the foreground, carrying the typical *ulee* stick of the Šayḫ Husayn pilgrims, a whip and other symbolically important items; photo 2007, courtesy of Denis Nosnitsin

Pilgrims who proceed to Š.Ḥ. are called *garibaa* (from Arab.: *ġarib,* 'foreigner, guest') or *ǧiila* (Orom. 'pilgrim') or *ǧaalallo* (Orom. 'devotees'). They travel as ascetics in groups (men and women together), living from ↗alms and singing hymns (called *baaroo*; Andrzejewski 1972, 1974; Baxter 1987). As a rallying sign, they carry Y-shaped sticks (Orom.: *ulee* or *ḍanqe*), the branches of which are curved outwards and down. *Ulee* is also the name given to the permanent keepers of the sanctuary who lead the ceremonies.

Rituals performed at Š.Ḥ. follow a course determined by the sacred geography of the place. Before entering the sanctuary, pilgrims gather on the hill of Waalenso dominating the plain of Annaaǧina, where they sing songs in praise of Š.Ḥ. The beginning of the sacred area is marked by two broad ↗sycamore trees. The sanctuary itself is enclosed by stone walls. At the entrance, on the right of the door, there is a sacred black stone that is kissed by those entering (the analogy with the *haǧar al-aswad* ['The Black Stone'] in the Kaᶜba of ↗Mecca is obvious). Devotion is focussed on the domed mausoleum (Arab. *qubba*) of the saint. At the time of ceremonies, it is draped with green and red curtains. The tomb is in a crypt surrounded by four stone columns. It is reached through a low door. Inside devotees usually take some of the dust of the sacred lime of the floor and the walls (Orom. *ǧawara*, probably from Arab. *ǧawhara*, 'precious stone'), a substance they swallow, rub their body with or bring back home, as it is considered to be endowed with healing properties. Next to this shrine, the second most important part of the sanctuary is the mosque dedicated to ᶜAbdalqādir al-Ǧīlānī, the Baghdadi founder of the *Qādirīya* ↗Islamic brotherhood, the most widespread throughout the Horn of Africa. Outside the walls, there are two smaller *qubba* for the father and the mother of the saint, which are also honoured by pilgrims. Within the sanctuary, the pond of Haroo Lukkuu is fed by a spring, allegedly discovered through a miracle by the saint. It is also called *zamzam*, again by analogy with Mecca. Its water is considered holy and to have healing powers. Outside the sanctuary there are two rainwater ponds (called Imaro and Dinkiro) for more ordinary use. On the slopes of Qačamsare pilgrims visit a series of caves and other places linked to miracles worked by the saint. In the "cave of the snake", stone formations are seen as a python petrified by the saint. The "cave of the horsemen" is where his enemies were turned into stone. In the "cave of honey", walls of black stone ooze water. In the "cave of the sinners" white pebbles are collected which are then thrown into the "valley of sins" for the sake of purification. In the "cave of herbs", pilgrims make a vow while pulling a sprig of grass.

Devotion to *šayḫ* Ḥusayn probably goes back to the 13th cent., when this saint was (supposedly) the agent of the propagation of Islam in ancient ↗Bale. However, the pilgrimage to Š.Ḥ., in its present form, began to take shape at the end of the 18th cent., when *amīr* ↗ᶜAbdaššakur b. Yūsuf of Harär built the mosque dedicated to ᶜAbdalqādir al-Ǧīlānī, on the holy site of the tomb of *šayḫ* Ḥusayn, probably in order to consolidate the practice of Islam throughout the Oromo populations. A Somali *šayḫ*, *āw* Muḥammad, was put in charge of that mosque, which became the centre of diffusion of the *Qādirīya* in the region (Braukämper 1989:121). Later, it became the meeting place of other brotherhoods, particularly the followers of *šayḫ Aḥmad b. Idūs*, to which the custodians of the sanctuary adhere. Because of its very deep roots and through its diffusion in vast ethnic and religious networks, the shrine of Š.Ḥ. has long been a melting pot of Islamic practices and local systems of belief drawing mainly on Sidaama, Oromo and Somali cultures. Several authors (CerStud II; Braukämper 1989; Abbas Hajji 1991) consider the pilgrimage to Š.Ḥ. to be an Islamized version of older Oromo pilgrimages to the ↗*abbaa muuda*, the high-priest of the Oromo religion. This hypothesis is confirmed by many elements in the rituals performed by pilgrims. However, it is not known to what extent Oromo traditional religion had been moulded by the influence of Islamic societies of ancient Bale before the 16th cent.

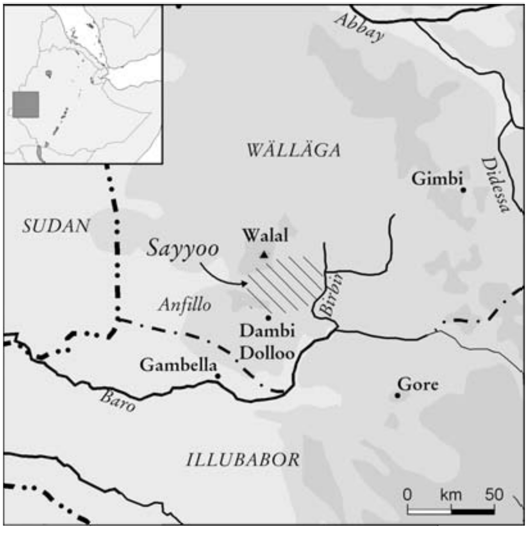
Säyṭan ↗Devil

Sayyoo

S., according to ↗Oromo oral tradition, is the name of one of three clans of the ↗Mäč̣č̣a who crossed the River ↗Gibe and settled in southwestern ↗Wälläga at the beginning of the 18th cent. Upon arrival in the region, the S. occupied the area stretching from Tulluu Walal to the ↗Anfillo forest near the River ↗Baro. Since then, the name has come to refer to both the people, known collectively as the *Ǧaᵓan Sayyoo* or the six sub-clans of S. (Daalle, Laaloo, Garǧeeda, Haw, Halaku and Galaan), and the geographical area where they live, today also designated as Dambi Dolloo. S. is also the name of a *wäräda* today.

Until the 1880s the settlement S. was a small Saturday market place frequented by farmers from the surrounding region which also served as a buffer zone between four local strong men who had emerged as regional leaders as the Oromo ↗*gadaa* government declined (cp. ↗*Mooti*). These were ↗Ǧootee Tulluu of ↗Gidaamii (later of ↗Qällǝm), Abbaa Gimbi of Busasse (Anfillo kingdom), Abbaa Dasa of Galaan, and Abbaa Gossa of Burayuu. After consolidating their power in their respective territories, the men started to expand towards the buffer zone in their quest to gain control of the marketplace and the trade at S. When Mǝnilǝk's general ↗Gobäna Dač̣i appeared in the region in 1886, Ǧootee, who tried to expand his power over all of S., submitted to him without resistance. In exchange, he achieved autonomy for his domain and was given some 2,000 rifles. This changed the balance of power in the region in favour of Ǧootee who was then able to establish full control over S. in 1886.

Ǧootee's moves coincided with growing ↗Mahdist involvement and British presence in the region. The British occupied the Sudan in 1898 and decided to draw western Ethiopia, which they viewed as potentially more profitable



than the Sudan itself, into their economic orbit. During the Anglo–Ethiopian boundary delimitation talks (1902), Britain sought to establish a commercial enclave in Ethiopia. In 1904 *aṣe* Mənilək II agreed to allow the British use of a trading post as an inland free-port. In 1907 the post was established at the town of ↗Gambella south of S. and soon emerged as a prosperous commercial entrepôt in south-western Ethiopia. This accelerated the growth of the town of S. Much of the trade from there, which, prior to the establishment of the Gambella post, was oriented toward the Sheikdom of ↗Beni Šangul to the north, quickly shifted south towards Gambella.

In the same year as the inland port was established, ↗Greek entrepreneurs from the Sudan began to arrive to take advantage of the commercial opportunity that the natural resources of the region offered. Within one year, about 30 Greek nationals settled in S. to collect such commodities as rubber, wax, ↗coffee, ↗ivory, ↗leopard skins, and civet (↗Zibeth) for forwarding to Europe via the Sudan and Egypt. In exchange, items such as cotton cloth, ↗salt, metal wares, and soap were imported. These goods were transported by human porters, a job opportunity which attracted many local people. In addition to initiating a lucrative trade in S., the Greeks introduced such innovations as alcohol distillation, soap-making, grain mills, oil-squeezing plants, cheese processing businesses, bakeries, coffee processing mills, brick factories, and hotel services. During his tour of S. in 1912, *ləǧ* ↗Iyasu confirmed Dambi Dolloo as the name of the town.

In 1918 Ǧootee Tulluu died. The appointment of *däǧǧazmač* ↗Bərru Wäldä Gäbrəˀel as the first Amhara ruler ended the autonomy of Ǧootee's domain. In 1919 Bərru Wäldä Gäbrəˀel invited American missionaries from the Sudan to enter S. (↗Missions). In the following years, they built the first hospital as well as modern schools. The Italians who occupied S. in 1936 built an airstrip, roads, and new buildings. After liberation, S. continued to develop as a major urban centre. Apart from the settlers who came to the area as soldiers with *däǧǧazmač* Bərru, seasonal labourers, small entrepreneurs and government workers migrated to S. Yemeni Arabs became the dominant owners of small restaurants and shops. Municipal administration began in earnest in 1955 and utility services soon followed. The first public elementary and secondary schools were inaugurated in the late 1950s.

Schimper, Wilhelm

Georg Wilhelm Heinrich S. (in Amh. sources: **ሽምብር**, *ato* Šəmbər; b. 2 August 1804, Lauf/Pegnitz, d. 10 October 1878, ᶜAdwa) was a renowned German botanist, who spent more than 40 years in Ethiopia collecting specimens of plants, mainly in ↗Səmen, the ↗Täkkäze area and the region around ↗ᶜAdwa. S. discovered more new African plant species than possibly any other botanist, and numerous plant species bear the epithet *schimperi*/*schimperiana*.

S. was the son of the engineer and teacher Friedrich Ludwig Heinrich S. and Margaretha Baroness von Furthenbach. From 1828 to 1830 S. studied natural sciences in Munich and entered into contact with ↗Rüppell. In 1834, after a first expedition to Algiers, S. published his thesis under the auspices of the botanist Christian Ferdinand Friedrich Hochstetter in Esslingen, and then proceeded to Alexandria. After research in Egypt and other regions he arrived in ↗Massawa in January 1837. In Təgray *däǧǧazmač* ↗Wəbe Ḫaylä Maryam allowed him to settle in ᶜAdwa. Between October 1837 and May 1840 S. undertook various expeditions, whose results made him a famous botanist.

Financial problems of his sponsors in 1842 forced him to remain in Ethiopia, and he was appointed governor of ↗Ǝntiç̣ç̣o (with 18 village districts). S. also acted as a political advisor and translator for Wəbe, and on 22 April 1843 married the Catholic convert *wäyzäro* Mərṣit in ᶜAdwa (b. ca. 1823/28, ᶜAddi Mäᶜasärät, d. 5 February 1869, ᶜAdwa), who belonged to the landed gentry and who was related to the diplomatic envoy *abba* ↗Ǝmnätu (RubActa II, 223). He had three children with her: Yäšimmäbet Dästa (b. 3 December 1843), Ṭaytu or Ṣ́äḥaytu (baptized 15 December 1845) and *ləǧ* Ǝngədašät (b. 1847, also known as Wilhelm S. junior), the later engineer, and interpreter for the Italians in Eritrea (Smidt

Wilhelm Schimper (seated, left, with white beard), with his family members (his wife seated, right; daughters with children in front of him), among other captives of Tewodros II just after their liberation by the Napier expedition (detail); photo 1868, from the collection of Wallraff-Richartz-Museum, Agfa-Fotorama, Köln

2005: 209f.; for dates s. de Jacobis 2000: 453, 565, 724). Just before his marriage, S. was converted to Catholicism, on 16 April 1843, by de ↗Jacobis, and thereafter furthered the establishment of Catholics in his governorate, especially in ᶜAddi Paša, Ǝntiččo and his second seat Ambasəya. He did not practise this faith, however, after ↗Tewodros II took power (Herbert 1867: 68; de Jacobis 2003: 1500–03).

In June 1850, S. and his collaborator ↗Zander were asked by Wəbe to build a palace and a church, ↗Däräsge Maryam in Səmen, near the village of ↗Däräsge. The buildings, for which S. also supervised the floral decoration of the murals (Markham 1869:64), were finished five years later. Rich botanical collections were also made, sent to Alexander Braun and ↗Schweinfurth, and to the Jardin des Plantes in Paris, for which S. had a standing order.

After the Battle of Däräsge, 1855, Kaśa Ḫaylu was crowned in S.'s Däräsge Maryam as *aṣe* Tewodros II. S., as a former protégé of Wəbe, lost his governor-post, retreated to ᶜAdwa, and his scientific work was blocked by the new ruler. In 1861 the Protestant missionary ↗Bender married S.'s daughter Yäšimmäbet in ᶜAdwa, and in 1863 the missionary ↗Kienzlen married S.'s youngest daughter Ṣ́äḥaytu in ↗Gafat, where, by order of Tewodros, they all had to stay (also after Kienzlen's death). There, S. worked out his topographic maps of Bägemdər and Təgray (Sadebeck 1869), and was later transferred, with all the other captives including his children, to ↗Mäqdäla; among them was a third daughter called Təbleṭ (later married to the merchant Ermyas Kaśa in ᶜAdwa), seemingly from a second wife in Däräsge Maryam. They were released only on 12 April 1868 by the ↗Napier expedition.

S. spent the last years of his life in ᶜAdwa. He continued to write reports on Ethiopia to the German Consulate in Alexandria and other institutions, e.g., on the coronation ceremony of *aṣe* ↗Yoḥannəs IV; or on *aṣe* Yoḥannəs's maltreatment of Ṣäḥaytu, then the wife of the pretender-to-the-throne ↗Kaśa Golǧa. S.'s last surveys were published in 1877. In his last known letter, of 8 May 1878, he described famine in Təgray. S. had at least one more child from a marriage after 1869 and, allegedly, further from other relations.

Gerd Gräber

Schlichting, Christoph

S. (d. after 1729) was a 17th–18th-cent. German Orientalist and one of the better-known students of Hiob ↗Ludolf, though little is known about his life. Two dates are certain: he entered the Academic Gymnasium in Hamburg in 1676, and wrote a note in a manuscript dating from 1729 (Uhlig 1983 A: 76; SixTana III, 456). He was a student of Esdras Edzard in Hamburg, with whom also Ludolf maintained good relations (Behrmann 1902: 46).

S.'s work as scribe and translator for Ludolf helped preserve some of the latter's original correspondence up to the present day.

S. mastered Gəʿəz to such a level that he could write short poems in this language, which he dedicated to such personalities as the theologians Heinrich Opitz and Kaspar Hermann Sandhagen (Behrmann 1902: 49).

The *Homilia Aethiopica de nativitate Domini nostri Jesu Christi*, published by Theodor ↗Petraeus twice in 1659–60, was republished in 1691 by S. using the Ethiopic types cut by Johann Georg ↗Nissel and Theodor ↗Petraeus (Wijnman 1960: xxv). A Latin translation and a description of the Ethiopic characters was provided. The volume also contains ch. VIII of Ludolf's *Theologia Aethiopica*, the *De Ministerio Ecclesiastico* written by ↗Gorgoryos. According to Behrmann (1902: 49), S. composed an *Obtestatio supplex de lingua et studio aethiopico propagando* in 1693. In 1697 Ludolf reports that S. planned to publish "something Ethiopian", but there is no further evidence to that (ibid.). Still in 1697 S. taught at a "Collegium Aethiopicum" in Hamburg (Schröder 1873: 560).

Sophia Dege – Siegbert Uhlig

Schlobies, Hans Martin

S. (b. 15 March 1904, Heydekrug, Memelland, now Lithuania, d. January 1950) was a German Orientalist. He finished his school education at the grammar-sch ool (*humanistisches Gymnasium*) of Insterburg in 1922. S. started his university studies in Königsberg (now Kaliningrad), but soon moved to Berlin, where he studied Oriental languages, including Gəʿəz and Amharic. His main teachers were the assyriologist Bruno Meissner and Eugen ↗Mittwoch. In Berlin S. was promoted to Doctor of Philosophy in 1925 with a thesis on the Akkadian weather god (Schlobies 1925).

In autumn 1925 S. worked as a private tutor for a German family in Ethiopia. Later, he was employed by a German firm in Addis Abäba, and finally he worked as a dragoman (interpreter) at the German Legation there (1927–28). During his stay in Ethiopia S. collected rich linguistic and historical material, especially on local Muslim peoples. He also had the opportunity to visit Yemen.

Back in Germany, S. received several research scholarships from the *Notgemeinschaft der Deutschen Wissenschaft* (1928–30 and 1932–34). The last one enabled him to visit Yemen again. There he had access to the Ancient South Arabian artefacts of the private collection of *imām* Yaḥyā. S.'s scientific interest now became centred on Ancient South Arabia. His most important work in this field is, together with Eugen Mittwoch, the edition of the Ancient South Arabian inscriptions at the Ethnological Museum of Hamburg (Mittwoch – Schlobies 1936–38).

S. worked as a lecturer at the Seminar for Oriental Languages at the University of Berlin (1930–31 and 1934). He taught Ethiopian languages, mainly Amharic and Oromo. He also studied law, apparently preparing to enter the diplomatic service. In January 1935 he started working as research assistant in the Oriental Department of the Foreign Office (Auswärtiges Amt), in 1938 he became Legationssekretär (legation secretary) and in 1942 Legationsrat (legation councillor).

S.'s intention of publishing his Ethiopian materials and composing an Oromo dictionary was never realized due to his early death (in 1950 as a prisoner of war). His legacy as an Ethiopisant owes much to the materials which he collected and which are now kept in the Berlin-Brandenburgische Akademie der Wissenschaften in Berlin. The Ethiopian part comprises Gəᶜəz manuscripts (mainly ↗magic scrolls), card catalogues of Amharic words, personal names and names of plants, Arabic, ↗Harari and ↗Səlṭi texts, and linguistics notes on Oromo, Harari, Səlṭi and other Gurage languages, ↗Argobba, ↗Kəmantnäy etc. The Islamic manuscripts are now catalogued (WagHand: call numbers starting with NL Schlobies), but only two texts have been published (Wagner 1989; in SegBodLes).

Ewald Wagner

Schneider, Roger

S. (b. 29 April 1917, Luxembourg, d. 4 April 2002, Addis Abäba) was an eminent Ethiopisant, epigraphist and philologist. He received his secondary education in Luxembourg. His interest in Semitic languages led him to the Université Catholique de Louvain, where S. attended courses in Assyriology and in Sabaic by Gonzague Ryckmans, and further to the ↗Institut National des Langues et Civilisations Orientales (INALCO) in Paris, where he studied Arabic. After the armistice in 1940 S. returned to Luxembourg and continued his studies there.

In 1945, S. again was a student in Paris. This time he focused on Ethiopian languages, studying Amharic and Gəᶜəz under Marcel ↗Cohen at INALCO and the École pratique des hautes études (EPHE), IV^{e} section, resp. In 1955, after submitting at the EPHE his diplome on Gəᶜəz syntax (published in 1959), S. became a research fellow at the Centre national de la recherche scientifique (CNRS). In 1956 he participated in a CNRS research mission in Ethiopia, with a long stay in Gondär.

In 1957 S., employed by the Ministry of Foreign Affairs, returned to Ethiopia as an expert of the Archaeological Section of the National Library of Ethiopia, in charge of epigraphic materials of Ethiopia. In 1959 he became a member of the French archaeological mission at the Centre of the Research and Conservation of Cultural Property, Ethiopian Ministry of Culture, actively promoting French–Ethiopian co-operation.

S.'s fruitful collaboration with the archeological mission resulted in a series of articles on Ethiopian epigraphy and on early Ethiopian history. He deciphered and published several important inscriptions in Gəᶜəz and Sabaic (for the relevant works, see bibliography in RIÉ I), and also made several significant contributions on the origin and development of the Ethiopian ↗script (Drewes – Schneider 1976; Schneider in SegBodLes). Together with Étienne Bernand and the present author, S. worked on the first two volumes of the *Recueil des Inscriptions de l'Éthiopie* (RIÉ I–II; appeared in 1991).

S.'s pursuits in Ethiopian philology are no less significant. He published several papers on Ethiopian hagiographical works, and contributed to the description and preservation of the ancient Ethiopian ↗manuscripts of the National Library. During his research in the monastery of ↗Gundä Gunde in 1962 S. started to compile an inventory of the monastery's library and was able to discover a number of important ancient manuscripts (s. Schneider 1963; Anfray 2003:368).

In 1973, S. received the Ḫaylä Śəllase I Prize of Ethiopian Studies.

After retiring in 1982, S. remained in Ethiopia, teaching South Arabian and Ethiopian epigraphy as well as early Ethiopian history at Addis Ababa University as a part of his activities at the Mission française d'archéologie.

Abraham Johannes Drewes – Red.

Schoeller, Max

S. (b. 28 July 1865, Düren, Germany, d. 12 May 1943, Zurich) was a traveller in Eritrea and author.

S. grew up in Düren as the son of the industrialist and lord of a manor, Alexander S. (1837–92), and his wife Adele née Carstanjen (1841–1913). Originally, S. was supposed to take over his father's sugar refinery in Jülich, for which purpose he studied chemistry in Freiburg, acquiring the title of Dr. phil. However, he started to get interested in Africa and the German colonies. In spring 1894 he undertook a hunting expedition to the Colonia Eritrea, accompanied by the Swiss botanist and explorer Alfred Kaiser (1862–1930), Ernst Anderssen (or Andersson) and a certain hunter Reich.

In Eritrea, S. met the explorer Georg ↗Schweinfurth. Together, they visited ↗Qoḥayto and cleared out a rock grave. They found 70 skeletons, packed in animal skins, of which 30 skulls were brought by Schweinfurth to the famous anthropologist Rudolf Virchow in Berlin. S. described the grave in his book *Mittheilungen* (1895) which was also translated into Italian. A collection of 34 photographs of this journey is kept in the Biblioteca Civica of Villasanta.

In 1895 S. planned a journey to the Oromo countries, which, however, was not realized. Instead, he travelled to Equatorial East Africa and Uganda in 1896–97, again accompanied by Kaiser, and by the pioneer photographer of animal life, Carl Georg Schillings (1865–1921). S. brought numerous ethnographica with him, which are kept, together with photos, in the Ethnographic Museum of Vienna.

S. was a member of the German Colonial Council and received several decorations and orders. His correspondence is kept in the Federal Archives of Berlin.

Steffen Wenig

School of Oriental and African Studies

The SOAS of the University of London was opened in 1917 as School of Oriental Studies (renamed the SOAS in 1938), originally as a centre for training in the languages and cultures of "Eastern and African peoples, Ancient and Modern […] especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession" (Philips 1967:17). From the beginning language teaching along with historical and cultural studies formed the nucleus of SOAS's mission, though initially mostly focusing on the Indian sub-continent and the Near and Middle East. By the mid 1930s, however, African languages formed an established part of SOAS's coverage. In the last years of that decade, teaching of Amharic and Gəᶜəz was introduced, under the distinguished tutelage of ↗Ḫəruy Wäldä Śəllase during his exile in the United Kingdom with Emperor Ḫaylä Śəllase. Later, between 1948 and 1951, Roy Clive ↗Abraham was the first designated Lecturer in Amharic. Other teachers and researchers of Ethiopian languages at SOAS in the 1950s were Frank Palmer (remembered for his work on Bilin and Təgre especially), Archibald ↗Tucker, and Bogumil Witalis ↗Andrzejewski. Amongst non-linguists we should mention George Wynn Brereton ↗Huntingford, who joined the Department of Anthropology in 1945.

The consolidation of ↗Ethiopian Studies at SOAS originates in the 1960s with the appointment in 1964 of Edward Ullendorff (retired in 1982) to the Chair of Ethiopian Studies that had been especially created for him. Ullendorff was joined in 1965 by the historian Charles ↗Beckingham. Under Ullendorff, teaching of and research into Amharic language and literature became a permanent feature of SOAS first with Arthur Irvine (who joined the staff a little before Ullendorff and retired in 1996), and then with David Appleyard (from 1975 to 2006), who also worked on Agäw languages. Richard Hayward (from 1971 to 2002) researched on a wide range of Ethiopian languages from ^{c}Afar to Zayse, and is known as the pioneer of ↗Omotic studies in the United Kingdom.

Historical research on the region has always been one of the key points of the African History section, and a number of internationally recognised scholars of Ethiopian history have obtained their research degrees from SOAS. Similarly, research and teaching on the Ethiopian region has also figured in the Departments of Anthropology, Music, The Study of Religions, and Art and Archaeology. The latter department has a growing research interest in Ethiopia.

At the time of writing, SOAS is the only university institution in the United Kingdom which is actively engaged in the teaching and research of Ethiopian and Eritrean languages (Amharic is currently the only Ethiopian language taught regularly, though Gə^{c}əz, Oromiffaa and Təgrəñña have been taught in the past), history, social anthropology, and art and archaeology, regularly attracting students and researchers from across Europe and the world.

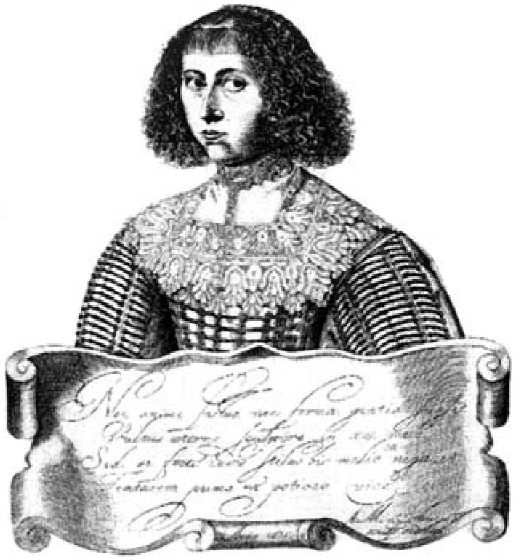
David L. Appleyard

Schurman, Anna Maria Van

S. (also von Schürman[n], Van Schuurman[s]; b. 5 November 1607, Cologne, d. 14 or 15 May 1678, Wieuwerd, near Leeuwarden, The Netherlands) was a Dutch poetess and artist, who wrote one of the first ↗Gə^{c}əz grammars.

In 1636 S. became the first female student in Europe and studied arts and literature, medicine (partly), but mainly philosophy, theology and Semitic languages at Utrecht University. Gysbert Voetius, one of her professors, taught her theology, Hebrew, Aramaic, Arabic, Syriac, but for Samaritan and Gə^{c}əz she was an autodidact. She was an active member of the "Respublica Litteraria" (Van Schurman 1648; Van Beek 2004 and 2010; Irwin 1998). Contemporaries such as Huygens praised her studies, especially her knowledge of Gə^{c}əz (Huygens 1895: 147f.). She used Gə^{c}əz in her polyglot pages, e.g., Ps 19:9 and Ps 110:1 (Van Beek 2004: 88–92, 109, 116; 2010: 73, 82, 172).

Although Hiob ↗Ludolf is praised as the founder of ↗Ethiopian Studies, it should not be forgotten that S. had completed her Gə^{c}əz grammar long before he published his in 1661. In 1647 he visited her in Utrecht and greatly admired her grammar and other products of her intellectual and artistic mind. When he fell ill at her home, she nursed him and drew his picture before he left (Juncker 1710: 43, 94; Mollerus 1744: 806, 814; Schotel 1853: 35ff.).



Self-portrait of Anna Maria Schurman from 1633; collection of 't Coopmanshuis Franeker, The Netherlands

Later S. became a member of the radical Protestant Labadists in Amsterdam, later Altona and Wieuwerd, and sold much of her library. The superintendent of Greifswald, Maier, got hold of some "scripta rariora varia A.M. Schurmanniae autographa Aethiopica, Graeca, Arabica, Ebraea […], nec non Grammatica Aethiopica, Lib. II. Lib. I agit de Lectione, alter de Nomine et Verbo" (*Bibliotheca Maijeriana* 1715: 786). Until this grammar is found, we do not know how much Ludolf owes to her studies.

In her autobiography *Eukleria* she rejected her studies, saying that one drop of the Holy Spirit would have given her more insight in the real meaning of the Bible than all her linguistic studies, Gəʿəz included (Van Schurman 1673: 31f.).

Pieta van Beek

Schuver, Juan Maria

Juan (or Joannes) Maria S. (b. 27 February 1852, Amsterdam; d. 1883, Tek, Dinka area) was a Dutch journalist, traveller and explorer. He was the son of the Dutch coffee and tea merchant Joannes Theodorus Schuver and Theodora Paulina Monica Roothaan. S.'s travels took him to Spain as a war reporter, then to the Balkans and western Asia, later to Cairo and the Sudan. In the southern Sudan S. was killed by Dinka warriors who mistook him and his small group of Zande soldiers for slave traders.

S.'s significance for the study of North-east African history and ethnography is based on two travel accounts: *Between two Niles* and *On the Abyssinian Frontier*. Their historical value lies in the vivid observations of the political system of the region, the rising Mahdīya (↗Mahdists), the Ottoman-Egyptian Sudan, and the expanding Ethiopian empire. His accounts of encounters with the Oromo chief ↗Ǧootee Tulluu, his descriptions of the ↗Kwama, ↗Berta and ↗Gumuz people are unique ethnographic accounts of the time, region, and its peoples. These accounts have served as basic sources for various publications, e.g., by Ernesta Cerulli (CerPeople).

Since 1947 S.'s ethnographic collection, containing a considerable number of objects, has been in possession of the *Rijksmuseum voor Volkenkunde* in Leiden. Included are objects from various ↗Koman-speaking peoples, such as a straw raincoat, an ostrich eggshell apron and necklaces of teeth, as well as a wide variety of other items acquired by S. from his field trips and from markets in Khartoum.

As an explorer, S. had long fallen into oblivion until the extent of his observations was made public to a wide readership by the extensive edition of his African manuscripts by Wendy James, Gerd Baumann and Douglas Johnson in 1996.

Lit.: ArEvang 253–55, CerPeople.

Alexander Meckelburg

Schweinfurth, Georg August

S. (b. 29 December 1836, Riga, Latvia, then Russian Empire; d. 19 September 1925, Berlin) was a German botanist, geographer, and ethnographer, who explored especially the northern Ethiopian borderlands, ↗Eritrea, central Sudan and the ↗Nile valley.

S.'s father originated from the area of Heidelberg where S. went to study in 1857. After completing his naturalist studies in Munich and Berlin (1862), he went on his first expedition to the Nile countries in 1864, through ↗Nubia, and then to the Red Sea coastal region south of ↗Sawākin, reaching the Ethiopian borderlands (1864–66). Back in Germany he published his *Beitrag zur Flora Aethiopiens* (1867) which won him the support of the Humboldt Foundation for his next journey into inner Africa, to discover the watershed between the Nile and Congo river systems, one of the last secrets of central Africa of that time.

In 1868 in Khartoum S. made an agreement with the Coptic trader Ġattas which allowed him to join an expedition of Sudanese ↗ivory traders into the Baḥr al-Ġazal region, which left ↗Khartoum on 5 January 1869. In their company, S. travelled through the territories of the Dinka, Jur (Luo) and Bongo. In January 1870, one year after his departure from Khartoum, he travelled alone through the country of the "Niam-Niam" (perceived as "cannibals" by northern Sudanese), i.e. Zande (Azande). At "Monbuttu" (Mangbetu), where he stayed for nearly a year, S. became the first European to have contact with Central African pygmies (Aka Mbuti). In the Uelle River, running westward, he found proof that he had indeed crossed the Nile-Congo watershed. His travel account which was received with great enthusiasm (1874) was immediately translated into English, followed by six other European languages.

From winter 1873 to spring 1874 S. accompanied Gerhard ↗Rohlfs into the Libyan Desert exploring the al-Ḫarga oasis. The following year, he came to Egypt following an offer of the *ḫidīw* ↗Ismāᶜīl where S. founded the Geographical Society in Cairo. From 1875 to 1889 S. lived in Cairo from where he started for at least twelve expeditions, most of which led him into the Arabian Desert between the Nile and the Red Sea. In 1881 he travelled to southern Arabia and ↗Soqotra (s. EAE vol. 5). He explored the Nile valley between Asyut and Aswan in 1882, the coast of Marmarica in 1883 and the geological aspects of the region of Cairo and Gizeh in 1883 and 1887, ending his Cairo term with another visit to the ↗Yemen in 1888–89.

Once back in Berlin, S. was employed in the Botanical Gardens, but soon took up travelling again, writing books and numerous articles in between. In 1891, 1892 and 1894 he visited Italian Eritrea (in 1894 in collaboration with Max ↗Schoeller).

S. compiled extensive botanical, anthropological and ethnographical collections, of which some are kept in Berlin in the Ethnographical Museum and the Botanical Garden.

Script, Ethiopic

Elaborated by the mid-4th cent. A.D. on the basis of a consonantal script attested in South Arabia, the E.s. is the only syllabic alphabet ever used by the Semitic-speaking peoples (the other writing systems attested with certainty among them are different varieties of the consonantal alphabet and the syllabo-ideographic cuneiform script borrowed from the Sumerians). From the typological and, to a certain extent, historical points of view, the E.s. is classified among the syllabaries (or rather alphasyllabaries) which are wide-spread in India (including Brāhmī and Kharoṣṭhī) and South-Eastern Asia (cp. Jensen 1969:337, 351). It is often called the Gəᶜəz script (also rarely Abyssinian or Ethiopian–Eritrean script) or, to avoid any geographical connotations, *fidäl* (ፊደል, i.e. 'letter[s]') and, in daily conversation in Ethiopia and Eritrea, sometimes after the language in which it is used (i.e. Amarəñña [↗Amharic] or ↗Təgrəñña). The Gəᶜəz term *fidäl* is already mentioned by Ludolf (1661:1, 468; 1698:102), but is of obscure origin (cp. LesCDic 155).

Genesis of the consonantal script

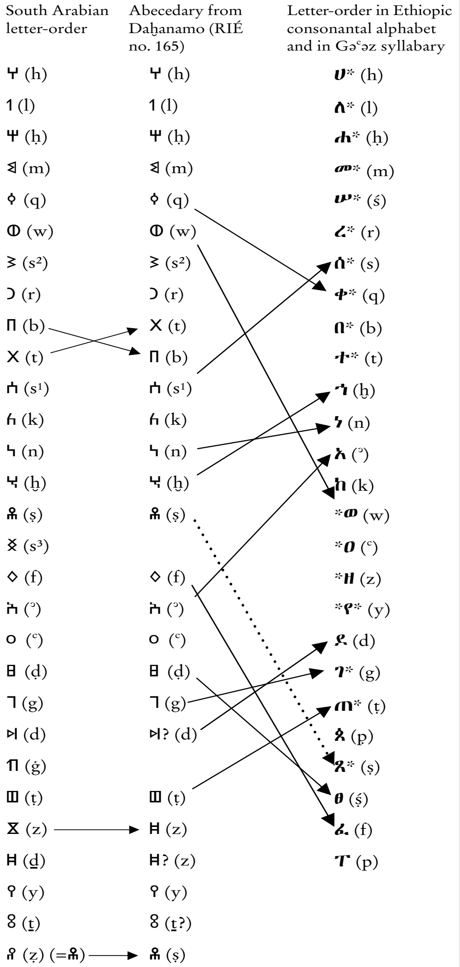
The problem of the origins of the original, unvocalized writing system from which the E.s. stems still remains debatable. In 1841 Wilhelm Gesenius and Emil Rödiger succeeded in deciphering the South Arabian monumental script (cp. ↗Epigraphic South Arabian) thanks to the close resemblance of the majority of its characters to the E.s. As a result, the hypothesis about the emergence of the E.s. under direct South-Arabian influence became self-evident, and, after the discovery of early Sabaic ↗inscriptions at the sites of ↗Yəḥa, Ǝnda (Abba) ↗P̣änṭälewon near ↗Aksum and ↗Käskäse, it was explicitly formulated by Enno ↗Littmann (DAE IV, 41, 78).

Adolf ↗Grohmann (1915) tried to demonstrate that the script of early Sabaic graffiti (which he also designated as "die sabäische 'Kursiv'form") rather than the ductus of monumental texts ought to be considered as the real basis for the development of the E.s. The hypothesis proposed by Ryckmans (1955: 4f.) and supported by Drewes (1955: 122) and later by Garbini (1979: 80f.) and Ricci (1984: 256), which sees the origin of E.s. in the Thamūdic script, is hardly tenable, in view of the lack of any trace of contacts between non-Sabaean population of Arabia and pre-Aksumite Ethiopia. Moreover, the term "Thamūdic" is an artificial label applied to a conglomerate of undetermined and non-homogeneous Arabian writings. In 1976 Drewes and ↗Schneider returned to Grohmann's conception, but admitted the possiblitity that some influence of South Arabian monumental script on the evolution of the E.s. is not excluded. Some years later Schneider (in BodSegLes) assumed that the script of South Arabian graffiti (which he too called "cursive") had been introduced into Ethiopia earlier than the monumental one.

Recently, formal similarities of characters found in Ethiopian Sabaic graffiti and in newly discovered documents on wood from ancient Yemen have been pointed out (Frantsouzoff in PICES 15). Two possible explanations were proposed: either the South Arabian minuscule writing proper to these documents was known in Ethiopia, or both writings developed independently, yet follow the same trends, from a common source – the South Arabian monumental script.

A tentative chronological classification of the consonantal script of the Gəᶜəz inscriptions, proposed by Drewes and Schneider (1976), distinguishes between "Protoethiopic", i.e. the script of early Aksumite graffiti still close to the South-Arabian script, and "ancient Ethiopic", the most ancient form of the E.s. proper. The criteria for this classification are not only the shape of certain graphemes, but also the variations in size and position of graphemes. In "Protoethiopic", there are letters of medium size and medium level (በ or ገ), those prolongated upwards (as አ, ሐ, ሰ) and those prolongated downwards (as የ and ጸ). The earliest stage of "Protoethiopic" is represented by RIÉ nos. 181 (written from right to left) and 180. The inscriptions RIÉ nos. 182 and 183 represent the second stage of "Protoethiopic".

Table: The order and shapes of the letters in Epigraphic South Arabian consonantal alphabet and in Gəᶜəz syllabary.



South Arabian letter-order	Abecedary from Daḫanamo (RIÉ no. 165)	Letter-order in Ethiopic consonantal alphabet and in Gəᶜəz syllabary
𐩠 (h)	𐩠 (h)	ሀ* (h)
𐩡 (l)	𐩡 (l)	ለ* (l)
𐩢 (ḥ)	𐩢 (ḥ)	ሐ* (ḥ)
𐩣 (m)	𐩣 (m)	መ* (m)
𐩤 (q)	𐩤 (q)	ሠ* (ś)
𐩥 (w)	𐩥 (w)	ረ* (r)
𐩦 (s^2)	𐩦 (s^2)	ሰ* (s)
𐩧 (r)	𐩧 (r)	ቀ* (q)
𐩨 (b)	𐩩 (t)	በ* (b)
𐩩 (t)	𐩨 (b)	ተ* (t)
𐩪 (s^1)	𐩪 (s^1)	ኀ (ḫ)
𐩫 (k)	𐩫 (k)	ነ (n)
𐩬 (n)	𐩬 (n)	አ (ᵓ)
𐩭 (ḫ)	𐩭 (ḫ)	ከ (k)
𐩮 (ṣ)	𐩮 (ṣ)	*ወ (w)
𐩯 (s^3)		*ዐ (ᶜ)
𐩰 (f)	𐩰 (f)	*ዘ (z)
𐩱 (ᵓ)	𐩱 (ᵓ)	*የ* (y)
𐩲 (ᶜ)	𐩲 (ᶜ)	ደ (d)
𐩳 (ḍ)	𐩳 (ḍ)	ገ* (g)
𐩴 (g)	𐩴 (g)	ጠ* (ṭ)
𐩵 (d)	𐩵? (d)	ጰ (p̣)
𐩶 (ġ)		ጸ* (ṣ)
𐩷 (ṭ)	𐩷 (ṭ)	ፀ (ṣ́)
𐩸 (z)	𐩹 (z)	ፈ (f)
𐩹 (ḏ)	𐩹? (z)	ፐ (p)
𐩺 (y)	𐩺 (y)	
𐩻 (ṯ)	𐩻 (ṯ?)	
𐩼 (ẓ) (=𐩮)	𐩮 (ṣ)	

1. The reliable rearrangements of characters are marked with uninterrupted arrows, the hypothetic ones – with peched lines.
2. The Ethiopic characters attested in RIÉ no. 239 I and II are designated with an asterisk put respectively at the right or at the left of the character.

The first stage of "ancient Ethiopic" is found in the inscription of ᶜAnza (RIÉ no. 218), but the same type of script is also used in ↗ᶜEzana's documents (RIÉ no. 185 II). Whereas the graphemes አ, ሐ, ሰ are still higher than በ or ገ, the lower borderline is the same for all graphemes. The final stage of "ancient Ethiopic" is represented by a few vocalized inscriptions of ᶜEzana (RIÉ nos. 187–89), with the same size and level of all graphemes.

In "Protoethiopic", the shapes of many characters remained almost the same as in South Arabian writing. For instance, in RIÉ no. 181, only six letters differ from their Sabaic counterparts: *ḫ* is represented upside down, s^2 and *d* are turned at 90° to their normal position, *n*, *k* and ᵓ are reversed. Some of these changes, viz. for *ḫ*, s^2 and *d*, became fixed in standard E.s., others proved to be accidental. All the characters of “ancient Ethiopic” and of the E.s. proper, in comparison with South-Arabian script, can be classified as follows (s. table):

1) those which were only slightly modified (ሰ, ቀ, በ, ነ, አ, ከ, ወ, ዐ, የ, ገ, ጸ, ፀ);
2) those which retained their general contours, but were turned 180° (cp. 𐩢 and ሐ, 𐩧 and ረ), 90° (cp. 𐩣 and መ, 𐩦 and ሠ, 𐩵 and ደ) or less with simultaneous change of the angle between the bars (cp. 𐩩 and ተ);
3) those which lost one bar (cp. 𐩠 and ሀ, 𐩸 and ዘ, 𐩷 and ጠ);
4) those which were more radically transformed (cp. 𐩡 and ለ; 𐩭 and ኀ; 𐩰 and ፈ).

Certain South-Arabian graphemes (*ġ*, *ẓ*, *ś*, *z*, *ṯ*) are absent from the E.s. due to differences in the phonological systems of Gəʿəz and ↗Epigraphic South Arabian. After the merging of *z* and *ḏ* into *z*, the Sabaic sign for *ḏ* (of more frequent occurrence than *z*) was chosen to render the resulting phoneme.

The South Arabian word divider, i.e. a vertical bar (|), appears in Aksumite epigraphy (even in the late Aksumite inscription of ↗Ham, RIÉ no. 232), but is eventually replaced with two dots put vertically (፡). In some inscriptions of ʿEzana two small horizontal bars appeared at the ends of the divider (RIÉ nos. 186–88). Only such bars, without a vertical line between them, were used in the two fragments of an inscription found in South Arabia and dated from the reign of ↗Kaleb (RIÉ no. 195 I–II). The transformation of these bars into dots is attested in an Aksumite graffito, RIÉ no. 252.

In Aksumite epigraphic documentation neither *p* nor *p̣* occurs. Nevertheless, the former at least (evidently derived from the Greek π, cp. the specific variant of this character used as numeral: Π → ፹ → ፐ) must have been known at the time (↗Numbers, numerals, numeral systems). It is often attested in the onomastics of the ↗Bible (the main part of which had probably been translated in Gəʿəz by the 6th cent.). The emergence of its emphatic counterpart *p̣*, formed on the graphic basis of *ṣ* (ጸ → ጰ), could be more recent.

Direction of writing

Numerous South-Arabian inscriptions in Ethiopia and Eritrea are “boustrophedon”, where the writing direction alternates between right-to-left in one line and left-to-right in the next one. Both directions appear to be acceptable in Sabaic graffiti of the Ethiopian-Eritrean region. Almost one third of them (40) is written left-to-right, 31 consisting of one line, 9 of two lines. Similarly, both directions are found in “Protoethiopic” inscriptions (RIÉ no. 181 is written right-to-left). The spread of Greek writing in Ethiopia, albeit limited, must have played an important part in the final adoption of the left-to-right direction in “ancient Ethiopic” and in the E.s. proper.

Letter-order in Ethiopic consonantal alphabet and in Gəʿəz syllabary

The South-Arabian alphabet of Daḫanamo (RIÉ no. 165) gives clear evidence that the so-called South Semitic letter-order, used in ancient Yemen, was known in pre-Aksumite Ethiopia too. The main difference is the absence of the letters *ġ*, *ẓ*, *ś* and *z*, which probably reflects local phonetics (s. Frantsouzoff in PICES 15, 575). Two fragments of an abecedary, also found in Daḫanamo (RIÉ no. 239 I–II), show a different letter-order, closer to the traditional Ethiopic syllabary called *Hahu* (for still another alphabet order s. ↗*Abugida* and *Hahu*). Changes versus the South-Arabian order are mostly due to the tendency to range together graphemes of similar shape (Ryckmans 1984: 81).

Names of the signs

The names of the Gəʿəz characters became known in Europe thanks to the Ethiopian traditional scholar ↗Täsfa Ṣəyon, who mentioned them in the preface to his 1548 edition of the Gəʿəz N.T. (↗Incunabula). Since then, they appear regularly in works on ↗Ethiopian studies, sometimes with minor differences (Ludolf 1702; Isenberg 1841). In his grammar, ↗Dillmann (1899, Taf. I) gave those names in two columns: according to Isenberg 1841 and to the 1548 N.T. edition (s. also a slightly different version in *Abugida* and *Hahu*). The authenticity of the traditional names is confirmed by the genuine Gəʿəz texts mentioning some of them (s. Getachew Haile in PICES 3; Conti Rossini 1941; cp. also the works by traditional scholars, e.g. THMDic 45–49; DTWDic 10).

Both in Ethiopia and Eritrea, the names of Gəʿəz characters are no longer in use. Instead, every syllabic symbol is called in accordance with its pronunciation (*ha*, *hu*, etc.). In order to distinguish between signs having the same phonetic value in Amharic, several descriptive designations for them were elaborated, such as **እሳት፡ ሰ** (‘*s* as in *əsat*’ = ‘fire’) or **ንጉሥ፡ ሠ** (‘*ś* as in *nəguś*’ = ‘king’; s. Leslau 1995: 3).

Vocalization of consonantal Ethiopic script

A major reform in the history of the E.s. was its vocalization. No information about this innovation has been preserved. As the epigraphic evidence suggests, it took place during the reign of ᶜEzana, even before he converted to Christianity (the vocalized inscriptions RIÉ nos. 187, 188 certainly belong to his pre-Christian period). The introduction of new syllabic signs was not gradual; they appeared at once, alongside with the special symbols for labiovelars: e.g., ጓ in *Agʷezat*(*a*) (RIÉ no. 187.10, 11, 16); ኰ in *kʷəllu* (RIÉ no. 189.7); ኈ in *ḫʷəlqo* (RIÉ no. 189.22), etc. However, independently of this reform some attempts to introduce *matres lectionis* into the Ethiopic consonantal writing were undertaken. Two characters, *w* and *y*, were employed for rendering *u*, *o* and *i* at the end and sometimes even in the middle of the words. Their use, which proved to be very limited and short-termed, is attested in the legends on the coins of the kings ↗MḤDYS and ↗Gersem as well as in the only partly vocalized inscriptions of *ḥaṣ́ani* ↗Danəᵓel.

The main principle of the vocalization reform consisted in the addition of small bars or circles to a consonantal character, or even in a partial change of its shape so as to create seven graphic variants for rendering "consonant + vowel" syllables. These variants are designated by Western scholars with the term "order", while in Ethiopia they still bear their traditional names (cp. HabTent 33):

1st order (C + *ä*; a character preserved its original shape): ግዕዝ, *gəᶜəz*;
2nd order (C + *u*): ካዕብ, *kaᶜəb* (lit. '2nd');
3rd order (C + *i*): ሣልስ, *śaləs* (lit. '3rd');
4th order (C + *a*): ራብዕ, *rabəᶜ* (lit. '4th');
5th order (C + *e*): ኃምስ, *ḫaməs* (lit. '5th');
6th order (C + *ə* or zero): ሳድስ, *sadəs* (lit. '6th');
7th order (C + *o*): ሳብዕ, *sabəᶜ* (lit. '7th').

For labiovelars (*qʷ*, *ḫʷ*, *kʷ*, *gʷ*) five variants were elaborated, but with no special names (cp. at the beginning of EAE vols. 1, 2, Transliteration and Transcription Tables: Table 2).

The vocalization of the E.s. might have been influenced by one of the early Indian writing systems, Brāhmī or esp. Kharoṣṭhī (s. also ↗India, relations with). The discovery of a few short inscriptions, dated into the first three centuries A.D. and written in a variety of the Brāhmī script, side by side with two or three unvocalized Ethiopic graffiti in the cave of Ḥōq in Soqoṭra (s. EAE vol. 5) makes it probable that such a script was also known in the ↗Horn of Africa. In both the above-mentioned Indian writing systems the basic form renders a consonant with the short *a*. As for the other principles of the formation of syllabic signs, this process in Brāhmī consists of some stages, while in Kharoṣṭhī as well as in the E.s. the variants derive directly from the basic form. Albeit only a few signs of Kharoṣṭhī have been found yet in Ethiopia (exclusively in Indian coin legends, s. Chatterji 1968: 54), there are good reasons to consider it as a probable model for the vocalization of the Gəᶜəz consonantal writing (s. also ↗Inscriptions: Gəᶜəz inscriptions in Ethiopia/Eritrea in antiquity).

Further development of the syllabary

The next reform of the syllabic script undertaken presumably in the 14th–15th cent. was the invention of new symbols (such as ቸ, *č*, ጀ, *ǧ*, ጨ, *č̣* etc.) for the sounds absent from Gəᶜəz but characteristic of Amharic, by that time a court language of the ruling ↗Solomonic dynasty. Ullendorff (1951a: 214) mentions an Amharic manuscript dating to the late 16th cent. as the earliest manuscript using such letters (Oxford, the Bodlean Library, Clarke Or. 39). Thus, the E.s. syllabary came to be used for writing in Amharic and, later, Təgrəñña.
Further symbols were invented for such labialized consonants (followed by *a*) as ቧ, *bʷa*, ጧ, *ṭʷa* etc., for the spirantized consonants (ኸ, *k̠*, ቐ, *q̠*) of Təgrəñña, as well as for such imported consonants as ቨ, *v*. However, no elimination of certain Gəᶜəz graphemes, superfluous in Amharic, took place. As a result, certain sets of graphemes employed in written Amharic (such as ሀ, ሐ, ኀ) do not differ in pronunciation and are to a certain degree interchangeable. Their employment is not standardized, but tends to follow Gəᶜəz written tradition (cp. ኀይል, *ḫayl*, 'power' vs. ሐውልት, *ḥawəlt*, 'stela', both pronounced with initial [*ha*] – in contrast to Təgrəñña, which has preserved the difference between ሀ [*ha*] and ሐ [*ḥa*]). In Eritrea, the graphemes ሠ, ኀ, and ፀ have been eliminated from today's Təgrəñña, as they are pronounced in the same way as ሰ, ሀ, and ጸ, resp. (different from Təgrəñña of ↗Təgray, Ethiopia, where ጸ has been eliminated).

An attempt at creating a new syllabary, more appropriate to the phonetic system of Amharic, is ascribed to ↗Mənilək II (s. GSMen 94; Demoz in SegBodLes 399ff., table II; the "cursive script"). But neither the enforcement of this new script, nor other, less drastic, proposals for the orthographic reform of Amharic, by Ethiopian, Eritrean or European scholars (ibid.; Leslau 1954; Cowley 1967), were ever achieved (cp. also *Amarəñña mäzgäbä qalat*, 2001, prepared by the Ethiopian Languages Research Center [↗Ethiopian Language Academy]). The E.s. was carefully preserved from the fall of Aksum up to the mid-20th cent., in the first line thanks to the ↗Ethiopian Orthodox (Täwaḥədo) Church, but also due to its obvious applicability and convenience.

It should be noted that within the tradition of ↗magic literature, "secret signs" were sometimes produced (cp. ↗Magic scrolls). Most probably, they have no relation to the regular characters of the E.s., and seem to have been borrowed from the cryptic alphabets based on the Arabic one which were known among the Copts. In any case, the close parallels to some of those signs, especially to the so-called "caractères à lunettes", can be found in the alphabets collected in *Šawq al-mustahām fī maᶜrifat rumūz al-aqlām* (the essence of most important issues called 'The Lover's Desire'/ teaching about the enigmatic letters) ascribed to the semi-legendary early Islamic writer Ibn Waḥšiyya (cp. ed. Hammer 1806).

No device for marking gemination has been developed in the E.s. (but cp. CRAbb 16f.), although several European scholars employed in this function special symbols such as two dots over the corresponding consonants, or a sign similar to the Arabic sign of emphasis *šadda* (such as Johannes ↗Kolmodin did for Təgrəñña, s. KolTrad). ↗Irob writers in ↗Təgray have started to use the two dots to mark geminations in printed texts written in Irobəñña (cp. ↗Saho).

In its present form, the E.s. includes 202 graphemes for Gəᶜəz and 251 (rare graphemes excluded) for Amharic. Capital/small letters are not distinguished. Punctuation signs include the word divider ፡ (*näṭəb*); marker of the sentence end ። (*mulu näṭəb*); semicolon/colon ፤ (*dərrəb säräz*); and ፣ ([*näṭäla*] *säräz*), corresponding roughly to a comma.

The E.s. was widely employed by missionaries to create the first samples of written texts in other languages of Ethiopia – ↗Təgre, ↗Oromiffaa (starting from 1871, replacing a previous Latin orthography of Oromiffaa), ↗Konso etc. In the 20th cent., when the creation of alphabets for previously unwritten languages of Ethiopia began during the reign of *aṣe* ↗Ḫaylä Śəllase I (s. ↗Literacy), a decision was made to adapt the E.s. syllabary to the specific requirements of these languages. This implied both the modification of the writing system and the introduction of new symbols, for sounds specific for those languages (e.g., implosive *ɗ*, retroflex *ɖ*, retroflex-implosive *ḍ*, or, in the case of ↗Bilin and other ↗Agäw languages, **ጝ** for *ŋ*) – a task carried out by the Ethiopian Language Academy. Most non-Semitic languages, such as Oromiffaa, ↗Sidaama, ↗Kambaata etc., later abandoned the *fidäl* in favour of a newly fixed orthography in Latin script. At present, the Ethiopic syllabary is mostly used for writing in Ethio-Semitic languages: Gəᶜəz, Amharic, Təgrəñña, Təgre, ↗Harari, ↗Səlṭi, ↗Čaha, but also for some non-Semitic languages such as ↗Qabeena, ↗Wälayyta, or Irob.

Še ↗Benç̌

Seals

The use of S. in Ethiopia is relatively recent. Ethiopian ruler’s use of S. with a ↗lion rampant was mentioned in several European publications from the 16th cent., especially by ↗Jesuit missionaries, but no traces of it have been found and the pattern of the reproductions known is undoubtedly of foreign origin (Pankhurst 1973: 180). The use of S. by Ethiopian rulers is better documented during the Gondärine monarchy: the Chronicle of ↗Iyasu I is the first to mention a royal S. (**ማኅተም**, *maḫtäm*), as well as the reception of letters from abroad adorned by S. (Pankhurst in PICES 6, 401f.). But the known letters written by Iyasu I and his successors to foreign correspondents bore no S. (Pankhurst in PICES 6, 402–15). Some letters sent by ↗Susənyos and Iyasu I to Europeans also had the design of a cross enclosed by the letters **ኢየሱስ** (*Iyäsus* ‘Jesus’) at the top, instead of a S. Foreign travellers in Ethiopia drew attention to this practice of Ethiopian leaders in the early 19th cent. (Pankhurst 1973: 180).

During the first half of the 19th cent. some Ethiopian noblemen, including *ras* ↗Wäldä Śəllase of Təgray and *däǧǧazmač* ↗Wəbe Ḫaylä Maryam, made use of real S. in their foreign correspondence (Pankhurst 1973: 184f.). *Aṣe* ↗Tewodros II was nevertheless the first to use it systematically in his letters. His S. is adorned by a lion rampant, which served as a model for his successors until ↗Ḫaylä Śəllase I.

During the second half of the 19th cent., only kings and dignitaries of high rank used S. Later their use became more common in Ethiopian society, and they were even eventually adopted by lower rank chiefs such as ↗*azzaž* or ↗*qäññazmač*. The popularity of the use of S. grew with the extension and reinforcement of royal power and of the administrative development of Ethiopia in the 20th cent. The expansion of political and economic relations between Ethiopia and foreign countries (↗Europe, relations with; ↗Treaties and conventions, s. EAE vol. 5) also furthered its popularity.

S. had various uses. Used for signing letters sent by chiefs and other authorities to their coun-

Seal of the imperial library and collection of antiquities; ca. 1930, private collection of Berhanou Abebe

terparts in Ethiopia or abroad, they also served as evidence of identity and authenticity on the passes delivered by dignitaries to foreign travellers. They could be affixed to the top of royal proclamations, read in various places of the territory (↗*Awaǧ*). A S. could also be a sign of ownership, affixed especially to manuscripts. It could also be used to take an oath. After the ↗coup d'état of 1916 (s. EAE vol. 2, 1081) which led to the dismissal of *ləǧ* ↗Iyasu, all chiefs were required to affix their S. to the deposition text (GebMolIyas 364). Economic transactions were also concluded with the S., which had, in that case, a legal, contractual value. In case, affixing a S. was a mark of the commitment of its owner and the S. was considered a very personal object.

The S. is in many ways the official and personal representative of its owner. It bears his name but also his title(s), sometimes the name of the region or the city of which he is the ruler, the origin of the holder, or a motto, in Amharic, Təgrəñña, Arabic, Coptic or in a European language, depending on the culture of the owner, on his region but also on his correspondents. The inscription of the S. of *abunä* ↗Peṭros was, for example, written in Coptic, Gəᶜəz, and Arabic, whilst the S. of *ras* ↗Mäkʷännən Wäldä Mikaʾel was written in Gəᶜəz, Italian or French and Arabic (Tornay – Sohier 2007:84, 112).

Except in the case of Muslim leaders such as ↗Abbaa Ǧifaar II, whose S. contain only a legend in Arabic (cp. ill.), the S. were always adorned with symbols and every element was carefully chosen (s. Tornay – Sohier 2007:21). The diameter of the S. may also express the rank of its owner. The place of the S. on the letter was also meaningful and regulated. Only the king of kings and the *abun* had the right to affix their S. to the top of their letters, whilst other dignitaries had to fix it on the bottom of the documents (cp. also Smidt in VarAeth).

The S. was a carefully kept object of value. The king's matrix was under the custody of the ↗*ṣäḥafe təʾəzaz*, a precaution that did not always prevent political problems arising because of the use of the royal S., as is related in various diplomatic sources. Some S. were manufactured abroad, such as those of Tewodros II or of ↗Mənilək II as *nəguś* of ↗Šäwa; most were fashioned in the country, possibly by the clergy and/or by Armenian or Arabic ↗goldsmiths of Addis Abäba. Catholic missionaries also sometimes provided S. to Ethiopian nobles. Matrixes were made of silver, copper, brass or other blendings, engraved or embossed, but the matrixes of most noblemen of the 19th and 20th cent. are untraceable today, except in the case of the S. of Tewodros, whose matrix was brought to England by British soldiers in 1868 (Pankhurst 1973:89; ↗Napier expedition). The absence of such precious artefacts in public collections may be explained by the fact that S. - were, after the death of their owner, broken or had the surface of their matrix scored in order to prevent misuse by non-authorized persons.

Ink was more widely employed than sealing wax. Its colour varied: blue and black ink were often used but the archives of the Ministry of Foreign Affairs in Rome also contains a letter of *aṣe* ↗Yoḥannəs IV with a golden S. and a letter of Mənilək II ornamented by a red S. The meaning of these colours is not known today. Ink was imported from abroad.

The use of S. by individuals decreased after the fall of the monarchy, but is still employed by the Ethiopian administration. In spite of their tiny surface, the S. are valuable and rich historical sources.

Səbəstyanos

The first ↗*märəd azmač* of ↗Šäwa, S. (**ስብስትያኖስ**, also Səbəste, r. 1703–19, d. 27 *Yäkkatit* 1719 [AWTarik 81]) was one of the six or seven sons of ↗Nägaśi Krəstos.

Before his sudden death in 1703, Nägaśi left a will giving his throne at Agânča to his son Akawa, his spear and silver knife to S. and his land and money to all his other children (AWTarik 73; BTafA 505). Akawa thus succeeded his father, but was soon deposed in favour of his brother Dana. S. did not fight his brothers; he went to ↗Märḥabete to serve the ruler Mäzämmər, where he was received with honours and gained esteem by his bravery. Meanwhile, Dana suffered several territorial losses, and his kinsmen decided to displace him in favour of S., who was lured from Märḥabete back to Aganča by a trick.

Even before S. ascended the throne he had repelled the invading ↗Ṭəmmuga and ↗Abbičuu Oromo. These victories brought him much wealth, which enabled him to acquire his own followers. Dana, on the advice of his own people, marched against S. but lost. Shortly after this victory, S. had his kinsmen and friends assembled at ↗Šola Meda for the official mourning of his father. On this occasion, and after having consulted the *maḥammade* of ↗Walašma^{c}, S. pronounced himself *märəd azmač* (BTafA 507; AWTarik 74f.).

S. drove the Karrayyuu Oromo out of Yəfat and managed to restore to Šäwa the region around ↗Doqaqit previously conquered by Nägaśi. He apparently built the town of Doqaqit and governed "all Šäwa" from there (PankHist 186). S. married Tagunstyan (Darkwah 1975: 8), a noblewoman from Dobba, who bore him ↗Abbəyye "Qädami Qal". Later, leaving his son at Doqaqit (AWTarik 80; BTafA 507), S. made ↗Ayne, founded by his father Nägaśi, his capital. S. is credited with founding such towns as ↗Ḥar Amba and Aya Bär (PankHist 186).

Abbəyye, who had no ↗*tabot* for the church of St. Michael he was restoring at Doqaqit, stole one from Ayne. Seeing this as an act of disloyalty, S. marched to Šola Meda where Abbəyye resided, and was killed there, either by his son or by one of the latter's servants. The traditions differ as to the exact year of S.'s death; his rule is estimated at ca. 10–20 years.

Unlike his father, S. never sought the recognition of the emperors at Gondär, and paid them no tribute. The emperors, on the other hand, never recognized S. as Šäwan ruler. S. rather declared Šäwa a sovereign state. He expanded its borders as far as the ↗Awadi, and cultivation of the valley started during his rule (AWTarik 82; BTafA 509). The title S. bestowed upon himself became hereditary and, along with the position, passed from father to son without serious contest for seven generations.

Sophia Dege

Səbḥat Arägawi

Ras S.A. (**ስብሐት፡ አረጋዊ**; b. ca. 1844, d. 25 February 1914, Ak̠ora) was a Təgrayan warrior-prince and governor of ↗^{c}Agamä.

Aṣe ↗Yoḥannəs IV had a policy of weakening the hereditary base of the house of *däǧǧazmač* ↗Säbagadis Wäldu of ^{c}Agamä by imposing overlords on them and transferring them to other units within ↗Təgray. This policy, of partitioning ^{c}Agamä into several districts run by distantly related or even completely unrelated chiefs (Markham

1869:54; Tsegay Berhe 1996:107), reached its peak following the death of *šum ᶜagamä* ↗Arägawi Säbagadis in 1873. Yoḥannəs used the opportunity to appoint a favourite courtier, Tädla Ayba, from the neighbouring area of Kələttä Awləᶜalo, over the traditional territory of the *šum ᶜagame* with the title of *däǧǧazmač* (Caulk 1984:211; BTafY 129; Tsegay Berhe 1996:107). At the death of Aragäwi, his two children, Wäldä Gäbrəᵓel and S.A., reacted in two diametrically opposed ways. The older brother, Wäldä Gäbrəᵓel, who had at that time a family of his own and much to loose, opted for the more traditional way of going to the Emperor's court to wait for royal favours (Caulk 1984:211; Tsegay Berhe 1996:107).

S.A., however, opted to rebel, joining his ↗Irob kinsmen in the escarpments. He was one of the young Təgrayan nobles who had been taken to *aṣe* ↗Tewodros II's court in 1861 (Caulk 1984:211; Tsegay Berhe 1996:107). In the early 1870s, he posed a serious challenge to Yoḥannəs by defeating a series of government expeditions sent against him and by capturing one of Yoḥannəs's appointees in ᶜAgamä. In response, the Emperor appointed Wäldä Gäbrəᵓel over ᶜAgamä, with the title of *däǧǧazmač*, in 1875. This appeased S.A. and he started to frequent the Emperor's court (Caulk 1984:211; Tsegay Berhe 1996:117). He is even said to have fought at the Battle of ↗Gundät in November 1875 on the side of Yoḥannəs. He commanded the ᶜAgamä contingent when Wäldä Gäbrəᵓel reportedly fell ill. However, S.A., not wishing to become a simple courtier, went back to the bush in 1876 in an open revolt against the Emperor's rule (Tsegay Berhe 1996:109f.; Caulk 1984:211). Furthermore, S.A. seems to have quarrelled with his own brother over the acquisition of hereditary ↗*rəst* lands.

Between 1876–81, S.A. continued to challenge Yoḥannəs's government, destabilizing ᶜAgamä and the adjacent lowlands, raiding cattle and waylaying caravans. He is even said to have allied himself with the Egyptians and made his abode among his Irob kinsmen. The Catholics of ᶜAgamä collaborated with him (as they did with his father, Arägawi) looking for his protection to consolidate their fledgling Catholic base, in ↗ᶜAlitena (OMahPh vol. 3, 6; Aleme Eshete 1970/71:57). Some time earlier, S.A. is said to have had a confrontation with Yoḥannəs's troops, apparently led by *baḥər nägaš* Täsfa Maryam of Saᵓəsəᵓ whom he captured and brought to Irobland to hide. In response, the Emperor sent about 3,000 government troops commanded by two of his leading lieutenants, *däǧǧazmač* Tädla Ayba and Mäšäša, who looted the countryside burning down the Catholic churches and missionary residences (Aleme Eshete 1970/71:57; OMahPh vol. 3, 6; Tsegay Berhe 1996:110).

Defiant groups of the Irob among the Buknáyto Catholics ambushed and killed a number of the ruler's soldiers while S.A. struck from behind, restoring to the Irob much of what had been taken as booty (Aleme Eshete 1970/71:57; Caulk 1984:211, OMahPh vol. 3, 6f.). The action further strained the ↗Lazarist's relations with Yoḥannəs and induced diplomatic pressures from European consuls in ↗Massawa (Aleme Eshete 1970/71:57; OMahPh vol. 3, 6). When Wäldä Gäbrəᵓel's health deteriorated, the Emperor appointed S.A. deputy governor of ᶜAgamä with the title of *šum ᶜagame*. This brought an end to the feud between the Emperor's court and the family of Säbagadis. From 1881 onward, S.A. served his Emperor loyally, administering his father's land with his ailing brother. When Wäldä Gäbrəᵓel finally died in 1888, Yoḥannəs appointed S.A. as successor to his brother with the title of *däǧǧazmač* (Caulk 1984:211; Tsegay Berhe 1996:110f.).

S.A. became one of the leading contenders of the post-Yoḥannəs power struggle in Təgray. He was ambivalent in his alliances with *aṣe* ↗Mənilək II, the Italians and members of the feuding Təgrayan nobility in the years between 1889 and 1898. After armed hostilities with *ras* ↗Mängäša Yoḥannəs, the official successor of Yoḥannəs IV, an uneasy truce was concluded in 1892 when S.A. reluctantly recognized Mängäša. Mängäša in turn conferred the title of *ras* on S.A (ErlAlula 141; Tsegay Berhe 1996:154f.). But it was a short-lived peace until 1894 when Mängäša managed to confine S.A. in the prison of ↗Ambalage. The Italian colonial invasion of 1895, however, helped his release. As a consequence, S.A. briefly joined the Italians, who confirmed him as *ras* only to betray them on the eve of the battle of ↗ᶜAdwa. He played a significant role during the battle of ᶜAdwa by launching another front in the strategic mountains of ᶜAgamä (BerAdwa 24f.; Yaqob Beyene 1973:146). Then, S.A. joined a rebellion with his erstwhile rival, Mängäša, against Mənilək, which led to his captivity and exile to ↗Harär for another decade. In 1908, he was restored to his governorship of ᶜAgamä which he ruled until 1914.

In 1914, S.A. died in the battle of Aḵora, in his ᶜAgamä chiefdom, in yet another round of power struggle with his nephew, *däğğazmač* ↗Gäbrä Śəllase Barya Gabər of ^{c}Adwa and central Təgray. S.A. was perhaps one of the most influential politicians of his period. His successors ruled over ^{c}Agamä until the 1974 ↗Revolution (Yaqob Beyene 1973: 146f.; Tsegay Berhe 1996: 157f.).

Tsegay Berhe

Səbḥatä fəqur

The S.f. (**ስብሐት፡ ፍቁር**, 'praise of the Beloved') is a communal daily office in the practice of the ↗Ethiopian Orthodox Täwaḥədo Church.

The S.f. is considered to form a unity with the office of the ↗*Sä^{c}atat*. Correspondingly, in books (both manuscript and printed), the S.f. always follows upon the *Sä^{c}atat* (s. ed. Mogäs ^{c}Ǝqubä Giyorgis 1996/97: 208ff.; ed. Ṭə^{c}umä Ləssan 1999/2000: 221). In some manuscripts (e.g., VatLib Aeth. 30, 47; EMML nos. 1309, 1529), the S.f. appears under the title ↗*Məhəlla*, being also a sort of supplication.

Like the *Sä^{c}atat*, the S.f. is not read during the Easter period (↗*Fasika*) and on major church ↗feasts such as ↗*Lədät*, ↗*Ṭəmqät*, and others. The frequency of use depends on the local church tradition. It can be included into the daily service, or only said on a specific occasion or feast, e.g., the Marian cycle, or during the first seven days of each month (cp. ed. Ṭə^{c}umä Ləssan 1999/2000: 221), or during the period of spiritual retreat (↗Fasting). If the ↗*Maḫlet* or ↗*Sä^{c}atat* is celebrated in the morning, the S.f. could be said right before the Divine Liturgy (↗*Qəddase*) of the afternoon, or late in the afternoon.

The S.f. is always sung in ↗*^{c}əzəl* mode of chant. The melody of S.f. is also called *zema maḫzäni* ('song of compassion', cf. EMML no. 2852).

The S.f. is celebrated in the form of processions inside or outside a church, the ministers carrying a Marian icon, the ↗*tabot*, and the ↗cross. The S.f. is divided in portions according to the days of the week (EMML no. 1529).

In the past, the S.f. had a simpler structure, and varied according to a local tradition. Today, S.f. has fixed and optional/moveable elements. These include the Prayer of Thanksgiving, Nicene Creed, *Our Father*, a series of hymns, fixed Psalms, ↗*Wəddase Maryam*, and, if there is a priest, *liṭon* and *mästäbq^{w}ə^{c}at* (↗Litanies).

Different collections list different psalms and canticles to be recited every day (cp. ↗Psalter):

E.g., ms. EMML no. 1529 (17th–18th cent.): Ps 6, 24, 31, 37, 50, 69, 129, Ct 6 (prayer of Manasses), Ct 13 (*Magnificat*); ms. EMML no. 3049: Ps 26, 41, 50, 123 Ct 6, 13; EMML nos. 2201 and 4493 (16th cent.): Ps 120, 26, 41, *Taśahalänni* [50, or 55, or 56], 85, 123, Ct 6, 13.

The litanical hymns of the S.f. (some published, some still unpublished) include:

Mäḥarännä Ab ('Have mercy on us, o Father'; EMML no. 3049; ed. Mogäs ^{c}Ǝqubä Giyorgis 1967/77: 238–44; ed. Ṭə^{c}umä Ləssan 1999/2000: 245–54); *O Zäwärädkä* ('O you descended'; ed. Mogäs 1967/77: 204–07); ↗*Bäʾəntä śəllasekä* (EMML nos. 1487, 3049; ed. Mogäs 1967/77: 303f.), *G^{w}äśʾa ləbbəyä* ("Eructavit cor meum"; EMML no. 1487).

Particularly relevant are such Marian hymns as (cp. ↗Marian literature):

↗*Bəṣəʾət anti* (Raineri 1986), *Mälkəʾa śə^{c}əl* (ChRep no. 368), ↗*O rəḫrəḫtä ḫəllina*.

The supplication is addressed to God through the intercession of the ↗Prophets, the Patriarchs, the ↗Apostles (esp. St. Peter), St. ↗George of Lydda, ↗Täklä Haymanot, ↗Ewosṭatewos or ↗Gäbrä Mänfäs Qəddus (EMML no. 3049). God is asked to bless the supplication for the sake of Christ who suffered for the sinners (ms. VatLib Aeth. 47; EMML no. 1529).

Tradition ascribes the composition of the S.f., or at least of its Marian parts, to the 15th-cent. Emperor ↗Zärʾa Ya^{c}əqob (EMML nos. 1529–5, 2096–3; Getatchew Haile 1983: 55; Raineri 1986).

Habtemichael Kidane

Səbḥatä nägh

The S.n. (**ስብሐተ፡ ነግህ**, lit. ‘Praise to the Morning’, i.e. Matins; sometimes simply *Nägh*) is an office in the practice of the ↗Ethiopian Orthodox Täwaḥədo Church. It is a part of the ↗*Dəggʷa*. Unlike such other parts as the ↗*Mäwäddəs* (celebrated on Sundays), the ↗*Kəśtätä aryam* (celebrated on a saint’s day) and the ↗*Məhəlla* (celebrated only ten times during the year), the S.n. is celebrated every day of the week.

The S.n. is celebrated early in the morning. The name stands for different forms of Matins or Lauds for big liturgical ↗feasts, minor feasts, weekdays, and for special days.

The main types of S.n. are: **ንኡስ፡ ስብሐተ፡ ነግህ** (*nəᵓus səbḥatä nägh*, ‘minor S.n.’); and **ዐቢይ፡ ስብሐተ፡ ነግህ** (*ᶜabiyy səbḥatä nägh*, ‘major S.n.’), for Sundays and important feasts such as ↗*Mäsqäl*, the three Sundays of Advent (*Səbkät*, *Bərhan*, *Nolawi*), *Amanuᵓel* (Christmas eve), ↗*Lədät*, ↗*Ṭəmqät*, *Təsbəᵓt*, Palm Sunday, ↗*Fasika*, Ascension, Transfiguration, Pentecost, ↗*Fəlsäta lämaryam*. The main difference lies in constituting elements and the chanting mode. The specific composition may vary from church to church.

During weekdays, *səbḥatä nägh zäzäwätər*, a weekday S.n. in the memory of the saints, is performed. It takes a particular form during the Marian *Zämänä ṣəgge* (26 *Mäskäräm* to 5 *Ḫədar*, ‘the season of the Flowers’), when on Saturdays the Canticle of Canticles is used instead of Ps 62, 91, 5, 64, and the ↗*Maḫletä ṣəge* becomes part of the Matins on Saturday and Sunday. During the weekdays of ↗Lent, the whole ↗Psalter is recited, divided into groups of ten psalms each.

The elements used in the S.n. are: (1) Biblical readings: Ps 62, 91, 5, 64, 148–50 (also called *säbbəḥəwo*, i.e. Lauds) and two Canticles of the Three Boys in Furnace (Dn 3:52–56 and 57–88), each accompanied or followed by a *Dəggʷa* element; Gospel passages; (2) extra-biblical readings: extracts from the ↗*Sənkəssar*, ↗*Täᵓammərä Maryam*. The *Dəggʷa* elements utilised in the S.n. are: a) elements that accompany Biblical texts, ↗*zäᵓamlakəyä*, ↗*zäyəᵓəze*, *bäḫamməstu*, ↗*yətbaräk*, ↗*maḫlet*, *səbḥatä nägh*, *śäläst*, ↗*sälam*, *arbaᶜət*; b) elements that are said on their own: ↗*ᶜəzəl* or *həyäntä ᶜəzəl* (according to the liturgical period), *abun*, *əsmä läᶜaläm*, *qənwat*, *mäzmur*. Other ↗hymns are composed during the S.n., including such ↗*qəne* as *zäᵓamlakəyä*, *gubaᵓe qana*, *śəllase*, *zäyəᵓəze*, as well as different ↗*mälkəᵓ*, ↗*ziq*, and other hymnological compositions. Various ↗prayers such as the ↗*Wəddase Maryam*, ↗litanies and *Kidan* prayers taken from the ↗*Testamentum domini* are usually included into the S.n.

Secundus

S. (Gr. Σεκοῦνδος, *Sekoûndos*, Eth. **ስክንድስ**, Səkəndəs; fl. 2nd cent., Athens) “the Silent” is a Greek philosopher (of either Pythagorean or Cynic school) known from an anonymous *Vita* of S. (2nd/3rd cent. A.D.) containing his life and his maxims, which was also translated into Gəᶜəz.

While learning abroad, S. was told that all women are inclined to ↗prostitution. Back home, he tried to seduce his own mother to test this claim, and realized that she would succumb to his advances. When he disclosed his identity, she committed suicide. Seeing the tragedy resulting from his words, S. took a vow not to speak anymore. He remained steadfast even when threatened with death by Emperor Hadrian. Finally, Hadrian posed his questions on the world and man and received S.’s answers (“maxims”) in writing.

The Greek text is known in several versions (Perry 1964:65–91). An Armenian translation was made as early as the 5th cent. An incomplete Syriac translation is known from a 9th-cent. manuscript. The 12th-cent. Latin version, with suggestions from Ambrose’s *Exameron*, became widespread in Europe and was the source of several versions in European languages (Moretti 1998). Extant Christian Arabic versions, known in Arabic since the 9th cent. (GrafLit I, 388; Perry 1964:59–64, 119–60, append. III), are considerably expanded in comparison to the Greek. The Arabs also knew S. as an alchemist (Ullmann 1972:164).

The Gəᶜəz translation titled **ዜና፡ ስክንድስ፡ ጠቢብ፡ ለእንድርያኖስ፡ ንጉሥ፡ ወትምህርታቲሁ፡ ወጥበቡ፡ ወተስእሎታቲሁ** (*Zena Səkəndəs ṭäbib *läᵓəndəryanos nəguś wätəmhərtatihu wäṭəbäbu wätäsəᵓəlotatihu*, 'The story of Secundus, King Hadrian's sage and of his teachings, his wisdom and his dialogue') was made from an Arabic *Vorlage*, probably in the 14th cent. It is attested in manuscripts since the 17th cent. (Zotenberg dates ms. BN Éth. 146 [ZotBNat 249] to this period).

The impact of this book on Ethiopian culture is hard to assess. Manuscripts seem to be quite rare, although two of them (mss. BritLib Orient. 818 and 827) were in the royal collection at ↗Mäqdäla. A comprehensive Arabic-Gəᶜəz edition drawing on broader manuscript evidence is a desideratum.

Śəᶜəlä Krəstos

Ras Ś.K. (**ሥዕለ፡ ክርስቶስ**, b. ca. 1570, d. ca. 1636) was half brother of *aṣe* ↗Susənyos through Ḥamälmal Wärq (s. vol. 5) and one of the staunchest supporters of the ↗Jesuit mission. After Susənyos's second coronation at ↗Aksum in 1607, the Emperor appointed Ś.K. governor of Təgray (BecRASO III, 409) and, afterwards, Ś.K. joined the monarch in his struggle against ↗Kəflo and ↗Yolyos (PerChron 129–32 [text]). Thereafter, he was promoted governor of ↗Goǧǧam (ibid. 142).

As governor of Goǧǧam, Ś.K. was one of Susənyos's closest confidants. Along with his troops, he took an active part in the campaigns against the Oromo (PerChron 190–97 [text]; BecRASO III, 499–508) and against nobles who challenged the Emperor's authority. Although he started his career as a bitter rival of the Catholic missionaries, Ś.K. was highly respected by the Jesuits, who described him as "very prudent, brave, perspicacious, and well-versed in the Ethiopian books" (BecRASO III, 429).

Towards 1612, Ś.K. began to frequent Jesuit company, in particular that of Pedro ↗Páez and later Francisco Antonio de Angelis, who became his confessors (BecRASO III, 429–34). In February 1613, he authored a letter to Pope Paul V (ibid. 440f.). Two possible factors behind his leaning towards the Jesuits could have been his close relationship with the pro-Catholic ↗Bəᶜəlä Krəstos and his recovery in 1614 from a serious illness. Henceforth, the governor attributed his military victories over the Oromo to his break with the Ethiopian Church (BecRASO II, 383f.; VI, 433).

Ś.K.'s increasing affinity towards the missionaries' creed found conspicuous expression in the vast swathes of land that he designated for the construction of Catholic churches (↗Qʷälläla, Särka, Ḥadaša; BecRASO XII, 213; Pennec 2003:225). Under the influence of Ś.K., the province of Goǧǧam was the first to accept the Roman Lenten and to celebrate publicly the Catholic feasts (BecRASO IV, 15). Moreover, Ś.K. named his son after Cardinal Bellarmine and was deemed by the missionaries to be an agent for spreading the faith (BecRASO XII, 490; Orlowska in PICES 14, 430). He was also active in Susənyos's plan to expand the empire, particularly in the systematic policy of converting to Catholicism the ↗Agäw populations. In 1624, Ś.K. reported that he had burned down a huge Agäw idol and asked the patriarch Alfonso ↗Mendes to send more clergy for the purpose of reinforcing the conversion enterprise (BecRASO XII, 135f.).

However, towards the end of the decade Susənyos began to lack confidence in Ś.K.'s fervent methods. He removed Ś.K. from his long-held post in Goǧǧam (BecRASO IV, 55). Later he appointed Ś.K. governor of Bägemdər, only later to dismiss him out of fear that his kinsman's zealousness would alienate the peasants, who already were on good terms with Ś.K.'s rival ↗Gäbrä Krəstos (cf. PerChron 293 [text]). Thereafter, Ś.K. managed to convince Susənyos to grant him the governorship of ↗Damot (PerChron 292f. [text]), for which he agreed once again to take up the sword against the Oromo.

The relations between Ś.K. and Prince ↗Fasilädäs were also characterized by a lack of trust. Thanks to the Jesuits' mediation, a meeting was set up between the two at which Ś.K. declared that he did not harbour any aspirations for the throne. Nevertheless, Susənyos's royal chronicle blames him for the chaos that descended upon the land amid the unravelling of the Catholic project. In the final year of his reign, Susənyos commanded his half-brother to return to the front, even though he was still nursing wounds.

After Susənyos's death (1632), Fasilädäs asked Ś.K. to return to his ancestral faith. As the latter refused, he was exiled to ↗Wägära in November of the same year (BecRASO VII, 197–203). Later, he was transferred to the lands of the ↗Balaw, where he died (BecRASO VII, 446f.).

His name and figure inspired, most likely, the character of Rasselas, the protagonist of Samuel ↗Johnson's homonymous novel.

Seera

The word S. ('order', 'custom' or 'local law') is known among the ↗Oromo, ↗Gurage, Səlṭe (↗Səlṭi), ↗Hadiyya and ↗Sidaama. It is related to Semitic (cp. Gəᶜəz **ሥርዐት**, *śərᶜat*, 'ordinance, order' [also Amh.], cp. also Arab. ↗*šarīᶜa*) but entered into the Gurage languages via Cushitic (KaneDic 480f.; Leslau 1979: 558).

Among the Oromo, who are taken as an example here, S. are sets of religious, moral and juridical laws, precepts and commandments that guide judgements in different Oromo societies. They define wrong-doings and often contain regulations about how to proceed in case of human misdemeanours, such as theft, bride abduction and homicide. The S. is regarded as sacrosanct. Holy objects, creatures and institutions are thereby under special protection. Many prescriptions also refer to cattle, and to places of communal right such as watering places. The different S. are codified to varying degrees. Among the ↗Arsi, S. is subdivided into six chapters (VSAe II, 226, 476–81). Some S. rather resemble moral commandments, such as the ↗Boorana S.: "Fear God/the Sky [↗Waaqa], fear the Earth. […] Fear the father, fear the mother, fear the elder brother. […] You shall not kill. You shall not lie. […] You shall not abandon your mother" (VSAe II, 226f.).

At court sessions, the judge (↗*Hayyuu*) hears the arguing parties and witnesses. After thorough consultation with the other elders, he finally pronounces the verdict by holding his sceptre (↗*Bokkuu*) and by saying: "Receive the law" (VSAe II, 231). Despite his influence, the *hayyuu* can rarely enforce the execution of his judgement by sanctions. There are nevertheless accounts of severe punishments, e.g., among the western Arsi, and even of death penalty (de Salviac 1910: 203f.; VSAe II, 322f.).

The transmission of the holy formulae is one of the most important acts when handing over the duties and offices of the ↗*gadaa* system (VSAe II, 226). During several ceremonies, the S. is recited and the amount of blood-money (or the number of cattle) to be paid after homicide is fixed (HuntGal 47; de Salviac 1910: 185; VSAe II, 541). For the most part, the "newly" proclaimed law is a re-statement of the traditional law, sometimes with modifications (HuntGal 47; VSAe II, 225).

Andrea Nicolas

Seᶜert, Chronicle of

The C.S. is a conventional title of the chronicle, provided by its editor Scher, who had found an acephalous manuscript of the work in Seᶜert (Turkish *Siirt*), Eastern Turkey, where he had been the archbishop of the Chaldean community.

It is a work of an unknown East Syrian ("Nestorian") author written in Arabic, which contains information on East Syrian Church history (including the monastic) together with accounts of the secular history of Persia (↗Iran) and the ↗Byzantine Empire. The text, as published by Scher, contains two parts covering the periods 253–422 A.D. and 484–650 A.D., i.e. beginning from Emperor Valerian (253–260 A.D.), whereas the last datable account is that of the West Syrian (↗Jacobite) patriarch Athanasius Gammālā (594–631 A.D.); the Arab conquests are mentioned, too. Recently a new manuscript was found which is reported to contain the missing beginning (van Vossel 1998), but so far it has not been published; the end remains unknown.

The C.S. was based on Syriac sources (e.g. the *Church History* by Daniel bar Maryam (mid-7th cent., not extant) most of which remain unknown. It was composed in the 11th cent. before 1020 (Fiey 1966: 22).

The C.S. contains a valuable account of the arrival of Christianity at ↗Nağrān, where a massacre by the Jewish king of Ḥimyar, ↗Yūsuf Asᵓar Yaṯᵓar also known as Ḏū Nuwās, provoked the Aksumite crusade of ↗Kaleb ca. 519/524 A.D. Due to the brevity of its report, details concerning the history of Christianity at Nağrān remain obscure. In particular, the C.S. does not explain which Yazdegard occupied the Persian throne when the merchant Hannān was baptized at Ḥira and began the conversion of Nağrān and Ḥimyar, and does not reveal the form of Christianity that Hannān adopted. Of considerable interest to Ethiopian historians are remarks in the chronicle about the Jewish king, whom it calls Masrūq, thus confirming the name otherwise known from the *Book of the ↗Ḥimyarites*.

The C.S. was discovered and edited by Scher (1908–19), who was assisted by several scholars, with R. Griveau supervising the final instalment after Scher was murdered in 1915. The fate of various parts of the manuscript at Seᶜert, Mosul, Paris, and Baghdad is described by Macomber (1971).

Roderick Grierson

Seferian & Co Limited

The Ethiopian-Armenian company S. & Co was founded in 1913 by Mihran Mouradian, the elder son of Kevork Mouradian, a renowned and prosperous merchant in Istanbul.

Born in 1865, Mihran graduated from the Commercial School of Marseille in 1885 and joined the family business. After the ↗Ottoman Empire lost the Roumeli region to Bulgaria, the Mouradians' business was affected, so the family decided to diversify and establish branches in other countries. A younger brother, Diran, went to England and another relative to New York seeking new venues for their business. In 1901 Kevork Mouradian died and his four sons continued the business of their father, expanding it globally under the management of Mihran Mouradian. With the intention of expanding the business in ↗India, he went to Manchester to consult with his brother, and then boarded a vessel for Egypt.

Mihran Mouradian spent some time in Egypt where, in 1908, he established a branch in partnership with Krikor Seferian, under the management of his brother Edward. Krikor Seferian informed Mihran of the vast possibilities in the Sudan and Ethiopia and they decided to establish branches of their business in ↗Khartoum, ↗Addis Abäba, ↗Asmära, Port Sudan and ↗Djibouti. While Krikor Seferian took over the task of establishing the branch in Khartoum, Mihran Mouradian arrived in Addis Abäba and established the Kevork

Mouradian Company, engaging in the import of ↗cotton, textiles and ↗salt, as well as the export of ↗coffee, hides and skins. The existence of an ↗Armenian community in Ethiopia and the events in the Ottoman Empire during World War I persuaded him to remain in Ethiopia, and he pledged to build a church in memory of his father. In 1928, the construction of the Armenian Apostolic Orthodox Church could commence in Addis Abäba thanks to the donation of Mihran Mouradian; it was named Saint Kevork (St. George).

During the Italian occupation of Ethiopia (↗Italian war 1935–36), Mouradian left Addis Abäba for Europe where he died tragically in Italy, in 1936. His partner, Krikor Seferian, then took over the business and expanded it further with branches all over Ethiopia. In addition to its existing business, the company extended its activities to the import of machinery, pumps, diesel engines, electrical appliances, tires, trucks, and cars.

Mary Nalbandian

Šəfta

The word Š. (**ሽፍታ**, ‘bandit, outlaw’), from **ሸፈተ**, *šäffätä*, ‘he rebeled, lived as an outlaw’), probably of Semitic origin, exists in variants in many languages in the Horn of Africa, including Cushitic (e.g., Agäw, Kambaata, Somali; cp., e.g., Leslau 1979: 573f.). The term covers a wide spectrum of meanings ranging from criminals, like ordinary ‘robbers’ or ‘highwayman’, to ‘robber barons’, politically ambitious ‘rebels’ as well as ‘resistance fighters’ and even pretenders to the throne. The word was regularly used to vituperate a political enemy and only rarely as a self-ascription. “Š.” describes somebody who left his society or his lord and “went into the woods” (**ዱር፡ገባ**, *dur gäbba*, cp. also **ዱር፡አዳሪ**, *dur addari*, ‘vagabond’, ‘brigand’, ‘outlaw’) As an expression of his outlawed status (**ሽፍታነት**, *šəftannät*, ‘banditry, rebellion’) the “classical” Š. refrained from cutting his hair and let it grow in a warlike **ጐፈሬ** (*g*^{w}*äfäre*) style. The Š. leaders, who often were of (or claimed) noble descent, gathered followers from their families and countrymen to raid traders and to challenge the respective ruler or government.

Among historians (cp. Crummey in PICES 7; 1986; 2004/05; Fernyhough 1986) the Š. is discussed in terms of Hobsbawn’s (1972) concept of the “social bandit”, a Robin Hood-like folk hero who redistributes the wealth of his victims among the peasantry. Crummey (2004/05: 12f.), however, states that, applied to Ethiopian examples, Hobsbawn’s concept in many cases does not fully match or cannot be deduced easily from the sources. For him the Š. phenomenon is often better described as “rural social criminality” rather than “social banditry” (s. also ↗*Bolläd*). Both concepts, however, may apply to different historical examples of Š.

Apart from the very great number of local bandits active throughout the history of Ethiopia, a considerable number of important political figures spent some period of their lifetime as Š. In such cases *šəftannät* became a frequent strategy on their way to legitimate political power. Most prominent examples are Kaśa Ḫaylu who ascended the thone as *aṣe* ↗Tewodros, and Kaśa Mərč̣a, who later became known as *aṣe* ↗Yoḥannəs IV. In the 1860s Kaśa Mərč̣a stayed among the ^{c}Afar as an outlaw, before assuming a leading role in Təgray. Already before, in the 1840s, his maternal uncle ↗Ar^{ɔ}aya Śəllase Dəmṣa had rebelled against *däǧǧazmač* ↗Wəbe Ḫaylä Maryam (cp. Caulk 1984: 204f.).

In modern times, the socio-political tradition of Š. was maintained in internal conflicts over supremacy as well as in the military opposition against foreign intruders. In Eritrea the 1894-rebellion of ↗Bahta Ḥagos against Italian colonialism may be understood as an example of this. During the Italian occupation (1935–41) the term Š. was broadly used by the Italian administration for any kind of ↗resistance fighters. After Liberation local groups who did not obey to the *aṣe* Ḫaylä Śəllase I regime were characterized by the same label. In Eritrea in the 1940s the so-called Mäsazgi brothers fought against British rule and were, likewise, denominated as Š.

Between 1963 and 1967 Somali secessionists in north-eastern ↗Kenya were called Š. in government propaganda (after Somali: *šufto*). The conflict of ethnic Somali and the Kenyan government became known as the “shifta war” (s., e.g., Mburu 1999).

Dirk Bustorf

Səgd

S. (**ሰግድ**, ‘the [Fast of] Supplication’) is a major religious observance of the ↗Betä Ǝsraʾel, which falls on the last (29th) day of the 8th moon, 49 days after the Day of Atonement. In Ethiopia people and priests, who gathered the day before, made a ↗pilgrimage in the morning, ascending a hill. As recently as the 1940s and 1950s, the people carried stones on their heads and backs up the hill, and also left handfuls of millet grain on the stones to commemorate the dead (they no longer carried grain in the 1970s; Leslau 1951: xxxivf., 1957: 87f.; Kaufman Shelemay 1980/81).

The priests sang prayers while ascending the hill, and then sung and read religious passages at the top of the hill in and around a shaded stone enclosure. The religious passages chanted and sung in the 1970s focused on the prophet Ezra from Neh, the Decalogue from Ex 20 and related passages in Ex 23 and Lev 20 and 26, as well as Dan 3 and Ps 146: 2. There were also scattered passages and prayers in Agäw throughout that the priests no longer understood (Kaufman Shelemay 1980/81: 57f.). In the 19th cent., passages included Deut 28–32 (Flad 1869: 52). In the 1940s and 1950s, passages from the ↗*Təʾəzazä sänbät* were also part of the ceremony (Leslau 1957: 87). The singing continued while descending back to the village, taking about four hours altogether (Kaufman Shelemay 1980/81: 43f.; Quirin 1975).

A *səgd* celebration in Jerusalem; photo 2008, courtesy of Shalva Weil

The origins of this ceremony among the Betä Ǝsraʾel most likely lie in their 15th-cent. interaction with Ethiopian Christian monastic traditions and practices (Kaufman Shelemay 1980/81, 1986: 48ff.; Quirin 1992: 63–72). In the 19th cent., sources referred to the ceremony as **ዐመተ፡ ሰው** (*ʿamätä säw*, ‘assembly of the people’), at which time it was directly tied to the Betä Ǝsraʾel monks who went on a seven-day retreat into the “wilderness” immediately afterward (Flad 1869: 51). As late as the 1950s the Betä Ǝsraʾel called their ceremony ↗*məhəlla* (Leslau 1957: 87), after the Christian ceremony. By the 1970s, the term S. (from Gəʿəz *sägädä,* ‘to prostrate oneself’) predominated.

By this time, S. had become the best known and probably most significant annual holiday. Moreover, the ceremony which had long been carried out in several regions, was focussed at least in the Gondär region, on the village of ↗Ambobär. In the late 19th cent., Betä Ǝsraʾel converts to Christianity were allowed to take part, and some Christian participation continued into the 20th cent. (Salamon 1999: 57–62).

Today among the Ethiopian Jews in ↗Israel the ceremony is undergoing further modification (Abbink 1983; Ben-Dor 1987). While local celebrations occur, the primary celebration takes place in Jerusalem on a hill overlooking to Old City. The holiday is said to focus on the Betä Ǝsraʾel’s longing to return to Israel. In 2008 S. was granted the status of an official Israeli national holiday.

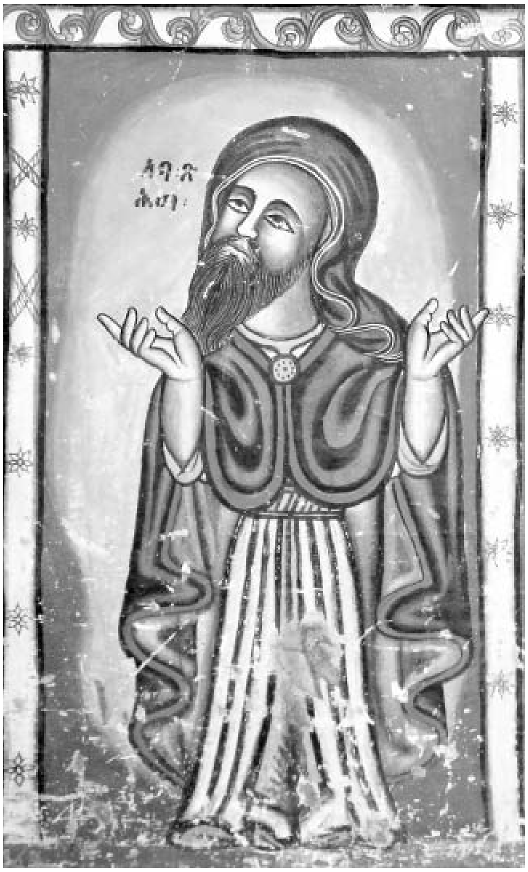
Ṣəḥma

Abba Ṣ. (**ጽሕማ**, also **ጸሕማ** Ṣäḥma) was a non-Ethiopian monk who allegedly arrived in Ethiopia with the group of the ↗Nine Saints in the 5th–6th cent. The main source on him is his Acts (↗*Gädl*) transmitted in a manuscript recently found in a church located in the area of Ṣädäya, called Däbrä Ḫättäta, near the village of ᶜEdaga ᶜArbi, Təgray (Brita 2008: 248f.). The manuscript was written in 1969/70, during the time of *aṣe* Ḫaylä Śəllase and Bishop *abba* Yoḥannəs of Təgray. The authorship of the Acts (↗*Gädl)* of Ṣ. is attributed to St. ↗Yared.

According to his Acts, Ṣ. was born on 3 *Taḫśaś* in Antioch, to Anqiṭos, king of Antioch, and Sara, the daughter of the king of "Rom", outside the sanctuary dedicated to St. Mary. Ṣ. was born completely covered with hair. Thus, the Archangel Gabriel appeared to ↗Athanasius of Alexandria, while he was baptizing the newborn, and advised him to name the child **ጽሕማ፡ በኑኀተ፡ ጸጕሩ** (*Ṣəḥma bänuḫatä ṣägʷəru*, 'Ṣ., because of the length of his hair', for the child was long-haired "like Samson" [cp. Gəᶜəz *ṣəḥm*, 'beard', LesCDic 552]). When he was an adolescent, at Anqiṭos's request, Ṣ was led by the king's envoys into the desert of Scetis. There he was entrusted to the care of *abba* Tewodros Esdros, who educated him in the Holy Books and bestowed on him the *askema* and *qob*ᶜ (↗Ordination).

Ṣ. led an ascetic life eating rotten leaves of mallow and drinking a bitter juice extracted from loe roots, ground on a stone and poured into a small clay pot to let the liquid settle for a week. Ṣ.'s dietary habits recall what, in the Syrian monastic milieu, Theodoretus of Cyrrhos, *Historia Religiosa* (ch. III), reports for the monk Sabine, who used to eat flour macerated in water for one month, the smell of which was foul (Brita 2008:188f.). A different matter is the saint's hairiness, which could be inspired by the scriptural model and, Samson apart, be related to Adam and Eve's awkwardness when, after eating the "fruit of the tree", they realized that they were naked (Gen 3:1–11; Brita 2008: 189f.). This motif



Abba Ṣəḥma, mural, 19th cent., Dima Giyorgis, Goğğam; photo 2008, courtesy of Ewa Balicka-Witakowska is fairly common in Ethiopian ↗hagiography, as attested, e.g., by the tradition of ↗Gäbrä Mänfäs Qəddus (Marrassini 2003, vol. 2, xlix–l and *passim*).

At least one ↗*mälkəʾ* in ms. BritLib Orient. 577, fol. 63r, 1721–30 (WrBriMus 128, no. 191), and one ↗hymn in ms. BritLib Orient. 590, fol. 52r, 18th cent. (WrBriMus 133, no. 196) are dedicated to Ṣ.

In two manuscripts of *Gädlä ↗Liqanos* Ṣ.'s name was omitted and replaced with that of *abba* ↗ᶜOṣ (Brita 2008: 361f., § 10), quoted also in the *Gädlä ↗Gärima* instead of *abba* ↗Zämikaʾel Arägawi or *abba* ↗Alef (Conti Rossini 1897: 174, vs. 112f.; Ducati 1939: 108). This could imply the presence of several traditions, at a very early stage, conflated in later times (Brita 2008: 24–28).

Ṣ. is also mentioned in both Təgre and Təgrəñña versions of the legend of the Queen of Sheba (↗Makədda), where his name appears in the form **ጨሐማ**, Čäḥama (Littmann 1904: 4f.) and **ጫሕማ**, Čaḥəma (Conti Rossini 1911–12: 603, 612), respectively.

The *Mäṣḥafä ↗Aksum* reports a feudal deed in favour of the church of *abba* Ṣ. made by the late 18th-cent. *aṣe* ↗Ḥəzqəyas, son of Iyasu III (CRAxum I, 49 no. 65; II, 59, no. LXV).

Ṣ. is commemorated in the *Sənkəssar* on 16 *Ṭərr*.

Ṣəḥuf əmni

Ṣ.ə. (Tgn. **ጽሑፍ፡ እምኒ**, lit. 'inscribed stone', 14° 20' 30" N, 14° 41' 45" E, 1,240 m A.S.L.) is the name of a place in the bed of the River Obel, in Qʷäḥayn, Eritrea, where in 1897 the members of the topographic mission of the Geographic Institute of Florence discovered a stone block (1,80 m x 1,60 m) bearing South Arabic letters (the inscription is also referred to as Ṣ.ə.).

The first brief account on the inscription was made by ↗Conti Rossini in 1900. In a more detailed description (1947: 12ff., with a photo and two copies of the text, fig. 4–5) he ventured several proposals concerning the date of Ṣ.ə. (ca. the epoch of ↗ᶜEzana, the paleography of whose "pseudo-Sabaic" inscriptions bears certain resemblance to that of Ṣ.ə.). Conti Rossini also identified some roots of the inscription as Semitic.

Drewes and Schneider (1970: 66f.) offered a transcription of Ṣ.ə., but no translation, and claimed the language of the inscription to be neither ↗Gəᶜəz nor ↗Epigraphic South Arabian. RIÉ no. 287, providing a slightly different transcription, agrees that the language of Ṣ.ə. does not resemble any language known in the region.

Seismology and volcanic activity

As a result of its high tectonic mobility, resulting in the progressive separation of the Arabian and African plates along the East African Rift System (EARS), Ethiopia and Eritrea are recurrently struck by volcanic eruptions (for location of volcanoes s. map for ↗Rift Valley) and high magnitude earthquakes.

The relief of the country has been divided by the northernmost part of the EARS (Main Ethiopian Rift [MER] or Rift Valley) into two uplifted bocks, the North-Western Plateau and the South-Eastern Plateau, thus splitting the African plate into the Nubian and the Somalian plates. The MER terminates into the ↗ᶜAfar Triangle, where it joins the Gulf of Aden and Red Sea rifts.

Different fault systems, either parallel or transverse to the EARS, show recent activity, as testified by the dislocation of Quaternary volcanics and alluvial deposits (Bekele Abebe et al. 2007).

Surface faulting was observed in connection with strong earthquakes (e.g., Serdo and Kara Kore-Meğete earthquakes).

According to Gouin (1979), 15,000 tremors, strong enough to be felt by humans, including a large number of highly destructive events, occurred in Ethiopia and the Horn of Africa between 1400 and 1977. More recent seismic episodes have been described by Atalay Ayele (1995) and Atalay Ayele et al. (2007). Significant were the events which affected southern Šäwa (25 August 1906: M = 6.8), ᶜAfar (4 January 1960: M = 5.5), ↗Awasa (14 July 1960: M = 6.3), Kara Kore-Meğete (1 June 1961: M = 6.6), Serdo (29 March 1969: M = 6.6), ᶜAfar (August 1989: M = 5–6; 24 September 2005: M = 5.5). Strong earthquakes also struck ↗Massawa (14 August 1921: M=5.8; 21 September 1921: M = 5.7), and Djibouti (22 January 1960: M = 6.0; 28 March 1973: M=5.5; 1 April 1973: M = 6.0; 20 August 1989: M = 6.3). Heavy damage to built-up areas as well as victims were caused by the earthquake shocks (as in the case of the 1961 Kara Kore-Meğete and 1969 Serdo earthquakes) and seismically induced landslides (such as that which destroyed ↗Ankobär town in 1842).

Furthermore volcanic activity is associated with rifting. This is the case of the Traps, a pile of basalt lava flows, some 2,000 m thick, during the Oligocene period. Volcanic activity continued during the Miocene, Pliocene and Quaternary, periods, resulting in major topographic changes and the formation of numerous lake basins.

Several volcanic eruptions have been recorded from the ᶜAfar and the MER in the last two centuries (Mohr 1962). Among these, the Dubbi eruption, starting on 7 May 1861, is reputed to have killed more than one hundred people. Another relevant eruption affected the Volcano ↗Afdera in June 1907. According to local tradition, a huge basalt flow erupted from the southwestern flank of the ↗Fantale volcano in 1810. Other volcanic episodes, discovered in the MER at Galibordi Pass and Mount Bosetti, could be related to the same period (Mohr 1962).

Three volcanic centres have erupted in the present century: the Erta Ale, the Dabbahu and the Manda Hararo volcanoes. The Erta Ale is a basaltic shield volcano located in northern ᶜAfar with a NNW–SSE elongated caldera which contains a rising lava lake whose activity has been documented since the 20th cent. The Dabbahu and Manda Hararo volcanoes started to erupt (basalt flows, ash, pumice and smoke plumes) along a 37-mile long approximately NNW–SSE ground fissure, and opened in the ᶜAfar in connection with the September 2005 earthquake.

Francesco Dramis – Giandomenico Fubelli

Šeko

Šeko language

Š. (also Šakko, Šak, Šekko, Čako; self-name: Şókú) belongs to the ↗Dizoid branch of ↗Omotic (not to be confused with ↗Šakačo, a ↗Gonga language). Š. is spoken in the Šeko, Guraferda and Yeki *wärädas* of the Southern Nations, Nationalities and Peoples' Region, roughly between Mizan Täfäri, Tepi and Badiqa. The number of speakers was ca. 23,800 in 1994 (according to the 1994 Census, s. Gordon 2005: 118). The variety of Š. spoken in Guraferda is, although divergent, mutually intelligible with the variants spoken around the towns Tepi and Šeko. Only a small minority of speakers is monolingual. Second (third) languages are Amharic, ↗Benç̌, ↗Mağaŋgir or ↗Käfa. Š. is not used in education, has no written tradition and is under pressure from Benç̌ and Amharic.

The consonantal phonemes of Š. are: labial *b*, *p* (~ *f*), *p̣*, *m*, alveolar *d*, *t*, *ṭ*, *n*, *r*, *ʦ*, *ṣ*, *s*, *z*, alveo-palatal *č*, *č̣*, *š*, *ž*, *y*, retroflex *tş*, *tş'*, *ş*, *z̧*, velar *g*, *k*, *q*, *w*, glottal ᵓ, *h*. Vowels are *i*, *e*, *a*, *ə*, *o*, *u* (length is phonemic), and syllabic *n̦*. Š. has four level tonemes, designated as v̀ (low), v̄ (mid-low), v (mid-high) and v́ (high). Some grammatical distinctions are made by tone alone, e.g. *n̄-gēqù* 'my goat' – *ń-gēqù* 'our goat', *hā-gēqù* 'your (sg.) goat' – *há-gēqù* 'his goat'.

Š. nouns end in *-u*, *-i*, *-a*, *-n̦* or a consonant. Nouns can be marked for definiteness in the sg. by *-n̦-s* (def.-masc.), <*i*>*-n̦* (fem.-def.): *tóós* 'relative' – *tóósǹs* 'the male relative' – *tóóys-ǹ* 'the female relative'; and pl. is marked with -(*ù*)*s* (masc.), -(*ì*)*s* (fem.): *şóóẓ-ùs* ‘snakes’, *túún-ìs* ‘springs’, *tosa-s* ‘myths’. Most inanimate nouns are masc. Gender is also marked in demonstratives, adjectives, relative clauses, and in 3rd pers. pronominal elements.

The case system consists of nominative (nom.), accusative (acc., marked by *-rà*), dative (dat., *-kǹ* ~ *-ǹ*), instrumental (*-kā*), and locative (*-qà*).

The independent subject pronouns are *nātā* ‘I’, *yə̄tā* ‘you’, *ˀáz* ‘he’, *ˀíž* ‘she’, *nátā* ‘we’, *ˀítí* ‘you (pl.)’ and *íš̀ì* ‘they’. Demonstratives include *yiz* ‘this (masc.)’, *yinì* ‘this (fem.)’, *hàz* ‘this (masc.) here’, *ˀékinì* ‘that (fem.) there’. Question words include *ˀiti* ‘who?’, *yírá* ‘what?’, *na* ‘where?’, *ˀáás* ‘how?’, *gībn̄* ‘how much?’ and *yír-èš̀ǹtà* ‘why?’.

Verb paradigms have either a high (marking irrealis, irr.) or low (realis, real.) tone on the verb stem, interacting with the lexical tone. The verbal stem is followed by a verb signalling aspect (optional) such as *a*(*n*) ‘put’ (potential), *ki* ‘be’ (progressive), and a sentence type marker: *-kē* (real.), *-mē* (irr., signalling *inter alia* weaker modalities), *-sē* (optative), *-ē* (jussive). E.g.: *n̄-sííś-á-mē* ‘I will listen’, *hā-kaas-a-mē* ‘you will play’, *há-sūs-kì-kē* ‘he is/was listening’, *yí-kààs-kì-kē* ‘she is/was playing’, *ń-sūs-kē* ‘we listened’, *ˀítí-kààs-kē* ‘you (pl.) played’, *ˀíš̀ì-kāās-ē* ‘let them play’. The subject clitic mostly precedes the verb stem but may follow it (truth-value focus): *sīís-n-kē* ‘we did listen’; or cliticizes to a constituent (constituent focus).

The imperative consists of the bare verb stem, with optional *-ē*, and suffix *-ít* for pl.: *sííś*(*-ē*) (sg.), *sííś-ít*(*-ē*) (pl.) ‘listen!’.

Negatives are formed by suffixing *-ara* after the main verb stem, optionally followed by the markers of subject, aspect and sentence type, e.g. *sííś-ərá há-kì-kē* ‘he does not listen’.

Questions drop the sentence type markers. E.g.: *hā-sūs-kì* ‘are/were you listening?’.

The copula is *tēkē* (affirmative)/*térē* (negative), as in *ˀáz tàmàrskìb tēkē* ‘He is a teacher’, *subn̦s térē* ‘It is not red’.

Derived stems are formed by adding such suffixes as *-s* (causative), *-ṭ* (passive/middle), *-n̦* (reflexive/middle).

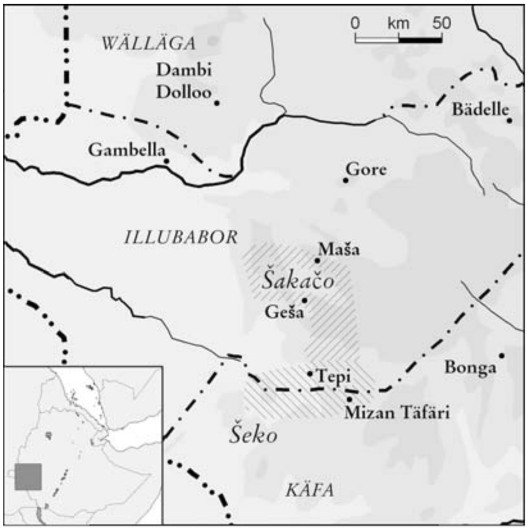
Š. follows the areal pattern with subordinate clauses preceding main clauses and Subject–Object–Verb order:

n̄-nānū káčí há-nā-ǹ yāān-kē

(1sg.poss.-brother yam 3masc.sg.-dat. plant.yam-real.)

‘My brother planted yam for me’.

Š. has both prefixes and suffixes, and some modifiers follow the head noun.



The ten-word list is: *qōy* ‘one’, *ṭaagn̦* ‘two’, *kadu* ‘three’, *taamu* ‘fire’, *haay* ‘water’, *ṣyaaṣù* ‘sun’, *ˀyáṣń* ‘moon, month’, *yarbǹ* ‘blood’, *ˀyarb* ‘tongue’, *ˀātş’ù* ‘tooth’.

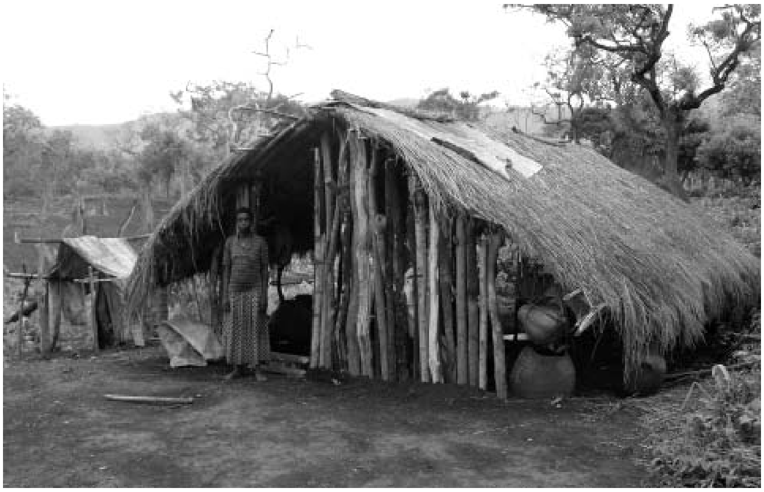
Šeko ethnography

The Š. people (Šäko, also called Šeka or Čako in the literature) are an indigenous ethnic group living in a mountainous area in the “Šeka zone” in south-western Ethiopia north of Mizan town and up to Tepi; in 2007 they numbered 35,573 people (CSA 2008:85). They are one of the smaller Omotic-speaking groups and have an historical and linguistic-cultural affinity with the ↗Dizi and Nayi. They differ from the ↗Šäkačo living to the north. Small towns in the area are Gurafarda (in Š.: Duka Dukas) and Yeki. Since Straube’s survey (1963 [= VSAe III]), little if any research has been done on Š. society.

The Š. live as subsistence cultivators and mixed farmers in a humid montane forest area. Most Š.



Šeko homestead, Samarta *qäbäle*, Guraferda *wäräda*; photo 2008, courtesy of Anne-Christie Hellenthal

cultivate the locally prevalent root crops including ↗*ənsät*, taro and yam, as well as ↗maize and ↗sorghum (in a shifting cultivation system), and also many garden crops such as tobacco, spices, cabbage, beans and lentils. Cash crops are high quality ↗coffee and ↗honey. There is also hunting and gathering. The Š. Forest, although shrinking, still has species of wild coffee and spice plants. This forest is a unique habitat and was recently classified as one of the National Forest Priority Areas of Ethiopia. Š. have a careful indigenous system of forest management. In addition, the Š. keep a rare and ancient sub-species of humpless cattle, which seems to have developed resistance to trypanosomiasis and which are the subject of research. The Š. had a quite developed "cattle culture" (with rituals, decoration, and recognition of cattle descent lines, s. also ↗Pastoralism), which, however, declined after the imperial conquest in the late 19th cent., when they lost most of their livestock. Oral tradition suggests that the Š. originally lived in lower areas more favourable to livestock herding (VSAe III, 34).

Historically the Š. had a paramount sacred chief or king (*kóināb*, or *kiás*), and local chiefs (*kóbm*), usually clan leaders. People were generally identified on the basis of patrilineal clan membership and lived in multi-generational, patrilocal homesteads. There was a ranked structure of noble clans (the *qomtu*) and inferior clans (*qamu*), with each clan having its own "emblem", e.g., rain, or an animal or plant species. Clans are exogamous. They were reported to have a pattern of foster relationships (*burğa*), with ritual aspects (VSAe III, 38). As with most other south-west Ethiopian peoples, craftsmen castes of hunters-tanners (*bandu*) and potters (*šórï*) existed among the Š. as socially inferior groups. In recent decades both the clan system and the social hierarchy have lost much of their significance, while the decline of the kingship set in immediately after the conquest of the Š.

Marriage required bride wealth in the form of cattle (from 5 to 15 head), nowadays replaced by money or cloth or other items. In relative terms it is also lower than before.

The Š. area was conquered in the 1890s by imperial Ethiopian troops and was laid waste by the post-conquest occupation and the ↗*näfṭäñña*–↗*gäbbar* system. Abysmal poverty and abusive state administration came to mark the area, including slave-raiding (s. Hodson 1929: 155, 157, 160). Also neighbouring groups, notably the agro-pastoral ↗Meᵓen, who arrived later in the area, had a tense relation with them and fought them repeatedly.

Many Š. are Orthodox Christians and also follow their traditional religion, which is characterized by the notion of a sky god (*Záku*), ancestor veneration, divination and spirit medium (*kai*) cults. Since ca. 15 years Evangelical Christianity is growing among them, partly in response to internal crisis and instability.

Recognized as a separate ethnic group or nationality after 1991, the Š. in the early 2000s formed an alliance with the ↗Mağaŋir people, in the *Sheko Mejenger Democratic Unity Organization,* opposed to the central government. It even gained seats in the 2005 elections. In the past decade, they have been involved in violent conflicts with several other groups in the area due to the new post-1991 discord among local groups about ↗ethnicity and ethnic territories, leading to hardened group relations and several bloody clashes occurred (e.g., 1993 and 2002). After their involvement in the 2002 fighting in Tepi town, in the Šäkačo area, more than 140 Š. and their allies, the Mağaŋir, lost their lives and many locals were displaced and left the area. Š.

has remained an economically vulnerable and untapped area. The local economy today is impoverished and land and other resource scarcity is growing, connected to population pressure and group tensions.

Jon Abbink

Səlät

The vow (**ስለት** or **ስእለት** *səᵓəlät*, from Gəᶜəz **ሰአለ** *säᵓalä* 'ask, beseech') is a binding promise made to God. It is understood as an act of trust between a person and his God whereby the former offers a thing, an action, or assumes in the future to provide some service or dedicates something valuable. The practice of S., in the form of a promise to God, is widespread in the daily life of an Ethiopian Christian.

The type and offering of vows differ according to the status and sex of the faithful. E.g., women, especially those who want to have children, prepare candles, bread, beer etc. in honour of the Virgin ↗Mary or their favourite ↗saint, and take them to church on the saint's day. She may also promise to name her child after the saint or to engage the child in serving the Church through a life in priesthood. Many famous Ethiopian saints are said to have been born after their parents had promised them to the Church (e.g., ↗Samuᵓel of Däbrä Wägäg). Men would give ↗alms to the poor when the wish is fulfilled, slaughter a bull, sheep or perform another sacrifice on their saint's day, in order to consolidate the saint's benevolence for the year. They can also perform ↗pilgrimages and offer a votive present or prohibit themselves from doing something. It was usual for Ethiopian rulers to make a S. to their patron saint at times of war or campaign. The most frequent type of S. was building a new church dedicated to the saint. E.g., ↗Mənilək II built the new building of ↗Gännätä Ṣəge Giyorgis in Addis Abäba in keeping with the vow he made before the battle of ↗ᶜAdwa; ↗Mänän Asfaw consecrated ↗Däbrä Ḫayl Qəddus Raguᵓel to fulfil her vow and thank the Archangel for bringing her consort to power.

A person making a S. is expected to fulfil it by doing what is promised before the expiration of a votive period; otherwise it is believed that he or she would be punished by God.

Mersha Alehegne

Seljan, Mirko and Stjepan

The brothers M.S. (b. 5 April 1871, Karlovac, Croatia, d. 1913, Huajabamba, Peru) and S.S. (also called Stevo; b. 19 August 1875, Karlovac, d. 7 June 1936, Ouro Preto, Brazil) were adventurers, who stayed in Ethiopia between 1899 and 1901. M.S. received military training in his home town, and learned German, French and drawing. He did not serve as a soldier, but from 1893 to 1898 he worked in Rumania, Hungary and Austria. During this time he learned Rumanian, Hungarian and Russian. His brother S. received military training as well, and served in the Russian Navy from 1894 to 1898.

In 1898 the two brothers met in Karlovac and decided to go to Africa. It was M.'s stay in Orthodox ↗Russia that had sparked his interest in Ethiopia. They set out in January 1899, performed odd jobs and played music (M. the violin, S. the flute) to make their living. They reached the court of *ras* ↗Mäkʷännən Wäldä Mikaᵓel in Harär on 24 April 1899, left on 8 May, and arrived in Addis Abäba on 9 June. They were received at the court by *aṣe* ↗Mənilək II and *ətege* ↗Ṭaytu, for whom they gave a concert. In Addis Abäba they became acquainted with the Russian "Count" Nicolaj ↗Leontiev. They provided their military skills and served as instructors and officers of a batallion of 300 members of the ↗Imperial Bodyguard for three months. At the end of September they were sent to southern Ethiopia, M. to serve as governor of the Ethiopian "Equatorial Provinces" (residing at Uba), with S. as his deputy. Leontiev had administered the area for a short while before them.

In southern Ethiopia the two brothers conducted geographical (including climatological and geomorphological) and ethnological research, and hunted ↗elephants. They studied the related Olamo (Wälamo, i.e. ↗Wälaytta), Boroda, ↗Malo, Kure (↗Koreete), Bakko (↗Aari; ↗Hamär Bakko), ↗Banna, ↗Bäšada and Karo peoples. M.S. drew excellent maps of this part of southern Ethiopia (now in the Town Museum in Karlovac). The brothers also founded a little town west of Lake ↗Turkana, long known as Seljanville (today's Selanž) and M. received the title "Count of Turkana". At the end of 1901, *aṣe* Mənilək gave them permission to leave the country, after he had decorated them with the Ethiopian Star and Solomon's Cross and having given each of them a silver shield, a sword and a silk tunic. They had collected many Ethiopian valuables, now kept, together with documents from their travels, in the Ethnographic Museum in Zagreb. They later (1903) went to South America, where M. died during an expedition in Peru in 1913, and S. settled in Brazil, married, and had four children.

Reidulf K. Molvaer

Šəlläla

Š. (**ሽለላ**) is a type of war chant or war song (meaning in Amharic also 'war boast', also a common translation for ↗*fukkära*). The term Š. is derived from the verb *šällälä*, 'to utter a war cry or chant', but also 'to cause to vanish', possibly a connotation of Š. as a war cry. Although the term Š. is often used in the same way as *fukkära*, the latter stresses the aspect of boasting, and is frequently uttered by the warriors praising their own bravery. Š. is often composed and performed by an *azmari* or *qärari/aqrari* to encourage soldiers and terrify the enemy. Š. chants can be accompanied by the performer's martial gestures, the brandishing of spears, etc., and were often exchanged by competing warriors.

In reference to Š., it is usual to say in Amharic: *Šəlläla qärrärä/aqrarra*, 'he composed and recited the Š.' (*qärärto* or *qärärtu* is defined as Š. and **የጦር፡ ዘፈን** [*yäṭor zäfän*, 'war song'], s. DTWDic 1117). The poetic form most suitable for Š. is the **ሰንጎ፡ መገን** (*sängo mägän*), with eight syllables, making for short, sharp utterances.

Early samples of Š. are found, e.g., in a chronicle written by *aläqa* Täkle (↗Täklä Iyäsus of Waqǧəra). After *fitawrari* Wändawwək, newly appointed by *däǧǧazmač* ↗Tädla Gʷalu as an official in Goǧǧam, was driven away by his opponents, they composed (*aqrarra*) the following war-song (cf. Molvaer 1998: 19):

Särgudäw, särgudäw, särgudäw bäç̣əre,
gədd bəlo, gədd bəlo kämäṭṭa bagäre,
fitawrari Wändawwək, yäṭis ç̣äw wädaǧu,
yägobäz mist wädaǧu;
afrəsäw, afrəsäw bäǧǧu!

'Pierce him, pierce him, pierce him with a spear,
If he comes to my land by force, by force,
Fitawrari Wändawwək, the friend of the salt [with a taste] of smoke [i.e. the false friend, repugnant as salt contaminated by smoke],
The friend [seducer] of the wives of the brave;
Go ahead and crush him, crush him!'

The next example shows that Š. and *fukkära* can serve much the same purpose. Another opponent of *däǧǧazmač* Tädla Gʷalu, the warrior Dori Ḫaylu, first boasted himself of his bravery (*fokkärä*), and then made a singer of war chants (*aqrari*) chant (*aqrarra*) the following war-song (cf. Molvaer 1998: 21):

Yäʾəlamitu anbässa ṭəǧǧaw;
täkula näw alabiw;
gadiwəmm əbab näw.
Qäç̣ämən täšagro mokkariwəss mannäw?

'His cow's calf is a lion;
His milkmaid is a wolf;
His leather-strap [used to bind the hind-legs of the cow when it is being milked] is a snake.
Who will dare to cross over [the river] Qäç̣äm [and come against him]?'

Historically, war-chants such as Š. proliferated during war-time: e.g., the campaigns of *aṣe* ↗Tewodros II, the ↗Italian war 1895–96 and the Battle of ↗ᶜAdwa, the ↗Italian war 1935–36 and during the ↗Resistance against the Italian occupation.

As troops are now trained in modern warfare, Š., *qärärtu* and *fukkära* are going out of fashion, appearing mostly in folkloric shows (e.g., at the commemoration of the battle of ᶜAdwa) and in plays celebrating war heroes (like *däǧǧazmač* ↗Balča Ṣafo). The musical style of such renowned Ethiopian musicians as Getaččäw Mäkʷəriya was mostly inspired by the Š. genre (Gétatchèw Mèkurya 2003).

Śəllase ↗Trinity

Śəllase

The Ś. (**ሥላሴ**, lit. 'Trinity') is a type of ↗*qəne* of complete verse, containing six *bet* and sung in ↗*ᶜəzəl* mode, as it depends upon the ↗*Səbḥatä nägh*. It has two sub-types: long (*räğğəm*) or short (*aččər*).

Ś., as its name indicates, is meant to celebrate the glory of the ↗Trinity. It is composed after the Canticles of the three youths in the furnace (Dn 3:52–56; ↗Psalter), which according to the teachers of *qəne*, reveal the unity and trinity of God, the God of Abraham, Isaac and Jacob.

Ś. can have various symbolism: the coming of Christ after 600 centuries or after 5,500 years, or the six evangelical worlds (Mt 25:35–46).

Ś. is composed on different occasions and can contain different Biblical elements. It is composed by the *däbtära* in the service of ↗*Wazema addäraräs*, if the *Yətbaräk* (Dan 3) is accompanied by the *Dəggʷa* element also called *Yətbaräk*. It is sung after Canticles in ↗*Aryam addäraräs*. During the *Səbḥatä nägh*, it is performed after the Ps. 148–50 (known as *Säbbəḥəwo*), with *Yətbaräk* of the *Dəggʷa*. Ś. is only composed if *Yətbaräk* is sung in the *ᶜəzəl* mode. It is not necessary when the *Dəggʷa* elements, or the *Səbḥatä nägh*, which accompany the *Säbbəḥəwo*, have ↗*məlṭan* which replaces *qəne* (i.e. becomes *həyyäntä qəne*; Yəḫeyyəs Wärqe 1967/68: 21f.).

The Ś. is considered as a difficult *qəne* to compose and is usually entrusted to elderly *qəne* masters.

Like *mäwäddəs* and *śahləkä*, Ś. can also be composed outside the church service, for praising religious and civil authorities and important persons.

Habtemichael Kidane

Śəllase: Mäṣḥafä śəllase

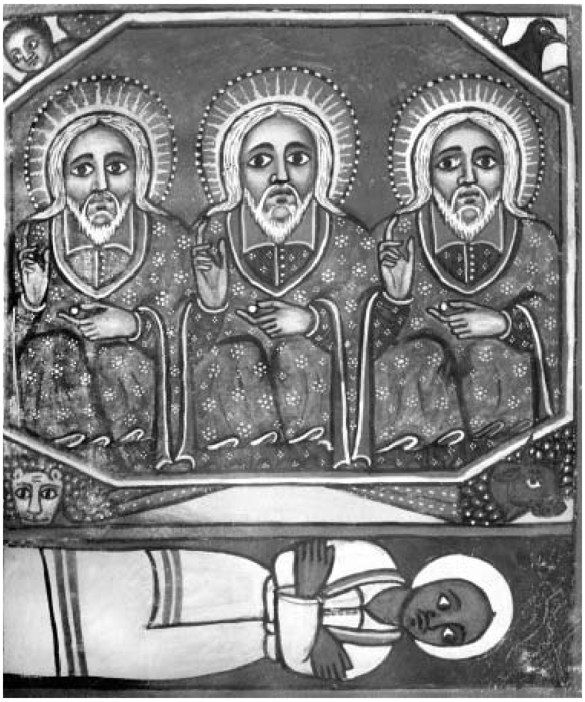
M.ś. (**መጽሐፈ፡ ሥላሴ**, 'Book of the Trinity', also **ኆኅተ፡ ፀሐይ**, *Ḫoḫətä ṣäḥay* 'The Gate of the Sun', the ↗sun being a metaphor for Christ; Wendt 1962: 11), is one of the theologico-apologetical writings attributed to *aṣe* ↗Zärʾa Yaᶜəqob.

The M.ś. is a short treatise found intertwined with the larger homiliary known as the *Mäṣḥafä* ↗*milad* (RicLett 825), with readings for the 29th of each month. The treatise on the ↗Trinity is clearly identifiable, forming the second (last) part of each homily, apart from *Mäskäräm* (the *Mäṣḥafä milad* homily for 28 *Gənbot* extensively deals with the matter of the Trinity). The M.ś. is twice introduced with the incipit **ነአምን፡ ዘንተ፡ መጽሐፈ፡ ሥላሴ፡ ዓቢይ፡ ዘይሰመይ፡ ኆኅተ፡ ፀሐይ። ኆኅትሰ፡ ዘፀሐይ፡ ማርያም፡ ይእቲ፡ እመ፡ ክርስቶስ፡ አዶናይ። ዘፀነሰቶ፡ ወወለደቶ፡ በድንግልና፡ ሕሊና፡ ወበድንግልና፡ ሥጋ፡ እንበለ፡ ጌጋይ።** ('We believe in this great book of the Trinity which is named "the Gate of Sun". The Gate of the Sun is indeed Mary, the mother of Christ the Lord whom she conceived and begot in the virginity of the mind and in the virginity of the flesh without sin'; Wendt 1962: 11, 33 [text], 11, 33 [tr.]).

The M.ś. as part of the *Mäṣḥafä milad* has been edited by Wendt from the 16th-cent. ms. BN d'Abbadie 62/63 (the pecularities of the language would suggest a later dating). EMML no. 6838 possibly dates to the 15th cent. (s. Getatchew Haile in EAE vol. 3, 965).

The aim of the *Mäṣḥafä milad* is to present the orthodox doctrine of the Incarnation and of the ↗Trinity and to defend them from presumed heresies. The contents of the M.ś., however, also include interesting points on ↗Mariology, ↗Eschatology (the reign of 1,000 years in Mount ↗Zion), Pneumatology, the sacraments of the Eucharist and Reconciliation, the ↗Sabbath, liturgical ↗calendar, etc.

The sources of the *Mäṣḥafä milad* and M.ś. are the ↗Bible (including Jub, En, Mac, 4 Es), the ↗*Didəsqəlya*, the ↗*Testamentum Domini*, the ↗*Senodos*, the ↗*Qerəllos* and other Church Fathers. The Biblical and extra-Biblical *testimo-*



Frontispiece miniature (the Trinity and a donor), ms. *Mäṣḥafä śəllase*, fol. 2v, 19th/20th cent., Čäläqot Śəllase, Təgray; photo 1993, courtesy of Michael Gervers

nia, the theological issues and a great deal of the vocabulary of this text feature in other writings of the time (e.g., Vitae of ↗Absadi, ↗Täwäldä Mädḫən and Fiqṭor of Däbrä Maryam). Thus, the M.ś. reflects an environment of high erudition which was also aimed at unifying the Church behind a commonly shared doctrine and religious practice, and the throne.

The insistence on the figure 81 as the canonical number of the Biblical books (↗Bible: Biblical canon), the main topic of the *Gənbot* homily, deserves a notice. There are large passages which reflect a bitter strife on the status of the ↗*Testamentum Domini*, the ↗*Didəsqəlya* and ↗*Enoch*. The M.ś. mounts a vigorous defence of their canonicity, underlining their practical utility and their complementary role to the ↗*Senodos*. It draws a comparison with the synoptic ↗Gospels which are complementary to each other and to John and vice-versa. The M.ś. warns that those who reject the *Testamentum Domini* betray and forfeit their Christian identity (Wendt 1962: 109–18 [text], 95–104 [tr.]).

The M.ś. is much shorter, and possibly older, than the *Mäṣḥafä milad* (Wendt 1962: v). It is framed in monologue style and is constantly addressed to two audiences. The main target of the vehement invectives of the M.ś. is the ↗Stephanites and the Jews (↗*Ayhud*) labelled apostates, "darnel", and liars. The Stephanites are repeatedly accused of saying that "each member of the Trinity existed with his word and his spirit independently of each other", thus bringing *zərwätä śəllase* ('scattering of the Trinity'; Wendt 1962: 13, 36 [text], 12, 33 [tr.]). The stereotypical reaction of the M.ś. is: "Each Person of the Trinity has his own face, appearance and person; the word of the Father, of the Son and of the Holy Spirit is the Son; one Word, one Spirit for the three of them" (ibid. 34f. [text], 32 [tr.]). The Stephanite literature never declares a belief in a threefold Word or in a threefold Spirit (ibid. 38 [text], 34 [tr.]). The hostility towards the Jews, which appears in other writings of the time as well, is impressive and raises the question as to why the Jews were attacked whereas the Muslims who are equally opposed to the belief in the Trinity and Incarnation were left out. The M.ś. accuses the Jews for saying that God did not beget nor is he begotten (ibid. 11 [text], 10 [tr.]). After his invectives against the dissidents, the author reverts to the believers and exhorts them to stand fast in the straight faith of the Church and to beware of false doctrines.

In dealing with the doctrine of the Trinity, the M.ś. makes use of the standard Biblical witnesses (e.g., Gen 1:3; 2:26; 3:22; 18; 19; s. Wendt 1962: 76 [text], 67 [tr.]) and of the traditional interpretation, mostly allegorical. The M.ś. employs analogies, such as three suns and one light to describe the unity and trinity of God (ibid. 104 [text], 91 [tr.]).

The M.ś. did not enjoy the success and spread of other Trinitarian texts like the ↗*Dərsanä śəllase* (occasionally also entitled *Mäṣḥafä śəllase* or *Zena śəllase*).

Along with the *Mäṣḥafä milad*, M.ś. is an important source not only of theology but also of ecclesiology, history and anthropology. Some forms of proper names, e.g., the form Šəwa (Wendt 1963: 49 [text], 43 [tr.]) for Sewa (i.e. ↗Šäwa) indicates the influence of Amharic on Gəʿəz.

Tedros Abraha

Ṣəllat ↗Tabot

Ṣəlmi

Ṣ. (**ጽልሚ**) is a variation of the extended family ownership of land in the highlands of ↗Eritrea. In this type of ↗land tenure system households are entitled to a share of the extended family's (↗*Ǝnda*) land through the male family head who is a member of the particular patrilineal lineage. Plots are allocated to individual families who then possess the right to lease them out or cultivate them; but without the prior assent of the members of the *ənda* unit, one cannot sell or mortgage them. Land is thus collectively administered by the extended family unit, and the individual who has the right to use it has only restricted rights over its disposal.

In Ṣ., as in *rəsti* (↗*Rəst*), ownership rights are traced back to the individual who first established rights over the land, most probably the first occupant. Ṣ., however, differs from *rəsti* in the practice of inheritance and distribution. In Ṣ., plots of land are allocated equally among the rightful heirs to the father's land. Strictly speaking, Ṣ. means the continued subdivision of the hereditary land, which in most cases leads to the fragmentation of the family estate. The progressive subdivision of the family estate often comes to a halt, which protects the land from being broken up into tiny fragments, and results in a system similar to collective *rəsti* (cp. ↗*Rəst*). It should be noted that at times terminology might be highly misleading, and in some areas the term Ṣ. applies to a system which nearly resembles *rəsti*.

Apart from some rare occasions, Ṣ. land is owned by inheritance generally through the male members of the patrilineal *ənda*. The system is thus basically exclusive, which means that land titles are due to members of the lineage community only and those who have been admitted through adoption. Although it is more common to inherit on the father's side, in practice, one may choose to own land in the mother's family estate. Similarly, it is more common for men to possess usufructuary rights, in some cases, though, women are also entitled to a share. These are rare cases when there are no male heirs to take over the land, when the father leaves a share to his daughter by will, or when the daughter is unmarried. Ṣ. land, once the right is given to share, cannot be revokable.

According to written and oral sources, Ṣ. was prevalent in all three highland provinces, ↗Ḥamasen, ↗Akkälä Guzay and ↗Säraye, prior to the reforms that came with the colonial era. In Säraye the system was able to survive until recently owing to the fact that the Italians did not force the overall adoption of ↗*desa* there. Today, this land tenure system is limited to small areas since in most parts of the country *desa* has been introduced by the subsequent ruling governments.

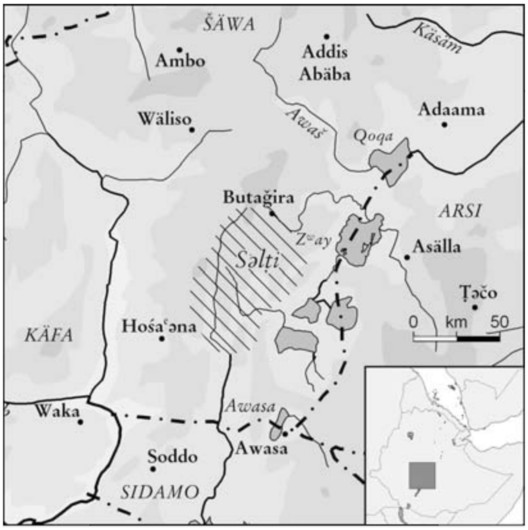
Səlṭi

Səlṭi language

S. (Səlṭe, Silṭi, Silṭe; self-names: *Islaamiñña*/ *Yiislaam Af*, lit. 'language of Islam', Amh.: Səlṭiñña), spoken by about 827,000 people (1994 census, s. Gordon 2005: 119), belongs to the East ↗Gurage group (along with ↗Zay and ↗Wäläne) which, together with ↗Harari, constitutes a branch of South-↗Ethio-Semitic. The language area stretches along both sides of the Addis Abäba–Hossa^{c}əna road, starting 10 km after Butağira and continuing up to 30 km before Hossa^{c}əna. The ↗Wəlbaräg consider themselves S. speakers. Neighbouring groups (e.g. ↗Libido, ↗Mäsqan) use S. as a second language. Cushitic influence is evident in the vocabulary (*fayya* 'good/well'), morphology (*-aančo*: *waarwaat-aančo* 'distressed'), and phonology (ten-vowel-



system with phonemic length). Arabic loanwords are not infrequent (Leslau 1999).

S. consonants are: plain stops *b*, *p*, *d*, *t*, *g*, *k*, ᵓ, ejectives *p̣*, *ṭ*, *č̣*, *q*, fricatives *f*, *s*, *z*, *š*, *ž*, *h*, plain affricates *ǧ*, *č*, nasals *m*, *n*, *ñ*, lateral *l*, vibrant *r*, approximants *w*, *y*. Vowels are *i*, *e*, *a*, *o*, *u*, plus long counterparts.

S. consonants (except for *h* and ᵓ) have contrastive gemination. Extensive morphophonemic changes (assimilation, palatalization, contraction, elision) characterize S. Dialect variation mainly affects glottalized consonants and ᵓ in southern varieties (influence of ↗Hadiyya), *h* and *w* vs. initial vowels, and *p̣* vs. *b*.

In nominals, singular and plural are unmarked, paucal is marked by -(*č*)*ča* (*adan* 'cat(s)', *adan-ča* 'a few cats') or reduplication (*gaar* 'house(s)', *gaaraaro* 'a few houses'). Definiteness is indicated by *-ii/-y* (masc.), *-te* (fem.): *wald-ii* 'the children', *baaliiq-te* 'the old woman'. Accusative marker is -*a* (with allomorphs -*e* and ø) or –*n*(*a*): *giz-a* 'thing (acc.)', *huseen-na* 'Hussein (acc.)'. Possession is marked by *ya-* (*ya-karaab qar* [poss.-ox horn] 'horn of an ox'), distributive by -*sa* (*ba-sa-wado* [in-distr.-turn] 'each in his turn'). The vocative marker is -(*a*)*w/-ew* (masc.) and -(*a*)*y/-ey* (fem.): *amiid-aw* 'Amiid!', *zamzoo-y* 'Zamzo!'. There are special vocative pronouns *koo* (masc.) and *tee* (fem.) 'hey, you!'.

Personal pronouns are *ihe* 'I', *iña* 'we', *ata* 'you (masc.)', *aš* 'you (fem.)', *atum* 'you (pl.)', *uha* 'he', *iša* 'she', *uhnu* 'they'.

Verbs are conjugated for person (including a special impersonal form), number and gender. From a consonant skeleton (e.g., *rkb* 'to find') three stems are formed: perfective (*rakab*-), imperfective (-*rakb*-) and jussive/imperative (*r(i)kab*). Alone or expanded with affixes or auxiliary *naar* 'was' (3rd pers. masc. sg.), these stems express tense and aspect: simple past *rakab-a*, present perfect *rakab-aan*, pluperfect *rakab-a naar*, present/future *i-rakb-aan*, continuous past *i-rakb naar*, imperative *rikab*, jussive *ya-rkab* (all forms in 3rd pers. masc. sg.). Negative prefixes are *al*- (perfective/infinitive) *ilaw-/itti-/ila*- (present/future), and *al-/at-/ay*- (continuous past, relative present/future, jussive/imperative). Any of the three stems can attach the suffixes -*aane* or -*a* to form converb.

Pronominal objects are expressed by verb suffixes: *rakab-a-y* 'he found him'. S. makes use of the benefactive -*nn*- and detrimental -*b*-: *rakab-ku-nn-ii* 'I found for him', *rakab-ku-b-uy* 'I found to his detriment'.

Verbal derivational markers are *a*- (transitive), *at*- (causative), *ta*- (passive), reduplication (iterative). The agent noun is formed with -*i*, infinitive with -*oot*. Compound verbs with *baala* 'say' or *añe/aše* 'do' are common: *liile baala* 'to shine'.

Personal pronouns and proper names take the copula -*t* (uninflected), other masc. sg. nominals -*n* (inflected) (fem. sg. -*nt*).

The word order is Subject–Object–Verb: *miiš-ii*$_1$ *gaara*$_2$ *mañe*$_3$ 'The man$_1$ built$_3$ a house$_2$'. Subordinate clauses precede the main clause. Most modifiers precede the head noun.

The ten-word list is: (*h*)*add* 'one', (*h*)*oošt* 'two', *šeešt* 'three', *ǧira* 'fire', *may* 'water', *ayr* 'sun', *wari* 'moon', *dam* 'blood', *aramat* 'tongue', *isn* 'tooth'.

Some poetic and prosaic texts in S., in Arabic script, were collected by ↗Schlobies, probably written down ca. 1926 by a S.-speaker, Muḥammad ^{c}Arab (s. WagHand 104–18). Nowadays, S. uses the Ethiopic ↗script (vowel length and gemination unmarked). The main published work is the collection of 3,000 proverbs with an Amharic translation by Hussein M. Mussa and Awwel Mohammed (2002). S. becoming the medium of instruction in schools (1995), the publication of the S. dictionary (1997) and the creation of Səlṭe Zone (2000) have raised the profile of S.

Səlṭi ethnography

The term S. (**ስልጢ**) is (1) an older variant of the modern ethnonym "Səlṭe" (**ስልጤ**) which includes all speakers of the S. language, and it is (2) the name of a major subgroup, the *Summus Səlṭi* ('Eight [districts of] S.') or "S. proper". Oral tradition derives the names S. and Səlṭe from the alleged *Summus Səlṭi* ancestor "*gän* Səlṭi" (*gän*[*za*], 'ruler of a territory'). Today's Səlṭe include the major subgroups of Azärnät, Bärbäre (↗Ǝnnäqor), Aliččo, Wuriro, Mälga (↗Wəlbaräg) and *Summus Səlṭi*. The great majority of the population is Muslim. Until the second half of the 20th cent., collective designations which included all major subgroups were "Ade(y)a" (from ↗Hadiyya [sultanate]), "Islam" and "East ↗Gurage", the last being primarily a linguistic category also including ↗Wälane and ↗Zay. They were widely considered to be part of the Gurage. However, after the fall of the *Därg* in 1991 a political movement formed, claiming an independent ethnic identity of the "Səlṭe", as they now called themselves. Ten years later the identity discourse resulted in the administrative secession from the Gurage zone and the establishment of a "Səlṭe zone" (for the earlier administrative division s. also ↗Hayqočč-Butağira). The S. language area reaches from the edge of the Gurage highlands up to the lowlands West of Lake Zʷay and from the area around the Har Šäyṭan crater lake, south of ↗Butağira, up to the lowlands of Sankura, bordering to the country of ↗Allaaba.

The Səlṭe practice mixed agriculture and cattle breeding. In the highland areas ↗*ənsät* cultivation is predominant, while in the lower regions cereals have more importance. ↗*Čat* and ↗*bärbäre* are the most relevant cash crops. Some written sources (e.g., Cecchi 1888: 123f.) describe the involvement of some S. and Wəlbaräg traders in slave trade. Since the 19th cent. merchants are engaged in trans-regional trade, especially in ↗coffee, on the caravan route crossing their territory to connect ↗Sidamo province and ↗Šäwa. During the 20th cent. many people from the area migrated to Addis Abäba and other towns in southern Ethiopia. In the capital they, together with the Gurage, make up one of the most important migrant groups. They are specifically known as entrepreneurs in the Märkato (↗Addis Kätäma) and Arada areas.

The Chronicle of *aṣe* ↗ᶜAmdä Ṣəyon mentions an entity allied to this emperor by the name of Sälṭagi/Səlṭähi, which can be interpreted as Səlṭi/e-ge ['land of S.'] (MarAmdS 100, 213). Braukämper identifies the "East-Gurage" as the only people related to the Hadiyya sultanate who did not adopt a Cushitic language. According to his reconstruction, in the 17th cent. their homeland was located in the highland of ↗Čärčär (BrHad 90, 184). According to oral tradition, today's Səlṭe consider themselves descendants of warriors of Arab, or even Šarīfic, descent who joined ↗Aḥmad b. Ibrāhīm al-Ġāzī and his successor *amir* ↗Nūr b. Muǧāhid. In the wake of the ↗*ǧihād*, ancestors, such as, e.g., *haǧǧi* Aliye Umär, *šayḫ* Naṣrallāh (↗ᶜAbdannāṣir), *šayḫ* Bärkälle, *imām* ↗Śidi, Kabīr Ḥāmid and Nūr

The *haḍra* mosque of the Alkäso *zāwiya*, Səlṭi; photo 2004, courtesy of the author

Yūsuf, are said to have migrated with their folks into the province of ↗Wäǧ. There, they settled on the slopes of the highlands and intermingled with the local population, the so-called Žära (cp. Bustorf 2006).

The Oromo migration into and through Wäǧ during the 17th cent. and constant conflicts with the ↗Libido drove the S.-speaking groups farther west into the highlands. In the 19th cent. scarcity of land and frequent conflicts with the neighbouring Gurage, especially with the warriors of *agäz* Hamdeno of ↗Geta and *damo* Mägänas of ↗Gumär (the latter mentioned in Cecchi 1888: 111–28), forced them to leave most of the highland areas (except Mugo, Ǝnnäqor and Aliččo-Wuriro) to the Gurage and to expand their territory to the pastoralist areas in the east and south-east. This again brought them into conflict with the ↗Arsi, Libido, Leemo- and Šaašoogo-Hadiyya.

Səlṭeland was subdued by Mənilək's troops for the first time in 1879. The earlier marriage of the daughter of the *Summus Səlṭi* chief *azma*[*č*] Qälbo with *nəguś* ↗Śahlä Śəllase facilitated a comparatively amicable relation between the leading families and the new rulers. In the course of the further Ethiopian conquest, Səlṭe warriors, such as, e.g., *azma* Ormora Gona, became important allies of the Ethiopian empire, notably in the campaigns against the Libido (e.g., 1879) and against King ↗Ṭona of Wälaytta in 1894.

In the 19th cent. the history of the S. speakers was characterized by Islamic revitalism fuelled by an intensified contact with Muslim centres, especially in Wällo, the rise in popularity of the ↗Islamic brotherhoods and opposition towards the expanding Christian empire. The leaders of the six major subgroups in 1881 joined the *ǧihād* of ↗Ḥasän Ǝnǧamo of Qabeena against Mənilək and started to reinforce Islam amongst their own people. The integration of Səlṭeland into Mənilək's empire after Ḥasän Ǝnǧamo's defeat in 1889 was followed by the settlement of ↗*näfṭäñña* families and the foundation of the first ↗*kätäma* "S." (south of today's Qəbät) and Wəlbaräg. The family of *ras* ↗Kaśa Ḫaylu, who was related to the leading Qälbo clan, was entitled with huge lands in the western S. area.

During most of their history the Səlṭe had no common political or judical body above the councils (*dämbus*) of the different major subgroups. Supra-tribal integration mainly was conducted by certain Islamic leaders (e.g., in the 19th cent., Haruna *gošte* and *šayḫ* "Wälle"; in the 20th cent., Alkäso *šayḫ*) and by political and military alliances (↗*Gogot*) of two or more groups, including sometimes not only S. speakers but also, e.g., ↗Mäsqan and Allaaba. A famous alliance, active between 1936 and the early 1940s, was the so-called *Səlṭi/e Gogot*. It united all major subgroups of the Səlṭe and, under the leadership of *imām* Sugato Zäyni, could dominate neighbouring ethnic groups.

Šəmagällä

Š. (**ሽማገለ**, also Šəmagälle, Wäld Šum, lit. 'son of a leader') is the designation of a sociopolitical group among ↗Təgre-speakers and the ↗Bilin. Š. is derived from a term in Ethio-Semitic languages which means 'elder' (↗*Šəmagəlle*), but also connotes a regular leading social role within gerontocratic structures. Among the Təgre and sociopolitically related groups such as the Bilin the term Š. came to be applied exclusively in its sociopolitical sense. The Š. leaders usually bear the title ↗*šum*, therefore the Š. are also known as Wäld Šum, e.g., among the Marya (cp. MunSt 238). Folk etymology connects Š. with that title (which supposes a form "*šumagälle*").

The complex traditional relations between the diverse Təgre groups and subgroups can be described as a loose confederacy, within which several lineages assumed an economically and politically leading role. Such lineages were called Š. The Š. were the 'aristocratic class' dominating all other Təgre groups, who were their 'serfs' (called ↗*təgre* in both Təgre and Bilin languages, e.g., MunSt 235). The Š. assumed the role of defender of the serfs' territory in war or conflict and had to provide food and clothing (Shack 1974: 79). One social marker was that a Š. would not milk cows or camels, considered impure work and reserved for *təgre* only. Within some groups – such as the ↗Bet Asgädä/↗Ḥabab, ↗Mänsaᶜ and ↗Marya – the Š. lineages formed an important element. Several smaller Təgre groups had no Š. among them. Until the early 19th cent., the Š. were predominantly Christians, while the serfs had started to convert to Islam earlier. Most Š. lineages are Muslim today (cp. Shack 1974: 91).

A prerequisite for assuming the role of Š. was that one was supposed to be an original (indigenous) group or the "owner" of the country. Generally, local groups or lineages, whose apical ancestor was a migrant, were excluded from any politically leading role, such as the Bet Ǧuk, said to be of Gondäre origin, or the Muslim ↗Təgrəñña-speaking highlanders, the ↗Ǧäbärti, many of whom settled at caravan places inside Bilin and Təgre territories (such as ↗Kärän). However, "indigenous" groups could also lose their status of Š. Some Š. lineages belonged to the "original migrants" of an area, i.e. the first who took possession of it, such as the direct descendants of the Ṭäqʷe of the Bilin (MunSt 203). Among the Beni ᶜAmir the Š. are called *nabtab*; their political leader, the *diglal*, is chosen from *nabtab* clans (Shack 1974: 88).

During the ↗Ethiopian–Eritrean Federation period (1952–62) several members of the Š. class joined the ↗Eritrean Assembly as representatives of the diverse Təgre groups and therefore assumed a new role in politics. However, following the struggle for Eritrean independence, which was also fuelled by opposition against Š. rule, the serf system had been abolished. Thereafter the ethnic term Təgre was now applied to all Təgre-groups, now also including the Š.

Wolbert Smidt

Šəmagəlle

Š. (**ሽማግሌ**) is an Amharic and Təgrəñña term denoting an 'elder' or 'old man'. Given the important role of the gerontocratic principle (↗Gerontocracy) in Ethiopian and Eritrean societies, the Š. is of central socio-cultural and political importance.

A typical Š. is a respected senior person, not necessarily of advanced age, who participates in the local council of elders (**ጉባኤ**, *gubaʾe*). He may serve his community as a mediator and adviser or as a local historian, conveyor of oral tradition (including ↗Genealogy) or expert in ↗customary law (↗Law: traditional legal institutions). The traditional judge (s., e.g., ↗*Dañña*) is selected from among the members of such a council.

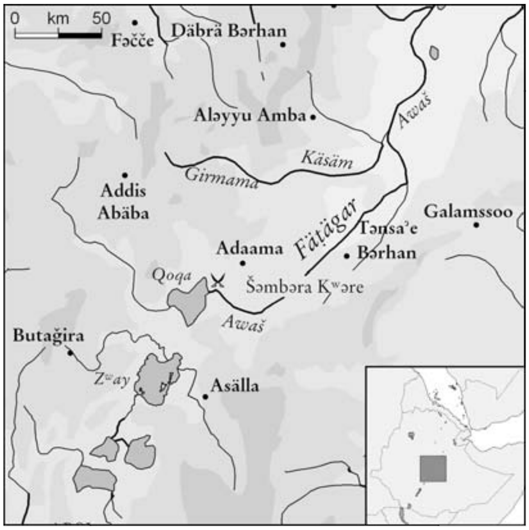
Dirk Bustorf

Šəmbəra Kʷəre

Š.K. (**ሽምብራ፡ ኵሬ**, also Šəmbəra Kure, 'Chick-pea pond') is a 16th-cent. battlesite in the area of the great Awaš bend, in the historical region of ↗Fäṭägar (for a tentative localization s. HuntGeogr 124 and his app. map 16, as well as the map below). Around or perhaps on 10 March 1529 (cp. BassHist 115 [tr.], with n. 2, and KrLebD 9, 12 [tr.], with nn. 26 and 42) it saw the first major confrontation between Muslim and Christian armies in the ᶜAdalite ↗*ǧihād* that had been launched against the Christian Kingdom by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ).

The Battle of Š.K. had a prelude in somewhat less bloody exchanges fought out briefly before at the nearby Sämärma River (the present-day Gərmama? Cp. HuntGeogr 89f., 124, and map 16). In those the Christian side remained victorious (BassHist 46–54 [text]; KrLeb 13 [text]). The subsequent battle of Š.K. however, even if both sides in it suffered heavy casualties (BassHist 63f. [text]; ↗Robel), ended in a severe and entirely unexpected defeat of the numerically greatly superior Christian forces (BassHist 55f. [text]; KrLeb 8f., 13 [text]). Still it was not, as is sometimes alleged, a decisive blow from which the



Location after HuntGeogr

Christian side was unable to recover or which, in central and southern Ethiopia, broke its fighting spirit. This might have been the case if the Muslim troops had followed up on their victory and, as Grañ desired, immediately marched against Ləbnä Dəngəl's residence at Badiqe. The exhausted and booty-laden *muğāhidūn* however could not be persuaded to do so, but preferred to return to Harär instead (BassHist 64f. [text]). It was hence only the 1531 battles of Anṣokiya and Ayfärs in Däwaro (the latter reported as the battle of Z-r-y in the ↗*Futūḥ al-Ḥabaša*; here and in the following similar instances, this source's Arabic script only yields orthographic skeletons; ↗Ǝslam Sägäd [I]), of B-w-sāt in Fäṭägar (↗Wäsän Sägäd), of Wāṣ-l at the Šäwa–Amhara border (↗Dägälhan, ↗Ros Näbiyat), and in 1532 the battle of Z-l-a in Bale (BassHist 106–11, 119–26, 160–70, 197–211, 285–90 [text]; KrLebD 10f., 13f. [text]) that for a decade broke the back of the Christian resistance in, essentially, the non-Təgrəñña-speaking parts of the kingdom.

Sembrouthes

S. (Gr. ΣΕΜΒΡΟΥΘΗC, *Sembrouthēs*, Eth. *SMRT, *Ṣənf Rəᶜud? cp. the ancient tribal name Σεμβρῖται/-ῖδαι, *Sembrîtai/-îdai*, Lat. *Se(m)b(er)ritae*, on which DAE IV, 3f.?) was a king of ↗Aksum likely to have ruled, for some 25 years at least, towards the end of the 2nd/beginning of the 3rd cent. A.D. He is only known from a Greek eight-line ↗inscription found by the Swedish missionary Sundström in 1906 at ↗Däqqämḥare, an Eritrean village on the road to Kärän, and kept now at the National Archaeological Museum in Asmära (DAE IV 3 = RIÉ 275).

In this much discussed document, dated to "the 24th year" of S.'s reign, the dedication of an unknown building or monument is implied: the king "came and set (it) up". Even more importantly, S. introduces himself in the third person as βασιλεὺς ἐκ βασιλέων ʼΑξωμειτῶν μέγας, *basiléus ek basiléōn Axōmeitôn mégas*, '(the) great(est) king from among the kings of (the) Aksum(ites)', i.e. from among his predecessors: a superlative predicate – so often misunderstood in scholarly literature – that seems to anticipate the later formula βασιλεὺς βασιλέων, *basiléus basiléōn*/Eth. *nəguśä nägäśt*, 'king of kings', i.e. 'king among(st) kings' or 'king par excellence' (s. ↗*Nəguś*).

S. has been regarded as identical with either a(n immediate?) predecessor of ↗Endybis (Pedroni 1997: 102–06) or, less recently, with the Ḥimyarite king ŠMR YHRᶜS (Drewes 1962: 106f.) or else with ↗Ousanas (Altheim – Stiehl 1968: 334 and 1969: 170f., 245) and ↗Ǝllä ᶜAmida (I) – whom some authors believe to be one and the same as Ousanas (Hahn 1983: 123ff. and in PICES 8, vol. 2, 11f.), but who is actually his son. All these groundless hypotheses also involve the identification of S. and his purported alias with the anonymous Aksumite king of the ↗*Monumentum Adulitanum*: a proposal that is now more soundly assumed for S. alone (MHAksum 79f.; Ricci 2003: 168f.; Fiaccadori 2004).

In keeping with the palaeographic evidence, dating the inscription to the 2nd/3rd cent. (rather than "the 1st/2nd cent. A.D." suggested by Bingen 1992) would definitely imply that S. be identified with the king of the *Monumentum*, dated to "the 27th year" of the latter's reign. Within a common Hellenistic framework, pointing to a "Ptolemaic" model, this inscription shows a number of striking similarities with that of Däqqämḥare, which could thereby be traced to one of the (north-)western campaigns recorded – three years later – in the *Monumentum*.

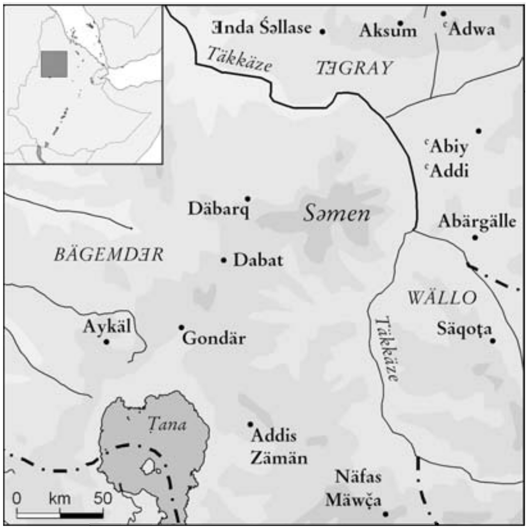
Səmen

S. (**ስሜን**, sometimes Sämen, **ሰሜን**) is a highland region limited to the north and east by the ↗Täkkäze River. The S. mountains are made up of several plateaus separated by broad river valleys. Its landscape, shaped by a number of peaks that rise above 4,000 m (↗Ras Dašän), is the result of massive seismic activity about 40 million years ago. The S. mountains is the third and northernmost area in Ethiopia where glaciation took place during the late Pleistocene period (Grab 2002).

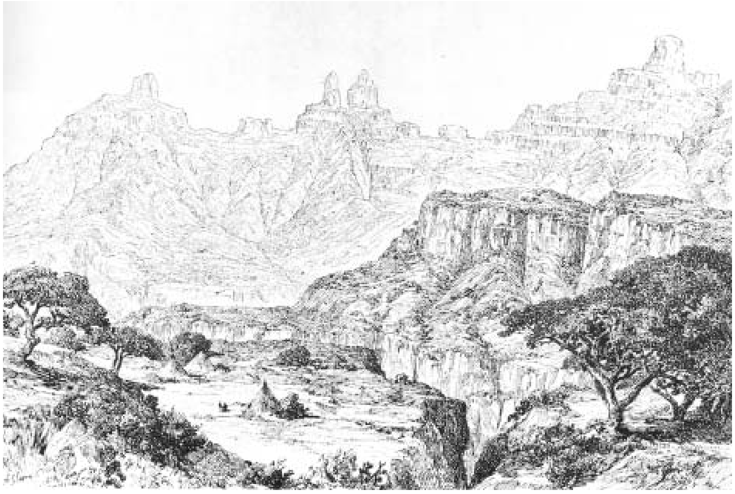
In 1959 the Simien Mountains National Park (↗Parks, National) was established, which stretches over 179 km² and is home to a great variety of flora and fauna, including endemic species (↗animals; ↗plants). The Park, which in 1978 became one of the first sites to be included by the UNESCO in its world heritage list, is today one of the country's main tourist attractions. The entry to the Park is at ↗Däbarq.



One of the earliest mentions of S. is made in the inscription copied by ↗Cosmas Indicopleustes (↗Monumentum Adulitanum), which reports an Aksumite king crossing the Täkkäze River and conquering the peoples there, including the "Samêne", who lived "among inhospitable mountains that are covered deeply in snow" (Wolska-Conus 1968: 374f.; SerHist 62; RIÉ no. 277: 6–9). The S. was also stated by Cosmas to be the place to which "the king of the Aksumites expatriates anyone whom he has sentenced to be banished" (Wolska-Conus 1968: 378f.; SerHist 65).

The origin of the toponym is a Gəʿəz word originally meaning 'south', which reflected the position of S. respecting Aksum. Later, as the core of the Christian kingdom shifted southward, the word, now firmly associated with S., came to mean 'north' (LesCDic 503; DillmLex 334f.).

Until recently, S. was mainly populated by the Fälaša (↗Betä Ǝsraʾel). By the 14th cent. it was known as one of major centres of ↗*Ayhud* (most probably identical with Betä Ǝsraʾel). The legendary queen Gudit, or ↗Ǝsato, is sometimes described as a "Fälaša" queen from S. who destroyed the town of Aksum and expelled its rulers at the time of ↗Dəlnaʿod (BassHist II, 457, n. 4). In 1332, ↗ʿAmdä Ṣəyon sent troops to put down a revolt of the *Ayhud* in S. (MarAmdS 68f.). Around the early 1370s, the monk ↗Qozmos renounced his Christianity and fled to S. The *Ayhud* of S. and ↗Ṣällämt venerated him as a semi-divine figure and helped him form an army that attacked the Christians in ↗Dämbəya and ↗Bägemdər. Eventually, this revolt was suppressed by *aṣe* ↗Dawit who sent troops from Təgray led by ↗Akḫadom.



The Səmen mountains viewed from Lämaləmo, drawing by Eduard Zander, 1850s; from Reclus 1885: 211

In the early 15th cent., *aṣe* ↗Yəsḥaq was the first ruler to become directly involved in the issue of the *Ayhud* in north-west Ethiopia. According to both Betä Ǝsraʾel oral traditions and Ethiopian written sources, Yəsḥaq instituted a divide and rule policy in ↗Wägära and S. that sparked a revolt. The *Ayhud* defeat in Wägära resulted in the first documented confiscation of their land (*Tarikä nägäśt*, EMML 7334, fol. 28v; Quirin 1992: 53ff.).

Despite this defeat, the Betä Ǝsraʾel in S. remained independent. But they were subject to Christian evangelization efforts, such as by the monk ↗Täklä Ḥawaryat, during the reign of *aṣe* ↗Zärʾa Yaʿəqob. These Christianization efforts stimulated a revolt of the Betä Ǝsraʾel in S., Ṣällämt and Dämbəya.

The S. Betä Ǝsraʾel continued to be the leaders of the group as a whole and remained independent through the next century. During the *ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), the S. area became a battlefield between the Christians and Muslims (BassHist I 185, 311f., 342f. [text]). The S. Betä Ǝsraʾel tried to maintain their independence by supporting Grañ during the reign of *aṣe* ↗Ləbnä Dəngəl (cp. also KrLebD 21 [text]), and then switched to support *aṣe* ↗Gälawdewos. In 1542, after a battle won by Christian and Portuguese (cp. Christovão da ↗Gama) soldiers with the help of Betä Ǝsraʾel, one of the latter's leaders was appointed as governor of the region (Quirin 1992: 74ff.; BecRASO II, 314f.).

The Betä Ǝsraʾel maintained good relations with Gälawdewos almost to the end of his reign, but in 1559–60 his brother, ↗Minas, unsuccessfully attacked the S. Betä Ǝsraʾel; the attack was led by ↗Rädaʾi (KrLebD 54 [text], BassEt I, 337 [text]). *Aṣe* ↗Śärṣ́ä Dəngəl repeated the attacks in S. Probably due to the more northern orientation of the regime which began under this king, the Christian state desired to control S. more directly, an effort that continued into the Gondär dynasty.

Between 1559 and the 1620s, the centre of Betä Ǝsraʾel leadership was in S. The sources name four prominent men and one woman in S.: firstly, the brothers Rädaʾi and ↗Kalef, secondly the brothers ↗Gʷäšən and ↗Gedewon as well as their sister Ḫarägo. It is not clear if all five were siblings, or if there were two families involved. After 1587–88, Śärṣ́ä Dəngəl took as his mistress Ḫarägo, who gave him four sons. The first son, Zämaryam, died in 1595, but the others – ↗Yaʿəqob, ↗Kəflä Maryam and Mätäkko – figured prominently in the politics of the succession struggle after Śärṣ́ä Dəngəl's death in 1597. Yaʿəqob, who was seven years old at the time of the Emperor's death, was declared king under a regency. It was during this regency, in 1597, that Gedewon, Ḫarägo's brother, was confirmed as the governor of S.

During the next two decades, many rebels rose against *aṣe* ↗Susənyos, several claiming to be the real Yaʿəqob. In 1614–15, one such rebellion was supported by Gedewon (PerChron vol. 1, 149–53 [text]). For two months the Emperor's forces attacked Gedewon in S. until he gave up the rebel in exchange for his own life. Gedewon was finally defeated and killed by the king's army in a conflict in 1623–24 (ibid. 155f. [text]). A final defeat of an uprising by Gedewon's son the next year (ibid. 283 [text]) put an end to Betä Ǝsraʾel political independence in S. But, as had been the case in previous regimes, some of the Betä Ǝsraʾel were next mentioned as soldiers serving under *abetohun* ↗Fasilädäs (ibid. 307f. [text]), the future emperor, who had been made governor of S. Besides, the S. remained a significant center of the Betä Ǝsraʾel religion into the 20th cent. with many monks living there.

During the ↗Gondärine kingdom, the ruler of S. was known as the *səmen ↗aggafari*, a position regularly allocated to the eldest son of the reigning emperor. The high rank of this official during the Gondär era suggests the significance to the kingdom of keeping this area under close control to prevent future Betä Ǝsraʾel revolts. The tolls from the S. customs post at Lämaləmo were also under the direct control of the monarchy (s. ↗*Kella*). In the early 19th cent., as centralized government was disintegrating (↗*Zämänä mäsafənt*), control over the S. was left in the hands of the local ruling family (probably also with the Betä Ǝsraʾel background, s. Quirin 1992: 139), with *däǧǧazmač* ↗Wəbe Ḫaylä Maryam being the most notable representative.

As Gondär was replaced as the power centre by ↗Šäwa during the 19th cent., S. also lost its political significance. *Ǝtege* ↗Ṭaytu Bəṭul traced one side of her ancestry to a S. line (Prouty 1986: vii), and she favored her relatives in appointments. She was also said to have brought S. masons to help reconstruct the city of Gondär.

During the Italian occupation, S. was incorporated into the governorship of Amhara. After the Liberation, it became an *awraǧǧa* within the province of Bägemdər and S. It is now a part of Amhara Regional State.

James Quirin

Semerjibashian, Johannes [Hovhannes]

S. (b. 10 August 1896 [?], Egypt [?], d. 9 October 1947, Addis Abäba) was a dragoman, a public relations officer, a resistance fighter and custodian of a diplomatic property in Ethiopia. An Armenian by birth, he lived almost all his life in Ethiopia and married a noble Ethiopian woman (Aṣädä Maryam Wäsän Yälläh, d. 1956).

Various sources put the year of S.'s birth between 1880 and 1896, and the family maintains the latter. He was brought to Ethiopia as a child and first lived in Harär where his father, Avedis Semerjibashian of Arapkir (b. 1860, d. 1924), had established a business. S. attended the Catholic mission school headed by ↗Jarosseau, where he met Täfäri Mäkʷännən (*aṣe* ↗Ḫaylä Śəllase I). From 1906 to 1914 he attended an American mission college in Bardizag, Turkey.

On his return, S. started his career as a dragoman with the British legation in Addis Abäba. His proficiency in several foreign and local languages and his talent for communicating, soon made him invaluable as an interpreter. In 1919 he resigned and joined an Anglo-American oil prospecting company as an advisor, administrator, liaison officer and correspondent. In 1925 he finally joined the reorganized German legation, where he stayed for over 20 years. He started as first dragoman and was later promoted to Oriental secretary. When the legation was reduced to the status of consulate general shortly after the Italian occupation of Ethiopia in 1936, he was made advisor for local affairs.

All the time, S. was in contact with Ḫaylä Śəllase, to whom he gave practical assistance whenever he could. E.g., in 1935, he was said to have collaborated with David ↗Hall to realize the purchase of arms for Ethiopia from Germany. In 1936, the Italians, who were aware of his relations with the sovereign and who intercepted some of his correspondence with the resistance fighters, arrested and sentenced S. to death. He was saved only through the German and British diplomatic intervention.

Clandestinely S. continued to work in support of the ↗Resistance, informing the patriots about Italian activities as well as international developments. He also strove to create harmony among the different resistance leaders whose activities were hardly co-ordinated in the initial stage. He published an underground newspaper ↗*Amdä bərhan zäʾityop̣ya* and disseminated it among the resistance fighters. At least twelve issues of this publication are said to have been produced. In recognition of his patriotic activities, Ḫaylä Śəllase awarded S. the highest order of merit with five palms.

In the mid-1940s, a conflict between S. and the Ethiopian government broke out. One reason was that S. apparently joined those criticizing the Emperor's absolute power. Another was that, appointed during the war the custodian of the German legation properties in Addis Abäba under the auspices of the Royal Swedish legation in Cairo, he refused the Ethiopian government any access to the German properties. Subsequently, the government declared him *persona non grata*. S. nevertheless stayed in Ethiopia and continued to work for the American embassy. On the evening of 9 October 1947, he was assassinated close to his house. He was survived by his wife, two sons and two daughters.

Bairu Tafla

Semeur d'Éthiopie, Le

S.E. was Ethiopia's first foreign-language periodical, produced almost entirely in French, but with occasional decrees or other texts in Amharic (from 1900 till 1905 *Bulletin du Léprosarium de Harar*), run by members of the French Lazarist Leprosarium in ↗Harär. Printed in Harär until 1908 and at ↗Dərre Dawa from December of that year to 1911, it was founded and edited for most of its existence by the French missionary, Father Marie-Barnard.

Devoted largely to religious and missionary topics and to Harär affairs, S.E. contained articles on the Lazarist leprosarium (↗Leprosy, lepers), with appeals to readers for financial assistance, and a necrology of past supporters; also contributions on the treatment, psychology and conversion of lepers; the activities of Roman Catholic missionaries; the history of the Eucharist in Ethiopia; an account of the mission station of Läfto during the great famine of 1889–1900; correspondence between the Pope and the rulers of Ethiopia; letters from ↗Jarosseau, Touvier, ↗Cahagne and other missionaries; Ethiopian Christian festivals; and indigenous Oromo religious beliefs (↗Oromo religion). Attention was also paid to essentially secular matters, with a series of brief news reports from Addis Abäba, Djibouti, Harär and Dərre Dawa. Subjects featured included the genealogies of *aṣe* ↗Mənilək II and *ətege* ↗Ṭaytu; the Emperor's appointment of *ləğ* ↗Iyasu as his heir; the arrival of Haräri governors (↗Yəlma Mäkʷännən, ↗Balča Śafo and Täfäri Mäkʷännən [later *aṣe* ↗Ḫaylä Śəllase I], together with decrees by the latter); the coming to Ethiopia of French diplomatic and other envoys; the activities of the French-run Harär hospital; the Ethiopian ↗postal system – the cost of sending letters all over the world; the movement of Somali tribesmen around Djibouti; Oromo folk-tales, and the history of the ↗Harari. S.E., which advertized itself as an illustrated journal, also regularly published a number of pictures, mainly on religious themes, with a frequently repeated engraving depicting "The Rich Man Carried to Heaven in the Arms of the Poor Man".

Richard Pankhurst

Semitic

The S. language family is one of the branches of the ↗Afro-Asiatic (also known as ↗Hamito-Semitic) phylum. As a linguistic designation, "Semitic" is first attested at the end of the 18th cent. (Voigt 2001: 1314). Several minor subdivisions within S. are certain: Akkadian; Canaanite (Hebrew, Phoenician, possibly Ugaritic); Aramaic; ↗Arabic; ↗Epigraphic South Arabian (ESA: Sabaic, Minaic, Qatabānic, Ḥaḍramitic); ↗Ethio-Semitic (ES); Modern South Arabian (MSA: Mehri, Harsusi, Jibbali, Soqotri). The arrangement of these groups into higher taxonomic units is still open to discussion.

One widespread classificatory pattern (Hetzron 1976, s. already Rössler 1950) splits the S. family into East S. (represented by Akkadian) and West S., further divided into North (or Central) and South S. Central S. consists of Canaanite, Aramaic and Arabic. South S. comprises ESA, ES and MSA. Semitic forms in the cuneiform archives from Ebla can usually be interpreted as East S. (= early Akkadian); West S. influence is discernible in the vocabulary only (Krebernik 1996).

The use of the suffix conjugation base $C_1aC_2aC_3$- to denote past actions separates West S. from East S. Amongst West S. languages, those that continue to use the long form of the prefix conjugation for the present-future (yV-$C_1aC_2C_2VC_3$) belong to South S., whilst Central S. has replaced it by the short form with suffixed -*u* (for further Central S. isoglosses s. Huehnergard 2005). The unity of South S., relying on an archaism rather than on a shared innovation, is problematic. Generalization of -*k*- in the suffix conjugation as a classificatory feature uniting ESA, ES and MSA has been assessed differently by various scholars (Blau 1978: 31; Zaborski in KayeLes 368f.; Appleyard 1996: 214f.; Huehnergard 2005: 168f.).

ESA, traditionally classified as South C., is attributed to Central S. in recent studies, since the present-future was expressed by *yV-$C_1C_2VC_3$-*u* at least in Sabaic (Nebes 1994).

The position of Arabic is ambiguous: *yV-$C_1C_2VC_3$-*u* for present-future suggests that it belongs in Central S., but a few features shared with ES and/or MSA (patterns of the broken plural, the verbal stem $C_1\bar{a}C_2aC_3a$, -*a*- in the suffix conjugation of derived stems) are striking (Blau 1978: 29ff.; Diem 1980: 68ff.).

Lexicostatistics suggest that proto-S. disintegrated in the mid-5th millennium B.C. (Militarev 2000: 303). The Arabian homeland of Semites, popular in earlier studies (s. references in Henninger 1968: 10), does not look attractive today in view of the well-developed agricultural terminology of proto-S. (Aro 1964) and the existence of contact lexemes between proto-S. (PS) and proto-Indo-European (PIE *_tauro_- – PS *_ṯawr_- 'bull', *_gʷern_- 'millstone' – *_gurn_- 'threshhold', *_woino_- – *_wayn_- 'wine', *_Haster_- 'star' – *_ᶜaṯtar_- 'astral deity', Gamkrelidze – Ivanov 1984:871–76), both of which point to a more northern locality (the combination of *_dubb_- 'bear', *_riᵓm_- 'aurochs' and *_ṯapan_- 'hyrax' in proto-S. animal vocabulary suggests Phoenicia and Palestine).

The PS consonant system comprises 29 phonemes (Cantineau 1953). Sibilants (*_s_, *_ṣ_, *_z_, *š), lateral sibilants (*_ś_ and *_ṣ́_, Steiner 1977) and interdentals (*_ṯ_, *_ḏ_, *_ṯ̣_) are prominent (some of them originally affricates, cf. Faber 1985; Steiner 1982; Voigt 1979). The wide inventory of gutturals (*_ḫ_, *_γ_, *_ḥ_, *ᶜ, *ᵓ, *_h_) is remarkable. Most stops and sibilants appear as triads of voiceless/voiced/"emphatic" (originally glottalized as in ES and Jibbali). The PS vocalic system comprises six phonemes (*_a_, *_ā_, *_i_, *_ī_, *_u_, *_ū_). Vocalic correspondences are regular in affixes, but reconstruction of root vocalism is often problematic (Kogan 2005). There is no reliable reconstruction of accent, but the "third mora rule" of Classical Arabic, corresponding to the metrical patterns of Akkadian poetry, may be projected to PS.

Primary nouns usually comprise three consonants, bi- and quadriconsonantal bases being also in evidence (Fox 2003: 61–83). Derived nouns are produced from verbal roots by vocalic elements inserted between the root consonants (Fox 2003), sometimes combined with prefixes.

Nouns in the sg. oppose the fem. in -(*a*)*t*- to the unmarked masc. Gender opposition in verbs and pronouns is expressed in a variety of ways, s. Gəᶜəz *tə-näggər-ø* – *tə-näggər-i* 'you (masc./fem.) say', *ant-ä* – *ant-i* 'you (masc./fem.)', *wəᵓət-u* 'he' – *yəᵓət-i* 'she', *zənt-u* – *zatt-i* 'this (masc./fem.)'.

The external pl. markers of nouns are *-_ū_ (masc.) and *-_āt_- (fem.). In some languages special affixes for the masc. pl. of adjectives are attested (Akkadian _-ūt-_, Gə^{c}əz _-an_, Təgre _-ām_). The most archaic apophonic pl. marker is *_-a-_ (Greenberg 1955), alternating with ∅ (Gə^{c}əz _əzn_ ‘ear’, pl. _əzän_) or another vowel (Mehri _ḥə-nīd_ ‘waterskin’, pl. _ḥə-nōd_). More developed systems of “broken” plurals (Ratcliffe 1998) are known from Arabic, ES, ESA and MSA. The dual marker *_-ā_ is productive in early Akkadian, Ugaritic, Arabic, ESA and MSA.

Nouns in the sg. distinguish between nominative (*_-u_), accusative (*_-a_) and genitive (*_-i_), preserved in Akkadian, Ugaritic and Arabic. In the dual and the external pl. only nominative vs. oblique are opposed: dual *_-ā_/*_-ay_, masc. pl. *_-ū_/*_-ī_, fem. pl. *_-āt-u_/*_-āt-i_. Possession is expressed by juxtaposition of the head and dependent noun in the genitive (Arab. _kitāb-u zayd-i-n_, ‘Zayd’s book’), analytic possessive markers are also widespread (Tgn. _nay ḥawwäy kälbi_, ‘my brother’s dog’). Spatial relations are expressed by prepositions.

No definite article can be traced back to PS, but according to Kuryłowicz (1950) and Dolgopolsky (1991), _-m_(V) or _-n_(V) following markers of number and case are fossilized markers of definiteness.

S. verbal roots are reconstructed as purely consonantal, although the thematic vowel of the prefix conjugation is lexically determined (*_-ktum-_ ‘to cover’, *_-šriq-_ ‘to steal’, Fronzaroli 1963). Verbal roots have three stable consonants (“strong” roots), or, if one of the radicals is _w_ or _y_, this alternates with a vowel or is dropped (“weak” roots). Some of the “weak” roots may be originally biconsonantal (cf. Voigt 1989; Zaborski 1991). Phonetically close consonants within a root are avoided (Greenberg 1950).

The verbal system of PS was close to that of Akkadian, which best correlates with non-S. Afro-Asiatic (Rössler 1950; Greenberg 1952). The short form of the prefix conjugation (*_y_V-$C_1C_2VC_3$) for past indicative and jussive is opposed to the long form for present-future, marked by gemination and _a_-apophony. Forms of the suffix conjugation denote state and are atemporal.

Throughout West S., the suffix conjugation base *$C_1 a C_2 a C_3$- came to denote actions in the past, replacing *_y_V-$C_1C_2VC_3$ in its narrative function (Gə^{c}əz _nägärä_ ‘he said’ – _yənäggər_ ‘he says’ – _yəngər_ ‘let him say’). In Central S. the long form disappears, and the present-future is expressed by the short form augmented with _-u/-na/-ni_ (Arab. _kataba_ ‘he wrote’ – _yaktub-u/yaktubū-na/yaktubā-ni_ ‘he/they/two of them (will) write’ – _yaktub/yaktubū/yaktubā_ ‘let him/them/two of them write’).

Derived stems are the intensive with a geminated second radical, the causative with prefixed *_š_V-, the passive and the reflexive with prefixed or infixed *_t_(_a_)- or prefixed *_n_(_a_)-.

S. languages have nominative syntax: the _u_-case marks the subject and the nominal predicate, the _a_-case marks the direct object. The word order in the nominal sentence is Subject-Predicate. For the verbal sentence the Verb–Subject–Object order typical of Central S., MSA and Gə^{c}əz is reconstructed for PS. Attributes follow their heads and agree with them in gender, number, case and definiteness.

Səmᶜon

Ras S. (**ስምዖን**, fl. 16th cent.) was an important official in the reign of *aṣe* ↗Ləbnä Dəngəl. In the sources his name is mostly associated with the name of the region he ruled: "*Ras* S. of Hagärä Maryam", Hagärä Maryam being also the name of his church in the centre of the same region. As his works and history show, S. was a capable writer and a scholar of ↗Gəᶜəz literature. We know so far that he authored:

1) **መጽሐፈ፡ ምዝጋና** (*Mäṣḥafä məzgana*, 'Book of Gratitude', EMML no. 5083, fols. 195r–99r);
2) **ድርሳን፡ በእንተ፡ ተዛልፎተ፡ አይሁድ፡ ወመርገመ፡ ይሁዳ፡ አስቆሮታዊ** (*Dərsan bäᵓəntä täzaləfotä Ayhud wämärgämä Yəhuda Asqorotawi*, 'Homily on Rebuking the Jews and Cursing Judas Iscariot', for Passion Week, EMML no. 5083, fols. 199v–203v);
3) several miracles of St. Mary (cp. ↗*Täᵓammərä Maryam*) worked at Hagärä Maryam (EMML no. 3872, fols. 2r–3v, 1rv, 90r–95r, 161r–62r and 173rv).

The *Book of Gratitude* and the miracles, copied originally for the church of Hagärä Maryam, are all important sources for Ethiopian history, social and economic life before the war of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") (Getatchew Haile 2005: 5–95).

S. was one of several children of the famous *ᶜaqqabe säᶜat* ↗Nägädä Iyäsus, the abbot of ↗Däbrä Ḥayq Ǝsṭifanos and *liqä kahənat* of ↗Mäkanä Śəllase (Taddesse Tamrat 1970: 114–17). From the chronicles, we know that the *ᶜaqqabe säᶜat* had another son called Bəᵓəse Ǝgziᵓabəḥer who was killed with his father on the same day in the war with Aḥmad Grañ (BassÉt I, 328). A new source (EMML no. 5083, fol. 196r) also reveals that S. and another official, Śärṣ́ä Yosef, were sons of Nägädä Iyäsus.

Although there have been (and still are) several districts called Hagärä Maryam (lit. 'the land of [St.] Mary'), in different provinces, S.'s realm was most probably the "Agere-Mariam" – Hagärä Maryam in ↗Bulga (later a sub-district in Käsäm *wäräda*; s. also Mesfin Wolde-Mariam 1991: 25, 199; and EMML no. 7346, fol. 36v). Furthermore, the sources testify that S. had built a church called Hagärä Maryam, with the lime transported from ↗Wäläqa (EMML no. 5083, fol. 196r). But it could also be that he had renovated an already existing church and built another, adjacent one.

S. was the *poeta laureatus* of the day when the community of Hagärä Maryam celebrated annually the Feast of Simeon or the Presentation of the Child Jesus in the Temple (*Yäkkatit* 8). The governor had given a special significance to the feast because he was named after Simeon who took the Child in his arms at the Presentation (Lk 2: 25–29): "S. enters (the church) and stands in their midst, dressed in brocade and wearing a seal ring of gold and silver to tell them a ↗*śəllase*". In his lengthy description of the feast, S. says, "The number of the wick(s) for the lamp(s) amounts to 10,000, which is ten thousand. (Only) God knows if the number is more or less. And the number of wax candle(s) is about 70 hundred, that is, 7,000" (Getatchew Haile 2005: 55–59).

A rare case in the works of Gəᶜəz literature and a glimpse into the old Ethiopian manuscript culture, S. describes with great affection his own ↗Psalter, once stolen and then retrieved: “The whiteness of its velum looks like Egyptian linen cloth which a fuller has whitened. Its ink is like the colour of black glass, like soot. The redness of its ink is like the colour of glowing charcoal. The cover of its boards is a badger skin, like the beauty of European red wool. Each miniature is covered with scarlet silk” (Getatchew Haile 2005:80). The Psalter was richly illustrated by “Märqoryos Afrəngawi” (possibly ↗Brancaleone).

The last miracle (EMML no. 3872, fol. 173rv) implies that S. had survived the Muslim wars (1527–43; ↗Aḥmad b. Ibrāhīm al-Ġāzī) and had built other churches in several places, including Wäläqa and ↗Damot. But his church of Hagärä Maryam did not survive (“In the month of *Miyazya*, [the *imām*] put on fire the country of *ras* S.”, cp. EMML no. 941, fol. 4v).

Src.: BassÉt I, 325 (text) = II, 99 (tr.); EMML nos. 941, 3873; nos. 5083 (*Mäṣḥafä gəbrä ḥəmamat*), 7346 (*History of Däbrä Libanos*), not catalogued.

Lit.: GETATCHEW HAILE, “The Works of *Ras* Səmʿon of Hagärä Maryam”, *JES* 33, 1–2, 2005, 5–95; MESFIN WOLDE-MARIAM, *Suffering Under God’s Environment*: *a Vertical Study of the Predicament of Peasants in North-Central Ethiopia*, Berne 1991, 25, 199; TADDESSE TAMRAT, “The Abbots of Däbrä-Hayq (1248–1535)”, *JES* 8, 1, 1970, 87–117, here 114–17.

Getatchew Haile

Səm^{c}on

Abunä S. (**ስምዖን**, “Simam” in Portuguese sources; b. Egypt, d. 11 May 1617, Dämbəya) was a metropolitan of the Ethiopian Church. Towards 1607 he arrived in Ethiopia to succeed *abunä* ↗P̣eṭros and on 28 March 1609 he anointed *aṣe* ↗Susənyos as *nəguś* of Ethiopia in Aksum. Shortly after, he sojourned for some days with the ↗Jesuits in ↗Fəremona (BecRASO III, 336; VI, 218).

In the course of 1613 and 1614, S. participated in the religious disputes held at the court in Dämbəya and ↗Ačäfär between the Orthodox and Catholics. He became a strong advocate of the official Orthodox dogma of the unique nature of Christ and forbade anybody from joining the Catholic faith and entering Jesuit churches. He also enjoined the governor of Təgray ↗Yolyos to persecute the Luso-Ethiopians (↗Portuguese). Susənyos, however, sponsored a freedom of choice that could only benefit the Jesuits (BecRASO II, 379f., 385ff.; VI, 283ff.).

In May 1617, following an abortive plot to assassinate Susənyos (BecRASO VI, 298), S. and other major figures of the state, such as ↗Yämanä Krəstos, Yolyos and ↗Kəflo, organized a military coup. The rebels were confident of their superior military force but an ill-planned strategy brought them to a rapid defeat at Ṣädda, Dämbəya. S. himself was killed and beheaded (BecRASO II, 393ff.; III, 357f., 496; VI, 299–304; XI, 385, 432). At his death, apparently at the request of court officials, the Patriarchate in Cairo sent a new metropolitan, Yəsḥaq. In 1619, however, Yəsḥaq died on the way to Ethiopia in ↗Sinnār as a captive of King Rubat, thereby opening the way for the nomination and dispatch of a Catholic Patriarch from Europe (PerChr 154; BecRASO XI, 432, 472).

The Jesuits presented S. as a greedy and ignorant person, who had several wives and children and who lived in luxury (e.g., BecRASO II, 435, 472f.; III, 355f.). According to Jesuit sources too, he was involved in an financial dispute with the Patriarch of Alexandria (ibid.).

Src.: BecRASO II, 379f., 385ff., 393ff., 435, 472f.; III, 336, 355–58, 496; VI, 218, 283ff., 298–304; XI, 385, 432, 472; PerChr 126ff., 154 [tr.].

Andreu Martínez d’Alòs-Moner

Śənä fəṭrät

Ś.f. (**ሥነ፡ ፍጥረት**, conventionally translated as the ‘Beauty of Creation’) is an Ethiopian version of the history of Creation.

At least one of the several versions of the Ś.f. was originally composed in ↗Gə^{c}əz (at an unknown date). It started to spread widely in ↗Amharic since the 17th cent., possibly against the background of Christological discussions of the time (cp. ↗Christology). Today, it is one of the four widespread Amharic catechisms of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC), along with the ↗*Amməstu a^{c}əmadä məśṭir* and ↗*Mängädä sämay*. Attempts have even been made, it seems, to make the text part of the *A^{c}əmadä məśṭir* (cp. mss. BN Éth. 192, 622; BN d’Abbadie 6, etc.). The use of Amharic for Ś.f. and the other catechisms, possibly motivated by the need to make them accessible to a broader public, in turn contributed greatly to the acceptance of Amharic as a literary language. As this is one of the first Amharic texts to be found in relative abundance, older copies (cp. Getatchew Haile – Misrak Amare 1991:2f.; s. EMML) provide an important glimpse into the language history. Most of the work's numerous witnesses come from the 18th–20th cent.

The Ś.f. draws heavily on Gen 1, ↗*Aksimaros*, and the Book of the Miracles of Jesus or *Mäṣḥafä əlᵓatqärfa (↗Täᵓammərä Iyäsus)*. The Ethiopian version of the story of Creation is also found in such texts as the *Gädlä ↗Addam*, the ↗*Qäleməntos*, the *Mäṣḥafä ↗məśṭirä sämay wämədr*, and the *Zena nägäromu läśəllase* (cp. ↗*Täᵓammərä śəllase*).

The fact that the Ś.f. is preserved in various lengths indicates that the traditional scholars freely expanded it in order to explain various points (cp. also Cowley 1988: 125–28).

Two Amharic versions and one in Gəᶜəz have been edited. The first Amharic version is the commentary on Gen 1 (Cowley 1988: 144–227); the second is untitled (Getatchew Haile – Misrak Amare 1991: 4–51); the Gəᶜəz version is called **ሥነ፡ ፍጥረታቲሁ፡ ለእግዚአብሔር** (*Śənä fəṭrätatihu läᵓəgziᵓabəḥer*, 'The Beauty of Creations of God', ibid. 52–87).

According to the Ś.f., Creation begins on Sunday, on 29 *Mäggabit*. The date is of special importance in the Ethiopian Orthodox ↗calendar as it is the day of the Annunciation, the Resurrection, and the expected Last Judgment. On this day, God created eight creatures: the seven – heaven, earth, water, wind, fire, darkness, and angels – in silence, as "there were no listeners," and the eighth, light, in speaking, that is, by saying, "Let there be light", because there were then angels to listen.

The creation of light and man are closely related to the arrogance of the ↗Devil (whose name, Saṭnaᵓel, is explained as 'confidant, retainer [of God]'). But because he did not sanctify God like the other angels, he "was wrapped with the darkness" of the past and hurled down an abyss. Since Saṭnaᵓel did not repent and claimed his place back, God created man in his image and likeness to take the place of the Devil. With this, an everlasting enmity between the Devil and mankind was established.

The text provides an explanation as to why God created the world after having been without it since the time that has no beginning. He wanted to demonstrate that he is omnipotent (*kähali*), wealthy (*baᶜəl*), a (just) judge (*fätaḥi*), and comprehensible but incomprehensible (*rəkub zäᵓiyyəträkkäb*), i.e. He is available to listen to prayers and give help, but creatures cannot conceive his divinity.

There is symbolism in virtually every creation. E.g., darkness and light are likened, resp., to this present world and the Kingdom of God which will come after this world. God created all, except man, in the evenings. He created only Adam "in the bright morning hour", to make him later "rule over the bright Kingdom of Heaven" (Getatchew Haile – Misrak Amare 1991: 82). Man's upright position is to tell man that he is heavenly and will not remain on earth while the others will. "Eve, who was created from the right side of Adam, brought death upon us, the hot blood and water, which came out of the right side of Our Lord Jesus Christ brought us life" (ibid. 83). And the sleep that befell Adam when God created Eve was a half-waking state: "As Jesus Christ brought out hot blood and pure water to say, 'I am alive' in his divinity, while dead in his humanity, (Adam) also had feeling, as in a vision, while he was asleep" (ibid. 48).

Two explanations are suggested for God's not creating anything on the seventh day. First, He wanted to demonstrate that there did not remain for him anything to be created. Secondly, he made it a model for the Kingdom of Heaven, making the seventh day a day of rest after six days of work (ibid. 50f.).

Getatchew Haile

Sənəddu Gäbru

S.G. (**ስንዱ፡ ገብሩ**, b. 13 January 1916, Addis ᶜAläm, d. 19 April 2009, Addis Abäba) was a prominent politician and author. She was one of eleven children of *käntiba* Gäbru (↗Gäbrä Əgziᵓabəḥer Dästa) and *wäyzäro* Kaśaye Yəllämtu.

In 1920 S.G. became enrolled in the Swedish Mission School in Addis Abäba. In 1928 S.G. and her sister Yäwəbdar went on to continue education in ↗France (Montreal) and ↗Switzerland (St. Crischona and Lausanne). In 1933 the sisters returned to Ethiopia and S.G. started teaching at the St. George primary school in Addis Abäba. In 1934 she married ↗Loränso Taᵓəzaz.

At the beginning of the Italian occupation, S.G., with her knowledge of foreign languages, helped her husband, who rose to particular prominence as head of the information and news services in Addis Abäba. Later, she separated from him and joined an impromptu women's Red Cross Unit west of the capital, caring for ↗resistance fighters and injured civilians. She also joined the ↗*Ṭəqur Anbäsa* patriotic association. After the ↗Graziani massacre, during which one of her brothers, Mäšäša, was killed, she was captured and imprisoned in 1937 on the Italian island of Asinara, together with her sister and father. In late 1939 S.G. was repatriated. She married *däǧǧazmač* Amäde Wäle, but this marriage was also short-lived.

After the Liberation in 1941, S.G. was appointed Director of the Wäyzäro Səḥin School in ↗Däse. In 1943 she moved to Addis Abäba, becoming Assistant Director of the Ǝtege Mänän Girls' School and, in 1945, the School's first Ethiopian Director. In 1953 she married her third and last husband, Major Asäffa Lämma, by whom she had three children.

S.G. began writing short poems and stories for her school students in Däse. In 1946 she began to write plays for her students to perform. A collection of her plays and poems, published in 1964/65, bears witness to the persecutions which followed the attack on Graziani and expreses S.G.'s patriotic and idealistic feelings. While encouraging modern western education S.G. also promoted in her students a love of Ethiopian culture and Amharic.

The only woman to be elected to Ethiopia's first ↗Parliament (1956–60), S.G. was elected Vice-President of the second (1960–62). She became President of the Ethiopian ↗Red Cross Society (1960) and served as Secretary of the Ethiopian Women's Welfare Association. In 1965 she was appointed Secretary-General of the Ethiopian Ministry of Social Affairs. She followed her husband to Germany when he was appointed Ambassador in 1961-64 and 1970-74, getting a position of Educational Attaché at the Embassy.

Following the outburst of the ↗Revolution (1974), S.G. returned to Ethiopia, retired and devoted her time to writing. She received honorary doctorate in Law from Addis Ababa University in 2005.

S.G.'s son Samuᵓel Asäffa was a Vice-President of ↗Addis Ababa University and has been serving as the Ethiopian Ambassador to the ↗United States of America starting from 2006. S.G.'s sister Yäwəbdar (b. 12 December 1923), known under the monastic name *əmmahoy* Ṣəge Maryam (which she had assumed in 1943 at Amba Gəšän Maryam), is a renowned violinist, pianist and composer; she is a nun in ↗Jerusalem.

Ṣənfä Arᶜad

Aṣe Ṣ.A. (**ጽንፈ፡ አርዐድ**; r. 1284/85–1293/94) was probably one of the sons of *aṣe* ↗Yagbəᵓa Ṣəyon.

The majority of the "short chronicles" maintain that, after the death of Yagbəᵓa Ṣəyon, his five sons succeeded him and reigned for five years. As in the case of *aṣe* ↗Nəwayä Maryam, the report for the period concludes with the words "*ṭäf naččäw*" which seem to indicate that the brothers died childless (Kropp 1981:269f.).

One of the versions of these "short chronicles" (ms. Tānāsee 106, s. DombrChr 153) stipulates, however, that only three sons of Yagbəᵓa Ṣəyon reigned, i.e. Ḥəzbä Asgäd, Qədmä Asgäd and Ṣ.A. According to the oldest "kings lists" (s. EAE vol. 5; s. also ↗Historiography) in mss. BritLib Orient. 818 (fol. 48) and in Paris, BN Éth. 146 (fol. 60v), the rulers who succeeded Yagbəᵓa Ṣəyon were not brothers at all, and there were only four. In the traditions recorded by Antoine d'↗Abbadie from the words of *däbtära* ↗Aṣqu, the five rulers mentioned in the "short chronicles" are sons of *aṣe* ↗Yəkunno Amlak and not these of Yagbəᵓa Ṣəyon.

The latter tradition may correspond to historical facts as it is supported by data from the Vita of ↗Bäṣälotä Mikaᵓel. In this hagiographical text, *aṣe* ↗ᶜAmdä Ṣəyon I denies being a son of his predecessor, *aṣe* ↗Wədəm Räᶜad, himself a son of Yəkunno Amlak, and presents himself as

Wədəm Rä^{c}ad's nephew, the son of his brother, Qədmä Sägädä, who might be the Qədmä Asgäd mentioned in the chronicles.

These contradictions may well be an indication of the power struggle which occurred at this time.

Sənkəssar

The S. (**ስንክሳር**, from Gr. *synaxárion*, in turn from *sýnaxis*, 'religious service', with reference to the memorial section of it) is a hagiographic work consisting of commemorations in the form of short Vitae, or mentions of name and death day only, of ↗saints and martyrs of the ↗Ethiopian Orthodox (Täwaḥədo) Church. Each notice is listed under the respective death day of the saint in calendric order and is to be read in the daily Divine Office (cp. Noret 1968).

The Ethiopic S. depends on the *Synaxarium* of the ↗Coptic Church, completed in the 13th cent. by Michael, bishop of Atrīb and Malīg, who largely compiled from Copto-Arabic hagiographical sources.

The first Gə^{c}əz translation of the Copto-Arabic S. dates from the end of the 14th cent., following the translation in the Post-Aksumite period of various hagiographical texts, later merged into the collection of the 'Acts of Martyrs' (↗*Gädlä säma^{c}ətat*). The translation was conducted under the initiative of Səm^{c}on (fl. 1400), either a Coptic or an Ethiopian monk of the Egyptian Monastery of St. Anthony (also credited with other translations of hagiographical texts, cp. Conti Rossini 1912), who produced a version strictly calqued upon the Arabic. Of this primitive recension three manuscripts are known, all of them dating from the 15th cent.: Paris, BN d'Abbadie 66–66bis, a two-codices manuscript which is the only complete one; BN Éth. 677 (*olim* Trocadéro 5), very mutilous, with readings for the first half of the year; EMML no. 6458, also with readings for the first half of the year. A different tradition, much closer to the Copto-Arabic text published by Basset (1904ff.) and still dating to no later than the end of the 14th cent., is represented by one defective manuscript witness only, i.e. ms. EMML no. 6952, mutilous at present, but originally with readings for the whole year. These translations, however (as it appears from the scarcity of manuscript witnesses), do not seem to have enjoyed a broad diffusion. Their scarce number is probably due, not so much to spoiling out of frequent use and to destruction of church goods during ↗Aḥmad b. Ibrāhīm al-Ġāzī's campaigns, as to the urgent need of updating the language (well abounding in Arabisms, cp. Colin 1993), and to the introduction of additional commemorations, following the emergence of local saints and the flourishing of Ethiopian hagiographic literature.

Between 1563 and 1581, a thorough revision of the S. was undertaken, affecting both language (especially the syntax) and contents. The new recension, probably arranged in the Däbrä Ḥayq Ǝsṭifanos monastery (where ms. EMML no. 2054 is preserved, actually the oldest and best manuscript witness of the so-called "Vulgate" recension), came to replace the older one as the reference S.-text of the Ethiopian Church. However, some decades later monks from the rival monastery of ↗Däbrä Libanos issued a revised recension that thereafter enjoyed widespread diffusion. This version presented some minor additions: the commemoration of the abbots of Däbrä Libanos, as well as short encomia (from probably already existing compositions) of five rhiming verses in form of ↗*sälam* that were added to most of the notices. The S. has remained unchanged since the early decades of the 17th cent. Only some manuscripts add the commemoration of one or two abbots of the monastic centre where they were copied.

As far as the contents are concerned, the first recension of the S. mainly considers saints of the universal church (e.g., ↗George of Lydda) and especially martyrs and patriarchs of the Egyptian one (e.g., martyrs under Diocletian's persecution, such as Fasilädäs, patriarchs of Alexandria such as Peter I, etc.). Yet, the first recension hardly makes any mention of Ethiopian metropolitans.

The second recension of the S. betrays perusal of a variety of sources in addition to the primitive text. One main source are the 'Apocryphal Acts of the Apostles' (↗*Gädlä ḥawaryat*), early

Page of a *Sənkəssar*, Qʷäraro Maryam church, Təgray, 20th cent.; photo 2002, courtesy of Michael Gervers

translated into Ethiopic in the 14th cent. Other notices are taken from ancient hagiographical texts in the *Gädlä sämaᶜətat* (such as those on Arsenophis, or bishop Phileas of Thmuis, cp. Bausi 2002: 12ff., that were not considered in the first recension), as well as from texts dedicated to saints of the universal church (especially from the Orient: Syria, Palestina, Cappadocia, Arabia, e.g., the martyrs of ↗Nağrān). Yet the most original additions are those commemorating Ethiopian saints, resuming longer ↗*Gädl*, but sometimes also recalling older traditions not elsewhere recorded. Commemoration days and characters (including Jesus Christ, the Virgin, etc.) from the O.T. and N.T. narratives (with strong influence of apocryphal traditions) are also included.

The S. is one of the most important literary works of the Ethiopian Church. It offers an almost complete catalogue of saints and holy men commemorated by the Church and is one of the most widespread texts, almost every church possessing a copy of it. Catalogues mention at least 100 extant manuscripts of the S. (cp. Colin 1988: 294f.). The reading of major episodes from the life of the daily saints is traditionally done before the priest pronounces the closing words of the service. Likewise, in the Ethiopian tradition there is hardly any other text of the same length, the S. normally appearing in the form of two or four codices.

After first attempts (notices from the S. were published, e.g., by Sapeto 1857, in DillmChr and by many others) and the first complete translation by Budge (BudSaint, basing on mss. BritLib Orient. 660 and 661), the full edition and translation of the S. for the series *Patrologia orientalis* was undertaken by Guidi (GuiSyn), prosecuted by Grébaut (GréSyn) and finally brought to completion by Colin (ColinSyn). Editions for liturgical use have been recently published in Ethiopia and Eritrea (cp. Colin 2001; Habtemichael Kidane 2000–01).

Sometimes assimilated to the S., there are other Ethiopic texts for saints commemoration, essentially in the form of names lists: although they have sometimes been referred to as *mēnológia* (cp. Grébaut 1914–32, 1920–21, 1922–23), actually they are "lists" according to proper terminology (cp. Noret 1968: 21f.).

Gérard Colin – Alessandro Bausi

Senodos

The S. or *Mäṣḥafä S.* (Gəᶜəz **ሴኖዶስ**, or **ሲኖዶስ**, 'Sinodos', probably the older form, from Gr. σύνοδος, 'assembly, meeting, council') is the most important canonico-liturgical collection of the ↗Ethiopian Orthodox (Täwaḥədo) Church. It includes a large body of writings dealing with various aspects of ecclesiastical practice, such as appointment and functions of the hierarchy (from the reader to the patriarch), liturgy (esp. ↗baptism and mass), prayer, Biblical canon, moral teachings and disciplinary rules, often attributed to the authority of the Apostles (these texts of the S., together with the ↗*Didəsqəlya* and the ↗Testamentum Domini [*Kidan Zäʾəgziʾənä Iyäsus Krəstos*], constitute the "Pseudo-Apostolic literature") or to influential characters, such as St. Clement (↗*Qälemənṭos*, a disciple of St. Peter), or ↗Hippolytus of Rome. The S. also comprises writings of Church fathers and canons of ecumenical councils and regional synods of the 4th cent. As it happens with canonico-liturgical collections peculiar to other Churches, the purpose of the S. is that of establishing upon the basis of authoritative legal sources – not without contradictions and inconsistencies – the so-called "received Christian tradition" on the right organization of the Church and Christian practice.

Transmitted by several tens of codices (the S. often constitutes a codex by itself, or is combined with other pseudo-Apostolic writings), the typical S. is already traceable in mss. starting from the 15th cent. at the latest. The work largely consists of translations from Arabic, in turn relying on Coptic and/or Greek texts, and betrays the contribution of more Arabic collections through complex transmissional processes: in particular, a Melkite and a Copto-Arabic collection seem to have merged in the S. not later than the 14th cent., as it is apparent from documents extant in the textual tradition (a *Melkite Index* and a *Coptic Index*, respectively).

The standard S. is composed of the following texts:

the two *Indexes* (ed., tr. BauSen; the latter, only in some mss.); the *71 canons* or *Statutes of the Apostles*, which correspond to the so-called *Synodus Alexandrina* (ed., tr. Horner 1904) and includes, in turn, the *Ecclesiastical canons* (cans. 1–20), the ↗*Traditio apostolica* (i.e., the most important canonico-liturgical text, cans. 21–47, ed., tr. Duensing 1946), a section *On the charisms* plus minor passages (cans. 48–51) and a *Parallel section* to book VIII of the *Apostolic constitutions* (cans. 52–71); the *Canons after the Ascension of Our Lord* (ed., tr. BauSen), a short narration of the preaching of the Apostles in the different regions of the world, followed by 30 orders agreed between the Apostles concerning prayer, observance of the feasts, clergymen and their moral impediments, commemoration of the dead, role of the king in the mass, and Eucharist; two recensions of the *Canons of Simon the Canaanite* (ed., tr. BauSen: again, a parallel text to book VIII of the *Apostolic constitutions*); four recensions of the *Apostolic canons* (ed., tr. BauSen: *81 canons*, *56 canons* and two recensions of the *Abṭəlisat* [↗*Abṭəlis*], in 81 and 80 canons, respectively; the *71 canons* plus the *56 canons* constitute the so-called *127 canons* in Arabic collections, cp. also *Clavis Patrum Copticorum* nos. 0088, 0091); a *Letter of Peter to Clement* (ed., tr. BauSen), against the simony, on forgiveness and generally on moral behaviour and offices of the clergy, respect for the elders, observance of the feasts, consecration of the altar, Communion service, vestments of the ministers; a version of the *Teaching of the 318 Nicene Fathers on the right faith and the monastic life* (ed., tr. Bausi 2004), composed of a first part on the heresies and a second part on rules for the regulation of monastic life; an *Interpretation of the Decalogue* attributed to ↗John Chrysostom; a number of other moral treatises, patristic documents, and penitential canons (most of them still unpublished; cp. Furlani 1925; Guerrier 1918–1919); as well as a set of synodal and conciliar canons (most of them also unpublished): 24 canons of Ankyra (314), 14 of Neokaisareia (314/319), 20 of Gangra (343: ed., tr. Grébaut – Guerrier 1922–23), 21 of Serdika (342/343), 25

Senodos, fol. 60r, 15th/16th cent., Gundä Gunde, Təgray; photo 2002, courtesy of Michael Gervers

of Antioch (330/341), 59 of Laodikeia (end of the 4th cent.); two sets of 20 and 84 of ↗Nicaea (325: the latter being the so-called "pseudo-Nicene canons", ed., tr. Mauro da Leonessa 1942).

Linguistic evidence corroborated by recent discoveries still under study (cp. Bausi in PICES 15) definitely demonstrates that more sections of the S. certainly depend upon a Greek *Vorlage* and date to a much older (probably Aksumite) period, when an archaic *corpus canonum* was early translated into Ethiopic, thus forming an *Aksumite collection* of canonico-liturgical character that included also historical and patristic texts. Some of them were variously transmitted in manuscripts of the S.:

one can list the *Epistle 70* by Cyprian of Carthage (ed., tr. Bausi 1998; cp. also Id. 2005); an archaic list of *Apostles and disciples* (ed., tr. Bausi 2010, in preparation); two synodal epistles for the *Council of Gangra* and the *Council of Antioch*; the *Canonical answers* by Peter of Alexandria (ed., tr. Bausi 2006a: attributed in Greek to Timotheus I patriarch of Alexandria, 380–385); the *Baptismal order* and a long collection of *Prayers*, from within the *71 canons* (can. 39: ed., tr. Horner 1904, Duensing 1946; tr. Salles 1958). The *Traditio apostolica* of the S. too represents a complex combination of old (Greek-based) and recent (Arabic-based) textual layers (cp. Bausi 2009). In turn, the *Aksumite collection* also preserves an almost complete set of the *Collectio Antiochena*, i.e. a counciliar collection where canons were arranged in a continuous series, to which also canons of the councils of Constantinople and Chalcedon (followed by patristic refutations of the same) were added (cp. Bausi 2006b).

Prescriptions and passages from the S. of the most various contents are quoted in the hagiographical literature since the second half of the 14th or early 15th cent. (cp. Conti Rossini 1941). The normative and reference character of the S. is also sanctioned by its frequent quotations in the *Mäṣḥafä* ↗*məśṭir* (1424) by Giyorgis of Sägla. In the works of *aṣe* ↗Zärʾa Yaʿəqob the S. enjoyed its highest success: together with the *Didəsqəlya* and the *Kidan*, it was assumed and quoted as the paradigm of the true Christian law (cp. Getatchew Haile 1981; Bausi 1992). The Ethiopian traditional interpretation as reflected in the textual tradition of the S. shows that along the time and not later than the early 18th cent. there were attempts at fixing a canon of the texts composing the S. and at arranging it according to the model of the variously understood "Clementine ↗Octateuch", what had also influence on the varying definition of the Biblican canon. Finally, in some manuscripts of the 19th cent. a concordance between the articles of law of the S. and those of the ↗*Fəṭḥa nägäśt* was also arranged (cp. *ibid.*).

Alessandro Bausi

Sənsul

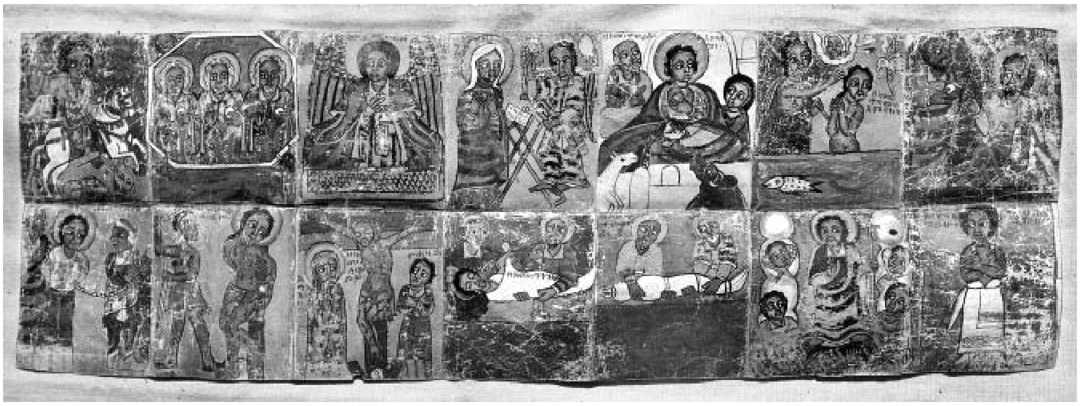
S. (**ሰንሱል**, Gəᶜəz, lit. 'chained') is a set of religious pictures painted horizontally on a long parchment strip folded like a concertina. Some pieces are enclosed between wooden or parchment boards. For very long S., two or more connected parchment strips are used. There are also examples made of single parchment sheets stitched or sewn together. Rarely, a large piece of parchment is first bent in the middle and then folded. Recently, S. made on paper have emerged. The size of a S. ranges from 6–7 to 35–40 cm in height and from 50–60 cm to 7–8 m in length. Each fold or sheet creates a panel occupied by one painted subject. Generally, pictures are supplied with captions identifying the scenes and figures. Some S. also have written supplications and short prayers including the name of the ↗donor or owner.

The S., which seem to be an original creation of Ethiopian spirituality, are used in private devotion and have an apotropaic function. Both factors influence the choice of pictures reflecting the personal preferences of the donor and can be seen as a kind of "painted litany". The series usually contains a selection of holy figures particularly venerated in Ethiopia: the Archangels, ↗Prophets, ↗Apostles, ↗Evangelists, martyrs (esp. the ↗equestrian saints, cf. ms. IES 3554, 17th cent., with eleven riders) and, some popular motifs with iconic function: St. ↗Mary with Child, ↗St. George, ↗Täklä Haymanot, ↗Gäbrä Mänfäs Qəddus and, from the 18th cent. on, ↗*Kʷərʾatä rəʾəsu*. The latter may be put in the middle of the set, the place where S. most often opens, creating a kind of diptych.

The oldest known examples of S. date to the end of the 15th/beginning of the 16th cent. These are the pieces kept in the *aṣe* Yoḥannəs IV's palace-museum in ↗Mäq̱älä (11 x 13 cm, full length 2.86 m, 22 painted panels: Christ with ↗John the Baptist, Apostles, Archangels), IES 5965–5966 (9 x 10 cm, length 2.85 m, 48 panels, painted unusually on both sides: the ↗Trinity, Archangels, Patriarchs, Prophets, Apostles, martyrs including the equestrians, monks including the Egyptian, ↗saints including several female figures) and Peabody, Museum of Salem [Langmuir Collection] where St. Mary with Child, the Apostles, and the equestrian Saints George and ↗Gälawdewos are represented.

Judging from the known examples, S. enjoyed particular popularity in the 17th–18th cent., and a large group of S. is painted in the then prevailing First or Second Gondärine style of ↗painting.

A stylistically distinct group originates in the 17th cent., most probably from ↗Lasta: the pictures display figures treated extremely conceptually, created from geometrical forms and using three colors only: that of parchment, red and black (items in the ↗Lalibäla churches of Betä Giyorgis and ↗Ǝšätän Maryam, in Juel-Jensen collection [UK] and Schweisthal collection [Germany]).



Sənsul with Christological scenes and saints, 18th cent., church of Ǝnda Abba Mamas, Təgray; photo 2005, courtesy of Michael Gervers

At the end of the 17th cent., a new subject is added, perhaps with an educational purpose: a synopsis of the life of Christ. A particularly richly produced example is Fogg 38 (27 x 18 cm and 7.92 m long, 44 panels), with the main theme depicting the life of Christ preceded by O.T. scenes and followed by the long suite of martyrs, which even includes such less popular figures as Jacob "the Mutilated". The donors in *proskynesis* are also depicted and the apotropaic character of the piece is indicated by the eyes with cross-formed pupils given to the Archangel Raphael, St. Mary, Christ, the Saints Zena Marqos and Täklä Haymanot.

The popularity of S. seems to decrease in the 19th cent.; later their character is often changed with addition of magical texts and pictures typical for ↗magic scrolls (e.g., Appleyard 1999, no. 79).

Ṣəraᶜ

Ṣ. (**ጽራዕ**, also **ጽራእ**, Ṣəraᵓ, **ፅራዕ**, Ṣ́əraᵓ, **ፅራእ**, Ṣ́əraᶜ, or [ᶜAd] Ṣ.) is a historical province roughly corresponding to today's *wäräda* ↗Wəqro in Eastern ↗Təgray, formerly a part of the Kələttä Awlaᶜəlo *awrağğa*. It is divided into Laᶜəlay Ṣ. ('Upper Ṣ.'), to the north, with mountains, and Taḥtay Ṣ. ('Lower Ṣ.'), to the south. It used to include the mountainous area of ↗Nägaš in the north, and to extend up to ↗Mäqälä in ↗Ǝndärta in the south, to Aṣbi in the east, its western portion bordering upon the massif of Ḥaramat (for location s. map for Ṣəraᶜ Abrəha wä-Aṣbəḥa).

The name Ṣ. may be linked with a South-Arabian root *ḍr*ᶜ (attested as *ḍr*ᶜ*n*, a toponym in Sabaic ↗inscriptions of Sirwaḥ, Yemen; and *ḍr*ᶜ meaning 'West' in Minaic, s. Sima 2000: 204, n. 111; it may also be related to the Ethiopic term for ↗Greece, used first for Hellenized Egypt). This link would be in accordance with the strong archaeological evidence of South-Arabian presence in the region (cp. the newly found inscriptions of Abba Gärima ᶜAddi Akawəḥ). Troops (?) called Ṣ. are mentioned in two Aksumite royal inscriptions (RIÉ nos. 187.34 and 189.30, 35).

Like nearby ↗Aṣbi, Ǝndärta, ↗Wäğğärat etc., the district was ruled by a ↗*šum*, the *śəyyumä* (*šum*) *Ṣəra*ᵓ, attested since the 18th cent. at least (CRAxum no. 67). The lordship of *šum Ṣəra*ᵓ existed until the 1970s. The *šum* was traditionally based in ↗Agula^{c}. The region was linked to both the ↗salt trade with the ^{c}Afar plains and the north-south Red Sea ↗trade route that was controlled by Muslim communities in post-Aksumite times (one of them in Wəqro). The rock-hewn church of Wəqro preserves a medieval Muslim Kufic ↗inscription. There are also a few outstanding rock-hewn churches such as ↗Ṣəra^{c} Abrəha wä-Aṣbəha, Tämsəḥul Ǝnda Kidanä Məḥrät (Tewelde Medhin Joseph in PICES 3, vol. 1, 22, 54).

In the 14th cent., Ṣ. became the cradle of the Ewosṭatean religious movement; both the birth place of *abunä* ↗Ewosṭatewos and of some of his prominent followers and the monastery Däbrä Ṣärabi, mother house of the ↗Ewosṭateans – and probably a pre-13th cent. foundation – are in Ṣ. Under *aṣe* ↗Ləbnä Dəngəl Ṣ. was given as a fief to the Emperor's father confessor Tənsaᵓe Krəstos (CRAxum nos. 26, 44). Ṣ. appears on the 1662 map by ↗Almeida and others (PerrZarY, annex) as a circumscription lying north of Ǝndärta and south of ↗Ḥawzen "which is Təgre"; it was then a part of the ↗*baḥər nägaš*'s realm (cp. LudHist I, 3, § 27). According to ↗Barradas's report, Ṣ. was "the district of the Queen" (Barradas 1996: 7). In the late 17th cent., however, it was severely threatened by the ↗Oromo (cp. GuiIohan 28). Owing to its location, Ṣ. became a corridor for raids to and from the ^{c}Afar lowlands, e.g., by ↗Mikaᵓel Səḥul in ca. 1760.

Later, Ṣ. was to be temporarily disintegrated. Under *aṣe* ↗Täklä Giyorgis, its parts – Dängʷällo (↗Dängolo), Agʷəla^{c} (Agula^{c}), Ḥawza – were given to other rulers (CRAxum no. 68); under *däǧǧač* Säbagadis some parts were given to Aṣbi Ǝnda Śəllase church (ibid. no. 82; cp. also Nosnitsin 2006: 28, 30). In 1867 the ↗Napier expedition passed through Ṣ. safely, thanks to the help of the local lords (Acton 1868).

In the early 1870s Ṣ. was the seat of *aṣe* ↗Yoḥannəs IV, who was the sixth descendent of *šum Ṣəraᵓ* ^{c}Amdom on his mother's side. He set up his residence in Agula^{c}, but it stayed there for a short time only, probably because the area could not provide enough supplies. Therefore, the royal camp was moved further south, to the ancient salt-market of ↗Mäqälä. On leaving Agula^{c}, Yoḥannəs donated his *gəbbi* (with the today half-ruined *addaraš*) to the Church, which established on the premises a small monastery called Getesemani.

Agula^{c} still shows traits of a former political centre, with its population of diverse origins, far from the uniformity of other rural settlements; e.g., there is a small community of traditional singers, "*čära wäṭa*" (corresponding to the Amharic ↗*azmari*), reminiscent of the former royal residence. Today, Muslims prefer to settle along the "main road" of Ṣ., which is the road from ^{c}Addigrat to Wäldəya, while Christians (mostly farmers) live more in the interior.

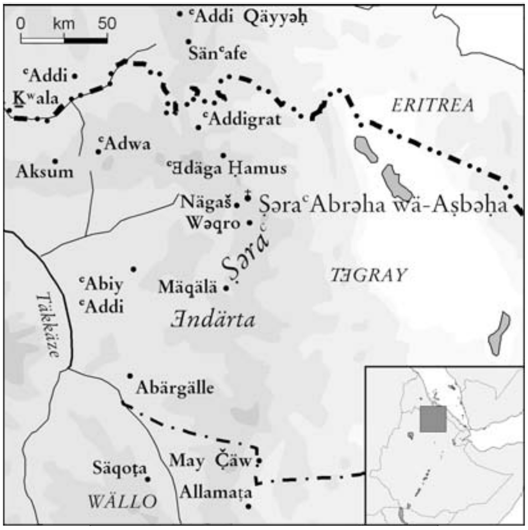
Ṣəra^{c} Abrəha wä-Aṣbəḥa

Ṣ.A.A. (**ጽራዕ፡ አብርሃ፡ ወአጽብሐ**) is a ↗rock-hewn church in ↗Ṣəra^{c}, Eastern ↗Təgray, situated ca. 15 km north-west of Wəqro (1,934m A.S.L.). Originally a monastic church, Ṣ.A.A. is dedicated to the mythical Aksumite kings ↗Abrəha and Aṣbəḥa and to *abba* ↗Guba.

A local tradition noted in the *Gädlä Abrəha and Aṣbəḥa* connects the site with a locality called Gämad, where the kings, in order to chase away demons, built a chapel dedicated to the Archangel Michael, and later a sanctuary in which they were eventually buried.

Carved out of a red sandstone mountain, this oriented to the east, semi-monolithic structure (the western and central bays are free from the rock) is one of the largest churches in Təgray (ca. 22 m long, 16.2 m wide and 5.1 m high). Its multi-section plan is of the cross-in-square type similar to those of ↗Mika^{ɔ}el Amba, and Wəqro Qirqos (↗Dängolo). A note in the Gospel book of Mika^{ɔ}el Amba allows us to surmise that all three churches were excavated in the early 12th cent., as a result of building activity of the patriarch ↗Mika^{ɔ}el I.

The principal body of the ↗church building has five aisles divided into three bays. The sections marking the shape of the cross are higher than the others. The south-north axis of the treansept is barrel-vaulted and resting on flat beams. The central crossing point (7.2 m high) is distinguished by four slender cruciform pillars connected by arches and the ceiling marked with carved imitation of crossed beams reposing on carved bracket capitals. The bay in front of the sanctuary is covered by a dome. The remaining eight sections, which form a square, have flat ceilings and are divided by pillars with chamfered shafts supporting flat beams. The engaged pillars with bracket capitals along the north and south walls raise from about 50 cm high plinths which also serve as benches. This part of the structure (today *qəne maḫlet*) is accessible to all, with the exception of the central domed bay, which, elevated by a two-stepped platform, functions as a sacred area (*qəddəst*). This area is now screened from the west side by a constructed wall (about 1 m high) and a modern wooden chancel which replaced the original, of which only a few fragments (three posts topped with pine cone) have been preserved (Lepage 1972: 85). Similar chancels are still intact in three churches in Aṣbi Dära: ↗Zärema Giyorgis, Mika^{ɔ}el Amba and ↗Däbrä Sälam.



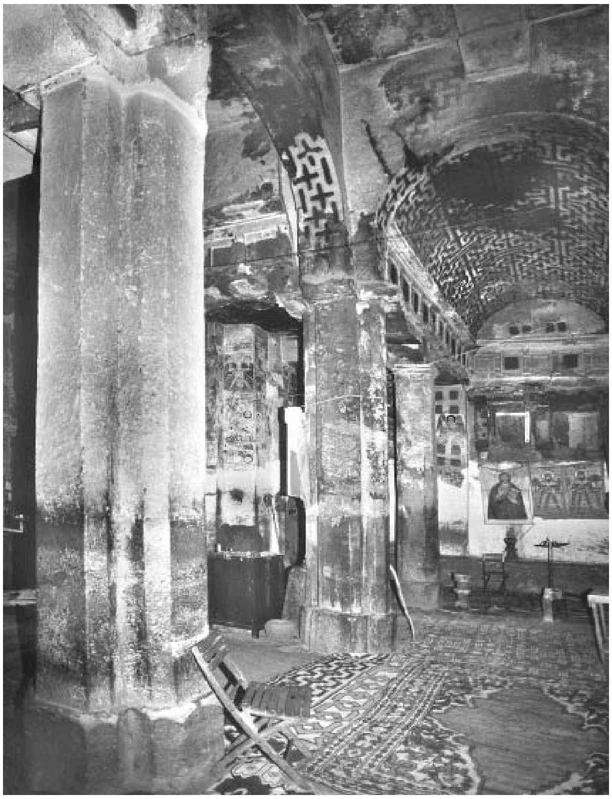
The eastern part of the church, which functions as the sanctuary (↗*Mäqdäs*), was never properly explored by scholars. Judging from the photographs taken from a distance, it has a central room which opens to the church by a triumphal arch and two side-rooms (*pastophoria*) which communicate with it by openings with high thresholds. The central room ends with horse-shoe formed apse covered by a semi-dome. Along the basis of the apse runs a bench with a rectangular niche in the centre (*synthronon*?; Lepage 1972: 86). Both side-rooms are square, covered by a cupola, each connected with the aisle by a pair of doors and a window. The smaller northern room has two niches in the western wall; the southern, much larger and presently empty, might have been used as a funeral chapel. Local priests claim that it contained the coffin with the bones of ↗Abrəha and Aṣbəḥa which is presently found elsewhere. The sanctuary and both side-rooms house three modern *mänbärä* ↗*tabot*s.

The western part of the church is limited to the central higher nave and two aisles. Through twin wood-framed arched doors it communicates with a similarly large vestibule recently rebuild and re-roofed in timber. It seems that originally it was monolithic with two pillars (Buxton 1970: 107).

The vestibule is preceded by an elevated porch built by the Italians in the 1930s.

There are three entrances to the church, all from the West: the main leads to the vestibule, the two others, the southern and the northern, are placed symmetrically in the first external bays. The interior is only illuminated by the double windows (0.7 m high, 1.8 m wide) at the ends of the north-south "transept" axe, and by the windows above the side entries. All have wooden frames of Aksumite type and wooden decorative traceries.

The architectural decoration is elaborate. The cruciform pillars have bracket capitals, the others have stepped "Aksumite" capitals. The walls are articulated by pilasters with brackets. The frieze of Aksumite type runs above lintel level along the walls, marking the south, west and north arms of the cross, and along the central part of the sanctuary including the apse. The barrel vault, flat ceilings, intrados of the arches and the wall above them are ornamented with complex, geometric patterns, painted inversely white and ochre. The central cupola is decorated with interlaces and stylized palmettes. The two engaged pillars, near the south and the north entrances, respectively, are decorated with long, shafted crosses carved in stone, one of them topped by affronted dolphins. In the southern side-room, a frieze composed of arched niches runs below the cupola, and the walls are covered by an intricate star and octagon design, the origin of which can probably be traced to Islamic art tradition.



Ṣəraᶜ Abrəha wä-Aṣbəḥa, Təgray, barrel vaulted "transeptal" bay facing north; 12th cent. (?); photo 2002, courtesy of Michael Gervers

The wall ↗paintings in the vestibule and on the west and north-west walls of the three western bays were executed during the time of *aṣe* ↗Yoḥannəs IV. They are painted in *al-fresco* technique with the exception of scenes on the eastern walls of the vestibule which are executed on canvas and glued to the wall. Stylistically, the whole set follows the Second Gondärine school of painting and displays a shortened version of the programme which, from the second half of the 18th cent. onward, appears in circular churches with squared *mäqdäs*. In the vestibule, besides the ↗Trinity and 24 Heavenly Priests placed centrally above the doorway, one finds the Christological cycle, the ↗equestrian saints, O.T. figures and a group of the most popular Ethiopian ↗saints. In addition, there are scenes from the life of kings Abrəha and Aṣbəḥa portraying them with suppliants. Recently, some of these murals have been heavily repainted.

Inside the church, the western wall is decorated with the Mariological cycle based on such apocrypha as the ↗*Nägärä Maryam*, ↗*Täᵓammərä Maryam*, ↗*Fəlsäta lämaryam*, the story of Adam and Eve and the martyrdom of the ↗Apostles. There is also a depiction of the Second Coming of Christ (cp. ↗*Dagəm məṣᵓatu läkrəstos*) and historical scenes with Yoḥannəs IV, in a religion procession and with *wag šum* ↗Gäbru, *ras* ↗Arᵓaya Dəmṣu and *ras* ↗Alula. There are also paintings representing St. Mary with Child on two pillars close to the main entrance and around the window in the wall dividing the southern side-room from the aisle (two archangels and a faded St. George). The paintings were sponsored by a noble lady, Amätä Śəllase, who is portrayed several times together with members of her family and attendants.

Ṣərag masäre

Ṣ.m. (**ጽራግ፡ ማሰሬ**, also *ṣärag*, *ṣäragi*, *ṣəragi*, *ṣərağ*, *masäre/mäᵓasäre* etc., also *raq masäre*) was one of the highest official ↗titles of the royal court. The title is of unclear origin; its first part is probably derived from the root *ṣärägä* (Gəᶜəz: ‘to sweep, clean [the way]’, LesCDic 563 [also in Amharic, Təgrəñña; cp. KWKDic 769]); *raq* is supposed to be the Šäwan Amharic form for *ṣərag* (GuiVoc 72). Its second part is derived from *asärä* (‘bind’, LesCDic 44), *masäre* being explained as ‘whip’ or ‘staff’ (for keeping the order, i.e. keeping the people at a distance; cp. also Guidi 1922: 69, n. 2; cp. KaneDic 208). The term appears in documents starting at least from the time of *aṣe* ↗Zärᵓa Yaᶜəqob (cp. GuiVoc 72; Kropp in VarAeth). It is mentioned in the ↗*Śərᶜatä mängəśt* which links its origin to the legend of ↗Mənilək I and hints at the Ṣ.m.’s role in the ↗coronation rituals (Varenberg 1915–16:11: ‘Ṣ.m. with a horn of ointment’).

The role of Ṣ.m. appears more prominent in the court culture and politics of the ↗Gondärine kingdom. In a few documents, he is equated to the *wəsṭ* ↗*azzaž*, i.e. ‘the *azzaž* of the internal part of the court’ (GuiIohan 145, 293 [text]; cp. Varenberg 1915-16:9; s. also Munro-Hay in StudAeth). Appointed by the emperor, the Ṣ.m. was a palace official whose function was similar to the position of “chief of protocol”. He was responsible for activities including the planning, hosting, and presiding of ceremonial events for visiting chiefs of regions and heads of monasteries and parishes, as well as coordinating logistics for the visits (cp. BlunChr 509). He arranged itineraries for foreign dignitaries visiting Ethiopia and accompanied the emperor on all official travel. During the coronation, he was supposed to offer oil to the Metropolitan and to invest the new emperor with the crown and royal vestments (Guidi 1922: 74; THMDic 1352; GuiVoc 862). The participation of a Ṣ.m. in the coronation ritual is thus attested for a number of emperors (only indirectly for Zärᵓa Yaᶜəqob, PerrEsk 338; cp. also, e.g., *aṣe* ↗Yoḥannəs I, GuiIohan 5 [text]; and ↗Mənilək II, GueCopMen 272). In addition, the Ṣ.m. was also one of the supreme judges.

The same title was occasionally also functional in ecclesiastical circles. Ṣ.m. was the honorific title of the ↗*aläqa* of the Addäbabay Iyäsus church of ↗Gondär (GuiVoc 72). Appointed by the head of the monastery, the Ṣ.m. was the fourth top official of a monastery (MahZekr 652) who had the task of mastering ecclesiastical ceremonies and introducing strangers to the abbot.

Mersha Alehegne

Śərᶜatä betä krəstiyan

Ś. (**ሥርዓት**[/**ሥርዐት**]**፡ ቤተ፡ ክርስቲያን**, 'Church Order', or 'Structure of the Church') is the title applied to a number of different texts in both Gəᶜəz and Amharic. The first was identified by Dillmann in ms. London, BritMus Add. 16,205, fols. 19–23 as *Regulae de Hierarchia ecclesiastica*, with the full title:

ሥርዓታተ፡ [ቤተ፡] ክርስቲያን፡ ወማዕርጊሃ፡ ዘአንበሩ፡ አበው፡ ቅዱሳን. [*Ordines Ecclesiae, ejusque gradus, a Patribus sanctis constituti*.] 'Orders of the Church and its Grades Established by the Holy Fathers'.

Following him, Conti Rossini (1900:630f.) refers to ten manuscripts containing a work under this title (but BN d'Abbadie 65, 78 should probably be excluded from his list). This Ś. (*Regulae* …) seems to be a writing in Gəᶜəz which frequently appears in collections of canonical-liturgical works, as one of the three texts which typically accompany the *Mäṣḥafä* ↗*fäws mänfäsawi* (which Dillmann considered parts of the latter, but s. Kleiner 2000, vol. 1, 36–40). Apart from the *Regulae* …, the other two, in Dillmann's (DillmLond 39) rendering, are:

– *Ceremoniale sacerdotum*: **ዘይደሉ፡ እምሥርዓተ፡ ቅኔ፡ መልእክተ፡ ክህነት፡ ዘይትፌቀድ፡ በውስተ፡ ጸሎታት፡ ወቅዳሴያት**. [*Regulae de ministerio sacerdotali, quae ad preces et liturgias rite administrandas pertinent*], 'What is Due from the Order of the Service, Duty of the Clergy, What is Required in Prayers and Liturgies';
– *Quaestiones de rebus ecclesiasticis subtiliores, cum solutionibus*: **ተኅሥሣታት፡ ወስእለታት፡ ዘአበው፡ ወፍካሬሆሙ**. [*Quaestiones et interrogationes Patrum, earumque solutio*], 'Inquiries and Questions to the Fathers, and Their Responses'.

From the catalogue descriptions it is not quite clear if these three texts are parts or sub-chapters of one work, or not (cp. mss. London, BritLib Orient. 549, fols. 65r–98v; Orient. 799, fols. 70v–80v); they are not always three (cp. ms. VatLib Cerulli Etiop. 81), and not always identified by the full titles (cp. Ṭānāsee 169, fols. 50ra–81vb). In some cases the title **ሥርዓተ፡ ቤተ፡ ክርስቲያን፡ ወማዕርጊሃ** can probably appear as heading for all of them (cp. Orient 550, fols. 84r–98r; Orient. 788, fols. 102–25r). Of specific interest is ms. EMML no. 1941 (probably the oldest witness, dated to 1664) fols. 26r–43r, where the title **ሥርዓተ፡ ቤተ፡ ክርስቲያን፡ ወማዕርጊሃ** is applied to a text of somewhat different content, but the *Regulae* … are contained on fols. 26r–27v (cp. also EMML no. 1952, fols. 9b–11b, both from ↗Däbrä Ḥayq Ǝsṭifanos).

The Gəᶜəz Ś. may indeed be a treatise regarding the structure of an individual church and the organization of the clergy, based on the translated writings of the Church Fathers (cp. EMML vol. 5, 437, 467). However, the text may also be an Ethiopian one; the existence of a foreign (Arabic?) *Vorlage* has been doubted since the work – an allegorical description of the church – seems to refer to an Ethiopian round church (Kleiner 2000, vol. 1, 40).

Apart from the Gəᶜəz text, there are Amharic texts under the generic title Ś. describing the "structure of the (building) of the church" (some of them ed., tr. in Griaule 1932; Schneider 1988). Characteristically, a large part of many Ś.-texts is made up of nominal sentences: the material parts of a church and other structures within the church compound, paraphernalia or even church ministers (priests, deacons, *däbtära* etc.) are referred to one by one and metaphorically equated to sacred things and phenomena or divine personages (Christ, St. Mary, Angels etc.), i.e.: "its (the church's) palisade is the watching angels; its binding is the Holy Spirit; its cords are *Pater noster* ..." etc. (Schneider 1988: 80, 82). In some texts, the equation is done by means of such words as *malät*, 'that is', or *məssale*, 'image, likeness', etc. Sometimes the metaphors and similes are supported by references to the Scriptures and other Christian works. Exploring the hidden divine character of the church structure, some Ś.-texts include theological expositions; they also contain didactic passages admonishing the faithful to learn "the order of the church" (in the extended sense, also the "regulations and organization" etc.) and not to be like "↗*Galla* and ↗*Šanqəlla*, the pagans" (Griaule 1932: 12, 16). On the whole, the Amharic Ś.-treatises seem to be akin to the tradition of ↗Bible interpretation, i.e. the ↗*Andəmta* and ↗*Tərgʷame*, using partly similar methods and expressive means.

As Cohen (1932:2) underlined, the Amharic Ś.-treatises represent teaching which was not comprehensive and rather unofficial, thus leaving space for variations and expressions of personal theological views. Certainly, the author(s) were working within certain (theological and literary) frames, but the known texts hardly show attempts at revision and/or standardization. The unofficial character of these writings is demonstrated also by the fact, that in many cases a Ś. is written on the opening or closing (blank) leaves of the manuscripts, i.e. "added" to its main content.

Manuscripts containing the Amharic Ś. are numerous; perhaps the most remarkable are an extensive one in mss. Paris, Éthiopien 637, fols. 14v–26r; or the one in St. Petersburg Papad.-Keram. 7, fols. 64v–69r. All the manuscripts with the Amharic Ś. are of 19th–20th cent. date.

The origin of the Amharic Ś.-treatises is still to be clarified. The Ethiopian sources have many references to the church structures and use an elaborate terminology; a few symbolical interpretations can also be found (Griaule 1932:3). The Amharic texts of the Ś. differ very much, although one common source cannot be excluded, and some texts share passages (cp. Schneider 1988:74f.; text 93f. [ms. Paris, BN Éth. 661] and Proverbio 2000:540f. [mss. VatLib Raineri 80, Comboni 16]). An original version might have been inspired by, based on or even translated from one or several Gəᶜəz texts. Indeed, ms. Paris, BN d'Abbadie 26 (s. Griaule 1932:37ff.) contains a text in Gəᶜəz exactly in the style of the Amharic Ś.-treatises: it is listed by Conti Rossini (1910:630f.), but it is not sure that the text in question is identical to the *Regulae*. BN d'Abbadie 247 contains one Gəᶜəz and one Amharic text unrelated to each other (Schneider 1988:75ff. [cp. Proverbio 2000:539f.], 85f.). One could consider the *Regulae* as one of the possible sources of the Amharic Ś. Significant cases to consider may be in mss. Berlin, Peterm. II Nachtr. 32, fols. 1v–2 (cp. Paris, BN Éth. 581, fols. 15r–21r) where Ś. is "an Amharic explanation of different terms and names, used in the church" (DillmBerl 38) apparently taking the place of similar Gəᶜəz texts accompanying the *Mäṣḥafä fäws mänfäsawi.* The 18th cent. may be considered as the time when this kind of treatises started to appear, along with intensified church construction and the emergence of the traditional exegesis schools during the ↗Gondärine kingdom.

Mss. London, BritLib Orient. 549, 550, 788 contain, besides the *Regulae* another text with a similar title, for the rite of the "introduction of the ↗*tabot* into the church" (*Śərᶜat zäᵓagbəᵓo tabotä wəstä betä krəstiyan*), which can also be referred to as Ś. For the moment it is impossible to clarify whether this is identical to the *Śərᶜatä betä krəstiyan amä qəddaseha*, also "the ritual for consecrating a church and the *tabot*" (EMML nos. 2537, 2588, 3111 etc.); cp. also *Śərᶜatä betä krəstiyan läᵓəgziᵓabəḥer* in Cerulli Etiop. 81, fols. 89v–112r.

Śərᶜatä mängəśt

The Ś.m. (**ሥርዓተ**[/**ሥርዐተ**]**፡ መንግሥት**, also *Mäṣḥafä śərᶜatä mängəśt*, lit. '[Book] of the Order of the Kingdom) is a generic title for a group of "secular" writings concerning court rituals and life, royalty (cp. ↗Kingship, divine), hierarchy, appointment and privileges of dignitaries. Both the language – ↗Gəᶜəz, with a large number of (old) Amharic words – and the rather compressed style of these texts make their understanding quite difficult.

The "standard" version, in four parts (the words "Ś.m." appearing in the titles or *incipits* of some of them), has been edited by Varenbergh (1915–16; Ital. tr. Guidi 1922) based on four

18th/19th-cent. manuscripts that also include historiographic materials linked to *liq* ↗Aṣqu and *däğğazmač* Ḫaylu (↗Ḫaylä Mikaᵓel Ǝšäte). The edited text consists of four parts:

Part I speaks of the origin of the "Order of the Kingdom", which came from Jerusalem with ↗Mənilək I – a clear connection with the ↗*Kəbrä nägäśt*. It lists titles and insignia of the 12 "owners of the law" (*bäᶜalä ḥəgg*) from the tribe of Levi who were made judges (*fätaḥəyan*, cp. ↗*Daññа*) under *aṣe* ↗ᶜAmdä Ṣəyon I (cp. the same text in DillmZarY 78, d).

Part II provides an extensive list of the dignitaries' titles and "their parts" (regions or districts), though the relationship between the latter and the dignitaries is not clearly indicated. The placenames mentioned are mostly relevant to the inner highlands (↗Märḥabete, ↗Wäläqa etc.), vassal provinces (↗Ifat, ↗Ǝnnarya etc.) or churches and monasteries.

Part III, *Wäg wäśərᶜatä mängəśt* ('Custom[s] and Order of the Kingdom'; s. ↗*Wäg* [s. EAE vol. 5], cp. also KaneDic 1577; GuiVoc 594), describes the formal elements of such important rituals as: the promulgation of a new king (↗*Nəguś*) after the death of his predecessor (III.1); the ↗coronation of a new king in ↗Aksum (III.2); the coronation of the ↗*ətege* (III.3); funeral of the "sons of the king" (III.5); the wedding of the princesses (↗*Wäyzäro*); the wedding of the 'royal daughter' (*wälättä nägäśtat*) (III.7); the setting up of the ↗*dämära* (III.12); the nomination and functions of the ↗*bitwäddäd* (III.10); the nomination and insignia of the ↗*däğğazmač* (III.11), of the ↗*əč̣č̣äge* (III.14), the ↗*baša* (III.19), the ↗*ᶜaqqabe säᶜat* (III.20). It sets up the regulations concerning the royal retinue during a campaign, as well as the rules for establishing the royal camp and dwelling (III.22–25; ↗*Kätäma*). Some paragraphs concern judicial matters: e.g., the privileges of the ↗*ətege*, that she be visited by the judges (III.4), and of the *əč̣č̣äge*, that supplies be brought to him (III.15). The high court meeting should be opened with a religious ritual (III.16); fees should be paid by governors upon nomination (III.25–26).

Part IV regulates the selection of judges if the case is between the king and the *əč̣č̣äge* or the ↗*abun* (IV.1, re-enforced after *abunä* ↗Marqos III, Guidi 1922: 24 n. 5). Divorce and expelling from clerical office (↗*Kəhnät*) should be the prerogative of the *abun*. The participation of ecclesiastical judges, the *əč̣č̣äge* and the *abun* in settling issues outside the ↗Canon law is limited (IV.3); all *rəst* and *gʷəlt* issues are to be directed to the *nəguś* (IV.4).

Part V is "the order of the precedence" (not a hierarchical list of ranks or "*Rangliste*") according to which officers and dignitaries (starting from ↗*šaläqa*) were to express their opinion before the *nəguś* on a particular (political, legal etc.) issue. Reflecting the current situation, the "precedence" was the object of subsequent revision and corrections that resulted in diverging written "orders": another version is known (Varenbergh 1915–16: 9f.) that repeats, with substantial difference for the *ᶜaqqabe säᶜat*, the "order" established under *aṣe* ↗Iyasu I (GuiIohan 145f.) and confirmed under *aṣe* ↗Bäkaffa (ibid. 293; on the legal praxis, s. Kropp 2004). Generally, the variation in Ś.m. texts may be due to major changes in the political system, i.e. to events of great historical importance.

Guidi (1922: 66) divides the Ś.m. texts into two categories:

1) those found in the manuscripts with royal ↗historiography, the oldest being Oxford, Bodl. Aeth. 29 (of *aṣe* ↗Susənyos's time); others are, e.g., BN d'Abbadie 118, fol. 43v–48r (not the beginning, fol. 13v–15r?) and BN d'Abbadie 52. In a text of ms. Bodl. Aeth. 29 the claim is made that the "custom(s) and law of the Kingdom" were established by ᶜAmdä Ṣəyon (DillmBodl 78); in another one, reference is made to Mənilək I and ↗Jerusalem (ibid.; this is the piece printed in DillmZarY 78). The published Ś.m. have but a minor share with these texts (Guidi 1922: 67). The only scholarly investigated fragment is the so-called *Śərᶜatä gəbər* ('Order of the banquet'; s. ↗*gəbər*);
2) the texts appearing in manuscripts with the ↗*Kəbrä nägäśt*, e.g., Paris, BN d'Abbadie 97 and 225 (CRAbb nos. 203, 204). The published Ś.m. are mostly from this category, while mss. London, BritLib Orient. 821 and 817 (WrBriMus nos. 392, 393) may contain passages of both types 1) and 2). Ms. Bodl. Aeth. 28 (DillmBodl 74f.) seems to offer a Ś.m. text close to that published.

The complex character of the printed version is proved, e.g., by allusion to the invasion of the ↗Oromo under Mäläk Sägäd (i.e. *aṣe* ↗Śärṣä Dəngəl; Varenberg 1915–16: 21, 37; Guidi 1922: 83f.), *aṣe* ↗Yaᶜəqob, *əč̣č̣äge* Zäwängel and ↗Abrəham, and especially *abunä* Marqos III (cp. Varenberg 1915–16: 22, 26, 38, 43; Guidi 1922: 86f.), indicating that the portions were written or revised at different times. Despite the apparent value of this version, one should underline its character as a "secondary" compilation, as all the witnesses used were either *liq* Aṣqu's manuscripts or copies of the so-called Chronicle of *däǧǧazmač* Ḫaylu, both with Ś.m. texts from unknown sources.

More manuscripts with Ś.m. texts have since come to light: Cambridge Or. 1873, fols. 3r–11r; Ṭānāsee 34, fols. 20rb–23rb, 28vb–rb; Ṭānāsee 106, fols. 65va–b, 68va–73va; ANLin Conti Rossini 27, pp. 264f., 286–91; cp. also Conti Rossini 44, fol. 2 (the same as in DillmZarY 18ff.?), etc.

There may be more Ś.m. testimonies, not always clearly distinguishable in the catalogues. Ms. Bodl. Aeth. 26 (given to ↗Bruce by *ras* ↗Mikaᵓel Səhul), with the *Kəbrä nägäśt* and the documents forming the *Mäṣḥafä ↗Aksum*, embraces a number of Ś.m. texts of which the coronation ritual ("renewed by Zärᵓa Yaᶜəqob") and the "order of the palace" have been published (DillmZarY 18ff. [a very similar ritual is translated in DAE I, 37f.], 74ff. and 77a; s. DillmBodl 72). It seems that coronation, in the broad sense, was also referred to as "Ś.m." (s., e.g., BTafY 130f.), i.e. '[establishing/renovation of] the state order', whereby portions of Ś.m. texts could be read (with or without emendations or changes) during the ceremony (ibid. 138f.).

A few other manuscripts transmit the Ś.m. as related to the *Mäṣḥafä Aksum* documents: e.g., mss. Ṭānāsee 34; Vat. Cerulli Etiop. 25; Vat. Aeth. 114; and also BN d'Abbadie 97 and 225, both used for the the *Mäṣḥafä Aksum* edition (CRAxum), but with the omission of the Ś.m. portions (as having no direct relationship to ↗Aksum Ṣəyon). In some cases Ś.m.-texts are linked with the tradition of the "short chronicles" (e.g., Caquot 1957: 191).

Likely to reflect more ancient customs, the nucleus of the Ś.m. might have emerged under ᶜAmdä Ṣəyon I (GuiSLett 32, 92) and been elaborated later (Guidi 1932: 48, 92). Notwithstanding the evident importance of the Ś.m. for the reconstruction of Ethiopia's past, the research on the relevant texts is still far from satisfactory.

Denis Nosnitsin

Śərᶜatä mənkʷəsənna

Ś.m. (**ሥርዓተ** [/**ሥርዐተ**]**፡ ምንኵስና**, lit. 'The Order of the Monastic Profession') is a generic title given to a number of works of Ethiopian ↗monastic literature containing the ritual of receiving the monastic habit by the novice. Although these are important elements of Ethiopian monastic tradition, the texts and the ritual have not yet been sufficiently studied.

The Ś.m is a collection of prayers and passages set in rubrics, and as such is similar in its arrangement to the *Mäṣḥafä ↗qəddase*. The ritual of receiving the monastic habit also ends with the Eucharistic communion. A number of texts can be described as a "monastic ritual":

I. The text, commonly referred to as the Ś.m. which was published in Grébaut 1940 [hereafter GŚm]), preserved in an ancient ms. Paris BN Éth. 79, fols. 3r–22v (ZotBNat no. 85; late 14th–middle 15th cent., UhPal 287f.).

It opens with an introductory prayer pronounced by the priest (GŚm 226), followed by: prayer of the novice (*wätəbəl … lämənkʷəsənna mänfäsawit* ibid. 226f.), two prayers said by the community in which the novice's name is explicitly mentioned (*nəsəᵓəläkä … wäläᶜalämä aläm*, ibid. 227f.; *nəsəᵓəläkä wänastäbäqqʷəᶜ … wäläᶜalämä ᶜaläm, amen*, ibid. 227f.), prayer of thanksgiving over the monastic habit (*ṣälotä akkʷätet* *kaᶜəbä laᶜəlä mälbäs*, ibid. 229f.), prayers of the novice said while putting on the parts of the monastic habit (tunic and girdle), and a prayer for the monks (*ṣälot lämänäkosat*, ibid. 232f.).

The title Ś.m. appears once more in the middle of the text. Again, an introductory prayer (ibid. 233f.) is followed by a prayer said while putting on the girdle (*ṣälot sobä yaqännətu mänäkosat* …, ibid. 234), and a prayer while (the monks) bow their heads [before God] (*sobä yadännu…*). The ritual is completed by 1 Cor 7:26–35, 1 Pet 1:13–18 and Acts 21:10–12.

GŚm also includes the monastic ritual for females. After an introductory prayer (ibid. 236), there is a monastic prayer read over "the virgins" (*ṣälotä mənkʷəsənna zäyətnäbbäb laᶜəlä dänagəl*, ibid. 237f.), a passage describing the cutting of the hair of the future nun (executed by a monk; ibid. 238) and a few prayers: "over the virgins", "over the monks", rearranged Ps 17 performed in ↗*gəᶜəz* mode, and the "prayer of ↗penance".

The edited text is of great value due to the age of the manuscript, yet its proper place in the tradition of Ethiopian monastic ritual is unclear.

II. Some manuscripts contain a text entitled Ś.m. or **ሥርዓተ፡ አሲረ፡ መነኮሳት**, *Śərᶜatä asirä mänäkosat* (incipit: *zəntu śərᶜatä asirä mänäkosat bäʾaskema qəddus*, 'this is the order of putting on the holy ↗*askema* on the monks …'). This monastic ritual is different from GŚm, though related to it. It is contained, e.g., in mss. Ṭānāsee 154, 18th cent.; Ṭānāsee 81, fols. 6ra–57vb, 20th cent. (the text of GŚm seems to be incorporated in it, cp. SixTana III, 187; HamTana II, 100); maybe Manchester, John Rylands Library, Ethiop. 16 (17th cent., cp. Strelcyn 1974, no. 16). As compared to GŚm, this text appears to be more elaborate and includes some regulations regarding spiritual and everyday practical monastic life (e.g. the manner of interrogation of the novice, the duration of the noviciate [3 years], etc.).

III. A monastic ritual entitled **ሥርዓተ፡ ሢመተ፡ ምንኵስና** *Śərᶜatä śimätä mənkʷəsənna* ('The Ritual of the Monastic Profession'), ascribed to ↗Jacob of Serug and preserved in ms. BN d'Abbadie 71 (CRAbb no. 78; 18th cent.), EMML no. 449, fols. 55r–76r; no. 1203, fols. 62r–90r (probably also EMML nos. 669 and 1012). Referring to a quotation from this text, reportedly found in the Vita of ↗Abäkäräzun (s. CRAbb 115), Conti Rossini argued that this text was translated from Arabic in the 14th/15th cent. (cp. also Conti Rossini 1899:209), yet the quotation has never been verified.

There are many other texts of monastic rituals or their portions in different rearrangements. Some are not easily identifiable, bearing different titles such as *Mäṣḥafä mänäkosat*, *Śərᶜatä mänäkosat* etc. Many other texts are registered in the catalogues as monastic rituals, without further specification (cp. the list EAE III, 997a; for EMML 2093 and 2168 cp. Zuurmond 1989, I, 149). Old manuscripts of the monastic ritual are: Bayerische Staatsbibliothek Cod. aeth. 42 (*Śərᶜatä mänäkosat*; SixBay 73); London, British and Foreign Bible Society no. 174, fols. 28r–75r, 15th cent. (most probably of type I. or II., s. Roger Cowley in Falivene 1982:84), and perhaps VatLib Cerulli Etiop. 269 (*Śərᶜatä ḥəggä mənkʷəsənna*), 15th cent. Fragments: Staatsbibliothek Preussischer Kulturbesitz orient. quart. 877; Rome, ANLin Conti Rossini 131, 134.II–III.

The origin of the monastic ritual texts may go back to the introduction of ↗monasticism (s. EAE vol. 5) in Ethiopia, with the core ritual possibly translated (cp. Evetts 1906; GrafLit vol. 1, 647ff.), but later revised and enlarged, and preserved in a number of versions: from a relatively short one in the ancient Paris, BN éth. 80 to elaborate and well-arranged rituals in EMML no. 2168 or esp. no. 2093. The transformation of the textual tradition must have gone along with the development of the ideology and praxis of Ethiopian monasticism, whose decentralized character favoured the emergence of multiple versions. The full understanding of the place of the Ś.m.-texts in the monastic tradition as well as the study of the monastic ritual itself are necessary to clarify the value of many other – in the first place hagiographical – sources (where the receiving of the habit is a recurrent topic; cp. ↗Iyäsus Moʾa).

Śərgəw Ḥablä Śəllase

Ś. (**ሥርግው፡ ሐብለ፡ ሥላሴ**; b. 29 June 1929, Addis Abäba, d. 7 January 2003, Munich) was an Ethiopian historian. The son of *märigeta* Hablä Śəllase Zäwde, he was sent to a church school at the Lədäta church in Addis Abäba. He then followed higher-level church education (↗*zema bet*) in the Taᵓəka Nəgəśt Bäᵓata Monastery. Later, he joined the Holy Trinity School from where he moved to the ↗Holy Trinity Theological College. Ś. obtained a scholarship to study theology at the National University in Athens where he received his first degree. Then he moved on to the University of Bonn where he studied the ancient history of Ethiopia and the Middle East for his doctorate degree, which he received in 1960.

Ś.'s first employment was at the Institut Éthiopien d'Archéologie. Shortly after, he was recruited into Addis Ababa University College (↗Addis Ababa University), becoming the first Ethiopian to teach Ethiopian history there. At the Institut Éthiopien d'Archéologie he started a journal entitled *Tarik*.

Ś.'s most important publication was *Ancient and Medieval History of Ethiopia to 1270* (SerHist). There he made extensive use of all published literature on ancient and medieval Ethiopian history, including the rich hagiographic corpus. He also produced a small but significant monograph, *Bookmaking in Ethiopia* (1981) in addition to articles in various scientific journals.

Ś.'s most enduring contribution to ↗Ethiopian studies lay in the microfilming of Ethiopian ↗manuscripts. When the ↗Ethiopian Manuscript Microfilm Library (EMML) was established in Addis Abäba, Ś. represented Haile Selassie I University on the committee and in 1972 became its first director. In 1977, he resigned his teaching position and took up his task at the EMML as a full time job. He travelled to several monasteries and to the principal churches of the country to look for, identify and microfilm manuscripts. Ś. himself took advantage of this project to consult a large number of manuscripts that he used to compile a 14-volume *Amharic Church Dictionary* (AmhChurchD), which he was unable to finish. Nevertheless, the work offers a comprehensive coverage of the practices of the Ethiopian Church, its objects and rituals and technical terms (copies are kept at the Institute of Ethiopian Studies and the National Library). Members of his family also state that he had written an extensive biography of ↗Mənilək II.

With the rise of the *Därg* (↗Provisional Military Administrative Council) Ś. left Ethiopia and settled in Germany, where he spent the last years of his life.

Serpent(s)

Snakes are highly laden with symbolism in most cultures of the African Horn. Comparative research reveals that the cultural conceptualization of the S. ranges from demonization to veneration. While among Christians the S. is considered as a representation of evil, it plays an ambivalent or even positive role as an "animal of power" or symbol of procreation in many autochtonous religions (↗Religions, traditional) and mythologies.

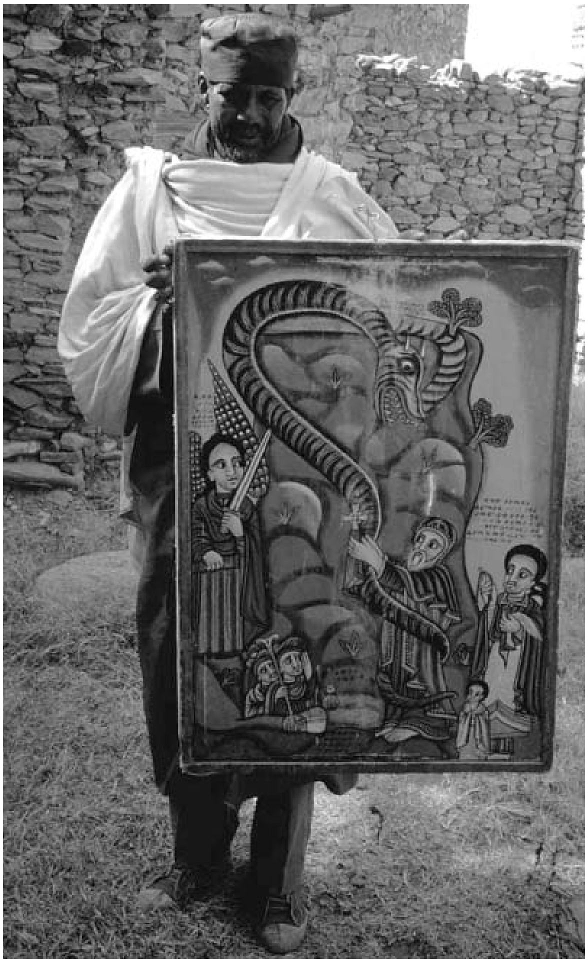
According to Gəᶜəz myths, found in a number of texts, the S.-king ↗Arwe ruled Ethiopia for centuries prior to the foundation of the so-called ↗Solomonic dynasty. He is depicted as a man-eating demonic creature that was finally killed by a certain ↗Angäbo who became his human successor as a ruler. This legend as well as its many variants (cp. Marrassini 2006), besides its apologetic impetus, reflects the probable centrality of the S. in many pre-Christian religions of the region. Reference to "snake cults" is also given in many folk legends (cp., e.g., a legend of the ↗Idda) and hagiographic narratives which often tell about holy men, such as, e.g., ↗Samuᵓel of Däbrä Wägäg and Märḥa Krəstos, who killed snakes that were held in great esteem by the local population and cut down the ↗trees in which they lived (KapMon 120).

However, there are legends influenced by Christianity in which S. play a symbolically positive role. The oral tradition of the ↗Ǝndägañ, for example, tells of a large S. that guarded the *tabot* of Bušurro Maryam, which is said to have hidden in a cave since the time of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"; Bustorf in VarAeth 27). ↗Zämikaʾel Arägawi was able to climb up ↗Däbrä Damo with the help of a S. (Guidi 1894: 68).

S. play a role in several myths of origin and serve as a symbolic animal for many groups in southern Ethiopia. According to a ↗Burǧi legend, the Baambala clan descends from a python that is said to have spit its saliva on a girl or to have bitten her. As a result of this the girl became pregnant. Her son, whose grave is said to be guarded by a python, became the ancestor of the clan. Similar myths are known among the ↗Konso and ↗Boorana (Kellner 2007: 174, 182ff. 313, 317, 329, 334f.). A myth of origin of the "pure" Oromo (*boorana*) relates them to a marine snake (Ficquet 2002: 55–71; VSAe II, 130, 379).

The S. is often perceived as a symbol of procreation and blessing. According to old Käfa cosmology, for example, a sacred black snake, *Meš tato* ('king of Mese'), represented the animal world. It was believed to live in a water hole, called Mese, and, by vomiting "milk", it brought prosperity to Käfa (Lange 1982: 271, 285f.).

It is reported from ↗Arsi and ↗Guǧǧi that the appearance of a snake was interpreted to mean good fortune. The Guǧǧi honoured a snake visiting a compound by hanging the fatty tissue of a slaughtered animal around its neck. To prevent it from biting somebody, it was fed with milk, butter or meat. The Arsi believed that snakes lived in pairs and, when one was killed, the other would take revenge. However, a snake that had bitten was killed to avoid the death of the bitten person (VSAe II, 405, 483, 505).



The serpent transporting Zämikaʾel Arägawi to mount Däbrä Damo, 20th-cent. traditional painting displayed at Däbrä Damo; photo courtesy of Alula Pankhurst

The Alabdu Oromo traditionally avoided killing a S. Especially for the *boorana* it was ↗taboo to kill a snake. Those who did were believed to be punished by the death of a relative or by disease. The members of the Akako clan even symbolically went into mourning when they saw a dead snake (VSAe II, 343f.).

Like other "animals of power" (↗Leopards, ↗Lions), S. are associated with ritual experts and tribal chiefs. Among, e.g., the Boorana, snakes played an important ritual role during the ↗*muuda* ceremony in the fifth year of the ↗*gadaa* period. On this occasion the ↗*qaalluu* of the Sabbo and Goona moieties, both wearing lion-skin masks, released poisonous puff adders and cobras as representations of their spiritual power. It was prohibited to kill them during the ceremony (AsmGada 91, 216, 226). After having transferred his office to his successor in the *bali* ceremony, a retiring ↗*abbaa gadaa* of the Guǧǧi had to kill and burn a snake. The blood of a sacrificed oxen was mixed with the ashes of the snake and smeared onto the forehead of the new officeholder who was now believed to have the ability to kill by staring (VSAe II, 393). The Muslim saint *šayḫ* ↗Ḥusayn of Bale, whose cult integrated many of the sacerdotal traditions of the pre-Islamic Oromo religion, is said to have had control over S.

A wide-spread feature in many cultures in southern Ethiopia was the keeping of snakes in the house. While in some cultures, keeping a snake in the homestead was a custom restricted to priestly families or to certain clans, elsewhere it was common among ordinary people. Ritual S. keeping is reported, among, e.g., the Wälaytta, Zala, Sidaama, Dizi (CerPeople 91, 113f., 129f.), Burǧi, Konso, Hadiyya, Gurage, Gawwada, Diraašša and Oromo. Like the *qaallu* of the Oromo, the *ganni* priests of the Burǧi and the *poqalla* priests of the Konso were believed to have strong ties to S. and to sometimes let some live in their house (HabKön 297; Kellner 2007: 178f.; VSAe II, 306).

In traditional medicine the meat of snakes was considered helpful in the treatment of leprosy. According to a tradition told to the German traveller Mueller, the meat of a S. was considered to be related to the element "fire" and to have the ability to dry out the "watery" body of the leper. In order to "cool down" the snake meat before consumption, it was said to have been given to a goat, which again was given to a young oxen. The leper had to eat from the oxen in order to be cured (Mueller 1935: 20f.).

Śərwä Iyäsus

Ś.I. (**ሥርወ፡ ኢየሱስ**, regnal name Məhərka Nañ; r. 1433) was, according to some versions of the "short chronicles", a son and successor of *aṣe* ↗Täklä Maryam (Ḥəzbä Nañ), and only reigned for four months.

The "short chronicle" of ms. Ṭānāsee 106 (DombrChr) does not mention Ś.I., naming another son of Täklä Maryam, ↗^{c}Amdä Iyäsus (Bädəl Nañ), as his immediate successor. The "kings list" dating from the reign of *aṣe* ↗Na^{c}od (Conti Rossini 1940: 48) also omits Ś.I. The omissions are probably due to the brevity of Ś.I.'s reign and to the power struggle between him and his younger brother and successor ^{c}Amdä Iyäsus and even his own son. The 15th-cent. Arab historian al-↗Maqrīzī mentions that, in the year following Täklä Maryam's death, four kings ruled in succession. Ś.I. may not have been recognized as king by all his subjects.

Setit ↗Täkkäze

Severianos of Gabula ↗Qerəllos

Severos of Antioch

S. (Eth. **ሳዊሮስ**, Sawiros; b. ca. 465, Sozopolis, Pisidia [Asia Minor], d. 8 February 538, Chois, Upper Egypt) was an anti-Chalcedonian theologian and patriarch of Antioch 512–18.

Born to a Greek family, S. studied philosophy in Alexandria and law and rhetoric in Beirut, but then joined a monastery near Maiuma, Gaza. In 509 he went to Constantinople to protest against the harsh treatment the monks experienced at the hands of Elias I, the Chalcedonian patriarch of Jerusalem (494–516), and his agent Nephalios. After the successful mission, S. stayed in the capital, acting against the Chalcedonian hierarchs. In 512 at the synod in Laodicea, S. was elected patriarch of Antioch. The years of his patriarchate marked the highest achievement of ↗Monophysitism within the imperial Church, the same time anti-Chalcedonian patriarchs were officiating in the three other patriarchal sees of the East (Alexandria, Constantinople, Jerusalem). S. was deposed in 518 when Justin I ascended the throne. He fled to Egypt and settled in the monastery of Enaton near Alexandria. He was still recognized as the main anti-Chalcedonian theologian; when

Justinian tried to reunite the Church he invited S. in 535 to Constantinople for discussions, but the unification attempt failed. S. was banished in 536, his works were condemned, destroyed and never recopied in Greek, surviving mostly in their Syriac translations. S.'s theological inheritance became the dogmatic base for the theology of the non-Chalcedonian churches (the "verbal monophysitism"), esp. the Syrian Orthodox Church.

S.'s main anti-Chalcedonian writings are the *Orations to Nephalios* (ca. 508) and *Philalethes* (509–11), a florilegium of sentences attributed to ↗Cyril of Alexandria. S. also wrote against such extreme Monophysite theologians as Sergius the Grammarian and against the aphthartodocetism of Julian of Halicarnassos (cp. ↗Julianism). 125 of his *Cathedral Homilies* (512–18) are extant, as well as over 200 letters, and some liturgical writings.

Some of S.'s writings (but none of his major dogmatic works) were translated into Arabic (GrafLit vol. 1, 418) and subsequently into Gəʿəz. In Ethiopia, the following compositions are attributed to S.:

1) *The Homily on the Archangel Michael*, included in the ↗*Dərsanä Mikaʾel* (in some manuscripts for the month of *Ḫədar*, in others for *Mäggabit*). Its attribution to S. is uncertain, the author is mostly referred to only as 'bishop of Antioch' (*liqä ṗaṗṗasat zäʾanṣokiya*), or, more seldom, 'of Alexandria' (*zäʾaləskändärəya*) (Marrassini 1984–86: 83). Other manuscripts (and the printed edition) attribute the text to Yoḥannəs, probably the 15th-cent. bishop of Aksum. The *Homily* appears, however, in earlier manuscripts outside the *Dərsanä Mikaʾel*, e.g., EMML no. 1833 (14th cent.), and thus must have been translated (or composed) earlier, transmitted first separately and subsequently integrated into the *Dərsanä Mikaʾel*.
2) *The Prayer of Blessing of Baptismal Water for the Feast of the Epiphany*, attached to the *Mäṣḥafä* ↗*ṭəmqät* (e.g., EMML nos. 2235, 2661, 18th cent.). This may be S.'s genuine composition, as among the *Cathedral Homilies* there are seven (nos. 10, 37, 63, 66, 101, 103, 117), which are concerned with the Epiphany.
3) *The Prayer for the Peace of the Soul of a Deceased Person*, a part of the *Mäṣḥafä* ↗*gənzät*, is extant in only a few manuscripts: ANLin Conti Rossini 71, 19th–20th cent., VatLib Aethiop. 115, 20th cent.
4) *The Homily on the Virgin Mary for the Rainy Season* [*kərämt*], is known only from two manuscripts: BritLib Orient. 8192, 14th cent., EMML no. 1763, 1336/37 or 1339/40. It is attributed to S. "the Orthodox" [*rətuʿa haymanot*], "bishop of Antioch". This may correspond to the Syriac *Homily* no. 67, devoted to Mary.
5) Nine extracts in the ↗*Haymanotä abäw*: the credo addressed to Emperor Anastasius; the letter to Julian of Halicarnassus (cf. Hespel 1964, 1968–69, 1971); the homily on Jesus's words "My God, my God why hast Thou forsaken me" (Mt 27: 14; cf. Syriac *Cathedral Homily* no. 22, PO 37:1); the homily addressed to the Emperor, originating in the Life of S. by Athanasius (Youhanna Nessim Yousif 2001); two fragments of a letter to the Emperor (Mai 1840: 728f.); two fragments of the Letter to John II, patriarch of Alexandria (ibid. 722–28); the Letter to ↗Theodosios of Alexandria (the second successor to John II).

Short quotations from S.'s works can also be found in some other compositions, e.g., in the ↗*Tərgʷame wängel*.

Four Lives of S. are known in Syriac; one is extant in Gəʿəz. Ascribed to Athanasius Gammala, the Syrian Orthodox patriarch of Antioch (594/95–630/31), it was perhaps originally written in Greek, and translated into Coptic, fragments of which have been preserved (Crum in Goodspeed 1907: 10–22), and later into Arabic (GrafLit vol. 1, 420), from which the Gəʿəz version is derived. The *terminus ante quem* of the translation is provided by ms. EMML no. 1840, of ca. 1400 (s. GuiSLett 79).

S. is commemorated in the ↗*Sənkəssar*, with two different stories for 2 *Ṭəqəmt* and 10 *Taḫśaś*. S.'s talks with Chalcedonians in Constantinople are mentioned in the text for 13 *Yäkkatit* dedicated to ↗Timotheos of Alexandria.

S. is depicted in some manuscripts, the oldest being the 14th cent. EMML no. 2064 (fol. 112r).

Severos of Ašmunayn

S. (Arab. Sawīros [or Abū Bišr] b. al-Muqaffa^{c} [lit. 'son of the cripple'], Gə^{c}əz: **ሳዊሮስ፡ ዘእስሙናይን**, *Sawiros zäʾəsmunayn*; fl. 10th cent.) was a Christian author and an outstanding personality of the ↗Coptic church.

Born to a devout Christian family, S. lived during a period of cultural transition, when Coptic was losing ground to Arabic. S. was employed as a clerk in the Arabic speaking administration, but left it and entered monastic life, gaining a thorough acquaintance with the Bible as well as with the history and exegesis of the Alexandrian church. He is credited with the introduction of Arabic into Coptic ecclesiastical literature. Patriarch Macarius I (932–52) appointed S. bishop of al-Ašmūnayn, the old Hermopolis Magna. In 950 and 955 S. produced two commentaries on the Nicene Creed (↗Nicaea). In 975 he disputed with the Jewish Rabbi Moses, in the presence of the Fatimid *ḫalīfa* al-Mu^{c}izz. S.'s signature appears second, after the Patriarch's, in a synodal letter dispatched in 987 or 988 to Athanasius IV of Antioch (987–1003). S. probably died during the patriarchate of Philotheus (979–1003).

Abū l-Barakat (d. 1324) attributes 26 works to S. (cp. GrafLit vol. 2, 306–17). Some of them had been declared lost, but were later retrieved in manuscript collections. More recently there has been a re-assessment regarding the authorship of the *History of the Patriarchs of Alexandria* (SawHist) which was traditionally associated with S. Whilst it may have been inspired by S., the *History* is the work of Mawhūb b. Manṣūr b. Mufarriǧ and his followers (Den Heijer 1989: 115f.). S.'s writings are mostly apologetic in character, often with a sharp polemical overtone. They represent his unequivocal stand vis-à-vis the Muslims, the Jews and the Chalcedonian Christians. His first commentary on the Creed is explicitly written against the Melkite patriarch of Alexandria, Euthychius. Here, S. passionately professes the Jacobite Creed, the Syrian brand of ↗Monophysitism, in contrast to the Chalcedon Christology. S.'s writings reflect his erudition but are also characterized by wit and a sense of humour.

Some of S.'s works were translated into Gə^{c}əz and widely circulated:

- the Gə^{c}əz version of his commentary to the Nicene Creed, *Discourse* [*Nägär*] *about the Assembly of the 318* [Nicene Fathers] *of abba Sawiros son of Maqfi* [Muqaffa^{c}], sometimes called the *History of the Councils* (e.g., ms. London, BritLib Orient. 691, fols. 106r–55v), and also known as the *Mäṣḥafä ↗Ḫədar*, since it was read on 9 *Ḫədar*; its oldest manuscript (EMML no. 1833, fols. 84v–123r) dates to the 14th cent.;
- the *Homily* [*in Honour*] *of the 24* [*Heavenly*] *Priests*, "an admonition [*Tägśaṣ*] to priests" (Paris, BN d'Abbadie 92, fols. 140r–45v; BritLib Orient. 691, fols. 193r–98v), to be read on 24 *Ḫədar*, the oldest copy found in the same ms. EMML no. 1833 (fols. 150v–155v);
- the *History of the Wood on which Christ was Crucified*, supposedly told by S., recorded in EMML no. 2063, fol. 81r;
- the *Homily by Sawiros the Orthodox on St. Mary*, the same S. possibly being meant, attested in the ancient (1336/37 or 1339/40) homiliary EMML no. 1763, fols. 270r–272v;
- the *Mäṣḥafä Sawiros* (**መጽሐፈ፡ ሳዊሮስ**, 'The Book of Severos'; hereafter M.S.), also known as *Kəbrä haymanot* ('Glory of the Faith') or simply *Sawiros zäʾəsmunayn*. Occasionally it is also mistakenly called *Mäṣḥafä ↗ḫədar* (cp. EMML nos. 2145, 2149).

It is to the M.S. that S.'s fame in Ethiopia is linked. It is the translation of S.'s Arabic *Kitāb al-Īḍāḥ*, or 'The Book of Exposition' (no critical edition is available as yet), originally written to reverse the state of religious stagnation, due to ordinary people's ignorance of the language of religious books.

The M.S. is composed as a dialogue between master and disciple and consists of twelve homilies (*dərsanat*). It is difficult to see a logical sequence in the treatises: they deal with fundamental elements of faith, such as the ↗Trinity and Incarnation (*dərsan* 1, 2) but there are also topics of a more parenetic nature, such as "the war that demons wage against the believers" (5) or "on the consolation of the faithful" (12). The author's main sources are the O.T. and the N.T., which are interpreted "allegorically" or spiritually. In line with scholars like ↗Origen, S. adopts a synchronic or "unitary" reading of the whole Bible, which was seen in its entirety as corresponding to the One Logos. It is a hermeneutic method that has characterized Ethiopian ↗exegesis. One of the many items of the M.S. which have become part and parcel of Ethiopian theology is, for example, the neo-platonic analogy, employed by S., of the "heart, word and life", used to describe the Trinity; another is the elaboration of the early Judeao-Christian concept of the "hidden descent" of the Son of God; yet another is the way "original sin" is transmitted. S. has also shaped Ethiopian angelology (cp. ↗ Angels), demonology (cp. ↗ Demons) and ↗ eschatology. A few passages from the M.S. were taken into the ↗ *andəmta* to explain parts of the N.T.

The time and authorship of M.S.'s translation into Gəʿəz are unknown. It is attested in at least 15 manuscripts (Tedros Abraha in PICES 15, 629) from the 17th–20th cent. (with the exception of a manuscript in the library of ↗ Qoma Fasilädäs, which, according to Wion [in PICES 14, vol. 1, 287f.], can be dated to at least the 15th cent.). The translation would fit well into the religious context in the aftermath of the failed Catholic mission (1555–1634). There are thematic and methodological affinities with such works produced at the time as, e.g., *ʿAśärtu täsʾəlotat* (Cerulli 1960: 187–236). The book would have supplied the tools to counter the "opponents of the Jacobite creed".

The book is also read in several churches during liturgical assemblies. Finally, parts of the M.S. have been used by critics of the ↗ Coptic Church (e.g., Kidanä-Wäld Kəfle) and religious nationalists who claimed emancipation of the ↗ Ethiopian Orthodox (Täwaḥədo) Church from Alexandria. They quoted from the introductory part of the first Homily which complains about the disappearance of the Coptic language, thus leaving the Egyptians without the means to get religious education (cf. Conti Rossini 1916: 458).

The M.S. is still unpublished. There is also a typewritten anonymous Amharic version of the work (Tedros Abraha in PICES 15, 629).

Severos of Synnada ↗ Qerəllos

Səwwuran

The Gəʿəz word S. (**ስውራን**, lit. 'the hidden ones', sg. *səwwur*) refers to a type of ↗ hermits (*baḥtawəyan*), who are believed to be "invisible" due to the exceptional purity and grace of God they achieved in the course of their ascetic life. The phenomenon of S. is a specific feature of Ethiopian ↗ monasticism (s. EAE vol. 5)

S. are those monks and nuns who are believed to be no more in need of food and not affected by desires of the flesh. Living in caves, forests and deserts, frequently on the margin of monasteries, they are believed to remain invisible to the people; indication of their presence may be pieces of garments, ↗ crosses, the smell of ↗ incense or the sound of bells and voices chanting in the early morning. The state of S. is thought to be "between life and death", and can last for a long time. People may see S. momentarily reciting the ↗ prayers with rosary, before they disappear. The S. do not speak; yet those seeking their assistance receive comfort and inspiration.

S. are believed to constitute sometimes large communities. Some 1,500–5,000 S. are thought to hide in the gorge and forest of ↗ Däbrä Libanos of Šäwa. Those S. who are said to live at ↗ Däbrä Asäbot have achieved particular fame; the abbot *mämhər* Ṭəbäbä Śəllase reported that their number exceeded 2,000. Three S. are reported to have saved the monastery from destruction during the ↗ Ogaden war (1978). After the Mass on 7 *Ḥamle* 1979, *abba* Wäldä Mikaʾel Bälay is said to have disappeared in front of the monks of the monastery. A few other locations for S. (called *mäkanä səwwuran*) are reportedly such monastic centres as Näčč̣ Sar Gädam, ↗ Rama Kidanä Məḥrät, ↗ Waldəbba.

The idea underlying the concept of S. seems to be also applicable to church buildings and paraphernalia. There is a belief that a few churches or monastic communities exist in an invisible state. Every now and then one of these "hidden monasteries" is said to have been revealed becoming a religious centre; a striking example being Boräda Dənke Waša in ↗Gamo Gofa. 44 *tabotaṯ* are said to be found here by a certain Hata Č̣əlalo, a Protestant Oromo. He related that the Holy Virgin appeared and revealed the cave to him; she told him to repent and convert to the Orthodox Christianity. The place became an important ecclesiastic centre where many miracles reportedly occurred.

S. feature in a few works of Ethiopic ↗hagiography where they are depicted with exceptional reverence, at least equal to or even superseding the protagonists of the Vitae in spiritual power. *Abunä* ↗Sämuʾel of Waldəbba had to deal with S. (s. Turaiev 1902: 26, 28, 33); they appear in the Vitae of ↗Gäbrä Mänfäs Qəddus (Marrassini 2003: 263, here called [*baḥtawəyan*] *ḫəbuʾan*, coming to witness the death of the saint) and Yoḥannəs Məśraqawi (Marrassini 1981: 303f., "hidden saints from the Scetis"). *Abunä* ↗Märḥa Krəstos received a ↗prophecy (s. EAE, vol. 5) from such a hermit (Kur 1972: 14f.); *abunä* ↗Täklä Haymanot is said to have been greeted by S. during his travelling in Waldəbba.

Sexuality

S. is a difficult subject to research given its extremely private character, and the obvious dangers of ethnocentrism, prurient interest, stereotyping and many ↗taboos (cp. Getnet Tadle 2006: 7). Most literature on the subject is comparatively recent and stresses current biomedical, public health, or epidemiological perspectives in selected urban areas (↗HIV/AIDS), rather than long-term cultural attitudes and practices from a variety of peoples. In general, it has to be emphasized that in S. there can be a wide gap between official moral discourses and everyday practice.

Any discussion of S. in Ethiopia must consider that the dominating Christian culture has an ideal not only of sexual morality, but in the case of its most revered and celebrated figures, celibacy and virginity. While there is no expectation that the general population would live according to these monastic ideals (↗Monasticism [s. EAE vol. 5]), the repeated images of saintly virgins, celibate saints, as well as the exclusion of woman of childbearing age (particularly immediately after child ↗birth and during ↗menstruation) all convey messages about S. and gender. Thus, even the avowedly secular may view homosexuality not merely as deviant, but as 'sodomy' (**ግብረ፡ ሶዶም**, *gəbrä sodom*) or sin (s. also ↗Theology), and conflate masturbation with onanism (which refers to coitus interruptus) and spilling the seed. However, in daily life among the lay people the ↗Ethiopian Orthodox (Täwaḥədo) Church's code of sexual behaviour is often honoured more in the breach than in practice.

In contrast to Christianity, ↗Islam begins with the underlying assumption that, within the context of ↗marriage (s. also ↗Matrimony), S. is a positive, natural aspect of human behaviour. Its pleasurable aspects are noted, and it is not limited to instances of procreation. Given the comprehensive character of ↗*šarīʿa* it is not surprising to find S. regulated in quite some detail. However, in practice Muslims are often far more flexible in their behaviour than legal codes would dictate. The imposition or adoption of stricter forms of Islam is often manifested in the intensification of codes of morality and attitudes toward S. especially as these apply to women.

Incest taboos between persons of differing degrees of ↗kinship are found throughout Ethiopia (cp. also ↗Genealogy). As elsewhere, not all violations are viewed with the same seriousness. When it comes to marriage, however, exogamy is strictly observed, especially in the countryside.

Female genital mutilation (↗Circumcision) is widespread in Ethiopia in a variety of forms including clitoridectomy, excision and infibulations. Such practices have deep social and cultural meanings and can be viewed both as symbolically transforming the victim into a "true woman" and at the same time suppressing her sexual urges. To be an uncircumcised girl or woman in the cultural understanding of the ↗Amhara implies promiscuity or being "over-sexed". In general, it is difficult to find written sources which view sexual desire on the part of a woman favourably. Even in those cases in which women are not condemned for having multiple partners, the emphasis appears to be more on her beauty and desirability, than on her sex drive. A ↗Boorana folktale acknowledges female sexual desire, but depicts it as dangerous to her and ultimately the source of her subjugation to a man (Sahlu Kidane 2002: 120).

Societies vary tremendously with regard to the importance they place on pre-marital virginity, especially for women. Among many groups, including the Amhara, ↗Təgrəñña-speakers, ↗Betä Ǝsraˀel, ↗Kəmant etc., there is a strong expectation that a woman will be a virgin when she first marries. The blood-stained sheet displayed on her ↗wedding night, which proves both her virginity and her husband's virility, assume considerable importance. Reminick notes (1976: 754) no less than 25 Amharic terms for the defloration of a bride. He suggests that the act encapsulates many of the core values of Amhara society, and in particular masculinity. Indeed, the fact that in many of these and other terms and elsewhere sexual intercourse is depicted as a violent act imposed on a resistant woman says much about the Amhara concept of S. Among the ↗Oromo as well there are proverbs which stress the importance of the groom taking his bride's virginity. These examples notwithstanding, among a number of groups including the Surma and the ↗Konso, virginity is not considered particularly important.

Many groups, including, e.g., the Konso and Sidaama, share the idea that sexual intercourse weakens men and should be avoided by warriors, hunters or those preparing to do heavy work. Often this is connected to the idea that the release of sperm drains the body of vital fluids and thus the deleterious effect applies to masturbation as well.

Polygamy is common at least as an idea among many peoples of Ethiopia, although religious and economic considerations limit the actual practices. Given the many possible ways for men to acquire multiple sexual partners (contract marriages, concubines, extra-marital affairs, ↗Prostitution etc.), it would be misleading to view polygamous households as exclusively, or even primarily an issue of S.

Taboos against sexual relations when women are pregnant, menstruating, and nursing (Hallpike 1972: 153) all create situations in which a man with only one wife may look elsewhere for companionship.

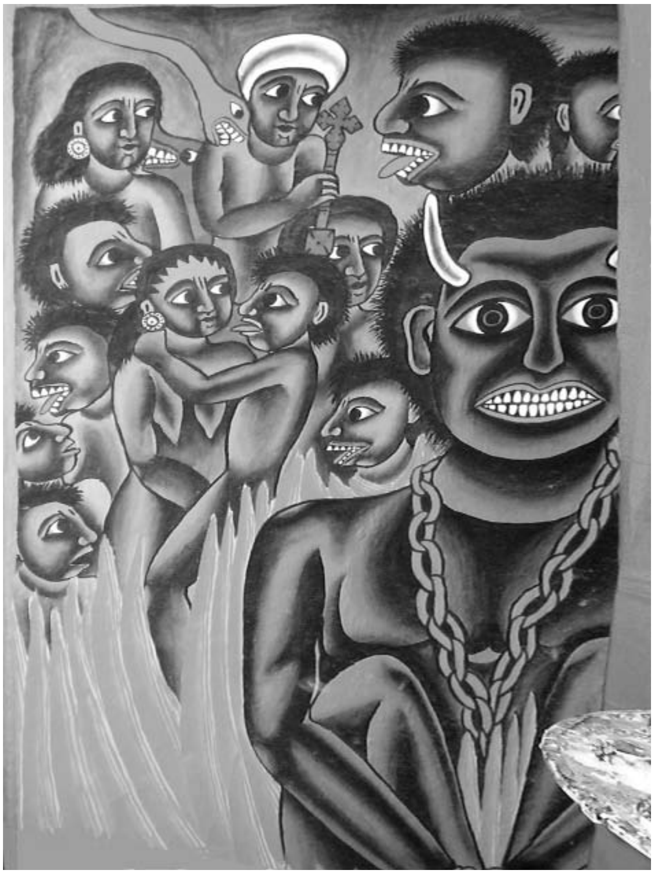
While among some people adultery, especially of the women, is treated with seriousness and is a reason for divorce, e.g., among the ᶜAfar, Somali and Kunama, it can usually be resolved if the guilty party pays a fine. Several Oromo tales treat women's adultery with understanding and imply that it reflects the husband's failure to be sufficiently manly in matters of hunting or war.

There is little literature on S. and aging in Ethiopia, although the general impression is that women who have reached menopause are considered to be no longer sexually active. Among the Konso, it is said a woman should not engage in intercourse after her first son has married. Boorana traditions condemn an old man who leaves his bed for another woman (Sahlu Kidane 2002: 28). Indeed, several age-grade and generational-grade systems (↗Age group system) would appear to symbolically suggest that men who have passed into "retirement" are no longer fully men and hence assumed to be no longer sexually active.

As in most societies, there is a broad familiarity with different sexual positions. Getnet Tadle's research in Däse indicates (Getnet Tadle 2006: 107) that the "missionary position" and **ጎን፡ ለጎኔ** (*gon lägone* 'side-by-side', i.e. both partners facing each other lying on their sides) are considered the "normal" positions by the Ethiopian Orthodox Church, while other positions are not only considered deviant or sinful, but also "dangerous". In this context, it should be noted that some Muslim traditions permit a wide variety of positions, but explicitly prohibit the female superior position.

Certain practices including oral sex (both male and female) and anal intercourse, homosexuality and transvestism are widely considered to be customs practised by Westerners and are projected onto the "other". However, comparable practices have existed in Ethiopia in different periods and among different groups (s. Murray – Roscoe 2001: 21–26).

Setaset (**ሴታሴት**) in Amharic refers to a womanly man. Among the Konso there are several terms including *sagoda*, *miteeza* and *palandeza* used to refer to men who act in a "feminine" manner, including homosexuality and transvestism. Such men are said to engage (in the passive role) in "sodomy". Indeed, unpublished ethnographic data from rural areas (e.g., Təgray) indicates that sexual behaviour of adolescent boys, such as sexual contacts among each other or even with animals, can be considered as just playful experimentation so long as the participants are immature youths (on the Kəmant cp. also Gamst 1969: 106).



Hell, with the depiction of sexual intercourse, wall painting, 20th cent., Abunä Gärima church, ᶜAddi Käwəḥ, Təgray; photo 2008, courtesy of Wolbert Smidt

Masturbation (Amh., ሰጎ, səgo) is for many boys and girls their first sexual experience. Although it generally does not necessarily carry the weight of sin, it is often the subject of misunderstandings and myths.

Griaule (1929:316–19) records the story of a man who masturbates into an aloe leaf, which then bears a child, who becomes the founder of a group of people. Apparently this story existed in several versions regarding several peoples. Although this story refers to masturbation, it obviously belongs to the larger genre of myths of origin which attribute the origins of groups to supernatural or "unnatural" practices. Such stories should not necessarily be read as reports of actual practices or beliefs but as mythological charters in which normal categories and boundaries including those of S. do not exist.

Given the largely dominating view of S. which emphasizes the aggressiveness of male S. and the passiveness of women, it is not surprising that women in various circumstances are vulnerable to sexual exploitation. In some cases, such as rape, this may be the result of individual vulnerability, particularly in times of social-political turmoil. Often, however, this vulnerability is part of an institutionalized form of sexual exploitation. Unattended girls and women, particularly walking in sparsely inhabited areas are often liable to be harassed and even assaulted by men. Among the Oromo a widow who refused the protection of a male relative through a levirate marriage was considered to be a *gorsumati* ('prostitute'), with the social stigma and vulnerability this term implied.

Although rape is treated more seriously than previously in the legal codes, in practice successful prosecutions are comparatively rare. Especially in the rural context victims will often be pressured by both the perpetrator and her own family to marry her assailant, since her loss of virginity seriously damages her chances of contracting a good marriage. If the woman was not a virgin prior to the crime, prosecutions are even rarer. Moreover, there is no legal concept of rape within a marriage. Marriage by capture or abduction is still practised in Ethiopia. However, as in the case of rape, if the parties marry, the crime is erased.

Women and girls who go to work in wealthier household are frequently expected to provide sexual services for their masters and their sons. Indeed, servant girls might be brought into a household implicitly for this purpose. In earlier times, in extreme cases, female slaves were constantly at the mercy of their masters and other men. Such sexual vulnerability was moreover not merely an internal societal issue. As with many colonial regimes, such as it was the case in colonial Eritrea and also in the 1930's ↗Africa Orientale Italiana, there was fertile ground for sexual relationships between occupiers and local women. The handing over of the ↗Qaññäw air base to the Americans brought only slight changes into this dynamic.

Ṣəyamo

Ṣ. (unvocalized Gəᶜəz ṢYM, South Arabian script ṢYMm and ṢYM, Gr. Τιαμῶ, Τιάμαα, Τιάμα, Τιαμά and Τζιαμῶ) is the name of an ethnic group attested among the peoples and tribes subjugated by an unknown king of ↗Aksum, whose acephalous Greek ↗inscription on a marble throne at ↗Adulis (*Adulitana II* of the ↗Monumentum Adulitanum) was copied by ↗Cosmas Indicopleustes, as well as in the titulature of ↗ᶜEzana, ↗Kaleb Ǝllä Aṣbəḥa and Kaleb’s son ↗WᶜZB.

Its localization is not established with certainty. An attempt to connect this name with the district of Ṣana (rendered as Tzama) in Təgray (to the south of Aksum) undertaken by Bernard de Montfaucon in 1707 in the *Collectio nova patrum et scriptorum graecorum* and supported in the 19th cent. by Henry Salt and Louis Vivien de Saint Martin proves to be unfounded. Another hypothesis is based on a gloss to Cosmas’s text, in which Τζιαμωα are associated with Γάμβελα and on the identification of the latter ethnonym with the name of a fertile valley in ↗Ǝndärta (south-east of Aksum). However, according to the gloss, both peoples were living “beyond the Nile”, which in this context is commonly interpreted as ↗Täkkäze, a tributary of ↗Atbara, while Ǝndärta is not separated from Aksum by the Täkkäze. The text of *Adulitana II* states that the king subdued a number of peoples, including Τιάμαα, after having crossed the river. It should be noted that the population of ↗Səmen is also mentioned among them, and it seems reasonable to localize Ṣ. not far from this mountainous region, on the same side of the Täkkäze.

It is not clear whether the occurrence of Ṣ. in the titles of three Aksumite rulers, in the mid-4th cent. and in the first half of the 6th cent. A.D., corresponds to their effective control over this people, since, e.g., the enumeration of South Arabian lands and royal palaces in the titulature of ᶜEzana reflects his mere pretentions and not his real hegemony in Yemen.

Ṣəyon Mogäsa

Ṣ.M. (**ጽዮን፡ ሞገሳ**, d. ca. 1462) was a wife of *aṣe* ↗Zärᵓa Yaᶜəqob and perhaps the mother of *aṣe* ↗Bäᶜədä Maryam I and *aṣe* ↗Tewodros I. She is only mentioned in historical sources in connection with a revolt against the Emperor in the 1460s, when *aṣe* Zärᵓa Yaᶜəqob accused her of planning, with the help of clergy and monks, to enthrone her alleged son Bäᶜədä Maryam. As a consequence, she was beaten with rods and died shortly thereafter (BassÉt 44; BruNile II, 82ff.). She did not live to witness Bäᶜədä Maryam’s accession to the throne in 1468. After Ṣ.M., Zärᵓa Yaᶜəqob took ↗Ǝleni.

Ṣ.M. was buried secretly by her children at a cemetery near ↗Däbrä Bərhan, the residence founded by her husband. When Bäʿədä Maryam brought incense to her grave on the anniversary of her death (ca. 1463) he was captured and detained by his father's men, but soon released again.

Śəyyum ↗Šum

Śəyyum Mängäša

Ləʿul ras Ś.M. (**ሥዩም፡ መንገሻ**, horse name Abba Yərga, b. 22 June 1887, Agäw Mədər, Goǧǧam, d. 16 December 1960, Addis Abäba), was a governor of ↗Təgray. He was a son of *ras* ↗Mängäša Yoḥannəs and *əmmäbet* Täwabäčč Wäldä Gäbrəʾel, and a grandson of *aṣe* ↗Yoḥannəs IV.

As a representative of northern nobility and the northern branch of the ↗Solomonic dynasty, Ś.M. was always in opposition to Šäwan hegemony over the Empire (cp. ↗Šäwa). In 1896/97, Ś.M. received the title of ↗*däggazmač*, together with Tämben and Abärgälle to govern, and soon entered the rivalry between the northern lords. By 1902 he was in rebellion, but was soon defeated by ↗Abrəha Arʾaya and then submitted to *däǧǧazmač* ↗Gäbrä Śəllase Barya Gabər. As early as 1909, Ś.M. joined the unsuccessful rebellion of *däǧǧazmač* Abrəha Arʾaya against ↗Abatä Bʷayaläw, the governor of Təgray, who had been nominated by *aṣe* ↗Mənilək II. In 1914, Ś.M. was appointed *ras* and made governor of Təgray by *nəguś* ↗Mikaʾel Ali and was given Mikaʾel's daugther, Täwabäčč, in marriage, and remained loyal to *ləǧ* ↗Iyasu during his short reign. In 1914 he fought against Gäbrä Śəllase Barya Gabər who had rebelled against Iyasu after Mənilək's death. From 1919 till 1935, Ś.M. held the governorship of western Təgray. After the Italian occupation, starting in 1947, Ś.M. was governor of the whole province untill his death in 1960.

Ś.M.'s attitude towards Iyasu and the Addis Abäba government after the 1916 ↗coup d'état (s. EAE vol. 2, 1081) was not clear. He was sympathetic to Iyasu, but also tried to remain loyal to the new Šäwan rulers. In 1916 Ś.M. was among the guests at ↗Zäwditu's coronation. When Iyasu sought his protection, Ś.M. did not want to act against Zäwditu and the government of Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I), nor did he plan to help them by seizing Iyasu. Thus, Ś.M. allowed Iyasu to escape and hide in the ↗ʿAfar desert as a guest of the ↗Awsa sultanate. As a result, Ś.M. was summoned to Addis Abäba and the governorship of ↗ʿAdwa, i.e. central Təgray, was taken away from him and given to *däǧǧazmač* Gäbrä Śəllase. In 1920 Ś.M.'s son, *däǧǧazmač* Kaśa Mängäša, rebelled against the rulers in Addis Abäba and planned to join Iyasu. This resulted in Ś.M. taking action against his own son. Kaśa Mängäša was caught by his father and sent to Addis Abäba, where he was kept in custody.

In terms of Ś.M.'s politics in his own province, he was a constant rival of another line of Yoḥannəs IV's family: *ras* ↗Gugsa Arʾaya and his son, *ras* ↗Ḫaylä Śəllase Gugsa. In part, this was a result of Täfäri Mäkʷännən's policy of counterbalance in order to weaken potential northern opposition. Making Ś.M. a part of *ras* Täfäri Mäkʷännən's entourage during his trip to Europe in 1924, was not only an honor, but also a sign of a lack of trust, i.e. the need to keep an eye on the Təgrayan *ras*.

However, on several occasions Ś.M. acted in support of the Šäwan government, e.g., by taking part in an expedition against the ↗Rayya-Oromo revolt in ↗Wällo in 1928. Täfäri appointed him *ləʿul ras* just before his coronation as Emperor Ḫaylä Śəllase I in 1930. Ś.M. was also nominated a member of the Senate in the first ↗Parliament.

During the Italian invasion (↗Italian war 1935–36) Ś.M. fought on the northern front and then joined the army in the south. He led his troops to win some of the battles, such as the first Battle of ↗Tämben. He also fought in the battle of ↗May Č̣äw. He formally surrendered to the Italians at ↗Säqoṭa, symbolically offering to General Ettore Bastico his sword, which was returned to him.

During the Italian period, Ś.M. stayed in fairly good terms with the Italians, however was never regarded by them as being fully trustworthy. He spent the first years of the occupation in confinement in Italy, starting from 1937. After his return to Ethiopia in 1939 he lived in Addis Abäba under Italian supervision. On 26 February 1941, Ś.M. was appointed ↗*nəguś* of Təgray by the Italians and was allowed to move from Addis Abäba to ᶜAdwa. Despite his seemingly good relations with the Italians, Ś.M. was secretly offering help to the Patriots (↗Resistance). His daughter ↗Käbbädäčč Śəyyum was activly involved in the partisans' networks.

Later, Ś.M. joined the British, fought to liberate the country from Italian occupation, and then rendered homage to *aṣe* Ḫaylä Śəllase I after his return to Ethiopia in May 1941. After the Liberation, however, Ś.M. was perceived as an even greater threat to Šäwan hegemony, and while nominally appointed governor of Təgray (on 15 November 1941), he was only allowed to stay in the capital. He was a member of the ↗Crown Council on various occasions. Ś.M. was one of those shot in the Green Salon during the 1960 ↗coup d'état (s. EAE vol. 2, 1081f.). His body was taken by airplane to ↗Aksum and buried there.

One of his sons, *däǧǧazmač* Kaśa Mängäša died in 1920/21, shot while escaping from confinement in Addis Abäba. Another son of his and a Wällo lady, *wäyzäro* Tayyäčč, *ras* Mängäša Śəyyum, became his successor as governor of Təgray and married Ḫaylä Śəllase's granddaughter, Ayda Dästa. A daughter of Ś.M. and *wäyzäro* Däbərnäš Mäkʷännən from Gondär, Wälättä Ǝsraˀel, was married to *däǧǧazmač* Gäbrä Śəllase Barya Gabər, his former rival, and was the mother of *däǧǧazmač* ↗Zäwde Gäbrä Śəllase. After her divorce she married again and was the first wife of the young ↗Asfa Wäsän Ḫaylä Śəllase whom she divorced in ca. 1944. They had one daughter Ǝǧǧəgayyähu. Ś.M.'s daughter Käbbädäčč Śəyyum, whose mother was a Təgrayan lady, married *däǧǧazmač* Abärra Kaśa Ḫaylu, a son of *ləᶜul ras* ↗Kaśa Ḫaylu. Among the wives of Ś.M. was also *wäyzäro* Aṣ́ädä Asfaw from Šäwa.

Śəyyum Täklä Haymanot ↗Haylu Täklä Haymanot

Shack, William Alfred

William Alfred S. (b. 19 April 1923, Chicago, d. 31 March 2000, Berkeley) was an American anthropologist who greatly contributed to ↗Ethiopian studies and, in particular, to the study of the ↗Gurage (esp. 1966 [= ShGurage], Shack – Habte-Mariam Marcos 1974 [focussing on the sub-group of ↗Čaha]) and the central Ethiopian peoples (1974) and the central Ethiopian ethnic groups (1974). A further research focus of S. was African American culture.

S. started his academic career at the Art Institute of Chicago in 1955 where he received a B.A.E. degree in art history and art education. In the same year he started studying anthropology at the University of Chicago.

After receiving an M.A. degree in 1957, S. went to Ethiopia for two years to carry out field research among the Gurage. He then continued his academic education at the London School of Economics and completed his Ph.D. in 1961. Between 1962 and 1965, S., accompanied by his wife Dorothy, again stayed in Ethiopia where he did further research amongst the Gurage and taught at the University College of Addis Abäba (later ↗Addis Ababa University). Appointed Assistant Professor of Sociology, S. founded, and then chaired, the Department of Sociology of Ḫaylä Śəllase I University. He revisited Ethiopia during the years 1972, 1973 and 1986. The persecution and murder of many of S.'s colleagues by the *Därg* regime detered him from any further visits to the country.

Back in the United States in 1965, S. joined the University of Illinois at Chicago Circle. In 1970 he was appointed full professor at the Department of Anthropology of the University of California, Berkeley. Apart from his high scholarly commitment there, he served in various leading administrative positions until his retirement in 1991. Between 1987 and 1996 S. was chairman of the International African Institute in London. S. paid a number of scholarly visits to other African countries, such as Uganda, Swaziland and South Africa.

In the tradition of British social anthropology, and influenced by the Chicago school of sociology, S.'s theoretical interests were focussed on the analysis of social processes and social structure and ranged from topics such as urbanization, ↗ethnicity, judicial mechanisms, religion, status and social change, to the cultural significance of food and diet. His monograph on the Gurage (ShGurage) became a classic of African anthropology and, together with his book on Gurage oral tradition (Shack – Habte-Mariam Marcos 1974) and various articles, laid the basis for an ethnology of the (Western) Gurage.

S. died of cancer. The William A. Shack Memorial Fund at Berkeley was founded in his honour.

Dirk Bustorf

Sheba, Queen of ↗Makədda

Shenute of Atripe

S. (Šenoute in Sahidic Coptic, also known as Shenouda; Gəᶜəz: **ሲኖዳ**, Sinoda, also Sinodyos, Sənudyos, Sunutuyus, etc.; b. ca. 350, d. ca. 464/65), archimandrite of a federation of monastic communities coordinated by the so-called White Monastery of Atripe, a small village not far from Panopolis/Akhmim (Upper Egypt), was the most prominent and prolific author of Coptic literature.

Information on his life can be found in S.'s own works, in the *Vita Sinuthii*, attributed to his disciple Besa (cp. Lubomierski 2007), and in such other works as the *In Macarium episcopum Tkou*, ascribed to Dioscorus of Alexandria, the *Vita Abraham archimandritae*, the *Vita Moysis archimandritae* and the *Historia Ecclesiastica Alexandrina*, besides some inscriptions found in the White Monastery (Crum 1904: 555f.; for synthesis of S.'s life s. Behlmer 2001; Kuhn in CE).

S.'s authority as a monk and archimandrite extended far beyond the boundaries of the White Monastery, especially after the Council of Ephesus (↗Ephesus, Councils of), when he distanced himself from the positions of Constantinople and Pachomian ↗monasticism – so much so that he became a point of reference for the whole Thebais. He was particularly active in his struggle against pagans and the heretics, including the last Gnostic groups.

S.'s extensive literary production was preserved in the rich library of the White Monastery (Orlandi 2002); its circulation was apparently not allowed outside the monastic federation. Like other codices of this library, S.'s works were eventually dismembered, sometimes down to single folios, and dispersed to different public and private libraries. They remained unknown to the scholarly world until the end of the 18th cent., when the first fragments of the White Monastery manuscripts came into the hands of

Cardinal Stefano Borgia, secretary of the ↗Sacra Congregatio de Propaganda Fide, and were published by Georg Zoega (1810). The real importance of S.'s textual production became fully perceptible only with the reconstruction of his literary corpus by Emmel (2004). It consists of two main categories: the *Canons* (9 vols., mostly letters inspired by special occasions and considered useful for moral training of the monks) and the *Discourses* (probably 8 vols., mostly public sermons composed by S. for a heterogeneous audience, including common people, monks from other communities and local administrators; s. Emmel 2004).

Whilst S.'s literary production appears to have been completely ignored by the Greek and Latin tradition (no mentions of S. are to be found either in the works of Palladius and John Cassian, or in the *Historia monachorum in Aegypto*, to mention but a few examples, and the absolutely first notices on him in scholarly literature date from Wansleben 1677: 370–76, and Ludolf 1691: 398, 619 s.v. "Sinodius"), various echoes of S. are found in the Ethiopic literature.

S.'s Vita (named either *Gädlä Sinoda* or *Täʾammərä Sinoda*, as it is in the form of 52 miracles) by Besa (Awsa in Gəʿəz, through Arab. Wīṣā) was edited by Colin (1982) on the basis of three mss.: EMML no. 1834, 16th cent. (in 48 chapters); Ṭānāsee 44 = Kebrān 44, 15th cent. (same recension); and Paris, BN d'Abbadie 126, 15th cent. (basic ms. of Colin's edition).

One can add ms. EMML no. 7602, 1379/1380–1413 A. D., fols. 8ra–38rb (52 miracles as in Colin's edition), with an illumination representing S. on fol. 7v (cp. Hammerschmidt – Jäger 1968, pl. 20: the dating of the ms. to the 16th cent. [*ibid.* 49f.] cannot be accepted, cp. Bausi 2002: 6), as well as one more unpublished miracle of S. from the *Gädlä Bäkimos*, fols. 122vb–23rc.

Translated from an Arabic *Vorlage*, the Vita seems less developed than the known Arabic versions (Amélineau 1888; Galtier 1905), and more similar to the Coptic Bohairic text. The possibility that all Oriental recensions depend upon a Greek original (cp. Colin 1982: viii [tr.]) is hardly tenable (cp. Lubomierski 2007).

A long commemoration of S. (the only one known as *abba* or *arsay mätryadəs*, 'archimandrite'), is found in the ↗*Sənkəssar* on 7 *Ḥamle*, while the other occurrences (on 18 *Säne*, 2 *Ḫədar*, 9 and 24 *Miyazya*, 23 *Ḥamle*, 14 *Mäggabit*, 6 *Gənbot* and 17 *Ḫədar*) refer to different characters of the same name (e.g., patriarch S. II, whose writings are found in the ↗*Haymanotä abäw*, cp. SixBay 60).

The Ethiopic tradition attributes to S. an apocalypse (*Raʾəyä Sinoda*, 'Vision of S.'), already quoted by ↗Giyorgis of Sägla in his *Mäṣḥafä* ↗*məśṭir*, and therefore dating *ante* 1424 at the latest (cp. YaqMist II, 125–29 [text] = 76f. [tr.]). The text was critically edited by Grohmann (1913) on the basis of seven manuscripts, the oldest of which is in a fascicle of a different hand added to ms. Paris, BN Éth. 113, of the 16th cent.

One can add, e.g., EMML no. 1157, 20th cent., fols. 257r–59r (excerpt); EMML no. 1351, 1950, fols. 2r–14r; Berlin, Staatsbibliothek, Ms. or. oct. 4078, 18th cent., fols. 36va–38vb (fragment).

The text mentions ten visions, of which the last one only is described in detail: Jesus answers to S.'s questions concerning the end of the world and the Last Judgement (↗Eschatology). Two more visions follow: one concerns the building of a church, where Christ himself will celebrate the Mass; the other tells of the reconciliation of the king of "Rom" (whose name is missing) with the king of Ethiopia, "Teyoda" (probably an allusion to the "Tewodros" of the ↗*Fəkkare Iyäsus*), of the patriarchs of Alexandria and "Rom", and the conversion of Jews, Muslims and pagans to the Christian faith, up to the establishment of peace everywhere for 40 years. Since neither the only partially known Coptic *Vision of S.* nor the vision quoted in an Arabic homily by ↗Cyril (probably of Alexandria; cp. Grohmann 1914) show any affinity, the Ethiopic *Vision* might be an original composition built up of different materials (esp. apocryphal texts); in particular, the meeting of the kings of Ethiopia and Byzantium seems to allude to the famous passage in the ↗*Kəbrä nägäśt*, ch. 116 (cp. ZotBNat 248; GuiSLett 43f.).

Short readings from writings of S. are included in the ↗*Gəbrä ḥəmamat* (hereafter GH, as *tägśaṣ*, 'admonition', cp. Proverbio 1998:102, where four passages with their Coptic correspondences are in evidence), respectively: on Monday, (1) 'On soul searching', cp. GH 1989/90: 62ab, and ms. EMML no. 1765, 15th cent., fols. 22rb–vb; (2) 'On distinguishing good and evil deeds', cp. GH 1989/90: 88ab, the same as that indicated as 'On respecting holy places' for ms. EMML no. 1765, fols. 36ra–vb; on (3) Tuesday, 'On joy', ms. EMML no. 1765, fols. 43vb–44ra, or 'On matters that please God', cp., e.g., ms. EMML no. 2140, fol. 30r; (4) 'On the need for commentary on biblical scriptures', ms. EMML no. 1765, fols. 54vb–56ra. One additional passage is attributed to S. on Thursday, (5) 'On the washing of the feet', cp. GH 1989/90: 217b–18a, and ms. EMML no. 1765, fols. 92r ff. Some manuscripts also attribute to S. the admonition 'On disobedience', e.g., ms. EMML no. 2140, fols. 23v ff., seemingly not attributed to him in ms. EMML no. 1765, fols. 33r ff. 'On the need of expelling the sinner from the church' is also attributed to S., cp. EMML no. 3571, 1730–55, fols. 28v ff. Yet, in the absence of a critical edition of the GH, any identification is highly hypothetical.

In the ↗*Wəddase Amlak*, there is one prayer of S. (sometimes reported as *təräyäd arsay*, a corruption of *arsay mätryadəs*) on Friday (together with prayers of Basil for Monday, John Saba for Tuesday, 2 prayers of Efrem for Wednesday and Thursday, Athanasius for Saturday, and Cyril of Alexandria for Sunday), also incorporating a prayer of ↗Pachomius, cp., e.g., EMML no. 2213, 18th cent., fols. 110r ff. The same collection of prayers for seven days is also transmitted separately, c.p., e.g., Paris, BN Éth. 89, fols. 76ff., 90, fols. 91ff. (in a different recension), and 91, fols. 89ff. (similar to Éth. 89, cp. ZotBNat 89ff.).

In the ↗*Täʾammərä Maryam*, the famous episode of Absadi, "the gardener who was accused before the old man (*abba* Sinoda?) of giving away vegetables to the poor", in fact, an episode of the *Vita*, takes place in the monastery of S. (cp., e.g., ms. EMML no. 1606, fols. 137r ff., 166v ff.; CerMaria 210f.), where Ethiopic texts were also translated in the 14th/15th cent. (e.g., the *Martyrium* of Theodor the Oriental, written by the Egyptian priest Mikaʾel or Zämikaʾel, during the reign of Gäbrä Mäsqäl, probably either *aṣe* ʿAmdä Ṣəyon or Yəsḥaq, cp. Bausi 2002: 12).

Sheol ↗Eschatology

Shield(s)

The S. (Amh.: **ጋሻ**, *gaša*, also **መከላከያ**, *mäkkälakäya*, 'protection'; Gəʾəz and Tgn.: **ዋልታ**, *walta*) was the only significant protective weapon to be traditionally found in Ethiopia. In prehistory the S. cannot be attested because of its perishable material. Nevertheless, together with the ↗spear it was already documented in late antiquity on ↗stelae (s. reverse of "Stele of Lances", MHAksum 140, 218, fig. 58). The Aksumite king ↗MḤDYS is shown on a coin carying a S. and a spear; this coin is, however, most probably a medieval forgery (s. Hahn 1996a, fig. 10; Munro-Hay 1995; 1999: 17; Overbeck 1997).

Until the 20th cent. magnificent S. figured as national emblems but these were only of decorative importance and showed the dignity of their owners and their membership of the dominant class (cp. ills. EAE vol. 1, 11, 449; VSAe I; VSAe III, 129, 207; Pankhurst – Ingrams 1988: 57, 87). Already in the Middle Ages the S. was described as part of the basic equipment of any Ethiopian warrior and of the imperial army (Munro-Hay 2004: 180; cp. ills. EAE vol. 2, 694, 818). At least up to the time of ↗Mənilək II S. were used in battles as a protection against aggressive attack (s. PankIntro fig. p. 126 top, figs. p. 127; VSAe III, 202, 327).

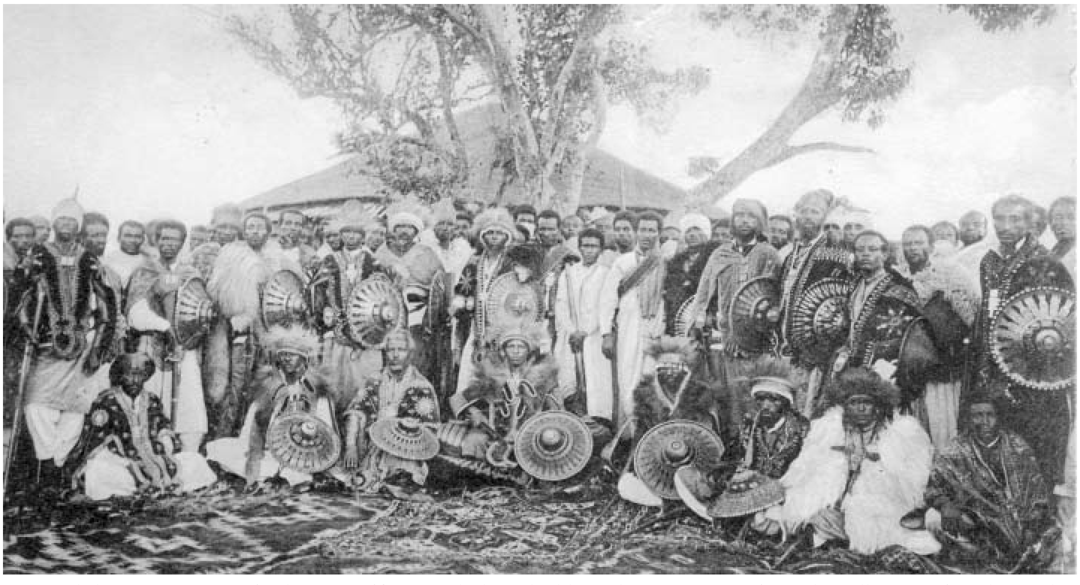
In addition they used to be, and sporadically are still today, an important ritual utensil full of symbolism (e.g., dance S. in ↗funeral rites and as grave objects s. VSAe I; III; cp. ills. EAE vol. 2, 82, 1033). S. have been articles of trade or exchange (PankEcon; Plaschke – Zirngibl 1992: 66, 68), and are the province of a special branch of craftsmen (↗Handicrafts).

In every Ethiopian region, round carrying-S. of different sizes were known, with one or two leather grips through which the forearm is placed (Amborn 1990: 153; VSAe I, fig. 38).

Northern and central Ethiopia: the "Amhara" type is a round S. (*gašša*) with a conical boss made from leather, 45–60 cm in diameter, with a rounded centre and a raised rim (Amborn 1990: 153f.), which is thought to prevent a spear, sword or sabre blade from sliding off in battle. These S. have punched, scratched or engraved geometrical patterns which radiate out from the centre or are arranged in concentric circles, sometimes on both sides of the S. They were produced by skilled leatherworkers. This type was also used in the East, in the areas of the ↗ʿAfar and ʿIssa (Plaschke – Zirngibl 1992: 65), and in the South, as testified by the Zala (VSAe III, 258).

For prestige S. the punched ornaments were completed by various geometrical precious metal fittings, according to the rank of the owner; they were also chased in an elaborate manner, and the S. points were decorated with animal hair set in silver (e.g., hairs from a ↗lion's mane, the fur and tails of servals and ↗monkeys; s. Plaschke – Zirngibl 1992: 70f., fig.; s. Spring 1993: 101, fig. 97; cp. ill. EAE vol. 2, 1061). Such S. were normally lined with red morocco leather and wrapped in coloured velvet for preserving.

A common S. in central and southern Ethiopia is a big round leather boss S., 50-70 cm (possibly up to 100 cm and more) in diameter, conically or



Postcard showing a group of Ethiopian officers with their shields, early 20th century; from the collection of André Evalet bulbously arched, with a raised rim of a different strength, with punched, traditionally geometrically patterned bands, concentrically arranged (e.g., ↗Tuulama of Šäwa, ↗Dorze, ↗Käfa, ↗Šeko: *giásn*, ↗Konso: *kassina*, ↗Burǧi: *gaazee*, ↗Dullay: *kaasanko*, *konkolo*, ↗Ṣamakko: *^{c}unto*) which is partly added to the "Amhara" type.

There are also S. with a sturdy midrib and a large number of irregularly wart-shaped protrusions (e.g. the ↗Amaaro) or with punched lines radiating from the middle rib-like rays. In the space between the lines they are regularly decorated with bigger and smaller warts (this is testified among the ↗Gurage, ↗Zay, ↗Sidaama, ↗Wälaytta, ↗Arsi lowland and ↗Walläga Oromo, s. VSAe II, figs. 17, 39; Benitez-Johannot – Barbier 2000: 102–05).

The S. were often provided with a sturdy semicircular handle and often with a leather string fixed in the raised rim through two pierced holes (s. VSAe III, fig. 25.5b). The colours of their leather fronts range from bright red-brown to a glossy deep black.

A small round boss S. of natural or coloured leather, 30–40 cm in diameter, is known from the highland Arsi (s. VSAe II, fig. 17), ↗Boorana, ↗Guǧǧi, ↗Dime, Bodi and Zala; however, it is also ascribed to the ^{c}Afar as well as the ^{c}Issa in south-east Ethiopia. These small S. with a raised rim, are decorated on the outside (with punched lines) and inside (with burnt-in lines) with geometrical motifs in concentric circles.

The especially small round S. of the ↗Oromo is made of thick rhinoceros hide, 24 cm in diameter, with brass fittings, and seems to be of South-Arabian origin. It can also be found in ↗Kenya and ↗Somalia (s. Plaschke – Zirngibl 1992:58, fig. 42; Rohrer 1932: 147, fig. 51). The hides of rhinoceros, buffalo, ↗hippopotamus, ↗elephant, antelope (Oryx) and gazelle as well as of oxen and cows were used for these round carrying S. as the essential base material (with a few exceptions: e.g., a wicker S. used by Oromo, Plaschke – Zirngibl 1992: 13, a wooden S. used by the ^{c}Afar, Rohrer 1932: 147).

However, there are also long elliptical, rectangular and pointed oval parrying S. (height 80–150 cm, e.g., among the ↗Aari and ↗Maale, s. VSAe I, 310, fig. 38; the Konso: *kontaleeta* and Dullay: *kondole*, Amborn 1990: 153f.) which were held vertically; mostly a wooden basic framework with an integrated handle was covered with cow or ox hide, and sometimes the hide of zebra (cp. ill. EAE vol. 2, 1033) or wickerwork was possible. The parrying pole, suitable as a close fighting and attacking weapon, and as well as a protection, is said to be the preliminary stage of the parrying S. (e.g., *kuerr* of the ↗Dinka in the area neighbouring the east of the upper White Nile, Plaschke – Zirngibl 1992: 74f.; VSAe I, 404).

Ursula Hellwag

Short chronicles ↗Historiography

Sibyl, Wisdom of

The W.S. (Eth. **ጥበበ፡ ሳቤላ**, *Ṭəbäbä sabela*) is an apocalyptic text translated from Arabic, in which it was composed on the pattern of the Latin *Sibylline Oracles*.

In Classical Antiquity Sibyls (of unknown etymology) were women regarded as possessing the gift of ↗prophecy (s. EAE vol. 5), whose utterances were put down and preserved, e.g., in Rome, since the republican epoch, in the temple of Jupiter Capitolinus. In the 3rd cent. B.C. the "pagan" literary genre of Sibylline oracles began to be used by the Jews in Alexandria for their religious propagandistic purposes, often hostile to Rome in general, or to some emperors (Nero).

The genre was adopted by the Christians, too, since they found in them prophecies announcing Christ. Consequently, both Jewish and Christian parts can be found in the Latin collection of the *Sibylline Oracles*. Although the Sibylline books were destroyed in Rome at the beginning of the 5th cent. A.D., the genre survived until the Middle Ages, when new Sibylline oracles were composed, such as the Latin *Tiburtine Sibyl*.

The Ethiopic W.S., or rather its Arabic *Vorlage*, derives perhaps from a text that may be called "Proto-Tiburtine Sybil", since it seems to be also the source of the Latin *Tiburtine Sibyl*. Three Arabic and one Karšūnī recensions are extant. The Arabic text was probably composed in Syria, to which the existence of the Karshuni version points, which, together with the first Arabic version, is the earliest. This hypothesis seems strengthened by some motifs and geographical references. The composition should be probably dated to the 11th cent., after the Byzantine re-capture of some of its former possessions in Syria from the Muslim hands.

The Ethiopic W.S. was translated from the third Arabic version (Schleifer 1910: 78). The full title is "The Wisdom of the woman whose name is Sibyl, the daughter of Heraclius, the chief of the wise man of Ephesus, and explanation of the dream that 100 wise men saw in the city of Rome, (all) in one night, and on the same hour".

According to the W.S., 100 nobles of Rome had simultaneously the same dream. They saw nine suns in the sky with various attributes (Schleifer 1908, §2: 1–9). For explanation, they were advised to consult the 187-years-old Sibyl. She revealed that the suns are the nine epochs, which symbolize continuous moral worsening of the humanity, until the sixth epoch when the light of the light of the Most High will appear, born by a virgin (ibid. §3: 7a). People of Judah will crucify him, yet many will believe in him. In the seventh epoch a king and his queen from "Berenṭəya" (Byzantium), as well as their successor, will persecute the believers. Later, a man from the south called "Mäfqəd" (↗Muḥammad) will rule for some time (ibid. §3: 11). The prophecies continue for the Muslim epoch; the historical allusions that are recognizable are references to the caliphs Muḥammad al-Amīn (809–13) and ᶜAbdallāh al-Maᵓmūn (813–33; ibid. §3:16f.). A fall of morality will follow. In the ninth epoch, a "lion cub" from the west will appear and will restore everything that was destroyed (ibid. §3: 24a, perhaps a hint to emperor Nicephorus and the Byzantine reconquista of the 10th cent., although the Crusades cannot be excluded). A 40-year long period of prosperity will follow, but then the eschatological calamities will begin, including the attack of the peoples of Gog and Magog, and the arrival of the Antichrist (the word itself does not occur). The end of the world will follow (conflagration of the earth for 40 years, fall of the sun and the stars), but people who did good (in their lifetime) will have nothing to fear.

Guidi placed the Ethiopic translation in the 15th cent. It is not a very popular text: at least seven manuscripts are known (Schleifer 1908: 3f., StrBritLib 100), of which the earliest date from the 17th cent. (ZotBNat mss. Éth. 146 and 157), others from the 18th cent. In some 20th-cent. manuscripts of the Amharic ↗*Baḥrä ḥassab* (e.g., EMML nos. 1104, 1087) a 7-year cycle (**ሱባዔ**, *subaᶜe*) is attributed to S. The W.S. influenced the *Apocalypse of* ↗*Baruch* of the Betä Ǝsraᵓel (perhaps 15th cent.; Beylot 1980).

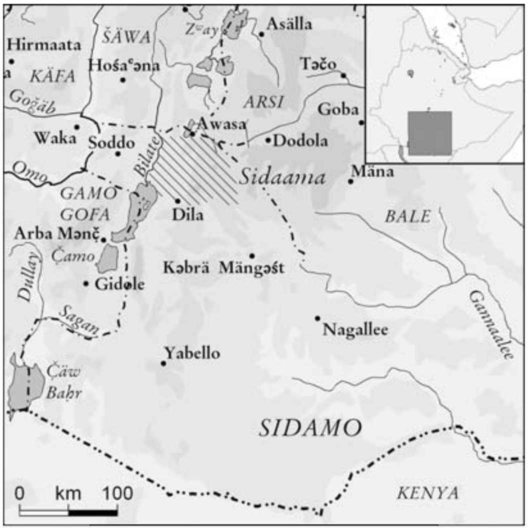
Witold Witakowski

Sidaama

Sidaama language

S. (Sidamo, Sidama; self-name: *Sidaam-u afoo/qaale*, lit. 'mouth/word of S.'; Amh. **ሲዳምኛ**, *Sidamiñña*) is a ↗Cushitic language belonging to the ↗Highland East Cushitic group. The number of S. mother tongue speakers is 2,925,171 (CSA 2010: 200) in south-central Ethiopia between ↗Awasa in the north and Dila in the south, Arbe Gona in the east and the Bilate River and Lake ↗Abbayya in the west.

According to Hudson (in BendNonSLang 235), the earliest codification of S. is the publication of St. Mark's Gospel by the British and Foreign Bible Society in 1933. Written in Ethiopic



↗script, S. was one of the languages used during the National ↗Literacy Campaign in the 1980s. The complete New Testament in S. (**ሃሮ፡ ጎንዶሮ**, *Haaro Gondooro*, lit. 'new oath') was published in 1990. After the fall of the *Därg* regime, a Latin script based on the ↗Oromiffaa orthography was adopted. On 19 *Näḥase* 1985 A.M. [25 August 1993], S. was officially proclaimed as a language of primary education and administration in the Sidaama Zone. Since then, numerous school primers and books have been printed (notably, the N.T. *Haaro Gondooro*, published in 2001 by the Bible Society of Ethiopia), and a radio station in ↗Yərga ᶜAläm has started broadcasting in S.

The phonemic system comprises five vowels *a*, *e*, *i*, *o* and *u* with their long counterparts, and 25 consonants: labials *b, p̣, f, m, w*; alveolars *t*, *d*, *ṭ*, *ɗ*, *s*, *z*, *n*, *l*, *r*; palatals *č*, *ğ*, *č̣*, *š*, *ñ*, *y*; velars *k*, *g*, *q*; glottals ᵓ, *h*. Stress (sometimes referred to as tone or pitch accent) has a grammatical significance, e.g. *kubb-i-nó* 'he has jumped' vs. *kubb-i-no* 'let us jump'.

Nominals can be marked for number, gender, and case. Plural formation is complex and involves more than ten morphological patterns. The category of gender comprises masc. and fem. The gender of inanimate nouns is arbitrary: *hayṭe* 'barley' (masc.), *qamade* 'wheat' (fem.). Gender is overtly marked only on few nouns (e.g., most nouns which end in *-e* are fem.), but is apparent in agreement with the verb and demonstrative as well as in the type of case markers.

There are three basic cases in S.: nominative (nom.), absolutive (abs.) and genitive (gen.). The absolutive (accusative) is not marked and is identical with the citation form. Nominative is marked by *-u/-i* in masculine nouns and remains unmarked in feminine nouns. Genitive is marked by *-u* (masc. common noun), *-i* (masc. proper noun), *-te* (fem.). Oblique case relations are encoded by postpositions encliticizing to a noun stem: dative is marked by *-ho* (masc.), *-te* (fem.), *-ra* (pronouns and proper nouns); in ablative/instrumental, *-nni* is suffixed after the gender markers *-u* (masc.) and *-te* (fem.).

Pronouns make gender distinctions in 3rd pers. sg., and distinguish between nominative and absolutive. Nominative is marked by an unstressed final vowel; in sg. (except 3rd pers. fem.) it is additionally marked by the suffix *-i*. In absolutive, the final syllable is stressed.

pers.		sg. nom.	sg. abs.	pl. nom.	pl. abs.
1st		*an-i*	*áné*	*ninke*	*ninké*
2nd		*at-i*	*áté*	*kiᵓne*	*kiᵓné*
3rd	masc.	*is-i*	*ísó*	*insa*	*insá*
3rd	fem.	*ise*	*isé*		

The demonstratives have three gradations: near (proximal), far (distal) and very far (remote): *kun-i* 'this', *kuuᵓ-u* 'that' (distal), *kuᵓᵓ-u* 'that' (remote). They are also marked for case, number and gender. E.g., in the above list *-u*/*-i* marks nominative. Many of the interrogative pronouns have both absolutive and nominative forms:

	abs.	nom.
'who?'	*ayé*	*ay-i*
'what?'	*maa*	*may-i*
'how many?'	*meᵓe*	*meᵓ-u*

All verb stems end in consonants; they range from mono-consonantal to tri-syllabics. A verbal form consists of a number of morphemes in the following sequence: verb stem, (number marker), tense/aspect marker, person marker, gender marker. The main tense/aspect forms are perfect (perf.: *kubb-í* 'he jumped'), present perfect (pres. perf.: *kubb-ino* 'he has jumped') and imperfect (impf.: *kubb-anno* 'he will jump/he jumps'). Verbs are also inflected for mood (jussive/imperative: *kubb-i* 'jump!' [sg.]). The person markers are 1st pers. sg. *-mm-*, 1st pers. pl. *-n-*, 2nd pers. sg./2nd pers. hon. *-tt-*, 2nd pers. pl. *-tin-*, 3rd pers. masc./3rd pers. hon. -ø-, 3rd pers. fem./3rd pers. pl. -*t*-. A non-finite verbal category known as converb consists of the verb stem plus subject-marking suffixes: *beett-u dod-e eᵓ-i* (boy-nom. run-3rd pers. masc. sg. converb enter-3rd pers. masc. sg. perf.) 'The boy entered running'.

Negation in main verbs and other word classes is indicated by the prefix *di-*, and in subordinate verbs by *-kki*.

The copula has three grammatically conditioned alternants: *-ho* 'he is', *-te* 'she is' and *-ti* 'it is'. Plural forms take either *-ho* or *-te* (the selection appears to be arbitrary). *-ti* is restricted to genitive structures and cleft sentences. E.g., *mine-nke-ti* (house-our-is) 'it is our house', *sirb-ino-hu Samaago-ti* (sing-3masc.-pres.perf.-who Samaago-is) 'it is Samago who has sung'.

Adjectives are inflected for case, gender and number. "True adjectives" are few, the majority being formed via verbal derivation or by means of relativized verbs. Similarly, S. has only a handful of "true adverbs" (mostly temporal). Most adverbial functions such as manner and place are expressed by means of postpositional phrases or subordinate clauses.

S. is a configurational language with a default Subject–Object–Verb word order: *beetto tima it-tú* (girl bread eat-3fem.perf.) 'The girl ate bread'.

The ten-word list is: 'one' *mite*, 'two' *lame*, 'three' *sase*, 'moon' *agana*, 'sun' *arriššo*, 'blood' *mundee,* 'fire' *giira,* 'tongue' *arrawo*, 'water' *waa,* 'tooth' *hinko.*

One interesting aspect of S. is women's avoidance lexicon known as *ballišša*, employed by married women out of respect for their fathers-in-law. However, this practice is rapidly declining.

Sidaama ethnography

S. (also Sidamo, Sidama; Sg.: Sidaančo), is the self-name of an ethnic group in southern Ethiopia. Their language belongs to the Highland East ↗Cushitic language group. The S. inhabit the highlands on the edge of the Ethiopian Rift Valley, between the town of ↗Awasa in the north and Dilla in the south, Harbegoona in the east and River Bilate and Lake ↗Abbayya in the west.

The neighbours of the S. are the ↗Arsi in the north, the ↗Guǧǧi in the north and east, the ↗Gideʾo (Gedeʾó, Amh. Därasa) in the south and the ↗Wälaytta in the west. The population of the towns in Sidaamaland (e.g., Awasa, Alätta Wändo, ↗Yərga ʿAläm), however, is multiethnic. Today's S. administrative zone belongs to the Southern Nations, Nationalities and Peoples' Regional State and comprises 19 *wärädas*. According to the 2007 national census of Ethiopia the total population of the S. zone was 2,966,652 (CSA 2008: 76f.).

The S. territory is dominated by a vast plateau which is interrupted by small valleys and rivers. The elevation ranges between 1,500 m and 3,500 m A.S.L. The area has three ↗ecological zones: *gammooǧǧe* ('lowland'), *woriččo* ('midlands') and *aliččo* ('highland'). Vegetation is sufficiently lush to support cattle grazing, ↗*ənsät*, and ↗maize. At higher elevations there is rainfall throughout the year. The year is roughly divided into the dry season (November–March) and a rainy cycle (April–October; s. also Hamer 1987: 12–19). Some of the best known natural attractions of S. territory are the Wändo Gännät hot water spring and recreation centre, the Loggita waterfalls and the Gidaabo hot water spring.

Ethnogenesis

The forefathers of the present day S. were probably part of an ethnically heterogeneous cluster of groups which belonged to the sultanate of ↗Hadiyya existing in the ↗Bale region between the 13th and 16th cent. Some S. elders, similar to Hadiyya oral traditions (cp. BrHad 429), claim that the S. came from *baara widinni* ('across the sea'), settled in various places in ↗Təgray, ↗Šäwa and ↗Harär and then moved south to settle in Bale. Other oral sources oppose this view and posit that the S. came from the south. Moreover, S. oral tradition relates that the original home of the S. was the River Dawa area and, in particular, beyond a big forest known as Bahaare. It is assumed that they stayed in this place till the second half of the 16th cent. whence they were pushed to a north-western direction by the ↗Oromo expansion. According to Braukämper (BrHad 431) the ancestors of the S. settled in present Sidaamaland after 1600. Their two main ethnic components, both called after their apical ancestors, were the Maldeʾa who are said to have come from ↗Däwaro, north of the ↗Wabi Šäbälle bend, and the Bušše who originated in Dawa, west of the upper Ganaale. According to some oral sources Malde°a was a descendant of *imām* ↗Śidi.

As oral tradition relates, the ancestors Bušše and Malde°a moved gradually into what was to become Sidaamaland, the Bušše taking the lead (Hamer 1987: 21–30). Both were pastoralists, though Bušše may have been acquainted with horticulture and found the land in the highlands suitable for both grazing and gardening. The land, however, was already occupied by a people called Hoofa by oral tradition. S. historical memory recalls that they became their subjects and were repressed, in particular by the Hoofa king Gololča Orde. It is believed that the S. adopted *ənsät* cultivation from the Hoofa.

The Gidabo River became a dividing line between the Malde°a in the south and the Bušše in the north. Both fractions adhered to an uneasy truce with the Hoofa. However, as demands for tribute increased by the latter, the Bušše called on the Malde°a to cross the Gidabo and help release them from Hoofa hegemony. The joined groups succeeded in defeating the Hoofa who later on were assimilated to the S.

S. oral tradition claims that decades later conflict arose between the Bušše and Malde°a with the former claiming tribute from the latter because of their earlier presence north of the Gidabo River. Eventually the Malde°a requested the Bušše to respect their rights to all of the land south of the river. Though followed by their enemies they managed, with the help of the ↗Guǧǧi, to drive the Bušše further north. The peace that followed was based largely on marriage exchange, a common language, and a culture that has held them together ever since.

Economy

While in the highlands most S. traditionally are subsistence farmers, in the lowlands also pastoralism is practiced. The number of pastoralists, however, decreases rapidly because of overpopulation and the concomitant lack of open grazing lands. Even farming is becoming less productive because of population pressure and decreasing plot sizes. This, and the occasional drop of coffee prices results in chronic poverty and malnutrition.

The S. mainly cultivate ↗*ənsät* (S.: *weese*). Its products, in particular *waasa* (fermented *ənsät* pulp), is the main staple food which is supplemented by dairy products, vegetables and the occasional meat. In addition to *ənsät*, ↗maize, barley, ↗sorghum, sugar cane, pulses, vegetables and various fruits are also grown. The S. live in small hamlets (*qačča*) clustered at the edges of plateaus. Their *ənsät* gardens surround their board and thatched houses. Cattle graze on the plateau which is held in common by the hamlet families. Each household owns the gardening land which is divided among the sons of the male head from one generation to the next.

After World War II the ↗coffee trade which had begun as early as the 1920s was developed further by S. producers in cooperation with the Ethiopia Coffee Board. Coffee is the main cash-crop since the 1950s. By 1970 the coffee produced in Sidaamaland constituted 25 % of Ethiopian exports (Hamer 1987: 148). Today, S. is one of the major coffee-producing areas and provides 45 % to 50 % of washed coffee to the Ethiopian market. The S. coffee is one of the famous and premium coffee brands in the world. The other important cash-crop is ↗*č̣at*.

There are also craftsmen such as 'tanners' (*awaččo*), 'potter' (*haadiiččo*), 'blacksmith' (*tuntičča*) and 'weavers' (*šimaane*, from Amh.: *šämane*). Traditionally, these professions have been despised and intermarriage between the common S. and the three artisan groups was prohibited. A portion of the educated population is engaged in government jobs while others are involved in trade.

Social and political organization

The S. are divided into exogamous patrilineal clans (*gare*). The Bušše are the largest S. group comprising nine sub-clans: Malgaa, Yanaase, Šabadiino, Haadiiččo (Daarra), Woriidi ('Lower') and Aliidi ('Upper') Garbiččo, Holloo, Asaarado, Harbegoona and Harbe. The Malde°a fraction consists of Haweela, Alatta, Sawoola and Qeweena. Other minor clans such as Dafina, Gisa, Banqaano, etc. claim supernatural descent. The Banqaano, for example, claim to have descended from the sky together with a 'lightening' (*banqo*). Although each clan claims its own territory, intermarriage and migration are slowly disguising settlement patterns. Among each clan two status groups are discerned, the *wolawiččo* ('free man') and *ṭalatiččo* ('foreigner, one who lives on the land of others'). The *yemereero* are free men with the highest social status observing special social and food taboos according to a system of ritual purity (*anga*).

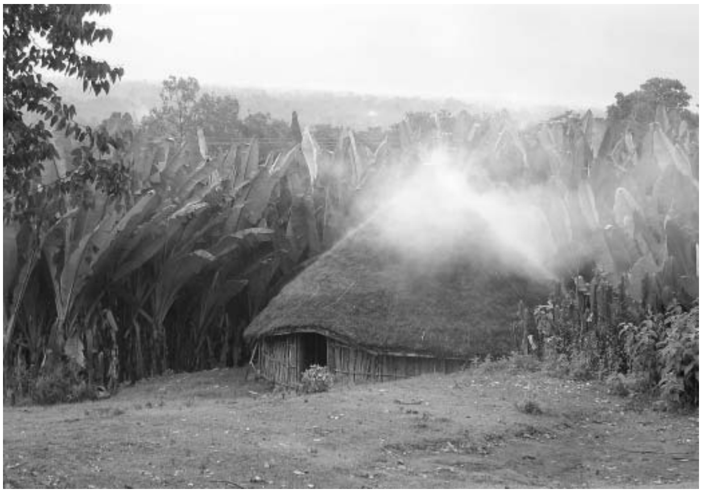

Fig. 1: House and *ənsät* garden in Sidaama; photo 2005, courtesy of Wolbert Smidt

The *aydde* (‘family/household’) forms the lowest nucleus of the S. social organization. Since the S. have a patriarchal system the *ayddaanna* (‘husband’) is the one who administers and is responsible for the family. He supports his family by farming and cattle raising. The *ayddaama* (‘housewife’) is responsible for feeding, bringing up the children and all household chores. A group of *aydde* form a *qačča* or *činančo* (‘village’). The village collective forms the *ollaa* (‘neighbourhood’). The *ollaa* cooperate in various tasks such as house building, farming, well digging, pond maintenance, mourning and wedding ceremonies, etc.

The village (*ollaa*), the tribe (*gare*) and the clan are administered by the council of *ç̣imeeyye* (‘elders’, Sg.: *ç̣imeessa*) who by virtue of their age have entered the ruling *luwa* grade (s. below). The elders handle local affairs and resolve from minor up to major conflicts. Their judgments and considerations are based on *halaale* (‘truth’) which emphasizes kindness, honesty and respect for elders.

The intermediate council is known as *gare-te songo* (‘tribal council’) and the next higher level of council is that of *moote-te songo* (‘council of the chief’). The S. did not have one elected leader who ruled over them. Instead each clan was administered by a traditional leader known as *moote* (‘chief’, cp. ↗*Mooti*) who was elected by the general assembly. When he died he was succeeded by his elder son/daughter. The *moote* ruled in consultation with the council of people’s representatives (‘*songo*’). The *moote* is assisted also by the *gadaanna* (s. below) who is responsible for defence matters. Most of the *moote* became ↗*balabbat* during the feudal period. The highest level of all councils is that of the *womu songo*. The *woma* is equivalent to a king in his status and usually the oldest person is elected for this post. In some S. clans the *woma* post is hereditary and hence even a youngster can become a *woma* but will be assisted by an elder advisor.

The S. system is patrilineal with males being the traditional inheritors. The S. socio-political structure is based on a system of generation grades called *luwa* (↗Age group systems; cp. ↗*Gadaa*). The *luwa* has five *luwa* sets: *wawaasa*, *fullaasa*, *hirboora*, *moggisa* and *daraara* which alternate every eight years. Hence the *luwa* system enabled the S. to select their leaders every eight years. The *luwa* only includes male members. They may range from infants to the very old ones and also can be a member of a different clan. The *gadaanna* (‘father of the *gadaa*’) leads the *luwa*. He is assisted by a vice-*gadaanna* or *ǧaˀlaawa*. There are two main obligations of a *luwa* set. The first is invading the enemy territory and pillaging their cattle. If a *luwa* fails to perform cattle rustling, then that *luwa* set will lose its prestige. The second one is circumcision of all the *luwa* set members within the period of eight years.

Religion and rituals

The autochtonous religion of the S. is based upon honouring Magano (also known as *kalaqa*, ‘Creator’ or *kaliiqa*, ‘Almighty’) and the belief in ↗spirits of powerful clan founders and deceased elders as well as nature spirits which may bring illness and possess individuals. One of the main ways of respecting Magano is by clinging to *halaale* (‘truth’) which emphasizes kindness, honesty and respect for elders.

↗Ancestors, in particular a deceased father, act as a medium for interaction between Magano and the family. In order to elicit the assistance of ancestors, a ritual of feeding the spirit is performed. It involves pouring honey and milk (*ṭoršira*) on the tomb or pouring the blood of a slaughtered bull to pay respect to the *annu ayyaana* (‘father’s spirit’). Some clans, e.g., the Buše, slaughter a number of bulls and pour the blood on the tomb

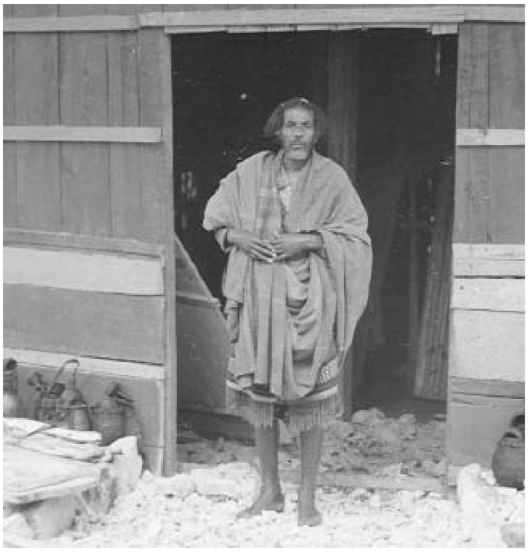

Fig. 2: A Sidaama elder in front of the tomb of Ṭummaano (the ancestral father of Sidaama), Teellamo, Šabadiino *wäräda*; photo 1988, courtesy of Anbessa Teferra

of their common ancestor or *akaaku ayyaana* ('ancestral spirit').

Magano is noted for originally giving people a choice between eternal life and reproduction. Choosing the latter they have continued ever since to grieve over the finiteness of life. A 'mourning ceremony' (*wiˀlišša*) usually takes place within a month or two and lasts for several days. If the deceased is a male a pole (*dore*) of podocarpus or ↗juniper will be erected. If he was a valiant who has killed an enemy or a wild animal the pole will be painted with *sorsa* ('red clay'). In addition, his wife will wear the skin of a wild animal which he has killed. For deceased women from three up to five sticks are stuck to the ground. Then a pot will be placed on top of the sticks and the pot is eventually covered by a *bulukko* ('heavy cotton blanket'). The mourning is accompanied by songs. Some may glorify the deceased, but most are concerned with the moral code (*halaalu*) condemning people who violate the norms, as well as consoling grieving relatives.

The rich system of S. tradition and customary practices is gradually changing because of various forces. For instance during the *Därg* regime (↗Provisional Military Administrative Council) traditional songs were discouraged and young boys and girls were even beaten up for performing *faaro*, a traditional dance. In addition, missionaries, in particular fundamentalist Evangelical churches which expanded quickly since the fall of the *Därg*, are responsible for the near-extinction of many traditional customs such as *kakkal-a* ('presenting a sacrifice'), *ṭoršira* ('ritual of feeding the spirit of a deceased father'), *ballišša* ('women's avoidance language') etc. Traditional dresses and cultural songs are becoming a rarity and are encountered mostly in *aliččo* ('the highlands').

Sidamo

The name S. (ሲዳሞ) was applied to a province in southern Ethiopia which covered a broad and culturally diversified region including the territories of ethnic groups such as ↗Sidaama, ↗Boorana, ↗Gučči, ↗Gideˀo, ↗Burği, ↗Konso, ↗Wälaytta and ↗Somali. It was bordered by the provinces of Bale in the east, Gamo Gofa in the west, Šäwa in the north, Somalia in the south-east and Kenya in the south (for location s. map for Sidaama).

The region was conquered between 1893 and 1897 and then integrated into the Ethiopian empire. The northern districts Sidaama and Ğämğäm were ruled by *däğğazmač* Baššah, *ras* ↗Ləˀul Sägäd and *däğğazmač* ↗Balča Safo and defined as S. province. Balča Safo, who founded the provincial capital of ↗Hagärä Sälam, governed this province with short interruptions until 1928. The southern part, "Konso-Boräna" or "Boräna" province, situated between the Dawa Parma River (further east called the ↗Ganaalee River) and Çäw Baḥər, was first ruled by *fitawrari* ↗Habtä Giyorgis whose troops had subdued the area in

March–October 1897. He established the outpost of Mega in order to secure the frontier to Kenya.

S. underwent several reforms of its administrative boundaries. During the Italian occupation the S. area was administered by the *commissariati* of "Sidamo-Yirgalem" (with a *vice-residenza* "Sidama-Hula") and "Boran-Javello" that were subdivisions of the *governatorato* "Galla e Sidama" which covered a great part of southwestern Ethiopia.

After the Liberation the northern and the southern part were combined to form Sidamo-Boräna province. The former province of ↗"Wällamo" joined this new formation which was later renamed as "S.". Since then S. consists of six *awrağğa* (administrative centres in brackets): ↗Arero (↗Yabello), Boräna (↗Nagallee), Därasa (after 1974 called Gideᵓo; Dilla), Ğämğäm (Kəbrä Nägäśt), Sidaama (↗Yərga ᶜAläm) and Wällamo (↗Soddo). In the "federalist" administrative reform of the early 1990s S. province was abolished and divided between the Southern Nations, Nationalities and Peoples' Region and Oromiyaa *kəlləl*.

The northern part of the region as well as the southern highlands are characterized by a high population density. The majority of the people are agriculturists, the cultivation of ↗*ənsät* playing a central role for many (Sidaama, Gideᵓo, Burği; ↗sorghum among the Konso). The spread of ↗coffee as a cash crop has already been initiated by Balča Safo (s. above). Until today coffee, grown between 1,800 m and 2,000 m A.S.L., is the most important crop in S. In the Boorana areas of the south, ↗pastoralism is the predominant subsistence strategy. Cultivated land is rare and the population is sparse. The main product is skins and hides. Ğämğäm and northern Boräna are rich in mineral resources.

Śidi

Ś. (ሢዲ [፡ መሐመድ], also ሲዲ, possibly from Arab. honorary title, 'master, lord') is remembered as Sidee in the oral traditions of groups which consider themselves as heirs of the ancient ↗Hadiyya state, particularly by the ↗Allaaba and the ↗Səlṭi. Ś. is mentioned in the Chronicle of *aṣe* ↗Susenyos (PerChron) and by Aṣmä Giyorgis (BTafA) as leader of the "Hadiyya" and opponent of the Christian ruler. However, oral tradition suggests that he was an important leader during the time of *amīr* ↗Nūr b. Muğāhid's *ğihād* against the Christian empire until 1568, since Ś. is reported to have been a father's brother's son of *ḥāğğī* ᶜAlī(ye), one of the most famous ancestors of the "Adäre" cluster in eastern Gurage (Səlṭi, ↗Wəlbaräg, etc.), whose grave is situated at Umnan in the territory of the Azärnät. Ś. or Sidee is said to have been slain in the course of internal disputes and was buried at Dangawura in ↗Ənnäqor. Similar to the mausoleum of his paternal uncle *ḥāğğī* ᶜAlī his grave has been a place of pilgrimage and veneration up to the present (BrHad 122ff., 179f.).

Ś. is reported to have fathered many descendents who became founders of leading clans in Allaaba and different parts of Gurageland. Their members were subsequently styled Sidee. The bulk of this people joined the Allaaba and achieved the position of the ↗*woma*, the political and spiritual chief of this group. They have usually claimed a particular nobility derived from an alleged Šarific descent and differentiated themselves from the rest of the group called *ağğer* (in a sense of commoners). Ağaamo, the clan of the chiefs in ↗Qabeena, refers to a close genealogical relationship with the Sidee. According to a popular legend two of Ś. illegitimate sons, who had been exposed and then saved under intricate circumstances, became founders of important Gurage clans, the Mogämänna of the ↗Čaha and the Ənäkʷamt of the ↗Gumär. The Sudee clan of the Arsi-Oromo in Arba Gugu east of the Rift Valley preserved the tradition of a common origin with the Sidee as descendents of Ś.

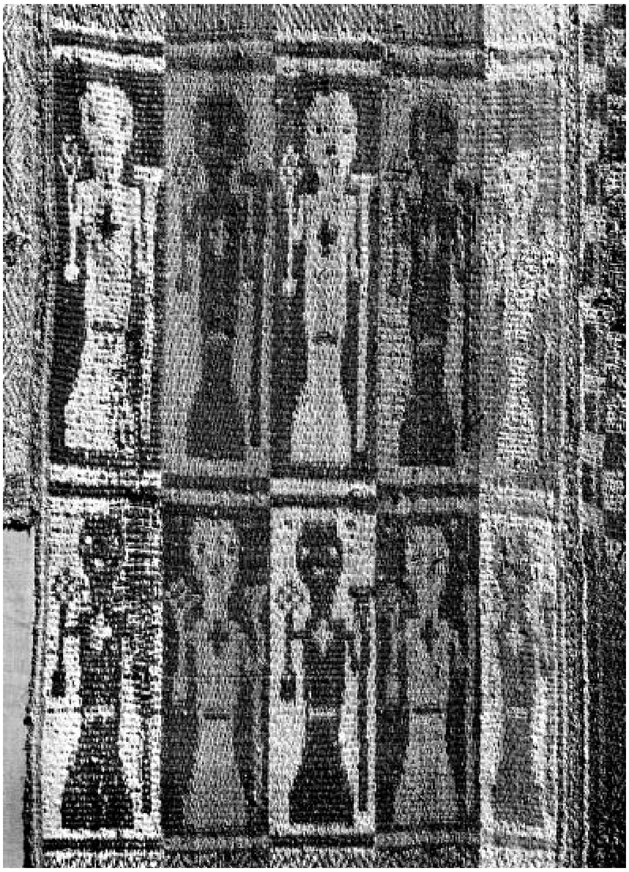
Silk

Ethiopia's geographical position, at the Indian Ocean and the ↗Red Sea, opened its shores from the earliest times to the S. ↗trade. The acquisition, distribution and use of S., from the 16th cent. and probably for centuries before, was a royal prerogative. Already in the 1st cent. A.D., Roman trade with ↗India gave growing importance to the sea route which had become the primary commercial link between the Mediterranean and the East. In the mid-6th cent., Procopius of Caesarea reports that Emperor Justinian proposed to King ↗Kaleb that Ethiopian [traders] bypass their Persian counterparts by selling S. from India directly to the Byzantines. They were unsuccessful, however, as the Persians "ever come first to the havens, where the Indians unlade, being their next borderers, and buy up all" (Procopius [tr. Holcroft] 24). It has been argued that the Ethiopian war against the Jewish ↗Himyar kingdom in the ↗Yemen arose because of the Byzantine attempt to control the S. trade. Apparently Ḏū Nuwās (↗Yūsuf Asʾar Yaṯʾar) started the war by killing Christian merchants travelling the S. route which passed through the region (Procopius [tr. Holcroft] 1–8; Starensier 1982: 61f.; Xinru Kiu 1998: 75f.). This close association with the S. trade led to its widespread use in Ethiopia, such that a thousand years later, when European travellers visited the country, they filled their accounts with references to textiles made from it. Alvares writes of the enormous quantities used for the decoration of churches (BeckHuntAlvar 89, 125), of S. tents serving as churches and communion houses (ibid. 188, 296), of S. curtains (↗*Mägaräǧa*) behind which the "Prester" sat and which, in churches, hung before the ↗*mäqdäs* (ibid. 75, 283), of S. ↗clothing for the Prester and the wealthy (ibid. 116, 143n, 304), of a S. covering for the ↗*tabot* (ibid. 84) and for the royal tombs beside the church of ↗Yəmrəḥannä Krəstos (ibid. 203). Alvares describes taxes or tribute (↗Tributes and taxation) of S. from nobles and Muslim communities (ibid. 117, 173f., 228, 429), and royal gifts of S. (ibid. 248, 434), the most lavish of which was *aṣe* ↗Ləbnä Dəngəl's donation in 1516 to the church of the Holy Sepulchre in ↗Jerusalem of enough S. to cover its walls (ibid. 448). The royal inventory, kept in baskets and stored in caves, fell under the administration of the governor of ↗Šäwa, who held the title "keeper of the silk caves" (ibid., 448 and n. 1). While the Portuguese knew the protocol and themselves offered S. to king and churches (ibid. 63 n. 2, 289, 306f.), the principal suppliers were Muslim traders (ibid. 251), particularly Turks. Further evidence from the 16th cent. is provided by ↗Zorzi (CrawItin 95, 153), and d'↗Almeida (BeckHuntAlm 55, 180), who confirms the eastern origin of the material and the Emperor's lavish use thereof (ibid. 43, 59, 61, 81). For the 17th cent., the quantities of S. imports from India and ↗China recorded by the Ethiopian ambassador *ḫoǧa* ↗Murād are equally impressive (DonMurad 49, 109). ↗Lobo comments on the preference given by members of the royal court to "Turkish brocades, velvets, and every other kind of silk" (da Costa 1984: 172).

↗Prutky remarks that the Emperor's ↗headrest "was covered with silk" (Arrowsmith-Brown 1991: 154). Little has survived from the period, other than occasional swatches incorporated into the inside covers of Ethiopian ↗manuscripts. The earliest of these date to the 16th cent. (Pankhurst 1980: 43–55). Earlier examples still can be recognized in the striped garments represented in 15th-cent. manuscript ↗painting (Gervers in PICEA 5, 127).

The majority of S. was imported as woven fabric, or apparently as short staple (undoubtedly from broken cocoons) to be spun (CrawItin 171). Reference to the ↗weaving of S. is rare, however, although there must have been a considerable industry among the artisans of the royal court, who would have been Muslims or Jews. Alvares describes the Muslim-turned-Christian wrestler Gäbrä Maryam, "who is clever with his hands (he works silk and [↗]gold) and makes braid and tassels on cloths" (BeckHuntAlvar 319). The most remarkable of the survivals from the 18th cent. are the enormous (5 m x 2.2 m), heavy, thick-spun, S. tablet-woven sanctuary curtains, possibly woven in Gondär (with a continuing tradition in ↗cotton apparently produced in ↗Tämben, Təgray) under the direct patronage of *aṣe* Bäkaffa, Queen Məntəwwab (↗Bərhan Mogäsa) and their successors, and preserved today at ↗Ǝnda Abba Gärima monastery (s. ill.) and in the collections of the British Museum, London, and the Royal Ontario Museum, Toronto (Balicka-Witakowska – Gervers 1996: 375–84; Gervers 2004: 588–601). D'Almeida records the ceremonial reception of ↗Śärṣ́ä Dəngəl at Aksum in 1580 when "The ecclesiastics, priests and deacons received him with the golden cross, the silver censer, and about twelve parasols, while they displayed hangings of silk" (CRHist 89, as quoted in BeckHuntAlm 96f. n. 1), which may be a yet earlier reference to such tablet-woven exam-



Heavy spun silk curtain, detail showing *däbtära* with *mäqqʷamiya* and crosses, 18th cent., Ǝnda Abba Gärima, Təgray; photo 2007, courtesy of the author

ples. That those presently to be found in Tämben are all made of cotton suggests that the 19th cent., the time of their fabrication, has shown a decline in the availability of spun S. thread. Decreasing supplies notwithstanding, Ethiopians continue to admire and use S. widely for ecclesiastical vestments and ↗*dəbab*, and for church furnishings. The Christian ↗*matäb* is invariably made of twisted or braided S., while the Muslim women of the ↗Harär region regularly wear the S. *atlas*, made of fine cloth imported through Djibouti.

When, under Emperor ↗Ḫaylä Śəllase I, the ↗coffee crop was compromised by the Convention on Biological Diversity (CBD), British agricultural advisors suggested that the country consider sericulture as an alternative. Under the *Därg*, a small group of North Koreans working at the ↗Zʷay State Farm are said to have produced S. secretly, but in recent years the industry has been openly considered by government and private enterprise alike. Experiments have been carried out at the Awaš Agricultural Research Centre in Malkaasaa and the Agricultural, Technical and Vocational Education Training College at Alage using worms raised on Gulo (*Castor-Eri* S.) and Enjory (mulberry – *Bombix Morris*). In 2004 the Canadian company Sabahar established a compound in Mäkanisa for spinning, weaving and finishing S. products, using cocoons from S. worm farms in Kombolča and elsewhere supported by the Japanese aid organization, Japanese International Cooperation Agency. The shortage of cocoons is to be alleviated by an intensification of S. worm cultivation and a S. processing factory is being constructed in ↗Mäq̱älä.

Michael Gervers

Simeon of Beth Arsham

S. (Syr. Šemᶜōn də-B̠ēṯ Aršam; b. 5th cent., d. before 548), also known as the Persian Debater (*Dārōšā Pārsāyā*), was a Syriac Jacobite bishop and author.

S. was active in Mesopotamia (Persian at the time), where he fought against all other religions or versions of Christianity, especially "Nestorianism" (↗Nestorius). After a successful dispute in which the East Syrian Patriarch Babay was his opponent, he was consecrated bishop of Beth Arsham, a village near Seleucia/Ctesiphon. He travelled extensively within Mesopotamia, but also to Armenia, Hirta and Constantinople. He died during one of his visits to the capital.

We are informed about his life by ↗John of Ephesus, who knew S. personally and devoted a chapter in his *Lives of the Eastern Saints* (ed. Brooks 1983: 137–58) to him. According to this source (ibid. 153), the Persian king Khusro I imprisoned S. (together with other Jacobite hierarchs) for seven years at Nisibis, but the king of Ethiopia (unnamed, probably ↗Kaleb), through his envoys, managed to get S. released.

S. composed a liturgical text (anaphora), and two historically important letters. The first, the *Letter on Bar Sauma and the Heresy of the Nestorians*, is a valuable, although quite hostile, account of the spread of dyophysite theology in Persia. The other *Letter*, addressed to Simeon, archimandrite of Gabbula, is a primary source for the persecution of the Christians of ↗Nağrān, which stimulated the military intervention of king Kaleb of ↗Aksum.

Dated to 523/24, i.e., soon after the martyrdom of Nağrān, this *Letter* is extant in two forms, a longer, possibly original (ed. Guidi 1881), and an abbreviated, transmitted in historiographic works, e.g., in the *Miscellaneous history* of Pseudo-Zachariah the Rhetor (6th cent.), and the *Chronicle* of ↗Pseudo-Dionysius of Tel-Maḥrē (8th cent.).

Irfan Shahîd (1971) attributed another letter ("*Second Letter*") to S. with more details on the 520s in South ↗Arabia. This attribution has not been accepted by other scholars (Ryckmans 1987: 297; Shitomi 1991: 223), and neither has Shahîd's (1963) attribution to S. of the *Book of ↗Ḥimyarites* (Brock 1997).

In the "first" *Letter* the account of the persecution is presented as a quotation of a letter sent by the Jewish king-persecutor (↗Yūsuf Asᵓar Yaṯᵓar) to an Arab king of al-Ḥīra, supplemented by other sources (an account of a messenger, survivor of the persecution, and S.'s personal knowledge based on his acquaintance with another survivor, who as a child was spared during the persecution). The *Letter* shows literary elaboration, with lengthy speeches pronounced by the martyrs. It is also tainted with Monophysite propaganda (Van Rompay 1982).

The *Letter* became the main source of information on the martyrdom of the Nağrān Christians for the whole of Christendom. It also became the main source of the Greek *Martyrium of ↗Arethas* (Detoraki 2007) from which the Arabic and eventually Ethiopic (Bausi – Gori 2006), as well as the Armenian and Georgian, versions are derived.

Witold Witakowski

Šinašša

Šinašša language

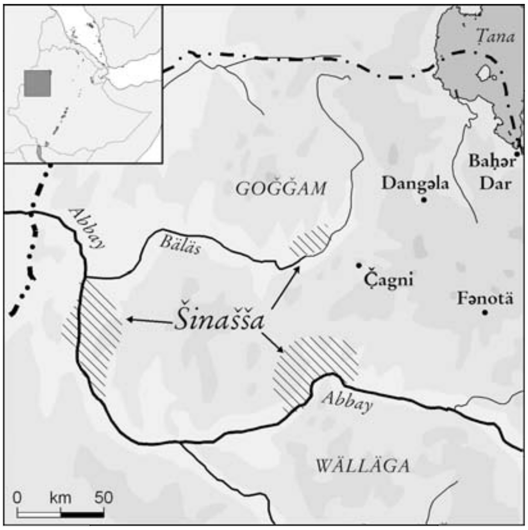
Š. (also known as Boro, self-name: Bòrná) is an ↗Omotic language (↗Gonga language family) spoken by ca. 20,000 people (1998 Census) in the south-west Amhara region. The contact languages are ↗Gumuz, ↗Awŋi, ↗Oromiffaa and ↗Amharic. It distinguishes between highland (Garibora/Gayibora) and lowland (Taribora/Worwibora) dialects, which are mutually intelligible and have ca. 85 % basic lexicon in common. In recent years, a number of brochures in Š. have been published, in Latin script.

Š. consonantal phonemes are (Wedekind – Lemma Alga 2002): plosive *b*, *d*, *t*, *g*, *k*, ᵓ; ejective *p̣*, *ṭ*, *ṣ*, *č̣*, *q*; implosive *ɗ*; affricate (*ʣ*), *ts*, *ğ*, *č*; fricative: *f*, *z*, *s*, *š*, *h*; nasal *m*, *n*, (*ñ*); liquid *r*, *l*, aspirate *r*^{h}; semivowel *w*, *y*.

Vowels are (ibid.): *i*, *e*, *a*, *o*, *u*, with long correlates, plus short *ï* (high central) and *ə* (mid central; the phonemic status of the latter vowel is not certain). Vocalic length is phonemic: *gàwá* ‘witness (n.)’ – *gàawá* ‘wound (n.)’.

Š. distinguishes between high (´) and low (`) tonemes. The transcription of Lamberti (1993: 46f.), where a mid tone (unmarked) appears, probably reflects phonetic tones (s. allotonic rules in Ashenafi Tesfaye – Wedekind 1990: 364). The three tones are mostly marked within the present entry, following Lamberti’s transcription. Tones are used for lexical and morphological distinction: *šaawà* ‘sweet’ vs. *šaáwà* ‘expensive’, *bí* ‘he’ vs. *bì* ‘she’.

Most nouns have the structure CVC(C)V (where C = consonant, V = vowel). The gender system consists of semantically unmarked masculine and feminine genders, expressed cumulatively with case markers (e.g., absolutive marker is *-a* for masc. and *-i* for fem.). Most nouns have default masculine form, but those with biologically feminine referents are marked for feminine when their sex has to be stressed: ‘mother’ *índà* (masc.) or *índì* (fem.). There are two numbers, singular (unmarked) and plural (marked by the suffix *-(w)ootsï*): *maáttsà* ‘woman’ vs. *maáttsù-woótsí* ‘women’. The case system according to Lamberti (1993: 64–68) includes absolutive, nominative, accusative, genitive, dative/benefactive, directive, locative, ablative, instrumental, comitative, vocative, with different markers which depend on the gender and number of the noun. However, the difference between nominative and accusative appears only in the plural (ibid. 64); Griefenow-Mewis (1996: 494f.) argues that Š. has one unmarked “basic” case which is used both for subject and object. In fact, case system may consist of absolutive, basic and genitive cases, while other case markers may be re-analyzed as postpositions (Rottland 1990: 193). Definite subjects are marked by the suffix *-ni*, which follows the case marker: *na*ᵓ*-o-ni* ‘the son’ (nominative). The morphology of adjectives is similar to that of nouns.



Personal pronouns are *tá* ‘I’, *néé* ‘you (sg.)’, *bí* ‘he’, *nòò* ‘we’, *íttì/ít*(*tà*) ‘you (pl.)’, *bóó* ‘they’. Š. possesses three series of demonstratives: *hanni* ‘this’ (proximal), *mani* ‘that’ (middle) and *ekkewi* ‘that, far away’ (distal). Interrogatives are *koonní* ‘who?’, *eeg-/eeb-* ‘what?’, *awr-* ‘when?’, *aqwó* ‘how? how much?’, *aak-* ‘where?’, *ambtsá* ‘how many?’, *aaw-* ‘which?’, all of them used with special focus markers.

Cardinal numerals either follow the noun (and take its case ending), or precede it (in this case, they are marked for genitive, and the nouns can take the plural ending): *toohï̀ keez-ók* ‘to three friends (directive)’; *uttsï baarùwoótsï̀* ‘five girls (nominative)’.

The Š. verbal system is rich and complex. It has five moods: indicative, conjunctive, gerundive, subjunctive, jussive/imperative, conditional, irreal, relative, potential, desiderative. In indicative mood, it distinguishes between preterite, present, aorist, and future; within each of these categories, further aspect and modal distinctions are made (perfective, ingressive, dubitative, progressive etc.). Negative paradigms differ considerably from the affirmative ones. The infinitive is formed by the suffix *-o*.

Verbs agree with their subjects in person, gender and number (expressed either through a set of prefixes or suffixes).

Š. uses postpositions rather than prepositions, such as *šuttsá* 'behind' in *míttï̀ šuttsá* 'behind the tree'.

The neutral word order is Subject–Object–Verb: *aššùwoótsï̀*$_1$ *meetsò*$_2$ *šikkóó-nï̀*$_3$ *kààrí*$_4$ *qùṭṭï̀rnóó*$_5$ 'The people$_1$ rapidly$_4$ cut$_5$ the meat$_2$ with the knife$_3$'.

The Ten-word list is (after Lamberti 1993; in brackets the variants from Wedekind – Lemma Alga 2002): *íkkà* 'one' (*ˀìkkà*), *gíttà* 'two' (*gìttá*), *keezá* 'three' (*kèèzà*), *tawà* 'fire' (*tàwà*), *aátsà* 'water' (*ˀààtsà*), *aáwà* 'sun' (*ˀààwà*), *aašittsà* 'moon' (*ˀàytsà* in highland Š./*ˀààntsísà* in lowland Š.), *sattsá* 'blood' (*tétsà/ṣáṣà*), *albeerá* 'tongue' (*ˀàlbéérà*), *gašá* 'tooth' (*gášà*).

Klaus Wedekind

Šinašša ethnography

The Š. (also known as Borna, self-name: Boro) are an ancient ↗Gonga people, historically and linguistically related to the Käfiččo (↗Käfa), Boša and ↗Šäkačo, but isolated from them by the Oromo expansions since the mid-16th cent. (s. Almeida's map, in BeckHuntAlm, facing xcvii). As a result they developed their own particular cultural profile, which has not been well-studied. The Š. speak a North Omotic language, but many are also fluent in Oromo and Amharic.

The current number of people identifying themselves as Š. is 60,587 (CSA 2007; the 1994 CSA figure was 32,698) and they live north of the Blue Nile (Abbay) River in the southern part of ↗Mätäkkäl zone of the Beni Šangul–Gumuz regional state. Several Arabic-speaking Š. communities live across the border in ↗Sudan. Their current lowland habitats are not the Š. historical homeland, highland areas south of the Blue Nile; from which they were largely displaced by ↗Oromo and highland Ethiopian raiding since the 17th cent. (e.g., *aṣe* ↗Śärṣ́ä Dəngəl waged war on them and their neighbours in the 1580s). Sudanese raids also regularly occurred. The Š. likely had a state, at least an independent polity, south of the Abbay River already in the early 16th cent., but which declined in the early 18th cent. Š. fortifications on Kitar hill near Wänbära can still be seen (ChTana 340). While the Š. were briefly mentioned earlier (BeckHuntAlm 17, 145), one of the first western travellers to describe the Š. was Juan Maria ↗Schuver in the 1880s (James et al. 1996: 181–85), who noted their distinct group features among the other people in the area, and saw that they (Schuver: the "Sinetjo") were the main local blacksmiths/craftsmen.

Š. today are part of a multi-ethnic society and have to some extent intermingled with adjacent groups like ↗Gumuz, Oromo, ↗Agäw and later ↗Amhara over several centuries. Many were "adopted" into Oromo society through the ↗*meediča* and *luba basa* rituals (Tsega Endalew 2002: 9), while others have in the past century moved out of the area and settled and assimilated elsewhere in Ethiopia. With the Oromo and Gumuz there have historically been tensions, mainly due to resource competition (land). An inter-ethnic mediation procedure – called the *miču* – was partially adopted to settle group disputes (Tsega Endalew 2002).

The economy of the Š. is poor and predominantly consists of the subsistence cultivation of ↗maize, ↗sorghum, ↗*ṭef* and beans. The hoe was used rather than the ↗plough. Cotton, ↗coffee and oil seeds are cash crops. They also keep livestock: cattle, sheep, goats and donkeys, and produce honey. In the 20th cent. the Š. were also involved in the trade in animal skins and civet (↗Zibeth), and in ↗gold panning.

The religious picture is mixed, as among the Š. one finds many followers of Orthodox Christianity, but also of Islam, of traditional religion and some of Evangelical Christianity.

Š. have patrilineal clans and a social hierarchy of status groups, including craftsmen. Elders are still influential. The specific cultural traditions of the Š. around lifecycle events, their folklore, rituals, and song and dance distinguish them from their neighbours, and seem to have gone through a revival in the past 15 years. In Mätäkkäl the Š. are also known to be good traditional herbalists and healers, with an intricate knowledge of the local flora and its alleged medicinal properties (Desalegn Desissa 2000; Mirutse Giday et al. 2008). Part of these are sold in the markets, e.g., in Bullen, the main Š. town, others are given during treatment. In general, Š. society is little known from an ethnological and social point of view and needs more study.

In the post-1991 ethno-federal state, the Š. became part of the Beni Šangul–Gumuz regional state (they are 7 % of its population). Power was largely divided between the ↗Berta and the Gumuz elites, but the Š. had 11 representatives in an 99-member state council.

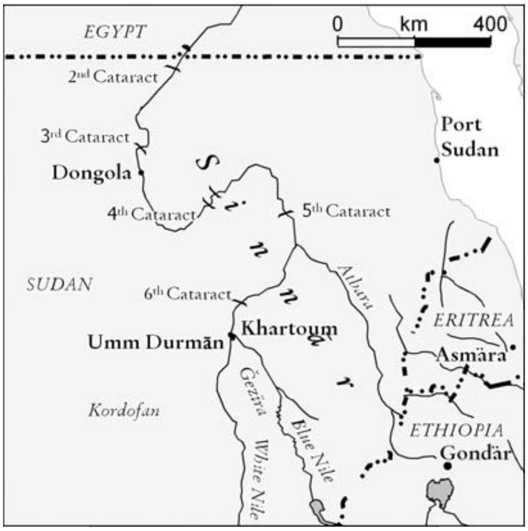
Jon G. Abbink

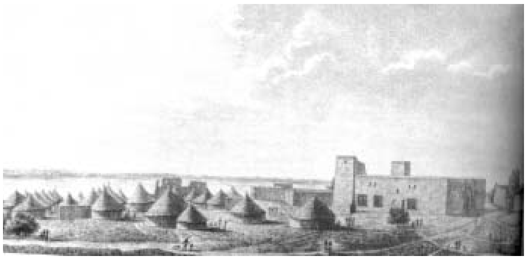
Sinnār

S. (Amh.: ስናር, Sənnar), sometimes also known as ↗Funǧ after the dominant ethnic group, was a Sudanese kingdom on the western and north-western borders of Ethiopia, extending up to today's Eritrea. The Christian Ethiopian empire had various connections with it, through trade, political alliances and military conflict. At times, Ethiopia claimed suzerainty over S., without ever exercising any permanent control.

S. was situated in the north-eastern Sudan, approximately in the territory of the defunct Nubian states of ᶜAlwa with its capital Soba (annexed in 1504 by the Funǧ shortly after its conquest by ᶜAbdullah Ǧammāᶜ in ca. 1500), and, partially, of Makouria with its capital ↗Dongola (s. Nubia, EAE vol. 5). In the 17th cent. Dongola was given as an autonomous province to rebellious descendants of the rulers of ᶜAlwa, the ᶜAbdallāb, in order to integrate them into S.

The territory of S. covered a wide region of the northern ↗Nile valley, over the whole Ǧazīra up to southern Kordofan (in the 16th cent.), in the north bordering on Egyptian–Ottoman territory. In the south, S. was in steady conflict with Shilluk and Dinka; the kingdom of Taqali in the Nuba Hills was tributary. In the Gondärine period the lowlands west of ↗Bägemdər were often disputed between S. and Ethiopia; in the late 16th cent. S. expanded into the neighbourhood of the weak Ottoman province ↗Habeš into north-western Eritrea (↗Ottoman Empire). S. was organized as a confederacy of semi-autonomous states, whose rulers bore the titles *manǧīl* or *makk*.





The mosque of Sinnār in ca. 1821; from Cailliaud 1819–22, Atlas pl. 7

S. was named after its capital, which was situated on the Blue Nile (it corresponds to today's S. Junction, not to be confused with the new town S. al-Madīna 5 km to the south-east). The Funǧ, an ethno-political term rather than a pure ethnonym, were a sedentary population, converted from a syncretistic Christian religion (with elements from local traditions) to Islam already in the early 16th cent. S. encompassed numerous ethnic groups. In territories immediately bordering on Ethiopia, these were scattered ↗Gumuz groups (often victims of slave-raiding [↗Slavery]), ↗Berta und their rulers, and the ↗Waṭawiṭ *šayḫs*. Several populations dependant on S. were nomadic, such as the Təgre- and Beǧa-speaking ↗Beni ᶜAmər in the northern lowlands of today's Eritrea (on relations between them and S., s. MunSt 291ff., 299). The dominant language of S. was Arabic.

The power of the monarchs of S. was based on the control of trade routes. Trade linked S. with Christian Ethiopia, ↗Oromo and ↗Gonga kingdoms to S.'s south-east, Sudanese kingdoms such as Darfur, with Egypt and the Ottoman Red Sea coast, mainly ↗Sawākin (Foster 1949: 107). Trade routes into Ethiopia went through Bägemdər and Fazoġli and were only closed in times of conflict, e.g., in 1700 when a S. subject had died in Ethiopia, despite the informal protection traders usually enjoyed in both countries (PankIntro 320; cp. Foster 1949:101, 103, 107, mentioning cordial relations with Ethiopia in 1698). Originally the main currency of S. was gold (O'Fahey – Spaulding 1974: 55; Triulzi 1981: 62); currencies used in S. in the 17th cent. were a small piece of iron in the form of a T, small silver coins of the Ottoman Empire and, according to ↗Poncet (Foster 1949: 105), Spanish silver dollars (↗Spain).

S. and Ethiopia were regularly linked by diplomatic alliances. *Makk* (king) Adlan I of S. (r. 1606–1611/12) sent fine horses as a ↗gift to the new Ethiopian ruler *aṣe* ↗Susənyos, who responded with gifts of gold sent to his successor Bādī I (r. 1611/12–1616/17), in accordance with the rules of traditional diplomacy (BlunChr 530). Shortly afterwards, however, S. under Rabat I (r. 1616/17–1644/45) attacked Ethiopia, in response to slave-raids into the lowlands west of Ethiopia claimed by S. The Funǧ invaded Bägemdər, but were repelled by Susənyos (1618–19). A previous ruler of S., ᶜAbdalqādir II (r. 1603/04–06), at around that time lived in exile in Ethiopia as the governor of ↗Č̣əlga in Dämbəya, a region and a market town important for Ethiopian trade with S. In the 17th cent., the rivalry between both kingdoms increased, e.g., over Fazoġli (which was a semi-independent *makk*-dom, but submitted by S. in 1685, Triulzi 1981: 61f., 66f.) and the Beni Šangul and other western borderlands.

In the 18th cent. *makk* ↗Bādī IV scored a great victory against Ethiopian forces led into S. by *aṣe* ↗Iyasu II (1744). He was the last powerful *makk* of S., according to the Funǧ Chronicle. When deposed in 1762 by his own officers, Bādī was granted asylum in Ethiopia and appointed Ethiopian governor of ↗Ras al-Fīl on the border with S. (in a territory previously belonging to the Muslim kingdom of ↗Mäzäga). The last *sulṭān* Bādī VII was defeated by Ottoman Egypt in 1821. Already in the late 18th cent., S. had allied itself to an Ottoman governor south of Egypt through marriage, followed by increased Ottoman presence in S.

In western Ethiopia and Eritrea there are still traces of the presence of S. in local ethnonyms and terminology. For example, the ethnonym used by the ↗Gumuz inhabitants of Gubba (the former Sudanese sultanate of ↗Qubba) is Fuñawi, besides Gubawi. Claims of Funǧ ancestry are found in the whole region from Roseires in the Sudan to Fädäsi in ↗Wälläga (Triulzi 1981: 57), which reflects former links as vassals and the influence of S. rather than real genealogical connections. The rulers of S. bestowed the title *diglal* upon the leader of the Beni ᶜAmər in Eritrea. It is still used until today. The S. title *manǧīl* ('territorial ruler') was in use recently in Gubba. As late as 1944 a "Funǧ king" (*manǧīl*) was crowned in Fazoġli (ibid. 58, 70). In addition, it is possible that S.'s classification of its population by colours such as "black" and "red" (Triulzi 1981:63) influenced ethnonyms in western Eritrea and Ethiopia, where such classifications are widespread, such as the Ḥomrah (i.e. *al-Aḥmar* 'the Red'; ↗Ḥamrān).

Sinoda

Abunä S. (ሲኖዳ; d. 1699) was an Egyptian metropolitan of the ↗Ethiopian Orthodox (Täwaḥədo) Church from 1671/72 to 1692 (cp. ↗*Pappas*).

S. was sent to *aṣe* ↗Yoḥannəs I by the Coptic patriarch Matthew IV (1660–75) to replace *abunä* ↗Krəstodolu II, imprisoned after a third and particularly tumultuous synod (BassÉt II, 292; Perruchon 1899: 173; BegCron 54; DombrChr 207 [tr.]). He arrived in Gondär on 19 October 1671 after having spent a few months in Čəlga, waiting for the religious and political troubles to cease. The royal armies welcomed him (GuiIohan 13f. [tr.]).

In 1678, S. held a council in his house in ↗Yəbaba, at which ↗Zäᵓiyäsus opposed *aṣe* Yoḥannəs, particularly his marriage to his relative, ↗Säblä Wängel. Yoḥannəs had already tried around Easter 1678 to have the metropolitan and the newly appointed *əččäge* ↗Qalä ᶜAwadi validate his wedding, but their power could not compete with the influence of the monks. It was therefore only in September that *aṣe* Yoḥannəs as enough arguments to convince his opponents (GuiIohan 25, 36f. [tr.]). This council shows clearly that the Coptic metropolitan had, at this time, almost no authority for the Ethiopian clergy and was only supposed to serve the royal politics. The incarceration of Krəstodolu, who died in his Ethiopian prison ca. 1678, might have convinced S. to respect this contract.

During the rainy season of 1679, a ↗relic of St. ↗Ewosṭatewos was brought from Armenia through Egypt to Ethiopia, and S. was the first prelate to open the ceremony reading a letter of the Coptic Patriarch. Later on this same year, S. opened a council against a heretic statement issued by the clergy from ↗Lasta (GuiIohan 39f., 41ff. [tr.], resp.).

The Chronicle of Yoḥannəs narrates that in 1680, when the Emperor's son Iyasu (future *aṣe* ↗Iyasu I) for the first time rebelled against his father, he forced S. to swear that he would not liberate Yoḥannəs from an excommunication that the *əččäge* would pronounce in case the Emperor tried to hurt his son. As the Chronicle might have been revised by Iyasu, this information must be considered with much care. It shows that S. might not have taken the same decision as the *əččäge* and that the Metropolitan was considered as the ultimate ally of Iyasu (GuiIohan 53 [tr.]). In 1681, while Yoḥannəs was already near death, S. presided over the last council (whose issue is not clear in the unfinished Chronicle of Yoḥannəs).

Shortly after his ascension to power, Iyasu held a council which stipulated that both S. and the *əččäge* had to transfer all their power of decision to the ↗*ᶜaqqabe säᶜat* and the father confessor of the Emperor (*qes aṣe*, GuiIohan 61f. [tr.]; cp. ↗*näfs abbat*).

In *Ṭəqəmt* 1684, a council was convened to settle the dispute between the ↗*Täwaḥədo* and the ↗*Qəbat* followers. The latter wanted to return to the pro-*Qəbat* decisions taken under Yoḥannəs, and insisted that they would approve the only authority of the *abun*. Iyasu postponed the council (GuiIohan 81ff. [tr.]). S. ended up in a difficult situation: on the one hand, the monks expected his support against the policy of Iyasu; on the other, Iyasu, under the threat of replacing him with a new metropolitan, ordered him to obey, to join him in ↗Aringo, and to unify the Ethiopian clergy into the unionist doctrine. All this happened before Easter. The patriarchal house was at this time in Žända, not far from ↗Gorgora (ibid. 84ff.). The council was eventually held in the house of the *ᶜaqqabe säᶜat* and it was concluded in favour of the *Täwaḥədo* party. The metropolitan and the *əččäge* were rewarded for their loyalty to the throne (ibid. 90–98). The *Qəbat* monks could not forgive this treachery; the Chronicle states that the monks of ↗Däbrä Wärq tried to hurt the metropolitan when he was crossing their area (ibid. 105).

In 1688, S. left Däbrä Maryam for Yəbaba where he presided over a synod deciding on the excommunication of the *Qəbat* party (GuiIohan 121f. [tr.]).

In spite of S.'s loyalty, Iyasu asked for a new Coptic metropolitan. *Abunä* ↗Marqos arrived in Gondär in *Mäskäräm* 1689 and was first sent to Särka (GuiIohann 143ff. [tr.]). S.'s health was decaying at least since 1691 (ibid. 162). His last official travel was when he accompanied Iyasu to Aksum in *Yäkkatit* 1693 (ibid. 170). A few months later, on 26 *Ḥamle*, the commemoration day of *abunä* ↗Sälama Käśate Bərhan, Marqos was officially appointed metropolitan (ibid. 174f.).

In August 1699, a few days before S.'s death, the French traveller ↗Poncet visited the former metropolitan in his residence in Tənkät, northwest of Gondär. According to Poncet, Iyasu preferred S. to Marqos, but had had to deposit S. for the fear of the *Qəbatočč* (Poncet 1713: 66–70).

The legacy of S. as one of the major metropolitans was used by both the *Täwaḥədo* and the *Qəbat* movement. In 1681, the lists of Coptic metropolitans compiled by the *Qəbat* adherents have S. under number 100, modifying the reality to obtain this result (e.g., ms. Paris, BN d'Abbadie 116, fol. 11v). The lists produced by the *Täwaḥədo*, when they keep S. as the 100th metropolitan, often add a derogatory comment on his faith when it comes to his follower Marqos (ms. BN éth. 245, fols. 6r–30v). S. was quoted as a reference of orthodox faith by the *Täwaḥədo* monks of ↗Waldəbba during the reign of *aṣe* ↗Bäkaffa, in 1725/26 (GuiIohann 330 [tr.]).

Sinoda

S. (ሲኖዳ; d. 1726, Gondär) was an 18th-cent. royal historiographer. Nothing is known of his early career. In February 1704 *aṣe* ↗Iyasu I went on a dangerous campaign in Goǧǧam and sent home his ↗*ṣäḥafe təʾəzaz* secretaries, ↗Zäwäldä Maryam and Akalä Krəstos (GuiIohan 236 [text]), and some other dignitaries. Being in the entourage of Iyasu, S. refused to go home and thereafter was apparently retained to continue to write the Chronicle. He penned the last six chapters (ibid. 230–63) for the events until 5 June 1704 and a short 'Second Account' (*Zena kaləʾ*) about Iyasu I's entering ↗Gondär (ibid. 263–67). It is unclear why S. stopped writing the Chronicle.

In April 1706 Iyasu I was dethroned by his son ↗Täklä Haymanot and soon killed. Shocked by the patricide and the murder of Iyasu, a person dear to him, S. did not offer his services to Täklä Haymanot, the new Emperor, and lived as a cleric at ↗Däbrä Bərhan Śəllase cathedral. However, in the same year *aṣe* Täklä Haymanot was killed while hunting, and *aṣe* ↗Tewoflos, Iyasu's brother, was enthroned. On the second anniversary of Iyasu's death, Tewoflos decided to execute the murderers of both his brother and nephew and canonize Iyasu I. It was S. who wrote for this occasion *aṣe* Iyasu's Vita (Conti Rossini 1942, after the manuscript from Däbrä Bərhan Śəllase; Chernetsov 1989: 255–82). Though the work is called ↗*gädl* in the *incipit*, S. remained very much a historiographer in style, describing the foundation of the churches of Täklä Haymanot (construction begun in 1683) and Däbrä Bərhan Śəllase in ↗Gondär, Iyasu's great campaign to ↗Gibe, his ↗funeral etc. (another, recent copy of this work, ms. 693 IES, has an Amharic title ያጼ፡ ኢያሱ፡ አድያም ፡ሰገድ፡ ታሪክ [*Yaṣe Iyasu Adyam Säggäd tarik*, 'History of *aṣe* Iyasu Adyam Säggäd']). However, the work is followed by the traditional hagiographic ↗*mälkəʾ* in honour of Iyasu.

S. was an adherent of the ↗*Täwaḥədo* doctrine, while *aṣe* Tewoflos was an adherent of the ↗*Qəbat*. This was probably the reason why S. did not become the historiographer of Tewoflos. S. resumed his pen as historiographer only in the reign of *aṣe* ↗Bäkaffa, in 1721, and was granted the official title of *ṣäḥafe təʾəzaz* (having been appointed ↗*azzaž* in the meantime) as late as 1723. S. wrote the first 27 chapters of the Chronicle of Bäkaffa, ch. 28 containing the notice on his death and a short list of his works (a ↗*säwasəw* being one of them; GuiIohan 313f. [text]). The Chronicle was continued by the "son" or disciple of Sinoda, ↗Kənfä Mikaʾel, who wrote the last chapters of the Chronicle.

S. was a talented author and perfectly mastered different types of writing; his works, beautiful in language and style, and full of historical information, may be rightly considered the apex of Ethiopian royal ↗historiography.

Sevir Chernetsov – Denis Nosnitsin

Šire

Š. (ሺሬ, also Šəre, old: Sire, Sirä, Səre) is a large region in northern Ethiopia. It was an important *awrağğa* of ↗Təgray province, and comprised four/five *wärädas* in the 20th-cent. imperial ↗administrative division, with the capital ↗Ǝnda Śəllase in the Qorraro *waräda*. Today Š. is incorporated into Western Təgray zone.

The districts which traditionally constituted the core of Š. are Qorraro, Asgäde, Ṣämbäla (Ṣəmbäla), Sämäma (Sämäna), and Ṣällim Bet (EllLusAnt 29). Š. was bounded by the ↗Täkkäze and ↗Märäb in the north/north-east and south-west. It bordered on ↗Adyabo in the north-west and Zana with ↗Aksum behind in the east. Säläk̲lak̲a was its farthest border point in the north-east; southern Š. adjoined ↗Mädäbay. As an *awrağğa*, Š. included Adyabo, formally independant from Š., on the border with Eritrea (↗Säraye).

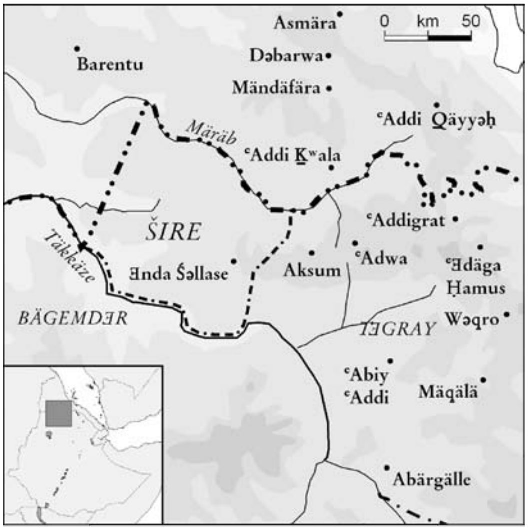
In the north-west, the landscape of Š. is dominated by the mountain massifs of Qʷäyäṣa (ca. 2,300 m) and Ṭiʾesu (ca. 2,000 m.). The average altitude of the Š. plateau is 1,900 m; west and south-west from Ǝnda Śəllase it descends slightly to the Täkkäze gorge, and it is cut by canyons of the tributaries of the Täkkäze (and by the tributaries of the Märäb in the north-east). The climate varies from warm to hot; Š. is relatively well-watered, with the rainy season from April to September, many rivers, and sources of underground water.

Research has revealed traces of the earlier population in Š. At the site of ᶜAddi Adẖano/Daẖno (ca. 5 km north of Ǝnda Śəllase) some traces of lithic industry and a rough stela have been found (Puglisi 1941: 101ff.; Godet 1977: 35); a pre-Christian burial site has been discovered at Säläk̲lak̲a (Cossàr 1945; Godet 1977: 55; probably belonging to the early period of the ↗Aksumite culture, cp. Fattovich in PICES 8, vol. 1, 90); Aksumite period structures are known at Wəbla Maryam, Sämäma (Finneran et al. 2005: 10). More sites have been discovered in the course of the recent "Shire District Archaeological Survey Project": pre-historic sites of lithic production have been recorded (Finneran 2003a, 2003b; Id. et al. 2005: 15–20), as well as both prehistoric and historic sites such as May Adraša, Hirətay, Ǝnda ᶜOna Libanos (Sämäma), ᶜAddi Näk̲asi ᶜAdgi (Finneran 2003a; Finneran et al. 2005; cp. Asamerew Desie et al. 2002).

The position of Š. explains its importance as a region connecting the highlands, specifically the region of Aksum, with the valley of the ↗Atbara and trade routes to ↗Egypt. The archaeological evidence suggests that the ↗obsidian "trade network" might have included Ethiopia in very remote times; scanty evidence proves links between the Ethiopian highlands and the Nile valley and Sudanese lowlands and its cultures during the 2nd–3rd millennium B.C. (s., e.g., Fattovich 1996; cp. ↗Nubia s. EAE vol. 5). At a later period, the Red Sea trade overshadowed the Nile valley route, but the region of Š. must have been a scene of both exchange of goods and movements of Aksumite armies, especially under ↗ᶜEzana, against the ↗Noba and Kasu, and ↗Meroë (when the Täkkäze was reached, s. RIÉ no. 189). However important Š. might have been as a linking region in pre-Aksumite and Aksumite times (cp. Phillips in AfrHorn), the archaeological evidence which proves this is still not large.

The role of the region was more conspicuous in post-Aksumite times. After the re-establishment of the ↗Solomonic dynasty, monasticism flourished in Š. According to traditions collected by Ellero, the oldest ↗monasteries of Š. are Ǝnda Abunä Märᶜawi Krəstos (↗Ṣäᶜada Ǝmba), established under *aṣe* ↗Yəkunno Amlak, and Ǝnda Abunä Zäkaryas, under *aṣe* ↗Wədəm Räᶜad, in Dämbe ᶜArqay (EllLusAnt 14ff., 25f.). Many more were established later, such as the historically important Däbrä Qʷäyäṣa of *abunä* ↗Samuʾel, or ↗Däbrä Abbay. Others are Ǝnda Abunä ↗Gäbrä Mäsqäl (of Gutämala) in Ṣämbäla, Ǝnda Abunä ↗Ləbdəyos, Ǝnda Giyorgis in Laqamba (ibid. 9f.; Finneran 2003), Ǝnda Abunä Mänadlewos in Qorraro (EllLusAnt 13; cp. Raineri 1998). The monastic colonization of ↗Waldəbba was certainly launched from Š. transmitting the Christian influence from Aksum. Churches are also numerous in Š. (EllLusAnt 40 and n. 4). The local ecclesiastical libraries, reportedly rich, are barely explored.

The toponym Š. (Sirä) appears in the *Mäṣḥafä ↗Aksum* in the documents traditionally ascribed to the half-legendary *aṣe* ↗Gäbrä Mäsqäl



(CRAxum 19, no. 3); and later in a charter of *aṣe* ↗Säyfä Arᶜad (ibid. 22, no. 8r). *Aṣe* ↗Dawit II donated some lands in Š. to ↗Däbrä Dəmaḥ in Säraye (Conti Rossini 1904:46). Such documents as the charter of Dawit II to Däbrä Qʷäyäṣa (ibid. 22, no. 10), or to Däbrä Ḫərmo (ibid. 22, no. 9; Ǝnda Abunä Aron, s. EllLusAnt 13f.) are important for the historical geography of Š.

Local traditions open the history of Š. with the arrival of *ras* Degäna (Degänay), who is said to have come from ᶜAgamä and, proceeding into the lowlands of Adyabo, pushed back the ↗Kunama. Degäna is said to have been buried in the Č̣ərqos (Qirqos) church of Ǝnda Śəllase (Gäbrä Iyäsus Abbay 1961:168). Degäna's descendants became the local rulers and the eponymous founders of a few local lineages and the political elite (listed in EllLusAnt 37; cp. Gäbrä Iyäsus Abbay 1961:168). The line of the first-born – Ḥad[äg]ä Anbäsa, Zärᵓaburuk, Rädaᵓi (ibid.) – inherited supreme power in the region in the office of the 'governor of Š.' (*śəyyumä sirä/ šire,* or *šum šire*). Degäna must have arrived in the late 14th cent., as he is mentioned in the Vita of Bänadlewos, one of the local saints (Raineri 1998:46f.; the dating in the tradition collected by Ellero [EllLusAnt 34–37; cp. CrawItin 208f.] must be corrected). Rädaᵓi's son Täklay is said to have founded the old centre of Š., ᶜAddi Gədäd, a custom post near Ǝnda Śəllase (EllLusAnt 37; Gäbrä Iyäsus Abbay 1961:168; HuntGeogr 259). The Christians constituted the *ᶜalet Degäna* ('the lineage of Degäna') and the migrants from the ↗Märäb Məllaš *ᶜalet Ḥadägti* ('the generation of Ḥadägti [area in ↗Akkälä Guzay]'); until the 1940s the existence of small groups of ↗Betä Ǝsraᵓel in Š. was reported (s. EllLusAnt 41f.).

The Chronicle of *aṣe* ↗Zärᵓa Yaᶜəqob relates that the governor of Š. was put under the authority of the ↗*baḥər nägaš* (PerrZarY 47f.), a situation which continued until the time of ↗Alvares (BeckHuntAlvar 115). Later, Š. was within the realm of the ↗*təgre mäkʷännən* (cp. LudHist L. I, cap. 3, 27), but the local rulers were usually exempted from his authority; enjoying high prestige and having direct links to the court, the governors of Š. were appointed in keeping with the local tradition and were only approved by the emperor (Barradas 1996:2ff.).

The documents collected in the *Mäṣḥafä Aksum* report that under *aṣe* ↗Ləbnä Dəngəl, the governors of Š. were Rädaᵓi (CRAxum 27, no. 21) and Tewodros (ibid. 28, no. 23).

During the invasion of ↗Aḥmad b. Ibrāhīm al-Ġāzī, a governor of Š. was killed in battle at ↗Šämbəra Kʷəre in 1529 (BassHist 126), and his successor Samuᵓel, at Ayfärs in March 1531 (BassHist 202; KrLebD 13). The population of Š. is reported to have accepted the Muslim power, but the destruction inflicted upon Š. was considerable (Däbrä Abbay was burnt in 1534; ibid. 14; DombrChr 161; BegCron 18, 23). A governor from the local nobility was appointed by the Muslims (BassHist 451; cp. BegCron 27). The Muslim population of Š. (called *ᶜalet Abdalla*, 'the lineage of ᶜAbdallāh') may have emerged in the region since that time (cp. EllLisAnt 41f.).

Azmač Täklä Śəllus was the governor of Š. over a long period under *aṣe* ↗Śärṣ́ä Dəngəl (cp. CRAxum 44 and a footnote to no. 53, the document of 1578/79; CRHist 58, 90, 100 [text]); his son, who perhaps inherited his office under *aṣe* Susənyos, died in battle in 1608 (cp. PerChron ch. 36). Under Śärṣ́ä Dəngəl, Ṣəmbäla was given to another *śəyyum* (CRAxum 84, 92); Laᵓəkä Maryam, ᶜAqba Mikaᵓel, Gäbrä Śəllase, Gäbrä Maryam, Mäzraᶜətä Krəstos are also mentioned as governors of Š. before 1616 (ibid. 75).

During the ↗Gondärine kingdom Š. became important as the "gate" to Aksum, to be reached from Gondär through Wägära, Däbarq, Lämäləmo (Limaləmo) and crossing the Täkkäze (cp. GuiIohan 165f. [text]; PankEcon 352f.; the modern "Lämäləmo road" goes along this old route).

Under *aṣe* Susənyos, a conflict arose in Š. when the governor *azmač* ᶜƎbäyä Dəngəl (entitled

ውሉደ፡ ውሉዱ፡ ለአሐዱ፡ ዓንበሳ፡ ወረዳኢ, *wəludä wəludu läʾaḥadu ᶜAnbäsa wärädaʾi*, ‘[from] the son[s] of sons of Aḥadu Anbäsa and Rädaʾi’) and other local rulers (*däqiqä Degäna*, ‘the children of Degäna’) increased tributes causing the people to flee. The local monastic leaders led by *abba* Asaᶜənä Maryam of Däbrä Abbay appealed to the Emperor and managed to reverse the situation (CRAxum 75f.). Under *aṣe* ↗Fasilädäs the office seems to have been called “the governor of Š. and Asgäde” (ibid. 48, no. 62).

As the Chronicle of *aṣe* ↗Iyasu I reports, in 1689 the ↗*Šanqəlla* (here Kunama) exterminated the Däwe-settlers (cp. ↗Ğawe) in Š. (GuiIohan 124 [text]). In 1691, Iyasu was in Š. and compelled the people of “the house of Degäna” to return the land they had taken from ↗Aksum Ṣəyon. In late 1692, he was again in Š. launching a major attack against the “*Šanqəlla*” and apparently extending it beyond the Märäb (ibid. 152, 158f. [text]; BruNile II, 451–56). In 1693 he severely punished “the children of Degäna” and cancelled their privileges, formally for their abuses and their inability to check the raids of the “*Šanqəlla*” into Waldəbba (GuiIohan 165 [text]; BegCron 65). Š. was given to the *təgre mäkʷännən*. Later the power of the local elite weakened, and in the mid-1750s Š. probably fell under the authority of *ras* ↗Mikaʾel Səḥul, added to the lands which his son *abeto* Wäldä Ḥawaryat received when he married *wäyzäro* Ǝleni (GuiIyas 217 [text]; reading uncertain). In the late 18th cent., Š. was given to Wäldä Śəllase upon his nomination as ↗*ras* by *aṣe* ↗Bäʾədä Maryam II. Under *aṣe* ↗Tewodros II, Š. was formally under the authority of the governor of Təgray, though probably ruled by local nobles. In 1867, *däğğazmač* Kaśa (the future ↗Yoḥannəs IV) defeated Tewodros’s forces under *däğğazmač* ᶜAynšät of Š., his father *däğğazmač* Täklä Giyorgis and *ras* Baryaʾu Ṗawlos, the governor of Təgray (ZewYohan 26, 274; different in BTafY 64f.; 72f.). In 1894 the governor of Š. *ras* Ḥagos followed his master ↗Mängäša Yoḥannəs and submitted to *aṣe* ↗Mənilək II (GueCopMen 354).

The emergence of the Colonia ↗Eritrea, the battle of ↗ᶜAdwa and the unclearly demarcated ↗boundaries changed the status of Š. to a frontier province. For a while, the internal situation in Š. was more stable than in the rest of Təgray, despite the fact that the governor ↗Gäbrä Śəllase Barya Gabər was ousted from his office in 1914 after a conflict with *ras* ↗Śəyyum Mängäša. However, in 1928–29 the Italians “rectified” the de facto border, coming closer into Adyabo in accordance with the 1902 treaty, including all Kunama territories within the colony (Zoli 1936: 135, map 3; ↗Treaties and conventions, s. EAE vol. 5).

Š. witnessed major battles during the ↗Italian war of 1935–36. The province took its final shape after the termination of ↗Ethiopian–Eritrean Federation and shared all the problems of Imperial Ethiopia, despite being governed by the “progressive” *ras* Mängäša Śəyyum.

After the ↗Revolution, the region was ready to start to battle the *Därg’s* repressive policy, as the first members of ↗Tigray People’s Liberation Front launched their first operations in February 1975 from Dädäbit. It again was the site of decisive battles in 1988–89 (Tekeste Melake in PICES 12, vol. 1).

Denis Nosnitsin

Sisgayo

S. (**ሲስጋዮ**, also known as Arutaano/Erutaano, r. 1620–32, Lange [1982: 35]: r. 1619–30) was a ruler of the then Gonga-speaking Hinnaryo (s. ↗Ǝnnarya) in the time of *aṣe* ↗Susənyos. S. has been identified with a mid-16th-cent king of allegedly Portuguese descent, Sigaro (BTafA 970), but for chronological reasons and due to weak evidence from the sources this is doubtful (cp. also Lange 1982: 30ff., 35; for Sigaro s. ↗Säpänhi).

S. came to power as *Hinnare* ↗*tato* after ↗Benäro, who in 1611 had overthrown the ruling house to whom S. probably belonged, and was killed "by treachery" (BeckHuntAlm 150; MHasOr 75f.). In order to parry Oromo incursions Benäro subordinated to *aṣe* Susənyos to whom the country paid a tribute of one thousand ounces of gold annually (BeckHuntAlm 152). After his death this relation was to be continued and S.'s party pleaded Susənyos in a letter to confirm the appointment of their candidate, blamed Benäro and justified his killing with the "cruelty" (severe corporal punishments) and "injustices" (high taxes) the population had suffered from during his nine years of rule. Susənyos vituperated the killing and demanded high tributes but accepted S. since he had not taken active part in the attempt against Benäro and had the backing of a large part of the people. This message he sent by his officer Mustafa *baša* and his "Turkish" regiment (PerChron 240f. [text] = 184f. [tr.]; MHasOr 76f.).

However, in order to meet popular aspirations S. abolished both the tribute to Susənyos and the obligation of war against the Oromo. S. concentrated on the defence of his highland territory and probably abandoned some of Benäro's fortifications in the surrounding areas. This facilitated the advance of the Sadača Oromo up to the edges of the Hinnaryo highland. As a result, in 1632 the party of Benäro's son Yämanä Krəstos prevailed and killed S. and all his followers. Yämanä Krəstos, who during S.'s reign had stayed at Susənyos' court (where he was converted to Catholicism), took over control of the Hinnaryo kingdom (BeckHuntAlm 150).

Skinner, Robert Peet

S. (b. 24 February 1866, Massillon, Ohio, d. 1960, Belfast, Maine) was the first ↗United States (US) envoy to Ethiopia. He entered the US diplomatic service, eventually becoming Ambassador to Turkey in 1933. During his first posting as consul in Marseilles in 1903, he was chosen to undertake America's first mission to Ethiopia. This was a time when America was exporting considerable quantities of cotton goods, the greater part of which went to Abyssinia (cf. Skinner 1906: 79f.) and the US Government felt that this commerce needed official support.

S. and his party, which included 25 American soldiers, landed at Djibouti and then travelled by rail to Dərre Dawa. They then went on to Harär, to meet its progressive governor, *ras* ↗Mäkʷännən Wäldä Mikaʾel, who presented them, at their request, with two zebras. In Addis Abäba the American party received a warm welcome from ↗Mənilək II, and was housed in the palace of *ras* ↗Wäldä Giyorgis. S. was much impressed by Mənilək's commitment to modernization (cf. Skinner 1906: 102, 122).

S. brought with him an Ethio-American Treaty, drafted by Enno ↗Littmann, then at Princeton University. This was signed in Addis Abäba on 27 December 1903, and ratified by President Theodore Roosevelt on 17 March 1904. It provided for the opening of diplomatic relations between the two countries, and afforded US citizens favoured status as accorded to nationals of other countries with which Mənilək had concluded agreements (Skinner 1906: 228–37). The treaty was followed in 1906 by the establishment of an American Consulate in Addis Abäba. Full diplomatic relations followed in 1909.

5. Domestic slaves and court slavery
6. The slavery question in politics

Slave trade from ancient times to 19th century

The slave ↗trade from the Ethiopian region, like S. itself, is of great antiquity. Queen Hatshepsut's inscription at Thebes (ca. 1495 B.C.) suggests that adults and children from the Land of ↗Punt were then exported. Almost one and a half millennia later ↗Pliny mentioned slave exports from the Aksumite port of Adulis, while the ↗*Periplus of the Erythraean Sea* noted the shipment of slaves from the more easterly Gulf of Aden ports of Malao (modern ↗Berbera), Mondus (Bandar Hais) and Opone (Ras Hafun). Most slaves exported from the Ethiopian region came, according to the Egyptian traveller ↗Cosmas Indicopleustes in the early 6th cent., from Barbaria, i.e. the above-mentioned Gulf of Aden coast, and Sasu, perhaps the inland country south of the Blue Nile. One of the effects of this long ongoing trade in slaves was that by the time of the Prophet ↗Muḥammad there was a significant Ḥabäša ('Abyssinian', cp. also Ḥabašāt) presence in Arabia. Prophet Muḥammad was nursed as a child by an Ethiopian woman, and he later appointed ↗Bilāl b. Rabāḥ al-Ḥabašī, the son of an Abyssinian slave girl, as his first muezzin.

Testimony to the extent of Ethiopian slave exports to Arabia is provided by 10th- to 12th-cent. Arab writers. Ibn Ḥawqal tells of Ḥabäša slaves being received by the king of the ↗Yemen; al-Maqrīzī reports that such slaves constituted some of the principal merchandise of Aden; and al-Idrīsī states that ↗Zaylaᶜ was one of the principal ports from which they were shipped. Report has it that around this time one of the ruler of the Yemen, Saᶜīd Ibn Nağah, purchased no less than 20,000 Ḥabäša slaves.

S. as an institution was accepted in the ↗*Fətḥä nägäśt*. This code held, on the basis of Biblical writ, that slaves could be captured in war (↗Warfare), or inherited from generation to generation. The text nevertheless attempted in some measure, to control the trade in slaves – by forbidding the sale of Christians to non-believers. This prohibition restricted, but by no means completely prevented the trade. This was because (1) the code legislated only for Christians, and in no way governed the conduct of Muslims who represented a significant section of the population. The latter, in part on account of their contacts with nearby slave-importing Muslim countries, constituted the majority of slave traders. (2) The code applied only to the sale of Christians, and therefore did not affect that of adherents of traditional ↗religions who probably constituted most of the slaves sold. The religious law thus allowed Christians to sell Christian slaves among themselves, as well as to purchase slaves of any denomination. The code also accepted – and reinforced – a division of labour in which slave raiders and traders mainly seized and sold slaves from communities other than their own. Many persons of traditional faith were thus captured as slaves and sold by Christians or Muslims, while most slave traders, like other merchants, were predominantly Muslim. *Aṣe* ↗Susənyos was reputedly opposed to the sale of Christians as slaves (PankEcon 88).

Some of the slaves sold were captured in war; others in slave-raiding expeditions; others again were descendants of slaves. Some were sold within Ethiopia. Other slaves were exported, through the Red Sea and Gulf of Aden ports, or the overland route to ↗Sudan; and were taken immense distances from their original homeland. They went mainly to ↗Arabia, ↗Egypt and the ↗Middle East, the ↗Ottoman Empire, ↗Sudan, ↗India and even a few to Europe. Most slaves taken to the East were speedily converted to Islam, in some cases on board ship, and on reaching their destination were often obliged to adopt entirely new occupations and life-styles. Male Ḥabäša slaves, many of whom served as soldiers, and even military leaders, tended to fetch a higher price than those from other parts of Africa, while slave-girls were preferred as wives or concubines.

In Bengal alone "Habši" (today's ethnic group mostly called Siddi), or slaves from the Horn of Africa, were reported in the 15th cent. to number 8,000 (cp. "India, relations with"). ↗Castration for the production of eunuchs, which involved high mortality, was reportedly carried out for a time at a place called Waslu (?) in the vicinity of the ↗Hadiyya sultanate, but was banned by the Christian monarchy.

The extent of slave exports depended significantly on conflicts in the Horn of Africa, and appears to have peaked in the early 16th cent. as a result of expeditions of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, which involved the gift and sale in the East of numerous Abyssinian slaves.

Early 19th cent. evidence, which is far richer than that for previous years, suggests that the slave trade from Ethiopia was still considerable. Pearce records that in 1812 – a not unusual year – 160 eunuchs, 700 young children, and 2,000 prisoners captured in war passed through ᶜAdwa market on the way to ↗Massawa and the coast. In the ensuing decades Krapf estimated that 3,000 slaves were taken annually from the Gurage country (PankEcon 82ff.); and Cecchi that 4,000 slaves a year were sold at the ↗Hirmaata/Ǧirän market. The principal ports handling Ethiopian slave exports were Zaylaᶜ and ↗Taǧūra, which between them reportedly exported around 6,000 slaves a year, mainly from the Šäwa area; Baylūl, which was said to export 1,500 slaves annually, from the same general area; and Massawa, around 1,750 slaves passing mainly through Təgray. Exports by the overland route to Sudan seem often to have been even greater, perhaps as much as 15,000 a year. Total slave exports through all routes could have been in excess of 25,000 annually. Slave prices, which tended to rise throughout the 19th cent., varied significantly from region to region, varied significantly from region to region, and according to the laws of supply and demand.

Typical prices at Aləyyu Amba market around the mid-century, as cited by Beke, were 10 to 15 Maria Theresa dollars for a boy and 13 to 20 for a girl, or 25 to 30 in the case of the most pleasing (PankEcon 82–87).

Richard Pankhurst

Red Sea slave trade in the 19th century

Although S. across the ↗Red Sea has been extant for millennia, no other period has seen more slaves move across this body of water than during the 19th cent., when the region became more closely and dynamically integrated into global commercial structures. The general expansion of global trade spurred the export boom in the broader area of the western Indian Ocean, including the slave trade.

The lack of detailed and reliable quantitative evidence, the frequently clandestine nature of the slave trade, the unaccounted for fluctuations of patterns and intensities of slave exports, and politically biased reporting designated either to spur governments to struggle against the trade, on the one hand, or to prove that slave trade activities have been choked off, on the other, all account for the difficulty to provide an accurate quantitative and qualitative assessment of the phenomenon in the Red Sea area. Nevertheless, scientifically and rigorously calculated (yet self-consciously tentative and cautious) estimates put the total number of slaves exported across the Red Sea and Gulf of Aden during the 19th cent. at 492,000 (Austen in PICES 5b, 33).

The Red Sea and Gulf of Aden slave trade constituted part of a broader commercial system in which slaves were moved from Africa to the Arabic, Turkish and Persian-speaking areas of the Middle East mostly by way of the Indian Ocean. But it was also closely linked to the greater Nile Valley commercial system which constituted an overland conduit moving slaves from the eastern and north-eastern African interior towards Egypt and beyond. Patterns of exportation either through the ↗Nile Valley or the Red Sea ports could depend on security along routes, specific conditions in port towns, shipping considerations, the cycles of seasonality, as well as a host of other commercial, political and logistical variables.

Notwithstanding periodic and frequent fluctuations, the slave trade was especially brisk between the 1820s and the 1880s. And unlike the Atlantic slave trade system, where slave cargoes were commonplace, slaves were most often moved and traded across the Red Sea and Indian Ocean on regular sailing boats together with other commodities. The growing demand for labour in Arabia, Persia, Egypt and the eastern Mediterranean clearly propelled the slave trade. The supply of cheap slaves and captives generated by Egyptian and Ethiopian expansionist drives and state formation in Northeast Africa during that period was also on the rise, meeting labour demands in the commercialized economies of the Middle East.

Among the major slave supplying areas were the Oromo and ↗Sidaama regions as well as ↗Käfa, ↗Mağі, ↗Gamu, ↗Gimira, ↗Gofa, ↗Wälaytta, ↗Kullo and ↗Konta in what is today southern and south-western Ethiopia (Abdussamad Ahmad 1989: 93). A significant number of slaves exported through the Red Sea ports also originated in the Sudanese region where extensive and often brutally violent slave-raiding and trafficking took place. In the 1820s Muḥammad ʿAlī’s expansionist army launched massive slave-raiding expeditions. In the following decades Sudanese and Egyptian traders handled the trade, expediting slaves either through the overland routes to Egypt or via ↗Massawa or ↗Sawākin, across the Red Sea. Some slaves remained in the Sudan where their labour was exploited in agricultural enterprises.

The main destinations of Red Sea exports were first and foremost the Ḥiğaz in western Arabia, the Yemen, and the Persian Gulf, with re-exports mainly to Egypt, Anatolia, the Levant and, until mid-century, a small number to north-western India. Slave prices between southern Ethiopia and the coast could increase tenfold or more, while between exporting ports and overseas destinations they would again rise dramatically.

Slaves were exported on traditional sailing boats carrying a variety of other commodities through the major African ports of the Red Sea and Gulf of Aden (s. sub-article above). The often clandestine nature of slave-shipping also meant that a significant number were expedited to Arabia from dozens of small and/or unidentified sites along the Sudanese, Eritrean and ↗Somali shorelines. This was especially the case since the mid 19th cent., as anti-slave trade activities were amplified. On the Arabian coasts too, landing often took place clandestinely at night, usually in the vicinity of major ports. Some slaves were then re-expedited from Jiddah, Hudaydah, and other Arabian Red Sea Ports, sometimes on steamships transporting Muslim pilgrims.

According to Austen’s tentative census (which also incorporates data from Arabian receiving areas), most Red Sea slaves in the 19th cent. were expedited via the Gulf of Aden (250,000). Taǧūra, Zaylaʿ and Berbera were the outlets of the slave trade, which to a large measure, sustained the formation and centralization of several Oromo

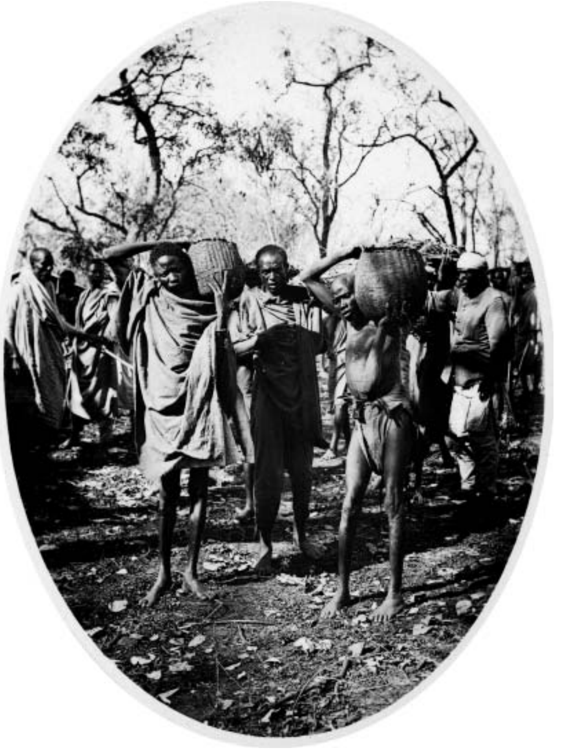

Fig. 1: Slaves in the Ethiopian highlands; photo 1917, collection of Maurice de Coppet, Helsinki University Library, Finland

polities in the south-western highlands (Gibe and Omo valleys) such as ↗Guduru, ↗Ǧimma, ↗Limmu-Ǝnnarya and ↗Geeraa, as well as Käfa (Fernyhough 1989: 106). The southward expansion of the kingdom of ↗Šäwa from the 1870s also abetted the trade feeding the Gulf of Aden ports (often in collaboration with ↗Abū Bakr Ibrāhīm Šaḥīm of Zayla^{c}). Next in quantity comes Massawa, the major outlet of the northern caravan routes, with 111,000 for the entire century; Sawākin, which, following the decline of ↗Funǧ (↗Sinnār), received caravans diverted from the traditional Nile routes, with 107,000, and the northern ^{c}Afar coast with a mere 24,000 slaves. The numbers clearly show a sharp decline around 1880, with the advent of European colonial rule and more strenuous suppression efforts, at least in the major ports. Other evidence suggests that European anti-slave trade efforts were only partly successful and that the trade did not die out altogether, even if it was reduced and less visible. All figures remain somewhat tentative.

In general, the vast majority of slaves exported through the Red Sea were in their teens, and the sex ratio heavily favoured females. Slaves from the Ethiopian region were exploited in a host of occupations, varying from "luxury" slaves such as eunuchs and concubines on the one hand, to the most labour intensive and physically trying occupations such as pearl divers in the waters around the Arabian Peninsula, on the other. Ethiopian concubines occupied an intermediary position between "white" and "black" slaves and were highly prized among those who were sufficiently well-off but who could not afford white Circassian or Georgian slaves, especially in Istanbul and in Egypt, but also in Arabia. A significant number of female slaves exported to the Middle East worked as domestic servants in both high and middle-standing households. Slaves were also employed in urban economies, in harbours, in transportation, artisanship, construction enterprises as masons, and as employees in trading and business outfits. Some male slaves were mariners with sea vessel crews in the Red Sea and the Indian Ocean. It is possible that some slaves from the Ethiopian region laboured in agricultural enterprises, perhaps date plantations.

Jonathan Miran

Slave raiding in the 19th century

The 19th-cent. slave trade of the Ethiopian interior was an integral element of the overall system of trade of the Horn of Africa. It used the same system of trade routes and was in the hands of the same category of entrepreneurs, i.e. predominantly Muslim merchants. Slaves together with ivory, gold, civet amber etc. were the most valued commodities for export. Virgin girls and the young in general reached the highest prices. With every resell the price of a slave increased, e.g., in Käfa (in 1905) one slave cost eight ↗Maria Theresia thalers but increased in price to 30–40 thalers in Šäwa (Bieber 1923: 43). The male slaves served in the transport of goods from the interior to the coast to be sold afterwards; sometimes together with their cargo.

In the 19th cent. one of the most important sources of slaves for the Ethiopian as well as the eastern Sudanese market was the Ethio–Sudanese periphery in all its extension from north to south. In this wide geographical sphere the lower grass- and bushlands as well as the partially forested uplands with their richness in game and abundant flora were mostly inhabited by hunter-gatherers who, to a limited scale, also practised hoe agriculture. In their oral traditions, some of these groups (e.g., ↗Gumuz) claim to have lived on higher altitudes before they sought refuge from slave raids in the lowlands, which were infested with ↗malaria and unattractive to cattle keepers due to the dispersion of the tsetse fly.

The northern Ethiopian highlanders considered hunter-gatherers and people of darker complexion as ↗*šanqəlla* or ↗*barya* respectively. They were, as such, preferred as targets of slave raids. The Sudanese Arabs had a similar attitude to the non-Muslim peoples of the lowlands east of the River Nile. However, to a lesser extent, the enslavement of captives from neighbouring groups was also common among the lowland groups themselves. This was boosted by the fact that after the Christian empire had taken formal control over the peripheries, they were expected to pay tribute not only in ivory and gold but also in slaves (Triulzi 1981).

South of ↗Mätämma the victims of slave-raiding came from the different Gumuz groups scattered over the Mätäkkäl region and the Ethio–Sudanese borderlands down to River Didessa in Wälläga. Mätämma, and al-↗Qallābat respectively, were the central trading post for slaves raided in the surrounding lowlands and beyond. It was the main gate for human trafficking from northern Ethiopia via the Nile and Khartoum to Egypt. In the north, the main area for slave raiding stretched out from ↗Gaš Setit to ↗Mäzäga. Here, slaves were mainly raided among the ↗Nara and ↗Ṣällim Bet groups.

In 19th-cent. ↗Beni Šangul, slave trade predominantly was in the hands of the ruling families of the ↗Waṭawiṭ. They systematically raided slaves among the Nilo-Saharan-speaking peoples, including ↗Berta, Gumuz, ↗Uduk, ↗Mao, ↗Komo, ↗Kwama, ↗Opuuo and Mabaan (today Sudan). The Waṭawiṭ used to mark slaves with six vertical scars on the cheek. Girls and women were preferred and more expensive (Theis 1995: 29). Raids, combined with forced gold mining labour, enabled the Waṭawiṭ šayḫdoms (Qebeš, ↗Asosa, Dul [↗Kurmuk] and Begi) to develop into important trading centres for north-western Ethiopia as well as Nubia.

The Waṭawiṭ paid tributes in slaves, ivory and gold to Ottoman Egypt and, since 1898, to the Ethiopian emperors. The most notorious slave trader in Beni Šangul probably was *šayḫ* ↗Ḫʷāğalī of Asosa. In ca. 1910 he even introduced a regular tribute in children to be paid by the neighbouring peoples (Theis 1995: 19–22).

During the ↗Mahdist rule, the Sudanese *ansar* raided slaves along the borderlands to Ethiopia until they were defeated by *ras* ↗Gobäna's army in ca. 1886. After this victory Mənilək established his hegemony by the help of ↗Ǧootee Tuullu, the ruler of ↗Qälləm, who himself was an intermediary slave trader and active in slave raiding among the smaller ethnic groups of the region (Theis 1995: 24, 30ff.).

In their history, most ethnic groups in south-western and southern Ethiopia were exposed to enslavement but often also enslaved war captives for domestic usage and trade. Important areas of slave raiding were ↗Illubabor and ↗Käfa. The Nuer enslaved the Komo, the ↗Mağangir were raided by ↗Añwaa, Še (↗Benç̌) and highlanders, the so-called ↗Gimira groups (i.e. Benç̌ [Še], Mer, ↗Šeko, ↗Nayi, ↗Ç̣ara) were victims of Oromo raiders as well as of campaigns of the Hinnario (↗Ǝnnarya) and ↗Käfa kings. The large requirements of the Käfa kingdom in slaves were supplied by captives of war from its vassal states of Konta, Dawro and Kunča.

Slaves in south-western and southern Ethiopia were taken as domestic or royal slaves respectively or trafficked to central Ethiopia via Gore, Bonga, Tiiffa (Käfa; Bieber 1923: 42) or Hirmaata (Lange 1975: 2f.). In the second half of the 19th cent., when the demand in slaves increased considerably, the latter became the most important slave market of the south-west.

The wider Gurage region was another important area for slave-raiding as well as slave trade. Among the many small rivalling groups the enslavement of captives of war for domestic needs was a traditional practice. Additionally, it was common to sell slaves to itinerant Muslim merchants. Slaves from the region, especially Gurage girls who had the fame to be extraordinary beautiful, realised highest prices. According to Cecchi (1888: 92), a young female slave from ↗Čaha or

↗Wəlbaräg was purchased at the ↗Qabeena market for 40 *natter* (ca. 17 kg of copper) while a male youngster was sold for about half of this price.

Slave trade in the region intensified after *nəguś* ↗Śahlä Śəllase had established his influence in northern Gurage (↗Soddo). Here, trade routes from the Gibe states in the south-west and from ↗Wälaytta via ↗Kambaata joined to cross Šäwa on the way to the coastal markets. The Šäwan king provided security for the caravans and collected taxes on every slave that crossed his territory.

On the eve of Mənilək's occupation of the region, the ↗Qabeena could establish control over the passage across the Gibe and the trade route from the south-west. Between 1881 and 1889 they rebelled against Šäwan supremacy under their leader ↗Ḥasän Ǝnǧamo. The strength of their petty state was mainly based on an Islamic revitalist ideology as well as trade, especially slave trade.

With the advance of the Christian Ethiopian armies into an area, a considerably high number of people was taken captive. While members of the local leading families were often set free to become intermediaries between Amhara and the local population, many commoners lost their home and freedom forever. The occupation of the Ethio–Sudanese "slave raiding belt" and south-western Ethiopia by the Christian empire had an ambivalent effect on the slave trade. While on the one hand slave traders were increasingly restricted by law, due to the official S. policy (s. "The slavery question" below), they continued their activities covertly, moving the slaves during night-time and selling them in-house. In many cases local Ethiopian administrators were indirectly but decisively involved. Even Ethiopian rulers, however, seem to have been active in slave raiding. *Ləǧ* ↗Iyasu's devastating raids of the "Gimira" country have to be emphasized here as an example of real "slave hunting expeditions"(cp. Lange 1975).

Dirk Bustorf

Domestic and court slavery

A "slave" may be roughly defined as an individual whose personal freedom and dignity is not acknowledged by society and who is treated as a possession or commodity. In Ethiopian societies many different forms of more or less non-free social statuses existed. They ranged from complete denial of any human dignity or rights to various kinds of "milder" servitude and serfdom. They are to be differentiated from other forms of exploitation and degradation imposed on individuals who, in principle, were considered as free, such as, e.g., the ↗*gäbbar*-system, the low status of women among many cultures, and the so-called ↗marginalized people (cp. also ↗*Fuga*; ↗*Manǧo*).

Comparing domestic S. in Ethiopia with the brutality of S. in the European colonies and the USA, European travellers tended to describe it as relatively moderate. Indeed, in consideration of the valuable property they were for their possessors, slaves were often fed well and cared for. Some even received some education (PankSoc 241–44). However, for the slaves themselves, whose perspective is rarely documented, being taken from their homeland and families was a traumatic experience, not to speak of the many hardships of a despised and dependent life in an alien land. The greatest burden was put upon the female slaves who in very many cases were sexually exploited by sellers and buyers already in their early years (PankSoc 245).

There were different ways how people were made slaves. The most common was the enslavement of captives taken in the course of war. They were treated as booty and divided among the warriors who could take them home as domestic slaves or sell them into the local or transregional market. Captives (ምርኮኛ, *mərkoñña*) belonging to a group that was not allowed for S. (e.g., in northern Ethiopia Amhara and Təgrəñña) could be released by payment of a ransom. Those sold were mostly reduced to lifelong S., their children inheriting their status. Slaves could also serve as part of the dowry (s. Walker 1933:40). While in some cases slaves were passed on to an heir, others were "temporary slaves". They stayed with the person who had captured or bought them until his death and then regained freedom. A slaveholder could also manumit his slave arbitrarily or release him after he had bought himself off.

Besides the enslavement of war captives, i.e. of people from alien groups, there were various institutionalized forms of enslavement of persons from the same society. The punitive enslavement of criminals was common among many societies (e.g., Šäwa, cp. EgeClass 134; Kambaata, cp. BrKam 182; Käfa, cp. Bieber 1923: 37; Yäm, cp. VSAe III, 329; Oromo kingdoms, cp. AbPrince 83, 83 n. 3; Wälaytta and Yäm, cp. HabKön 274) and in some cases (e.g., Ǧimma) was even expanded over the convict's family. Especially the poor were in danger to be enslaved by their fellow countrymen. Debt bondage or obnoxiation, e.g., often took the form of temporary S. Furthermore, in some societies poor parents could sell their child, even when still unborn, into S. In case that they were incapable of paying tribute in kind they sometimes were forced to leave their children to the ruler. The king of Käfa could sell poor freemen as slaves (Amh.: *wərs*, lit., 'person whose property has been confiscated') in order to gain some income (e.g., Käfa, s. Bieber 1923: 37–40).

Most slaves in Ethiopia were kept as domestic slaves of ordinary peasants and as court slaves of the nobility or rulers. In some areas, however, slaves were also employed as mine workers or gold washers (e.g., in Beni Šangul). Female slaves, in general, made up the majority of the slave population. Being part of the commodities of trade caravans, slaves also regularly served as carriers of goods. The number of slaves was in proportion to the economic possibilities of their owner. As part of his possessions, they contributed to his prestige and served as a "reserve fund". In case a slave did not meet his master's expectations he could be sold to traders (PankSoc 241–45).

Domestic slaves were un-free maidens and menials who received food, shelter and cloths from their masters. They were part of the household and, as such, were considered as near relations. Some were allowed to marry and to erect their own shelter in the backyard. While enslaved men served in agriculture, female slaves carried the housework, including, e.g., fetching water and rearing children. Sexual exploitation of maidens by their masters was not uncommon (cp. PankSoc 241–45).

In highland Christian Ethiopia slave trade was forbidden for Christians but the buying and keeping was not. A slave could be baptized and afterwards was protected from resale by his godfather. A Christian slave was, in principle, accepted as witness or juror at court, unless his master was the accused. A master who had severely injured his slave was expected to set him free as a recompense (AbPrince 54; Walker 1933: 4, 74, 141).

Court slaves

Slave labour was a major pillar of the socio-economic system of any court, be it noble or royal. Female slaves spun cotton, carried water and firewood, grinded flour and prepared food or drinks such as ↗*ṭälla* and ↗*ṭäǧǧ*. Others were personal servants of members of the court or were made favourites or concubines by their master (cp. PankSoc 241–44).

Male slaves roughly fell into two categories, those who were engaged in different kinds of manual work and those who were employed in administrative and military tasks. Being outsiders deprived from any bonds with their original kin, slaves completely depended on their owner who, thus, became their exclusive object of loyalty. Accordingly, slaves, especially eunuchs (↗Castration), sometimes could reach administrative key positions. Moreover, the military was an important field where they could progress in position. At Ankobär, for example, in the middle of the 19th cent. the ca. 1,000 musketeers of the royal bodyguard predominantly consisted of slaves in most ranks (EgeClass 115–23).

In southern Ethiopia the slaves at the kings' courts often had highest administrative positions. In Wälaytta royal officers, slaves by their nominal status, served as majordomos and treasurers of the *kawa* ('king') and had the privilege to wear red braided cloth. According to Haberland, certain slaves followed the deceased king into his grave (HabKön 266f., 269). Also at the royal court of Käfa male slaves functioned as pages, guards and officers (Bieber 1923: 37–40).

Dirk Bustorf

The slavery question in politics

Abolition of S. became a subject only hesitantly addressed by Ethiopian leaders when it became a crucial factor in European international politics in the second half of the 19th cent.

The diplomatic envoy Henry ↗Salt, for example, reported regular slave raids against the "*↗šanqəlla*" in the Ethio–Sudanese border regions, considered as "a kind of sport" by the Christian highlanders (SalTrav 307). The metropolitan was blamed for having killed a slave, which led to a complaint against him by *däǧǧazmač* ↗Säbagadis of Təgray (RubActa I, 26f.). Such observations motivated later European envoys to raise the issue of S. with Ethiopian princes and rulers. *Däǧǧazmač* Kaśa (later *aṣe* ↗Tewodros II) was the first who, as part of his radical reforms, issued a proclamation in 1854 forbidding the export of slaves. Its effect was only minimal. Selling slaves to Christians, for example, was still permitted for some time. A proclamation against the trade of Christian slaves followed, ordering the amputation of a foot and a hand of any wrong-doer, as the *↗Fətḥä nägäśt* prohibited the enslavement of Christians (ch. XXXI; s. GueCopMen 600, details: 606ff.). Consequently, enslavement of non-Christian war victims was still legal (PankSoc 328; PerGov 219; GueCopMen 601).

Slaves were continuously used as means of paying tribute. For example, when *nəguś* ↗Mənilək II submitted to *aṣe* ↗Yoḥannəs IV in 1878, he agreed to pay an annual tribute including 500 slaves to the Emperor (Marcus 1995:53). Mənilək himself received great numbers of slaves from the south-east as tributes and became Ethiopia's "greatest slave entrepreneur" (ibid. 73). He also received a two thalers tax per slave from slave-markets in 1878 (GueCopMen 603). This was in contradiction to his own decree of 1875 against the slave-trade (text s. ibid. 602), and his letter to the king of Italy of 28 November 1878 in which he claimed to have liberated 25,000 slaves (Nosseir 1928:241). In 1884 Yoḥannəs IV signed a treaty with Great Britain in which he prohibited slave-trading (but not S. as such; s. GueCopMen 601, with reference to the original text). When Mənilək II ascended the throne in 1889, he prohibited S., exempting the enslavement of war captives (ibid. 602f.). Slave-trade, however, continued, and his governors and he himself continued to turn captives of war into slaves (especially from the south, e.g., from ↗Wälaytta in 1894; PerGov 219; GueCopMen 601ff.).

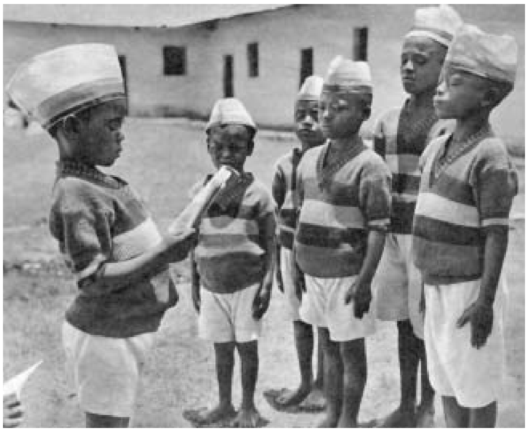

Fig. 2: Former slave boys at the school for liberated slaves in Addis Abäba, early 1930s; from Rikli 1935:27

Neighboring territories also implemented an abolition policy only late, as S. was one of the most important sources of income of governors and economic elites. Only starting from the 1870s slaves were consistently freed in Ottoman ↗Massawa, a major slave market. In ↗Eritrea, clandestine slave-trade was effectively stopped only after Italian colonization, but it still continued on a small scale in neighboring Anglo–Egyptian ↗Sudan and French Somaliland. The last slave caravan reached ↗Djibouti in 1929 (Fontrier 2003:218).

In Ethiopia Empress ↗Zäwditu reaffirmed her father's interdiction of slave-trade in 1918 (Nosseir 1928:241; GueCopMen 609). On 15 September 1923 *aṣe* ↗Ḫaylä Śəllase I issued a proclamation against S., followed by the law of 31 March 1924 abolishing the slave trade, but allowing the possession of slaves, in order to avoid alienating his followers, and an economic crisis (PerGov 224ff.; its full text s. ZerÉth; a supplement was issued in 1931, PerGov 227). Slave traders were threatened with the death penalty, which was, in very exceptional cases, imposed against some petty traders. Governors implicated in S. remained untouched, including the Emperor's own cousin, *däǧǧazmač* Tayyä Täklä Maryam of Benesso-Gurafarda, who maintained the country's principal slave market (PerGov 229, 330ff.). Another example is *šayḫ* ↗Ḫʷağalī (s. "Slave raiding in the 19th cent." above): Slaves occasionally fled from Ḫʷağalī's territory into the Sudan seeking liberation from S. (ibid. 327). Individual raiders, Amhara and Oromo, found protection and well-established markets also in Oromo provinces such as ↗Ǧimma until the early 1930s (ibid. 221, 229f.).

The abolition law was a condition for the admission of Ethiopia into the ↗League of Nations in 1923. Consequently, state institutions dealing with S. were established. One was the Office for the Abolition of S. of 1932, in Addis Abäba (in the building of today's ↗Holy Trinity Theological College), among whose responsibility was to dispose of freed slaves (PerGov 227f., 230). Freed "slave children" were put into a new school run by the *Fəqər ənna agälgəlot maḥbär* ('association for love and serving'), directed by *hakim* ↗Wärqənäh Ǝšäte, with ↗Märsəʾe Hazän as its secretary. Here they learned Amharic and European languages, mathematics etc., to be prepared for services for the modern state.

Resistance by "marginalized groups", victims of raids, occasionally led to armed conflicts. In 1932 a former slave led a revolt in the Šäwa–↗Gimira province, asking for abolition of S. He defeated the governor in 1934 and declared himself the future king in Addis Abäba (PerGov 329). When Italy prepared for conflict with Ethiopia, writers started to publish on S. in Ethiopia. This provided propaganda for the argument that Ethiopia was not "a civilized nation" as demanded by the League's charter, and therefore, by implication, did not enjoy the same rights as the other members. This seems to have weakened international support for Ethiopia, when the ↗Italian War broke out (1935–36). In October 1935 the commander de ↗Bono issued a decree in Asmära, freeing all slaves in Təgray with immediate effect, followed by a similar decree of April 1936 valid also for Amhara and Goǧǧam and extended later to all territories including Somalia (PerGov 232). After the effective occupation of Ethiopia, Italy claimed to have liberated 420,000 slaves, some of whom were placed into communal settlements (ibid. 221, 232). These decrees did not exclude forced labour (ibid. 233).

After Italy's defeat a new proclamation was issued in 1942 by Ḫaylä Śəllase, abolishing any form of slave-trade and the legal institution of S. itself. Offenders were punished by courts (PerGov 234f.). Many slaves then became servants. Serf-relationships between dominating and marginalized groups, however, continued especially in peripheral regions well into the 1970s (e.g., the "slave status" of the ↗Ṣällim Bet was only abolished by the TPLF), and, exceptionally, even until the 1990s, e.g., in the south-west. The special status of former slaves in diverse Ethiopian societies plays a role often until today; e.g., former slaves ("↗*Barya*") of ↗Betä Ǝsraʾel migrated together with them to Israel, but are usually still socially regarded as *barya*.

Wolbert Smidt

Sobat ↗Baro

Società Geografica Italiana

The S.G.I. was founded in Florence in 1867 with the aim of promoting "the progress of geographic science in any of its branches". Its original scope, however, was primarily political and it carried out a decisive role in buttressing the development of Italian colonialism, principally via exploratory activities.

The first African expedition of the S.G.I. was led in 1869 by Orazio ↗Antinori to the Eritrean plateau. In 1876, the Society, which in 1872 had relocated to Rome, invested enormous resources in another expedition under the leadership of Antinori to the equatorial lakes and south-western Ethiopia. Although it resulted in a substantial failure, the S.G.I. kept the scientific station of ↗Ləṭ Maräfiya, which also offered the opportunity to form in 1877 an Italian Committee of the International African Association.

In the 1880s, the expeditions organized by the S.G.I. proliferated and the missions led by Pietro ↗Antonelli, Federico Piano, Augusto Salimbeni (↗Salimbeni Expedition) and Vincenzo Ragazzi were sent to Ethiopia. In the 1890s, important missions reached Somaliland (↗Somalia) and the Benadir coast, thus provoking a mounting tension with ↗Mənilək II's government. The expeditions led by Vittorio ↗Bottego in 1892–93 to the course of the Juba (↗Ganaalee) and in 1895–97 to the ↗Omo and the Sobat (↗Baro) aimed at hindering Ethiopia's range of action and defining the zone of Italian influence within the Empire.

The Italian defeat at the battle of ↗ᶜAdwa in 1896 and the dramatic outcome of the second Bottego mission brought an end to the age of the great explorations in Italy. However, the Africanist vocation of the S.G.I. did not disappear and the expeditions resumed under the presidency of Antonino di San Giuliano. They were meant to provide intelligence to the Italian colonial administration in ↗Eritrea and ↗Somalia and help prepare the military expeditions in Tripolitania and Cirenaica. In 1908 the S.G.I. sponsored Alfonso Tancredi and Maurizio Rava's mission to Lake ↗Ṭana.

The creation of the "Ministero delle Colonie" in 1912, by means of which the Italian government came to control colonial policy, deprived the S.G.I. of authority in its traditional duties. However, until the collapse of the Italian colonies in 1947 Africa did not disappear from its agenda. During ↗Mussolini's regime, it participated in projects to study Libya and, after 1936, in Ethiopia, where it played only a marginal role.

During the post-war period, the S.G.I. favoured a nostalgic recall of Italy's former present in Africa. More recently, it has resumed its activities as a documentation and research centre. At its headquarters at the Palazzetto Mattei in Villa Celimontana, Rome, the S.G.I. hosts an important library with over 300,000 volumes, 50,000 modern maps and 150,000 images. It also possesses a South Arabian stela acquired in Egypt.

Soddo

Soddo language

S. (self-name: *Kəstanəñña*, lit. 'Christian language', also known as Aymällät) is an ↗Ethio-Semitic language belonging to the so-called *n*-group of Outer South Ethiopic. It is spoken by ca. 250,000 speakers (1998 census, s. Gordon 2005:116) in the north-eastern part of the ↗Gurage region, between the rivers Awaš in the north and Mäqi in the south; there are also some communities north of the Awaš, including the community in Addis Abäba (for location s. map for Gurage, EAE 2, 927). S., ↗Gogot and ↗Muḫər are referred to as Northern Gurage (Hetzron 1968), which is a typological rather than genetic unit: common features (in the first place, employment of Main Verb Markers *-u*, *-n* and *-t*) are, as Hetzron later states, archaisms or the result of convergence (1977:22ff.). The first materials on S. were collected by ↗Mayer (1878) and analysed by Praetorius (1879).

S. is not used as a language of education or administration. Published texts in S. include those collected by Hetzron (1977:145–64) and Leslau (1968), in transcription, as well as those by Täsfa Gäbräyäs (1994:155–200), in Ethiopic ↗script.

The consonantal phonemes of S. are: labials: *b*, *f*, *m*, *w*; dentals: *d*, *t*, *ṭ*, *z*, *s*, *n*, *l*, *r*; prepalatals: *ž*, *š*, *ǧ*, *č*, *č̣*, *ñ*, *y*; velars: *g*, *k*, *q*, *gʷ*, *kʷ*, *qʷ*; laryngeals: *h*. Palatalized velars (*gʸ*, *kʸ*, *qʸ*) occur sporadically. The vowel phonemes are: *a*, *ä*, *e*, *ə*, *i*, *o*, *u*.

There are two genders: feminine and masculine; gender is not marked on nouns but is indicated by agreement only. Singular number is unmarked; plural is expressed by the suffix *-ačč* or *-očč*, or by reduplication of the last radical (according to the pattern C*a*C*ä*). The definite article is *-i*; indefiniteness is unmarked.

A determined direct object is marked by prefixed *yä-* or *nä-* (which are also markers of indirect object); an undetermined direct object is unmarked.

Independent personal pronouns are *ädi* 'I', *dähä* 'you (sg. masc.)', *däš* 'you (sg. fem.)', *kʷa* 'he', *kʸa* 'she', *əñña* 'we', *dähəm* 'you (pl. masc.)', *dähma* 'you (pl. fem.)', *kənnäm* 'they (masc.)', *kənnäma* 'they (fem.)'. Pronominal possessors and objects are expressed by suffixes attached to nouns and verbs, resp. The applicative suffixes (called mediate in Goldenberg 1968) are object suffixes preceded by applicative markers *-l-* (benefactive) and *-b-* (malefactive, locative, instrumental, temporal). Like other Outer South Ethiopic languages, S. has developed two allomorphic sets of object and applicative suffixes, labelled as "light" and "heavy" (for applicative suffixes a third, "half-heavy" set exists). The distribution of the allomorphs depends on the final affix of the verbal stem they are attached to.

Demonstratives for near and far objects, *zi* and *za* resp., do not inflect for number or gender.

Examples of interrogatives are *ma* 'who', *yäma* 'whose/for whom', *mən* 'what', *yämən* 'why', *yitta, yittat* 'which', *yittani* 'which one'.

There are three basic verbal types of simplex stems distinguished by the vowel following the first root-consonant in the perfect: type *säbbäro*, type *tikkälo* and type *č̣affäro*. From these, various derived stems can be formed: by reduplication of the second consonant (expressing intensive, iterative and other related meanings), by prefixes *tä-* (passive), *a-* and *at-* (different types of causative). In addition, there is a large class of composite verbs, consisting of an invariable element encoding the semantics of the construction and of the inflected auxiliary *balo* 'say'.

The verb is inflected for person, number and gender; characteristic of S. is the employment of an impersonal form (with unspecified subject). Basic verbal categories are perfect (*säbbäro* 'he broke'), imperfect (*yəsäbru*), jussive (*yäsbər*), and imperative (*səbär*). Analytic constructions involving some of these forms and the auxiliary verb *näbbär* can express various aspects.

In the perfect and imperfect, two forms are distinguished: that of the main clause and that of the subordinate clause. The main form is indicated by a set of suffixes (so called Main Verb Markers): *yəbädr-u* 'he advances' (main form) vs. *yəbädər* (subordinate); *säffäro* (< **säffärä+u*) 'he measured' (main) vs. *säffärä* (subordinate).

The negative marker for the perfect is prefix *al-*: *al-säfärä* 'he did not measure'. In the imperfect, two negative markers are employed: *t-* for main clause verbs and *a-* for subordinate and for jussive, e.g., *tiqärs* 'he does not begin' (main) vs. *ayqärs* (subordinate). In negative forms, Main Verb Markers are omitted.

A dependent verbal form (called converb or gerund), used to express an event preceding that of the main verb, is formed by the suffix *-m* (according to Hetzron 1977: 95, also *-nna*) attached to an inflected verb in the perfect, imperfect or jussive/imperative: *täsbässäbmu-m alläfmun* 'They gathered together and went out'. Forms of the perfect with suffix *-m* can be used in the main clause expressing a completed action: *bägäbäya ǧäba säb ažžähu-m* 'I have seen many people at the market'.

The infinitive is formed from the jussive base with a prefixed *wä-* or (*w*)*o-*: (*w*)*osfər* 'to measure'.

The copula is formed of the element (-)*n-* with historical suffix pronouns: 3rd pers. sg. masc. -(*ə*)*n*, 3rd pers. sg. fem. *-na*, 2nd pers. sg. masc. *nähä* etc.: *zämmiddi nähä* 'You are my brother'. After personal and demonstrative pronouns the copula is either replaced (mostly in non-final positions) or preceded by *-tt-*: *kənnämu-ttə-näm* 'It is they'. The copula normally occupies final position, but may also be placed immediately after the emphasized constituent, even between a noun and possessive suffix: *ge-ddi-n* 'It is my house' vs. *ge-nnə-ddi* 'It is my *house*'. Goldenberg (1996) postulates a third copula, expressed by a suffixed *-u*.

Word order is Subject–Object–Verb: *aškər-i*$_1$ *guns*$_2$ *bällaw*$_3$ 'The servant$_1$ ate$_3$ bread$_2$'. Modifiers precede the head noun: *maläq-i*$_1$ *ge*$_2$ 'the big$_1$ house$_2$'.

The ten-word list is: *att/quna* 'one', *kitt* 'two', *sost* 'three', *äsat* 'fire', *yiga* 'water', *č̣äbär/yimər* 'sun', *därraqqa* 'moon', *däm* 'blood', *alämät* 'tongue', *sənn* 'tooth'.

Maria Bulakh

Soddo ethnography

S. (ሶዶ) was the name of a district of ↗Hayqočč-Butağira province (administrative centre: Buᵓi) in the area south of River Awaš adjoining the ↗Dobbi and ↗Mäsqan. Today, the S. *wäräda* belongs to the ↗Gurage Zone of the Southern Nations, Nationalities and Peoples Region; part

A group of Soddo Gurage, having a break in the shade; photo 1934–35, courtesy of Frobenius Institut, Frankfurt am Main (13-KB046-12)

of the old district was assigned to Oromiyaa. The Gurage of S. are also called Kəstane or Aymällät. The term Kəstane reflects their early Orthodox Christian identity (s., e.g., ↗Mədrä Käbd). Another designation of the S. is **አምስቱ፡ ጎርዳና** (*Amməstu Gordänna*, 'the Five Gordanna'), after the sturdy 'wall' (*gordänna*) of a Kəstane house. The S. share features of their material culture, technology and social structure with other Gurage groups. Like them they belong to the ↗*ənsät* cultural complex. Their political organization is generally described as acephalous, although this has not ruled out the emergence of leaders bearing a hierarchy of titles, such as ↗*abägaz*, ↗*azmač*, and ↗*nəguś*.

Territoriality is organized by 22 to 24 *agär* (lit., 'country') which provide the main focus of identification. The most important *agär* are: Adele, Amawte, Angatge, Aratge, Ašgadye, Aygado, Aymällät, Damu, Daragot, Ǝndabuyya, Gayyat, Kanz, Melko, Nuranna, Wačo, Wagaram, Zamute. The *agär* are subdivided into *ṭəb* ('clan'). At the village level, the Kəstane are organized into *sabuññat*, a unit of administration with politico-juridical functions. Transposed into an urban setting, the *sabuññat* evolved into self-help and funeral associations (↗*Ǝddər*).

The pan-Kəstane juridical system is called *Gordanna sera* (↗*Seera*). It is also known as **የንጀሪ፡ ሴራ** (*Yänǧäri sera*) after Ǝnǧäri, a place in Nuranna *agär* where the laws were initially agreed upon. Thus, elders from Nuranna were generally recognized as interpreters of ↗customary law. The *sera* served as a civil and criminal code, with provisions for ↗marriage and divorce, homicide, arson, and land use (including the commons and roads). The sanctions set down by these laws included **ዩካ** (*yekka*), a punitive visitation by a progressively rising number of "guests" for whom the malefactor had to prepare a lavish feast. Sanctions included confiscation of property, ostracism, and, in modern times, monetary fines.

The incorporation of the Kəstane into the Ethiopian state system in the last quarter of the 19th cent. diminished the potency of the *sera*. After the change of regime in 1991, a revitalization of Kəstane culture and language, spearheaded largely by urban Kəstane, could be observed. It resulted in the codification of ↗customary law and, in 1994, the establishment of the S. Gordanna *šängo* ('assembly') in order to enforce and promote customary laws and cultural practices as far as they were not considered as "harmful traditional practices".

Gurage and Oromo relations in the S. area were characterized by continuous warfare, particularly in the 19th cent. At the outset, the Kəstane appeared to have had the upper hand. In time, however, the Oromo, represented by the sub-groups of Abado, Malima, Dula, Geto and Ǧidda, became ascendant, breaking the Gurage defences and inflicting considerable damage. Kəstane oral informants recall a particular encounter when the swift Oromo cavalry overwhelmed the ↗*näfṭäñña* that the Kəstane leader, Oda Lelisso, had managed to secure from *nəguś* ↗Śahlä Śəllase of Šäwa. This history of warfare gave rise to the *gota* ('heroes'), whose deeds continue to be recited in Kəstane oral tradition. The most famous among these were Gačo Zage, Roge Baruda, Yadutu Dugda and Oda's brother Buli Lelisso.

One result of the 19th cent. wars was the ↗migration of the Kəstane to Geǧǧa (ca. 30 kn southwest of the capital) and Adᵓa (near Däbrä Zäyt) and, eventually, to major towns including Addis Abäba. Although the Kəstane settled in different quarters (*säfär*) of the capital, some quarters came to be particularly associated with them, such as Geǧǧa, Abba Koran, Gola, Näfṭäñña Säfär and ↗Addis Kätäma (Märkato). Above all, Märkato became a Kəstane preserve, with particular trades being monopolized by particular clans or *agär*.

By the 20th cent., however, Kəstane-Oromo acrimony had subsided considerably and the two peoples have come to be almost indistinguishable through a process of intermarriage. For instance, the Geto, originally Oromo, became a classical case of fused Oromo-Kəstane identity. This harmonious relationship was given a jolt subsequent to the change of regime in 1991, when sections of the Kəstane broke off claiming that they were Oromo. Thus the community split into two sections, S. Gordanna (Kəstane) and S. Ǧidda (Oromo). The drawing of the boundary between the Kəstane and Oromo portions of the territory triggered considerable tension and controversy.

Soddo

S. (or Soddu; 2,100 m A.S.L.) is the historical, political and economic capital of ↗Wälaytta (s. also ↗Wälamo provice). Founded in 1894, after the imperial conquest, only ten kilometres from Dälbo, the former palace of the kings of the Wälaytta, S. was built as a ↗*kätäma* and signified the end of the Wälaytta political entity. Given its position, S. was also expected to capture the commercial flows passing through Dälbo, in order to avoid any revival of the Wälaytta kingdom. The town was built at a higher altitude on the lower slope of Mount Damota and hosted the Orthodox churches of Giyorgis, Täklä Haymanot, Yoḥannəs and Maryam and a ↗*gəbbi* garrison of the emperor's representatives. The first of these was the Wälaytta elder *abägaz* Baša Kurfa (Yacob Heliso 1994: 44).

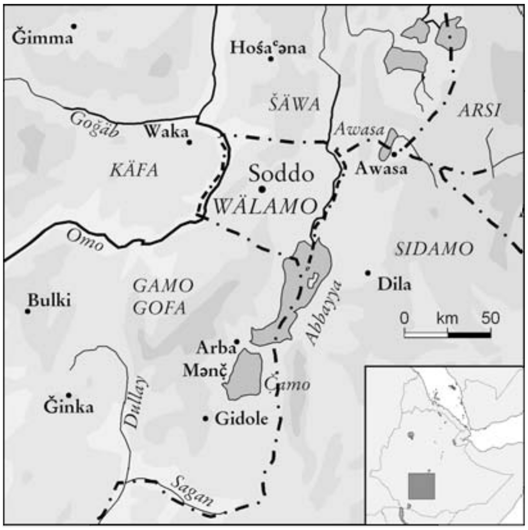
For most of the 20th cent., S. remained the extension of the central Ethiopian state in the Wälaytta region. Populated mostly by ↗Amharic speakers until the 1970s, the town chiefly depended on its administrative role, and, except for a small market in the Arada quarter, had only few relations with the rural hinterland.

In Italian times (1936–41) a large garrison was stationed in the town. It then also attracted foreign merchants (Greeks, Arabs, Indians).

In 1945 the town became a separate municipality (Yacob Heliso 1994: 49). In the 1950s and 60s the development of education and health care in S. was boosted by the ↗Sudan Interior Mission, which had first arrived in Wälaytta in 1927. The town saw major investment and development efforts under the administration of governor *däǧǧazmač* Wäldä Sämayat Gäbräwäld (1963–73).

Around 1970, the successful agricultural development program of the Wollaita Agricultural Development Unit (WADU), with its head office in S., allowed the growth of infrastructure and stimulated private agricultural investment and the increase of exchanges between the town and its environs. People from the countryside also began to settle in S. and many others attended its market place. At the centre of a rich agricultural area, S. thus improved its control over the countryside and its relations with neighbouring areas by developing its infrastructure, including a daily ↗Ethiopian Airlines flight to ↗Addis Abäba.

With the end of WADU in 1984, the town declined but retained its administrative functions and some other services; in this way it secured a level of economic development. S. and its 76,780 inhabitants (CSA 2008: 59) have access to more



services in comparison to those living in other towns of the North Omo area. Hotels, clinics and merchants attract people from North Omo, Dawro, ↗Gamo and Wälaytta. There are opportunities for (informal) urban employment, but the number of jobless is high.

In 2000, after violent incidents over language policy, S., until then the capital of the North Omo Zone, reaffirmed its "Wälaytta identity" when Wälaytta obtained the administrative status of a Zone. In expectation of an increased budget, the authorities in Wälaytta Zone tried to promote economic development and encourage industrial take-off. In 2003, about 45 % of the tax revenue of the Wälaytta Zone was generated in S. A university college was built in the town in 2007–08.

Sabine Planel – Jon G. Abbink

Söderström, Erik

S. (b. 26 September 1890, d. 10 November 1944) was a Swedish medical doctor and missionary active in Ethiopia in the 1920s. He started his studies at the Johannelund Missionary Institute, became a medical doctor in Edinburgh in 1916, and in the same year specialized in tropical diseases in Liverpool. After practicing in Leicester and Chesterfield, he went to ↗Addis Abäba as an ↗Evangeliska Fosterland Stiftelsen (EFS) missionary in January 1920, accompanied by his wife Gusti, herself an experienced missionary and nurse. They reached Addis Abäba only two weeks after the death of Karl Cederqvist who had requested missionary support from ↗Sweden.

As the ↗Oromo were the desired target of the EFS, S. moved to ↗Wälläga and worked at the American mission in ↗Sayyo for some months. In February 1922 he moved to ↗Naqamtee, where ↗Onesimus Näsib introduced him to the officials. The mission was given a beautiful hill as its site. A few other Swedes joined him, and, at Christmas 1924 a little church was inaugurated at Christmas 1924. S. was most interested in building a hospital, and the regent *ras* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I) supported this project and provided funding. However, it took four years (1927–31) to complete the building of the hospital compound. Despite its slow start, this hospital became an important centre of Swedish Evangelical work for several decades.

After the Italian occupation (↗Italian war, 1935–36), S. had to leave like the other expatriates. He moved to South Africa where Sweden also had an important mission field. Travelling through Africa, S. returned to Naqamtee in 1942, several years before the other Swedish missionaries came back to Ethiopia. His second stay in Ethiopia was cut short, however, when he died of typhus.

Bernhard Lindahl

Soleillet, Paul

S. (b. 29 April 1842, Nimes, d. 10 September 1886, Aden) was a French traveller and trader. He began his career as a civil servant and from 1865 was based in Algeria. In 1882 he founded, in association with Albert Godin, the Société des Factoreries Françaises with the aim of investing in ↗Obock.

S. took possession of the "Seven Brothers" islands (Sawabi) and of Sāgállu in the name of ↗France, from where, however, he did not possess any official mandate. His project was to dig a canal between the ↗Awaš River to the Gubbat il Čarab (Bay of ↗Tağūra), according to an old idea of Christovão de ↗Gama. In 1884, he was also the first to support the construction of a ↗railway through Ethiopia. Soon, however, S. parted company with Godin and filed his company for bankruptcy. To earn his living he then began to trade in weapons with ↗Mənilək II.

One of the last associates of Arthur ↗Rimbaud, S. died isolated in Aden. He was member of the Société de Géographie de Paris and founder of the Société de Géographie de Rouen. S. was also a very prolific writer, in particular on Ethiopia, being more interested in producing popularizing than erudite accounts.

Lukian Prijac

Solomon

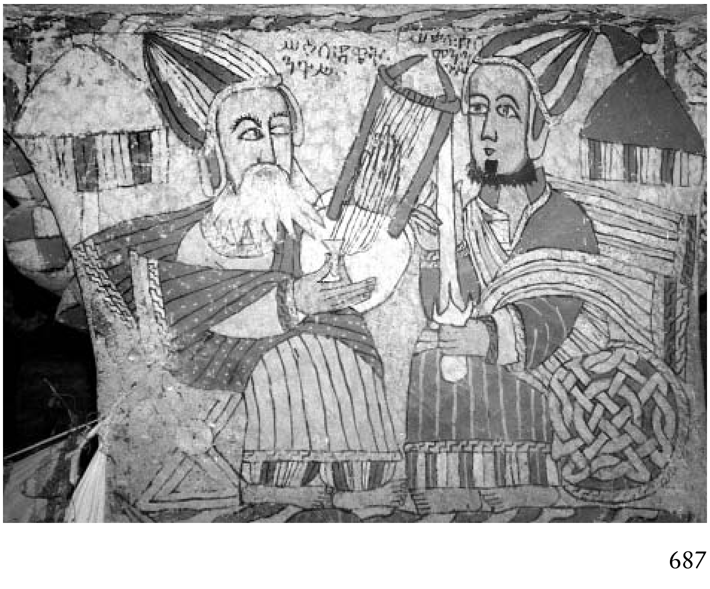
King S. (Gə^{c}əz: **ሰሎሞን**, Sälomon), the son and heir of the Biblical King David, figures prominently in Ethiopian ↗Gə^{c}əz literature. He is best known as a major protagonist in the ↗*Kəbrä nägäśt*, the Legend of S. and the Queen of Sheba (↗Makədda). According to this legend (preserved in various forms), S. was the progenitor of the so–called ↗Solomonic dynasty including the kings of ↗Aksum and the kings who ruled Ethiopia from 1270 (cp. ↗Yəkunno Amlak).

S. is credited with personally writing five Biblical books (cp. ↗Wisdom books), which in the Ethiopian tradition are: *Tägśaṣä Sälomon* (its chs. 1–4 corresponding to chs. 25–28 of the Book of Proverbs [Prov] of the Hebrew O.T., and ch. 5 to chs. 29 and 31:10–21); *Məssale* (the rest of the Book of Proverbs); *Qalä Mäkbəb* (Ecc); *Mäḥaləyä mäḥaləy* (Song); *Ṭəbäbä Sälomon* (Wis).

S. is credited with having sent most of the Biblical books to Ethiopia with ↗Mənəlik I. This is also supposed to be the time when the ↗*Märbäbtä Sälomon* was composed.

As this example indicates, in Ethiopia, as in most of the Oriental world, S. is also the archetypal wise man whom healers and magicians seek to emulate. According to 1 Kg 4:30, S. "excelled in the knowledge of all the children of the east country and all the wisdom of Egypt". In many post-Biblical traditions this came to be understood that S. possessed secret knowledge which gave him power over ↗demons (in particular, for subduing them to building his palace, cp. BezKebr 18 [text]). Joseph ben Gorion (cp. ↗*Zena Ayhud*) already mentions the art of healing by ↗magic means which was given to S. by God (*Judean Antiquities* 8, 45). The most important apocryphal work which focuses on S. as exorcist and magician is the so–called Greek Testament of S. This body of magic lore had reached Ethiopia probably via Egypt.

In this context, S. often appears as the patron magician in the use of magical names, ↗*asmat* (cf. mss. Paris, BN Griaule 104, 148, 155 etc.) and prayers against demons (BN Griaule 158, 202 etc.). The Archangel Michael is said to have given S. a ring bearing the seal of God. S. used it to summon



King David (left), playing the lyre and King Solomon (right), holding the sword, mural, 16th cent., Yädəbba Maryam church, Wällo; photo 2004, courtesy of Michael Gervers demons and to force them to build a labyrinth palace where he housed his wives and concubines. This seal appears frequently in Ethiopian ↗magic scrolls in the form of an eight–pointed star with a face in its centre. Finally, the name of S. in itself seems to have been magic (explained in the *Kəbrä nägäśt* as meaning 'Christ' in Hebrew, BezKebr 63 [text]) and transformed into a powerful magic device (cp. Hammerschmidt 1987: 161ff.).

The figure of S. commonly appears among the pictures which accompany religious texts. There are non–figurative pictures which are connected to S., such as *Mäṣḥetä Sälomon* ('The Mirror of Solomon'; Euringer 1937: ill.); the *Maḫtämä Sälomon* ('The Seal of Solomon'; Mercier 1997: 41, ill.); *Märgäf zäsälomon* ('The Fringe of S.', Mercier 1977:29, ill. 15) and *Märbäbtä Sälomon*. Besides, there are representations of S. as judge (narrative scene referring to the "judgement of S.", 1 Kg 3); S. among Biblical kings; S. with David; S. battling with the "king of demons"; S. on the throne holding a sword, his attribute (frontispiece to the Song of Songs, in the ↗Psalter).

Steven Kaplan

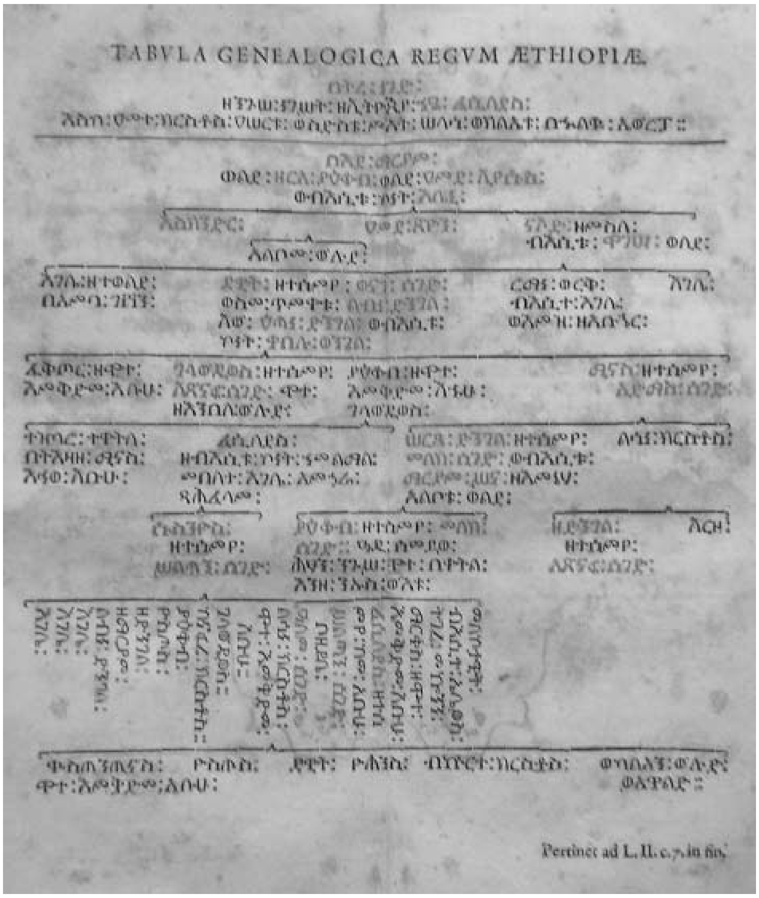
Solomonic dynasty

The term "S.d." has been coined by modern historians and designates the Ethiopian Christian dynasty which took power in the 13th cent. The rulers of Ethiopia, until the downfall were traditionally believed to be descendants of ↗Solomon, King of Israel, and ↗Makədda, the Queen of Sheba (cp. ch. 2 of Ethiopia's ↗Constitution of 1955), which made them even remote relatives of Jesus himself (cp. ↗Kingship, divine). The legendary *aṣe* ↗Mənilək I, the alleged son of King ↗Solomon and Makədda, would have been the first in a line of Ethiopian rulers which stretched to the reign of *aṣe* ↗Ḫaylä Śəllase I. Ethiopian traditional chronology, however, does not place Mənilək I in the 10th cent. B.C. in which he should have lived if he was a son of Solomon.

The classic formulation of Solomonic descent is found in the ↗*Kəbrä nägäśt*, which is generally believed to date in more or less its present form to the 14th cent. However, it is important to emphasize that elements of this foundation legend may predate this text. Certainly, the ideas of Israelite descent and that Ethiopians possess the Ark of the Covenant both predate the *Kəbrä nägäśt* as can be seen from the testimony of ↗Abu Ṣāliḥ, who says that the rulers of Ethiopia were "of the family of Moses and Aaron" (Evetts 1895: 288). Thus the tradition of Israelite descent was not necessarily connected to the founding legend of the S.d. The story of the restoration of the S.d. is also recounted in the more recent ↗*Bəᶜəlä nägäśt*.

According to the *Kəbrä nägäśt*, members of the S.d. ruled Ethiopia from the time of Mənilək I. Other sources relate how they were overthrown by the "Jewish" Queen Gudit (↗Ǝsato). Ethiopia was then ruled by kings of the ↗Zagʷe dynasty, who, while viewed in retrospect as saints, were also considered non-Israelite usurpers, overthrown in ca. 1270 by ↗Yəkunno Amlak. Later, Ethiopian royal historiography, which depended on the rulers of the S.d., depicts Yəkunno Amlak as a descendant of *aṣe* ↗Dəlnaᶜod, the last Aksumite king (cp. ↗Aksum). Thus his rise to power was depicted as the "restoration" of the S.d. This claim was repeated over the years in many royal chronicles. There is, however, no evidence that any Aksumite ruler ever claimed Solomonic descent (there is, e.g., no allusion to Solomon or Israel in any royal Aksumite ↗inscription), nor that there was in fact a continuous blood line from the kings of Aksum to Yəkunno Amlak (cp. BrakKirche 174–77).

Yəkunno Amlak is generally considered by scholars to have been the founder of an entirely new dynasty (TadTChurch 66f.), which took over and kept the Solomonic ideology as expressed in the *Kəbrä nägäśt*. In keeping with this royal ideology, several of the outstanding rulers of this period had names with strong biblical Israelite connotations including ↗ᶜAmdä Ṣəyon (lit. 'Pillar of Zion') and ↗Zärᵓa Yaᶜəqob (lit. 'Seed of Jacob'). Especially interesting in this context is *aṣe*



TABVLA GENEALOGICA REGVM ÆTHIOPIÆ.
Pertinet ad L. II. c. 7. in fin.

First printed genealogy of the Solomonic dynasty, 17th cent.: from Bäʾədä Maryam to Fasilädäs; from LudHist lib. II, cp. 8

↗Dawit II, counted second after Dawit "I", the father of Solomon. In traditional Ethiopian historical writing and oral historiography the members of the S.d. are often called *Ǝsraʾelawiyan* (lit. 'Israelites'), Däqqä Ǝsraʾel ('Children of Israel'), even ↗Betä Ǝsraʾel ('House of Israel'), and similar, to express their relationship with the kings of the biblical Israel, and to stress that they are the true and legitimate descendants of those kings (also thanks to the presence of the ↗Ark of the Covenant in Aksum; they and their people thus representing *verus Israel* in Ethiopia).

Royal descent was not always from father to son, but to almost anyone with the Solomonic family, although usually but not necessarily by male descent. Of course, this meant that there were large numbers of claimants and succession struggles were common (Taddesse Tamrat in PICES 4, vol. 1; RubTew 18f.). From the 13th cent. until the Muslim conquest of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, the problem of rival claimants to the throne within the S.d. was solved by confining potential heirs to the "royal prison" of ↗Amba Gəšän. In the 17th cent., with the rise to power of *aṣe* ↗Susənyos and his son ↗Fasilädäs a clear division between the Šäwan and Gondäre branches of the S.d. also emerged.

An important testimony to the tenacity of the belief in the S.d. is the fact that even in the ↗*Zämänä mäsafənt*, when the legitimate rulers were little more than puppets of the ruling nobles, they were not replaced by non-Solomonic emperors. Thus the ideal of rule by a member of the S.d. was retained even if effective power of such rulers was virtually non-existent. With the restoration of a centralist power by *aṣe* ↗Tewodros II in 1855, who claimed Solomonic descent through a sideline (put into doubt by many contemporaries), the divisive nature of the claim to be a member of the S.d. arose again, as his rivals, the young Mənilək of Šäwa (later *aṣe* ↗Mənilək II), Gobäze Gäbrä Mädḫən (later *aṣe* ↗Täkla Giyorgis II) and later, in 1867, Kaśa Mərč̣a (later *aṣe* ↗Yoḥannəs IV) all made claims to connections with the S.d.

It is important to note that the idea of Solomonic descent was part of a wider network of assocations which played a decisive role in Ethiopian politics and in church state relations. Members of the S.d. were keepers and defenders of the true faith and were vital patrons of the ↗Ethiopian Orthodox Täwaḥədo Church. A legitimate king had to be, not only a member of the S.d., but also a Christian.

However, the S.d. was not without its critics. The rulers often clashed with monks critical of their behavior, who believed that even the ruler was subject to Christian norms. Most pointedly, *abunä* ↗Ǝsṭifanos specifically challenged Zärʾa

Yaᶜəqob stating that "he respected the King much less for being an Israelite than for being a Christian King" (Taddesse Tamrat 1966: 108).

Several ↗Agäw groups have also developed elaborate traditions. These not only claim that their first ancestor was a grandson of King David of Israel, but impressive genealogies have been constructed deriving some of their ancestor-heroes from important figures of Ethiopia's S.d. (Taddesse Tamrat 1988: 11).

Although the S.d. cannot be convincingly traced to the Aksumite period, many of the rituals and symbols which characterized the ↗monarchy (s. EAE vol. 5) from the late 13th cent. onward probably have their origins in this ancient period. These include special rituals of enthronement and symbols of authority. The ↗lion, and more specifically the Lion of Judah, is used as a symbol of the Ethiopian monarchy at least from the time of *aṣe* ↗Minas (Esteves Pereira 1888: 30 [text]). Over the course of centuries it was elaborated. In a royal ↗seal from the mid-18th cent., a crowned Lion appears facing right with a large cross and the motto in Arabic which identifies Sulṭān Sagad [i.e., *aṣe* ↗Iyasu I] as a "descendant of Solomon, son of David" (Pankhurst in PICES 6, 406f.; s. also LudHist lib. II, ch. 3, §§27-28). The central feature in the Mənilək II Coat of Arms is the Solomonic throne, on which is inscribed the Star of the House of David (↗State symbols).

Although the overthrow of Ḫaylä Śəllase I in 1974 put an end to effective rule of Ethiopia by members of the S.d., there are groups which still view his descendants (or other members of the S.d., such as descendants of *ləǧ* ↗Iyasu) as the legitimate rulers of the country and call for their restoration to power as either as a constitutional monarch or as a mere figurehead.

Solomoon Daaimo

S.D. (b. 1944, Gimbičču district, Kämbata province, d. 15 July 2009, Addis Abäba) was an Ethiopian research assistant of numerous foreign anthropologists, geographers and historians. He was a member of the originally ↗Kambaata-speaking ↗Dubamo group who was gradually integrated by the Sooro-↗Hadiyya from the 19th cent. onwards. His language skills in Hadiyya, Kambaata, which he was able to master like most of the Dubamo, as well as Amharic and English prepared him well for his work as an excellent interpreter.

S.D. was brought up in the living conditions of peasants and preserved a deep-rooted knowledge of as well as sympathy for the rural traditions of his descent group. After the visit of a primary school, where he learned Amharic, he moved to the Adventist secondary school near ↗Šašämane. He left the school after grade ten and was hired as interpreter by the research team of the German ↗Frobenius Institute in September 1972. Later he completed his education up to grade twelve.

At first S.D. worked with Siegfried Seyfarth among the Hadiyya groups of Leemo and Baadawwaaččo until April 1973 and then joined the multi-sited fieldwork of Ulrich Braukämper among the Hadiyya, Kambaata, ↗Gurage, ↗Qabeena and ↗Arsi-Oromo until August of the same year. After Braukämper had changed his research area to Harärge and ↗Sidaama, S.D. was employed by the ethnologist Helmut ↗Straube for half a year of fieldwork in ↗Burği. In this context he also worked with Hermann Amborn. Later in 1974, S.D. accompanied Eike ↗Haberland on his research among the ↗Dizi (Mağı) in Käfa province. He then worked with the German geographer Volker ↗Stitz in various regions of central Ethiopia. After Stitz had died in an accident on Lake Ṭana in 1975, S.D. independently collected information particularly on genealogical questions for Haberland, Straube and Braukämper in order to fill gaps in their materials.

In the same year S.D. was charged by the authorities of the *Därg* regime (↗Provisional Military Administrative Council) of having hosted friends in Kämbata *awrağğa* who allegedly belonged to the left-wing opposition of the government. For eight years he was then kept in custody as a political prisoner in Addis Abäba. When he was released in 1983, his health condition was precarious and he never recovered completely. During the rest of the *Därg* period his contact with foreign researchers was reduced to some personal meetings during conferences at Addis Abäba and a minimum of written correspondence.

In December 1994 Braukämper resumed the cooperation of research with him by a common trip to ↗Hossaᶜəna. In 1999/2000 S.D. worked as research assistant of Ulrich Braukämper, Alke Dohrmann and Dirk Bustorf in Hadiyya zone on topics of traditional culture and economy. Another campaign of fieldwork in which he cooperated with Braukämper and Cathrin Horstmann from 2004 onwards focused on the consequences of villagization and resettlement in Hadiyyaland since the 1980s. S.D. maintained contact with the above mentioned researchers by steady correspondence and he considerably contributed to their work by providing valuable data which he had investigated independently by scholarly methods in various parts of central-southern Ethiopia.

Ṣomä dəggʷa

The Ṣ.d. (ጾመ፡ ድጓ) is one of the five books of the Divine Office, along with the ↗*Dəggʷa*, ↗*Məᶜəraf*, ↗*Zəmmare* and ↗*Mäwaśəᶜt*. It contains hymns, troparia and antiphons for obligatory daily use during the liturgically intensive period of ↗Lent. Together with the *Məᶜəraf* of Lent, it is used in the Liturgy of the Hours, both on ferial days and Sundays (cp. *Mäṣḥafä* ↗*säᶜatat*).

Historically, the S.d. is a part of the *Dəggʷa*, and its parts (*arʾəst*) are the same as for the rest of the *Dəggʷa* (cp. HabUff 190–98). The Ṣ.d. goes from the beginning of Lent to Easter (↗*Fasika*). It also includes chants for the liturgical ↗feasts that may fall within Lent, such as the Finding of the True Cross (↗*Mäsqäl*) and the Incarnation (*Təsbəʾət*), 10 and 29 *Mäggabit*, respectively (↗Calendar).

The omission of the Ṣ.d. portion from the regular *Dəggʷa* can already be observed as early as the 17th cent.; the *Astämḥəro* season became separated about the same time. Examples of manuscripts that include complete chants for the whole season of the Lent are EMML no. 4449 (18th cent.), EMML no. 4443 (1872/73), EMML no. 4457 (18th cent.); only complete Ṣ.d., EMML no. 4458 (19th cent.). Traditional scholars ascribe the composition of the chants, as with other ↗hymns, to St. ↗Yared. Some believe that the separation of the Ṣ.d. from the *Dəggʷa* was made during Yared's lifetime by his two disciples Sawiros and Sandros. Another more sustainable opinion is that the separation happened under the leadership of *abba* ↗Giyorgis of Sägla/Gasəč̣č̣a by the scholars of two centres of *Dəggʷa* learning,

↗Däbrä Ǝgziʾabəḥer and ↗Däbrä Nägʷädgʷad, and was spread during the time of *aṣe* ↗Zärʾa Yaʿəqob.

Nearly all Sundays of the Ṣ.d. draw their name either from the first words of antiphons or hymns of antiphonaries, e.g., the first Sunday's first antiphon, *Zäwärädä* ('the one who descended', also called *Muse-ni*), *Zä-qəddəst* (2nd Sunday/ week) or from the Gospel passage read on the specific Sunday, e.g., *Zäməkʷərab* (3rd Sunday/ week: Jn 2:12–25), *Zä-mäṣagwəʾ* (4th Sunday/ week: Lk 21:12–19), *Däbrä Zäyt* (5th Sunday/ week, also *mänfäqä ṣom* or *əkkulä ṣom*, 'halfway through the Lent': Mt 24:1–35), *Gäbrə Ḫer* (6th Sunday/week: Mt 25:14–30), *Niqodemos* (7th Sunday/week: Jn 3:1–11). In earlier collections, however, the Sundays are simply referred to by their ordinal numbers (EMML nos. 1763–42, 1745, 1747, 1751–53, 1756).

The Ṣ.d. is considered a programme of spiritual growth during the fasting period. The topics stressed are fasting and love for one's neighbour. The fasting is defined as the "mother of all [good] deeds" (*əmmä kʷəllu məgbarat*), whilst the stomach should fast not only from meat and milk products, but also from bread and water (Ləśśanä Wärq Gäbrä Giyorgis 1997:122); fasting is also prescribed for the eyes and ears, which should not see/hear any evil. God's Sabbath (ibid. 91) is another precept to be observed.

In traditional ↗education, the Ṣ.d. is taught along with the *Məʿəraf* (HabTent 278).

The Ethiopian Orthodox Church edition of the text was prepared in 1968. There is, however, no critical edition of the complete Ṣ.d. so far, Velat having only dealt with its first half (VelSoDe I–II).

Ṣomä lədät

Ṣ.l. (**ጾመ፡ ልደት**, lit. 'Christmas Fast', also **ጾመ፡ ታኅሣሥ**, *Ṣomä taḫśaś*, 'the Fast of [the month of] *Taḫśas*', **ጾመ፡ ነቢያት**, *Ṣomä näbiyat*, 'the Fast of the Prophets', **ጾመ፡ አዳም**, *Ṣomä Addam*, 'the Fast of Adam') is one of the ↗fasting periods in the liturgical year of the ↗Ethiopian Orthodox (Täwaḥədo) Church.

Ṣ.l. is a fast of Advent, understood as a spiritual preparation for Christmas. It is traditionally considered optional for the laity; therefore it is often called **ጾመ፡ ፈቃድ**, *Ṣomä fäqad* ('optional fast').

As Christ's fast of 40 days is the measurement of all Christian fasting, the Ṣ.l. originally also lasted 40 days, beginning on the day of St. Philip, 18 *Ḫədar* (28 November). Under the influence of the ↗Coptic Church, the duration of the Ṣ.l. has been extended to 43 days, from 15 *Ḫədar* (known as *Ṭəntä ṣomä lədät*). According to the Egyptian tradition, the addition was introduced by the 62nd Patriarch of Alexandria, Abraham the Syrian (975-78). Ethiopian tradition offers another explanation: the three additional fasting days belong to the three feasts of Annunciation (to St. Mary, to Jesus, to St. Gabriel).

On 15 *Ḫədar*, the liturgy includes the following reading from the ↗*Sənkəssar*: "And in this day was established the primordial fast of the proclamation of the *Genna*, which is the Nativity of Our Lord, glorification to him, which was ordered for all the Jacobite Christians" (*Mäṣḥafa sənkəssar* 1998/99:208; cp. ColSyn VIII, 314f.). This statement is clearly posterior to the addition of three days to the Ṣ.l.

The Ṣ.l. ends on Christmas Eve, 28 *Taḫśaś* (but for the year following the leap one, still now, there is no agreement when should the Ṣ.l. should end: on 27 or 28 *Taḫśaś*; also there is separation between those who celebrate the Christmas on 28 *Taḫśaś* in the leap year, and on 29 *Taḫśaś* [historical date]; s. the discussion of the date of Christmas under ↗ *Lədät*).

Habtemichael Kidane

Somali

Somali language

S. (*Af-Soomáaliga* 'the S. language') is the language spoken by the ↗Somali. Linguists use this term in at least two distinct meanings: (1) the written S. language and the corresponding spoken koiné, and (2) the Northern S. dialects and their most closely related varieties.

There is no general consensus about which such related varieties are. Mohamed Diriye Abdullahi (2000) regards as S. proper only:

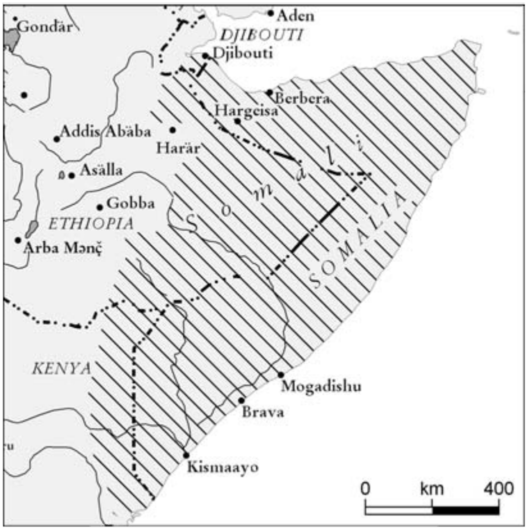
I (a) the Northern S. dialects spoken in ↗Djibouti, present-day Somaliland (s. also ↗Dir language) and Puntland, eastern and southern Ethiopia, north-eastern Kenya and the adjoining regions of southern Somalia west of the Juba River (↗Ganaalee), and

(b) the Benaadir dialects spoken in Somalia from the southern Mudug region to the left bank of the ↗Wabi Šäbälle and the area of ↗Merka. These two dialect groups are commonly referred to as *Af Maḥáa-tirí* (lit. 'language what did you say') in S., and are spoken by ca. 14,000,000 people in the ↗Horn of Africa and the S. diaspora in Arab countries, Europe, North America, Australia, etc.

Lamberti (1986), however, also regards as S.

(c) the so-called Ashraaf dialects spoken mainly for in-group communication in several families of ↗Mogadishu, Merka and some smaller intervening villages;

II the ↗May dialects spoken by almost 2,000,000 pastoralists and farmers (s. Lewis 2009) in the interriverine area of Somalia from Wanle Weyn to the eastern bank of the Juba River;



III (a) a group of rather diverse dialects spoken by ca. 130,000 pastoralists and farmers partly in the same area of May, from Baidoa to the mouth of the Juba. It includes Tunni, Dabarre, ↗Garre and Jiiddu. Some Garre speak a southern Oromo dialect (↗Oromiffaa).

Heine (1978, 1982) adds to the S. cluster, called by him "Sam languages":

(b) the Boni dialects spoken by ca. 8,000 hunter-gatherers from the southern tip of Somalia to the eastern bank of the Tana River in south-eastern Kenya, and

IV Rendille, spoken by ca. 35,000 pastoralists between Marsabit and Lake Turkana in northern Kenya.

Boni has been shown by Tosco (1994) to be closely linked to Garre, and thus to be actually a southern extension of group [III]. Ehret – Mohamed Nuuh Ali (1984) disregard Boni, but include into the S. cluster:

V ↗Bayso, spoken by ca. 1,000 fishers and farmers on the shores and some of the islands of lake ↗Abbayya in south-western Ethiopia.

A second, little-known Ethiopian language has to be added, namely:

VI ↗Girirra, spoken by a small group of farmers and pastoralists near ↗El Käre in present-day southern Oromiyaa.

Some minor groups such as the present-day ↗Ḫarla of the upper Fafan valley to the south of Harär and, especially, low castes (or ↗Marginalized people, s. EAE vol. 5) like the Midgaan hunters, the Yibir magicians and soothsayers,

The Osmania alphabet; from the private collection of Giorgio Banti

etc. are known to use special in-group jargons or argots that include foreign loanwords, altered S. words and metaphorically disguised expressions, e.g., Yibir *ma yafántahay* ‘are you well?’ from S. *fáyo* ‘well-being’, Midgaan *urshéen* ‘nose’ from S. *úri* ‘to smell sth.’ (i.e., ‘the smeller’).

The S. cluster is regarded by linguists as forming with ↗Arbore, its closely related Elmolo, and ↗Đáasanač the Omo-Tana subgroup of East Cushitic (s. Sasse 1979: 3f.), one of the major branches of the ↗Cushitic language family. Northern S. and the Benaadir and Ashraaf dialects preserve ^{c} and *ḥ* as separate phonemes, as in *mága*^{c} ‘name’ vs. May *magə́*, ^{c}Afar *migá*^{c}, Oromo *maqáa*, and *madáḥ* ‘head’ vs. May *madə́*, Oromo *matáa* etc. They also develop **z* into *d* in all positions, and **t* to *s* in the 2nd pers. sg., 3rd pers. sg. f. and 2nd pers. pl. of causative verbs, as in *wádne* ‘heart’ vs. Tunni *wésna*, Rendille *wéyna*, Sāho *wazaná*, Kämbata *wazana*, etc., and *karkarisey* ‘you/she boiled (it)’ from **-tey*, cf. May *karkariydi* (< **-iy-t-*) and Jiiddu *karkaristey* (< **-is-t-*).

The tribal names such as the *Harti* and the *Marreeḥaan* mentioned in the ↗*Futūḥ al-Ḥabaša* (BassHist) are among the earliest attestations of S. words. Short word lists and grammatical notes were published in the late 18th and early 19th cent., but real grammars, dictionaries and collections of texts appeared only in the last decades of the 19th and the beginning of the 20th cent., e.g., Larajasse – Sampont (1897), Larajasse (1897), and, especially, Reinisch (1900, 1902, 1903) and Kirk (1905), that also includes rich data on two low-caste jargons. These early studies dealt mainly with north-western dialects of S. Texts in north-eastern S. and Benaadir varieties were published later by Cerulli (collected in CerSom) and Moreno (1955), which also includes detailed grammatical descriptions of Benaadir and north-eastern S., as well as of May (called Digil by him). Bell (1953) and, on his basis, Andrzejewski (1955, 1956a, 1956b, 1968, 1975, 1979, etc.) discovered some previously unknown features of Northern S.: its system of 20 vowel phonemes, its morphologically relevant pitch-accent, case marking, almost obligatory focus marking, etc. In the following decades Northern S. has become the most studied Cushitic language, suffice it to mention here Puglielli (1981, 1984, 1998), Agostini et al. (1985), Lamberti (1988), Zorc et al. (1991), and Saeed (1999), that is presently the major reference grammar of S. There also are grammars in S. (Shire Jaamac 1976; Abdalla – Puglielli 1999; Axmed 2001), and monolingual dictionaries (Yaasiin 1976; Saalax 2004). Cabdalla (1983) is a historical study of S. in S.

The earliest known texts written in S. by native speakers are from the end of the 19th cent. in adapted ↗Arabic script (s. CerSom III, 115ff.). In those very years some Somali began to develop several indigenous alphabets for writing S. The best-known of these are the Gadabuursi script (s. Lewis 1958) and, especially, the so-called Osmania script, that the Somali Youth League later used even in printed works until the late 1960s (s. Maino 1951; s. ill.).

Missionaries were the first to use the Latin alphabet during the last decades of the 19th cent., in publications for native speakers of S. such as catechisms and prayer booklets, but it was only after World War II that educated Somalis tried seriously to adapt it to their language. After independence in 1960 no unified orthography had been developed for S., and different people still used the Arabic, indigenous and Latin scripts. It was only after the military coup of 1969 that a S. Language Committee, the *Guddiga Af-Soomaaliga*, was set up for choosing the official script and taking the necessary decisions for implementing it. The official S. Latin orthography was announced by the S. government on 10 October 1972 (s. Laitin 1977; Labahn 1982). Its features are shown below in the paragraph on S. phonology.

Written S. was immediately introduced in the administration of Somalia and in the school system. This involved a systematic effort for creating new S. terms for all the fields where other languages had previously been used, such as banking, engineering, education, the army, etc., as well as spreading their use through the mass media and printing. The State Printing Agency (*Madbacadda Qaranka*) published journals, educational material, and other texts in S. during the following decades. The same orthography established itself also in the other S.-speaking countries and in the Diaspora. The Arabic script continues to be used by some religious people.

Written S. in the official Latin orthography is now a largely homogeneous koiné mainly based upon Northern S., with a few lexical and morphological differences between northwestern writers and the others. E.g., phonological variation is visible in written S. in the use of the digraph *dh* for postvocalic *ḍ* ~ *ṛ* in some words such as north-western *yidhi* 'he said' or *gabadh* 'a girl' vs. north-eastern and southern *yiri* and *gabar*.

Northern S. has the following consonant phonemes (official spelling in brackets): the plain stops *b*, *t*, *d*, *k*, *g*, ˀ ('); the retroflex stop *ḍ* (*dh*); the palatal affricate *č* ~ *ǧ* (*j*); the fricatives *f*, *s*, *š* (*sh*), *x* (*kh*), *ḥ* (*x*), ᶜ (*c*, frequently realized as an epiglottal stop), and *h*. *Q* is pronounced by different speakers as a voiced or voiceless uvular stop or fricative, and tends to merge with *x* (*kh*) in Benaadir and the so-called Ashraaf dialects. There are also the nasals *m*, *n*; the liquids *l*, *r*, and the glides *y*, *w*. Vowel length is distinctive, and there are two sets of vowel colours: front and tense *ą*, *ę*, *į*, *ǫ*, *ų*, and back and lax *a̱*, *e̱*, *i̱*, *o̱*, *u̱*. There are thus minimal series such as *dų́l* 'nostril', *dú̱l* 'top', *dų̂ųl* 'attack (them)!' and *dû̱u̱l* 'fly!', or *ḍį́s* 'he built (it)' and *ḍí̱s* 'build (it)!'. S. orthography only reflects vowel length, and thus distinguishes ten vowels, not the actual 20. This distinction between front and back vowels has been observed not only in Northern S., but also in related varieties such as Maay, Jiiddu, Boni and Rendille.

Andrzejewski (1956a, 1979) showed that Northern S. has a system of pitch accent with basically three tone units: low, high and falling, e.g., *beer* 'liver [+ Nominative]', *béer* 'garden [+ Absolutive]', *bêer* 'liver [+ Absolutive]'. High and falling tones occur only on one syllable in each word, and falling tones only on long vowels and diphthongs. Tonal oppositions mark case, gender, tense and mood, and distinguish some particles, e.g., impersonal *la* vs. *lá* 'with'. Tone is not marked in S. orthography.

S. has two genders (masc. and fem.) and two numbers (sg. and pl.). Several nouns have gender polarity in the plural, e.g., *âwr* masc. 'male camel' vs. *áwr* fem. 'male camels', *káb* fem. 'shoe' vs. *kabó* masc. 'shoes'.

Definiteness is expressed by postposed articles. Northern S. has a three-way opposition between a definite article -*ka* (fem. -*ta*), a remote or anaphoric article -*kíi* (fem. -*tíi*), and an indefinite-generic unmarked form, e.g., *kábta* 'the shoe', *kábtíi* 'the aforementioned shoe', *káb* 'a shoe'. Benaadir dialects also have an indefinite article -*kóo* (fem. -*tóo*), e.g., *kábtóo* 'a certain shoe'.

Personal pronouns have independent, subject clitic and non-subject clitic forms. Northern S. distinguishes between 1st pers. pl exclusive ('we wihout you') and inclusive ('we and you') forms:

	Independent	Subj. clitic	Non-subj. clitic
1st pers. sg.	*aní-ga*	*aan*	*i*
2nd pers. sg.	*adí-ga*	*aad*	*ku*
3rd pers. sg. masc.	*isá-ga*	*uu*	–
3rd pers. sg. fem.	*iyá-da*	*ay*	–
1st pers. pl. excl	*anná-ga*	*aannu*	*na*
1nd pers. pl. incl	*inná-ga*	*aynu*	*ina*
2nd pers. pl.	*idín-ka*	*aydin*	*idin*
3rd pers. pl.	*iyá-ga*	*ay*	–

The independent pronouns usually have a postposed article in Northern S. *Aan* and *aad* are frequently used also as 1st and 2nd pers. pl subject clitics, respectively. Non-subject clitics are Ø in the 3rd pers., e.g., *má arkâan* 'they don't see him ~ her ~ it ~ them'.

S. has three major inflectional types of verbs: suffix-conjugated verbs, prefix-conjugated verbs, and adjectival or qualitative verbs. Most verbs belong to the first type, only six to the second, and a sizable number to the third one. Prefix-conjugated verbs generally have stem ablaut, e.g., *y-aal* 'he is (in a place)' vs. *y-iil* 'he was (in a place)'. Adjectival verbs have a compound affirmative non-past (with prefix-conjugated *áh* 'be'), but synthetic negative non-past, affirmative past and negative past, e.g., (*wuu*) *óg yahay* 'he knows', *má ogá* 'he ~ she doesn't know', (*wûu*) *ogaa* 'he knew', *má ogáyn* 'he ~ she didn't know'.

Negative non-past	**kêen 'bring'**	**âal 'be'**	**óg 'know'**
1st pers. sg.	*má keenó*	*má áal*	*má ogí*
2nd pers. sg.	*má keentó*	*má táal*	*má ogíd*
3rd pers. sg. masc.	*má keenó*	*má yáal*	*má ogá*
3rd pers. sg. fem.	*má keentó*	*má táal*	*má ogá*
1st pers. pl.	*má keennó*	*má náal*	*má ogín*
2nd pers. pl.	*má keentâan*	*má taallîin*	*má ogidín*
3rd pers. pl.	*má keenâan*	*má yaallîin*	*má ogá*

There are two basic tenses variously called non-past and past, present and past, or imperfect and perfect. Affirmative and negative tenses are systematically different from each other. Northern S. suffix- and prefix-conjugated verbs have progressive forms formed by the infinitive + *hây* ‘have’ (cognate of ↗^{c}Afar *hée* ‘stay’), e.g., north-western S. (*wuu*) *kéenayaa*/north-eastern S. (*wuu*) *kéena hayaa* ‘he is bringing it’. The non-past has different forms in main vs. dependent clauses. The negative past forms always lack subject agreement.

Northern S. is well-known for having almost obligatory focus marking in main clauses, by means of particles such as *baa* or *ayaa* for noun phrase (NP) focus and, in the case of subject focus, also of special verbal forms. E.g., *wadaa* ‘he drives [- subject focus]’ vs. *wadá* ‘he drives [+ subject focus]’: *baabúur*$_1$ *b-ûu*$_2$ *wadaa*$_3$ ‘he$_2$ drives$_3$ trucks$_1$’ (object focus) vs. *Áxmed*$_1$ *bâa wadá*$_2$ ‘Ahmed$_1$ drives$_2$ them’ (subject focus).

Case is marked both segmentally and tonally. An unmarked absolutive (or absolute, Abs) case used, e.g., for objects, focused subjects, and nominal predicates is distinguished from a nominative (Nom) and a genitive (Gen) case. The Nom is marked only on the last words of non-focused subject NP, even if they are verbs, e.g., *shálay*$_1$ *baa hali*$_2$ *ká*$_3$ *luntay*$_4$ ‘he lost a camel yesterday’ (lit. ‘yesterday$_1$ a camel$_2$ was lost$_4$ from$_3$ him’) with *hali* Nom of *hál* ‘female camel’, vs. *baabûur*$_1$*-ka*$_2$ *uu*$_3$ *wadaa*$_4$ *waa kán*$_5$ ‘the$_2$ truck$_1$ he$_3$ drives$_4$ is this$_5$ one’ where *wadaa* is the nominative-marked verbal form corresponding to non-nominative-marked *wadó* ‘that he drives’.

The basic ten-word Northern S. list is: *ków* ‘one’ (used only when counting; with nouns it is *hál*, when used alone as an argument it is *míd*: *hál baabúur* ‘one truck’, *míd kêen* ‘bring one!’), *lába* ‘two’, *sáddeḥ* ‘three’, *dáb* ‘fire’, *bíyó* ‘water’, *qorráḥ* ‘sun’, *dáyaḥ* ‘moon’, *ḍîig* ‘blood’, *^{c}árrab* ‘tongue’, *ílig* ‘tooth’.

Giorgio Banti

Somali literature

Somali oral literature

Data on Somali literary traditions were published already in the second half of the 19th cent. by explorers such as ↗Burton and ↗Robecchi Bricchetti, geographers such as ↗Paulitschke, and linguists such as Hunter (1880), ↗Reinisch and others. These early sources are reviewed in Andrzejewski (1983). Significantly, Burton (1856: 115f.) wrote: "The country teems with 'poets, poetasters, poetitos, poetaccios': every man has his recognized position in literature as accurately defined as though he had been reviewed in a century of magazines – the fine ear of this people causing them to take the greatest pleasure in harmonious sounds and poetic expressions, whereas a false quantity or a prosaic phrase excites their violent indignation".

This major type of oral poetry is discussed under the entry ↗*maanso*, as it is called by Somali scholars such as *šeeḫ* Ǧaamaᶜ (Jaamac Cumar Ciise 1974: ivf.), Yaasiin ᶜIsmaan (Yaasiin Cismaan Keenadiid 1984: 62f.) and Maḥamed ᶜAbdi (Maxamed Cabdi Maxamed 1989: 3). It includes different genres, is always authorial (s. also Orwin 2005) and, before the spread of literacy, it was always sung, not recited. Little is known about the equivalents of *maanso* in the interriverine area such as, e.g., the tradition of praise poetry in Afgooye on the lower Šabeelle River (↗Wabi Šäbälle).

Poetic style and sung performances characterize several other genres, such as (i) dance songs, that are frequently accompanied by hand clapping, feet stamping or drums, and (ii) work songs. Such genres are generally not authorial and much shorter than *maanso* poems. Dance songs vary regionally, e.g., the *ḍaanto* is traditionally widespread in the northern and western Somali-speaking areas, the *širib* in the coastal areas to the north of Mogadishu, and the *saar* in the south-west. On particular occasions, dance songs are improvised in poetic contests between talented youths. Work songs accompany different traditional activities, and can be divided into (a) male work songs such as camel-watering songs or camel-loading songs, and (b) female work songs such as shepherd songs, songs for grinding cereals, churning butter, weaving mats etc. (s. Maxamed Cabdi Maxamed 1989: 176ff.; Banti – Giannattasio 1996: 103ff., 116–22). Particular castes like the hunters have their own genres such as the *maanyo* songs (s. Ciise Maxamed Siyaad 1988).

After World War II the modern Somali song developed from different genres of dance songs through various stages like the *balwo* and the *heello* (s. Andrzejewski – Lewis 1964: 49ff.; Johnson 1974). It merges traditional poetry with popular culture, its themes ranging from politics to social critique and love.

Oral texts not necessarily marked by poetic style are, e.g., genealogies that are pervasive among the Somali (↗genealogy in social life). Complete recitations of one's genealogy (*abtirsiinyo*) often involve dozens of names, from the nearest forefathers to the legendary ancestors of all Somali. In a well known *masafo* poem *šeeḫ* ᶜAli ᶜAbdiraḥmaan, also known as *šeeḫ* ᶜAli "Maǧeerteen" or *šeeḫ* ᶜAli "Duulaa" in ↗Merka, traced his ancestry to Adam and Noah, before his clan's forefather. Here are its fist five lines in Somali orthography:

Ummadda Eebbahay badane, banii-Aadan baan ahay
Nuuxii baddiyo doonta, ku bilowday baan ahay
Haddii lays bahobaheeyana, bah-ina-Haajaraan ahay
Bin-Caqayl biyaha Jabarti, nin ka beermay baan ahay
Daarood boggiisiyo, beerkiyo laftaan ahay

'God's creatures are many, but I am a son of Adam,
I am from Noah who procreated after the flood and the boat,
And dividing people into families, I am from Haaǧar's family,
I am a son of ᶜAqayl, a man from the semen of Ismaaᶜiil Ǧabarti,
I am from the chest, the liver and the bones of Daarood'.

Genealogies and historical narratives about the history of particular clans or sub-clans were collected systematically by European scholars during the early 20th cent. (s. CerSom I, 51ff.; Colucci 1924), more rarely in recent times. Also oral texts of ↗customary law (↗Law: Traditional legal institutions) have been published (e.g., by Cerulli in CerSom II, 75ff.), even though they have been studied more in their legal aspects than as oral literary texts. Famous sentences passed by well-known traditional judges like *ina* Sanweyne are the subject of many traditional narratives s., e.g., Muuse Galaal (1956: 31f.; for folktales s. the sub-article on "Folktales and modern written literature").

Proverbs are pervasive in Somali speech and are given much importance by Somalis. Frequently they display metrical parallelism and complex patterns of alliteration like the following one, about failing to solve a difficult problem:

Waraabe ulna lala gaari waa, erayna wax lagaga guri waa
'You didn't get at the hyena with a rod, nor did you get anything back from it with your words'.

Parallel syllables in the two halves of this proverb have identical vocalic lengths with the only exception of *gaa* and *gu*, while *waraabe* 'hyena' alliterates with *wax* 'anything' and the two occurrences of *waa* 'didn't', *ul* 'rod' with *eray* 'word', and *gaari* 'get at' with *guri* 'get back'.

A particular genre that is very popular among Somali, are the numerical sayings, i.e., proverbs organized in series of three, seven, etc. (s. CerSom II, 213ff.). They hark back to a very old tradition, since they are pervasive in the Old Harari *Kitāb al-farāᵓiḍ* (s. CerStud I, 282–343), occur in several other parts of the Medieval Islamic world, and are already attested in the Bible (Prov 30; s. also Banti 1996: 180ff.). Here is a numerical saying in Benaadir Somali (in Somali orthography), alliterated in *d*, whose first two half lines are 8-syllable *širib* lines with their typical iambic rhythm:

Siddax walxaato waa dadaal, siddaxna Daayimaa yuwaad
Duful samey waa dadaal, daruurna Daayimaa yuwaad
Dugsi ood waa dadaal, diinna Daayimaa yuwaad
Dahabo guuri waa dadaal, dadna Daayimaa yuwaad

'Three things depend upon your effort, three only God can give:
Sowing depends upon your effort, rain only God can give,
Building a home depends upon your effort, religion only God can give,
Marrying a woman depends upon your effort, children only God can give'.

Like other peoples of the Horn of Africa, the Somali have highly formalized riddles that are generally alliterated. In north-eastern Somalia they are called *googgale*; who asks the riddle first says *googgaa*, who answers says *ᶜadale* or *waḥ kale* 'another thing', then the actual riddle is asked.

Extensive collections of oral literature, such as anthologies of *maanso* poetry by different poets or *diiwaan*'s of the major poets, collections of proverbs, sayings and folk stories were among the first texts that were published by educated Somalis, and many have appeared also in recent years.

Giorgio Banti

Somali religious literature

Schleicher (ed. by Reinisch 1900), Cerulli (CerStud I, CerSom II, 177–220, CerSom III), Andrzejewski (1983), Andrzejewski – Lewis (1994), Kapteijns – O'Fahey (2003), Mohamed M. Kassim – O'Fahey – Reese (2003) and Gori (2003) provide evidence of the antiquity and wide circulation of Arab religious literature among bilingual Somalis. This literature first circulated among the religious orders (*ṭarīqa*; ↗Islamic brotherhoods), mainly the Qādirīya (the most ancient and popular), Aḥmadīya, Ṣāliḥīya, and Rifāᶜīya (originating from Mukallā, Ḥaḍramawt. Thanks to them, the Somalis developed close links with the Sunnite communities of the Arabic Peninsula along with other Muslim communities in the Sudan, Eritrea (Massawa), and southwestern Ethiopia where these religious orders had missionaries (TrIslam 233–56). ↗Harär, where the Qādiriya was established in the 15th cent. by *šarīf* Abū Bakr b. ᶜAbdallāh al-ᶜAydarūs (d. 1503, Aden), played an important role in diffusing ↗Islam among the Somalis, along with the coastal towns of Arab-Persian – if not earlier – foundation (↗Iran). From these centres Islam reached the agro-pastoralists of the interior. Religious agricultural settlements (*ǧamāᶜāt*), like those in the fertile region between the Šabeelle (↗Wabi Šäbälle) and Ǧuba (↗Ganaalee) rivers, played also an important role in rallying followers among the somalized Bantu, the former Oromo-speaking groups and outcast Somali. While Islam was introduced by Arab merchants in other parts of Africa, it is mainly through these religious orders and congregations that Islam was popularized in the regions where Somali became dominant (s. Andrzejewski 1974). In spite of the historical link between Islamization and Somalization of the Horn of Africa, Islamization never meant complete Arabization, since Arabic remained restricted to religious practice or to the writing of contracts, letters etc. (Zaborski 1967). Three kinds of texts have coexisted: the imported original Arabic ones, Somali adaptations and original religious works in Arabic – e.g., hagiographies such as those studied by Gori (2003) – as well as religious poems in Somali. Some of these were written in Arabic script. In southern Somalia the Qādirīya was promoted by *šayḫ* Uways (Awees) Maḥammad (from ↗Brava, b. 1847), who wrote pious poems in different southern Somali dialects in Arabic script (CerSom III, 117ff.; Moreno 1955: 364 ff.). Other collections of poems, used in schools of mysticism through various worship practices like the ↗*dikr*–recitals, have been discussed by Cerulli (CerSom I, 177–210; CerSom III): those of *šayḫ* ᶜAbd al–Raḥmān al–Zaylaᶜī (14th cent.), of *šayḫ* Qāsim Muḥyi–l–Dīn (who also wrote in Či Mbalazi, the Swahili dialect of Brava), of *šayḫ* ᶜAlī Maye Durogba of Merka (who imported the Aḥmadiya from Mecca around 1870), of "*šeeḫ* Sūfī" (*šayḫ* ᶜAbd al–Raḥmān b. ᶜAbdallāh, of the Šaanšiya of Muqdišo; d. 1913). The latter received the title of "pillar of the Benaadir" (*quṭb al–Banādir*) and composed many poems in Arabic among which *Šağarat al-yakīn* ('The tree of Truth'), was included in the second volume of *al-Mağmūᶜa al-mubāraka* (s. ᶜAbdallāh b. *muᶜallim* Yūsuf 1919–20), a theological polemical book. This corpus was not only for teaching Sufism, but also for polemicizing against the Ṣāliḥiya (e.g., the above mentioned *al-Mağmūᶜa al-mubāraka*), at war with British colonialism. This internal rivalry led to *šayḫ* Uways's murder in Biyoley in 1909 by Ṣāliḥiyya followers. Abroad, the Qādiriya spread to the Swahili coast, and *šayḫ* Uways's brand of it, the Uwaysiyya, reached ↗Zanzibar and Kisangani in the Congo.

Šeeḫ ᶜAli ᶜAbdiraḥmaan (↗Somali oral literature) shows the depth of this Arab influence on religious Somali literature, and more generally on major poetry, e.g., in his well known alphabetically alliterated *masafo* poem *Alif yeen* "The letter *alif* said" (s. Banti 1996). Indeed, even part of the Somali poetic terminology derives from Arabic (such as Arab.: *qaafiya* 'rhyme', Somali: 'alliteration'); Morin (1999: 45–76) pointed out that the mono-rhymed classical *qaṣīda* probably influenced the development of Somali mono-alliteration in many genres of ↗*maanso* poetry. The poem *Yaa nabi*, composed by *šayḫ* Ismāᶜīl Fāraḥ and written in Gadabuursi script (Lewis 1958) and the *masafo* poems by *šeeḫ* Aḥmed "Gabyow" (s. Banti – Ciise Maxamed Siyaad 2000) are indicative of how these erudite traditions were active at the beginning of the 20th cent. both in northern and southern Somalia. The *sayyid* ↗Muḥammad ᶜAbdallāh Ḥasan, the well-known anti-colonial ↗Daarood leader, who received the title of *ḫalīfa* of the Ṣāliḥiyya at Mecca, composed oral poetry in Somali, and wrote verses and two polemical prose texts in Arabic, is the most celebrated example of how religion became instrumental during his struggle against the British (1899–1920) and their Somali allies (s. Jaamac Cumar Ciise 1974; Yaasiin Cismaan Keenadiid 1984). Religious poetry also includes rain prayers such as the *roobdoon* (s. Andrzejewski 1970).

Finally, one should not forget other oral genres of religious literature such as the legends on the lives of prominent saints (s. Andrzejewski 1971).

Didier Morin

Folktales and modern written literature

The religious literature circulating among bilingual educated circles consisted, as Cerulli put it for the Harari *Kitāb al-farāʾiḍ* (CerStud I, 283) in "a compendium of religious commandments of Islām and of moral maxims", and has its counterpart in innumerable folktales and oral narratives that are at the origin of modern fiction in Somali. The first texts were collected by European scholars such as Hunter (1880), Paulitschke (1896), Schleicher (ed. by Reinisch 1900), Cerulli (CerSom II, 203–82, CerSom III), etc. A second period, begun a few years before the independence of Somalia (1960), with major developments thanks to the adoption of a Latin orthography for the Somali language, is illustrated by Muuse Galaal (1956), Šire Ǧaamaᶜ (Shire Jaamac Axmed 1965; 1967), Maḥamed Faaraḥ (Maxamed Faarax Cabdillaahi 1967), ᶜAbdulqaadir Bootaan (Cabdulqaadir F. Bootaan 1973), Ḥasan Šeeḫ Muumin (in Morin 1980; 1995), ᶜIise (Ciise M. Siyaad 1985), Ḥange (Axmed Cartan Xange 1988; 1998), Kapjits (1996; Kapchits 2006) and many others. Andrzejewski (1985: 380) proposed to divide this oral and, later, written corpus into "fabulous fictional prose narrative" and "realistic fictional prose narrative". It has two main characteristics. First, these traditional narratives have a pedagogical concern, and are sometimes published in a simplified style for addressing a wider readership. Cycles of legends (such as those of queen Arraweelo, of king Wiil-Waal, or of the ogress Ḍeg Ḍeer), animal tales, anecdotes about well-known saints and other characters celebrate the cardinal values of traditional Somali society, its roots, and the necessity of respecting them. Concord (*hešiis*), solidarity, and the importance of ingenuity are repeated again and again as a conjuration against the structural instability of the "pastoral democracy" described by Lewis (1961). An important narrative structure, as far as Cushitic oral literature is concerned (Morin 1995: 233–50), involves animal participants acting in a neighbourly way that are deceived by the jackal-trickster (*daᶜawo*). The conflict is gradually unveiled through dialogue as in a judiciary debate, and the plaintiff's contradictions are finally revealed and punished. Other tales, probably of Arabo-Persian origin (↗Iran), mention towns, money – whereas "Cushitic" tales mention only bartering and countryside lifestyle – and slave-master (*sulṭān*) relationships, that rarely occur in trickster tales. This corpus refers to an idealized past called by Andrzejewski (1985: 340) "the Golden Era", that meets the Somali concept of *barwaaqo*, a time of plenty when pasture and milk are abundant, a nostalgic perception that crosses time and genres from the poetry of ↗Muḥammad ᶜAbdallāh Ḥasan to the novels of Nuuruddiin Faaraḥ (e.g., Nuruddin Farah 1981).

Published folk literature promoting good behaviour (*asluubta*) received a new impulse during the Seventies, when Siyaad Barre's government promoted education and publications that supported the national reforms, as highlighted by Andrzejewski in his introduction to *Aqoondarro waa u nacab jacayl* (Faarax M.J. Cawl 1974; tr. 1982), the first full novel ever published in Somali. Two short stories by Šire Ǧaamaᶜ (Shire Jaamac Axmed 1973a; 1973b) had appeared the year before. A rising number of short stories and novels appeared after that, published in the newspaper *Xiddigta Oktoobar* ('The October Star') or broadcast on the radio. Longer works were generally serialized, but a few of them also appeared as volumes. Kaddare's novel (Xuseen Sh. Axmed "Kaddare" 1983) on the contrast of rural versus urban life, tradition versus modernity, as well as older versus younger generations was serialized in the newspaper, then read on the radio and finally published by the National Printing Agency. Faaraḥ ᶜAwl's (Faarax M.J. Cawl, op. cit.) and Kaddare's novels, as well as Gamuute's short stories (e.g., Gamuute Axmed Gamuute 1993) typically make extensive use of quotations from traditional genres such as oral poetry, proverbs and sayings, while other fictional writing like Šire Ǧaamaᶜ's short stories and most later novels such as *Ayaan daran* (Cabdullaahi Sh. Xuseen "Hantiwadaag", n.d.), *Adeegto* (M.X. Cusmaan 1979) and the well-known *Maana-Faay* (Maxamed Daahir Afrax 1981) are written entirely in prose, and sometimes use inserts in local dialects for representing particular characters. There is an on-going debate about what characterizes the new Somali fictional writings, s. Morin (2000; 2006). Whereas the first novels and short stories of the 1970s addressed social and historical problems supporting the government's attempts at reforming them, later works became increasingly critical of how Somali society was evolving. However, from the mid-1980s several short novels were published by independent printers, mostly about love and other topics that would not incur the government's censorship. In the two decades after the collapse of Siyaad Barre's government, important fictional works have increasingly been published abroad.

Somali theatre developed mainly after World War II and became an important form of public entertainment in Somali towns in the mid–1950s. Its nature remained strongly oral, and many plays include long sections in poetry and song. Few scripts have been published, like the one by ^{c}Ali Sugulle (Cali Sugulle n.d.) or by Idaaǧaa – Yamyam (Axmed F. Cali "Idaajaa" – Cabdulqaadir Xirsi "Yamyam" 1974). Only one has been translated (Hassan Sheikh Mumin 1974). Afraḥ's book (Maxamed Daahir Afrax 1987) is a history of Somali theatre.

Finally, fictional and poetic writing by Somali authors in foreign languages should be mentioned, such as Nuuruddiin Faaraḥ's (Engl.: Nuruddin Farah) and Weris Diiriye's (Engl: Waris Dirie) novels in English, Abduraḥman Waaberi's (Fr.: Abdourahman A. Waberi) writings in French, ^{c}Ali Ǧim^{c}aale Aḥmed's (Engl.: Ali Jimale) poetry in English, etc.

The most complete history of Somali oral and written literature is Andrzejewski (1985: 337–407). ^{c}Ali Ǧim^{c}aale (Ali Jimale Ahmed 1996) insightfully described the complex interplay between oral and written fiction, poetry and theatre within the Somali community inside and outside Somalia during the Seventies and Eighties.

Didier Morin – Giorgio Banti

Somali ethnography

The ancestors of the S. moved into the northern Horn of Africa from around Lake ↗Turkana in today's north-western ↗Kenya. The name "Ṣūmāl", i.e. S. appears for the first time in a victory song of *aṣe* ↗Yəsḥaq (CerSom I, 111). Several S. clan names are mentioned in the *Futuḥ al-Ḥabaša*, recording the wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī (called Gurrey in S.) and his S. warriors (BassHist). They can be identified with names of today's clans of north-western Somaliland. Over the centuries the Somalis mixed with the ↗Oromo, who also came from around Lake Turkana and invaded north-east Africa in the 16th cent. Moreover, since ancient times Arabian and Asian (and later also European) refugees, missionaries, merchants and adventurers landed on the Somali shores along the Gulf of Aden and the Indian Ocean and established trading posts, mosques and fortresses. They gradually became integrated into the local population. Prior to the advent of the Somaloid nomads from Lake Turkana, some of the southern parts of the Horn were most probably inhabited by Bantu speakers who practised agriculture. Along with other indigenous groups inhabiting the northern Horn, they were absorbed by the new-comers. Thus from a historical perspective, the S. inhabiting the Horn of Africa today are a complex mixture of various groups.

By the mid 20th cent., the S. were increasingly represented (and represented themselves) as a homogenous ethnic group, with a common myth of origin (descent in the patri-line from a common ancestor), language, religion (Sunni ↗Islam) and customs (pastoral nomadism, particularly camel husbandry [↗Pastoralism]). The social organization of clan-families, clans, sub-clans, and so forth, in seemingly perennial opposition to each other, is still perceived by many as their most distinctive feature. The six large clan-families are ↗Dir, ↗Darood, Isaaq, ↗Hawiye, Digil and ↗Raḥanween. They are divided into dozens of clans, hundreds of sub-clans and primary lineages and thousands of "*diya*-paying groups" (s. below). Dir and Isaaq mainly reside in the north, Hawiye, Digil and Raḥanween inhabit the centre and south, and Darood dwell in all parts of the S. peninsula.

This representation arguably goes back to the influential accounts of (northern) S. society by Richard ↗Burton and Ioan Myrddin Lewis. The latter presented S. society as a "classical" segmentary society. In this perspective, the S. (mostly pastoral nomads) display a strong sense of equality. Depending on the context, they act as members of distinct groups on different levels of segmentation. By patrilineal descent all of them are connected through "total [↗] genealogy" (Lewis 1957). Later, other researchers diversified, qualified and partly refuted this depiction of the S. They emphasized notions of belonging beyond that of descent and highlighted the importance of locality, inequality and hierarchy in interpersonal and inter-group relations.

In colonial times, the S. were divided between ↗Djibouti, Ethiopia, and Kenya, British and Italian Somaliland. Only the two latter territories formed the ↗Somali Republic upon independence in 1960.

Genealogical divisions, *tol* and *ḥeer* (*xeer*)

S. in the north of the S. peninsula display a strong genealogical "ideology". Here Lewis' perspective largely applies. People count up to 30 forefathers to their common ancestor, who is the "father" of the clan-family. Most clan-families are so vast and so widely scattered that they cannot act corporately as political units. Only when there is enmity between them, do members of one clan-family have a strong identity of purpose against those of another. The clan as a genealogical unit goes back up to 20 generations. Clans tend to be linked to a territory through fairly regular seasonal migration movements as pastoral nomads. Lewis (1961) calls clans the upper limit of corporate political action. They are sometimes headed by authorities such as *suldaan* (cp. ↗*Sulṭān*) or *garaad* (cp. ↗*Gärad*), who traditionally have representative functions. Clans show no internal administration. Below the clan, Lewis differentiates sub-clans and primary lineages. The foundation of the system is the "*diya*-paying group". In case of homicide *diya*-paying groups pay and receive blood-money (S., *mag*, *diya* [from Arab.]). The group is usually an amalgam of a few lineages reckoning their descent back four to eight generations. According to Lewis, however, the system of distinct units suggests a more stable hierarchy of segmentation than actually exists. He considers the flexibility of being related through clan, lineage, etc. to be the most characteristic feature of S. social structure.

Nonetheless, the principle of agnation, *tol* (lit.: 'to sew'), is binding among northern S. Primary responsibilities and loyalties are expressed in respect to one's *tol*. This can be seen as an "anchor" in a field of otherwise fluid and flexible social relations, in which the level of identification is often decided by the context of hostilities or other social dynamics. Moreover, *tol* is important with regard to the collective identity of all S. as members of an ethnic group: by counting male forefathers, every S., in theory, arrives via the "brothers" Sab and Samaale at a common ancestor, named Hiil, who is the link to the ↗Qurayš (Lewis 1955; 1961).

Yet patrilineal descent is only one of two fundamental principles of northern S. society. The other one is ↗*ḥeer*, which operates mainly at the level of the *diiya*-paying groups. *Ḥeer* is a basic social contract within and between lineages. Such an agreement can be directly entered into by the actors concerned, or it can be inherited from their ancestors. Agreements are forged at general meetings (*šir*). The *ḥeer* of a *diiya*-paying group "denotes a body of explicitly formulated obligations, rights and duties". It binds people together "in relations to internal delicts and defines their collective responsibility in external relations with other groups" (Lewis 1961: 162; Hersi 1977). Its viability is guaranteed only as long as the contracting parties respect the agreement. As soon as one party deviates from the *ḥeer*, it is broken, and, if wished for, a new contract has to be negotiated. It is also possible to have treaty obligations and political solidarity without agnation. Generally, S. regard *tol* and *ḥeer* as complementary. In everyday practice, this segmentary lineage system based on *tol* and *ḥeer* is distorted by various inequalities regarding group size, power imbalances and complex alliances deriving from contractual agreements, from affinal ties or individual interests.

Locality and hierarchy

The agro-pastoralists residing along and between the rivers ↗Wabi Šäbälle and Juba (↗Ganaalee) in central and southern Somalia live from farming and herding. Among them, residence and notions of territorial belonging are of great importance. The clan as a land-holding group is the most significant level of segmentation. Yet this does not preclude movement and migration. Since the quality of the soil is variable and rainfall constantly shifts, it is useful to have plots in more than one place and pastoral rights over a wide range. Consequently, individuals and groups frequently move to the territories of other clans. The latter must approve the residence of the newcomers, either by alliance between more or less equally strong groups, or by adoption of a smaller group or of an individual by a larger and stronger group. Thus, all inter-riverine clans actually consist of fragments from many other clans who are assembled around a "core lineage", which gives many of the southern clans their consistency and identity (Luling 2002; Helander 2003).

The composite character of clan-families and clansamong the agro-pastoralist S. can lead to some parts of a larger group considering others belonging to the same group as "inferior" or "impure". The latter are called *boon*, which Helander translates as "commoners". They are not allowed to marry other members of the same clan who belong to the category of *bilis* ('nobles'). The problem of internal heterogeneity is captured by the proverb *tol waa hal la qaley*, which is translated as "the agnatic group is a slaughtered camel". It means that like a slaughtered camel, of which not all parts are edible, the composite clan consists of good and bad parts and not everybody within the group is comfortable with each other (Helander 2003: 17). A number of hierarchical differences distinguish *boon* and *bilis*. Although friendship can exist between them, *boon* are subject to much prejudice, social exclusion and to some extent exploitation as cheap labourers by the *bilis*.

Regarding the southern S. clans, descent and locality are seen as complementary, with agnation being most important for social identity on the highest level of segmentation, and for collective security against external threats (Helander 2003; Luling 2002). Helander (1996) suggests that the social idioms of adoption and co-operation based on co-residence and settlement in villages, and partly necessitated by farming, most probably contributed to the relative rarity of inter-clan strife among southern S. agro-pastoralists such as the Raḥanween.

In urban settlements particularly along the Benaadir coast of southern Somalia members of different lineages reside together. They "are joined by legal alliance but do not claim common descent" (Luling 2002: 80). Hence, urban settlements are confederations of clans. Here, "the descent principle operates *within* the lineage group, but the alliance principle alone *between* lineages" (ibid). Additionally, Luling outlines the importance of moiety organization, of residence in different neighbourhoods, of membership in certain co-operatives and of differences between noble and "ignoble" groups. Two features clearly

Somali smiths (*Tumaal*) at work, Harär; photo 2000, courtesy of Wolbert Smidt

distinguish the "urban model" from the two previous models: first, social relations are, at least between some groups of residents, strongly hierarchic; and second, political authority is to some degree institutionalized and more permanent.

The largest social difference within southern S. settlements exists between *ǧareer* (S. sp.: *jareer*, also called Bantu) and the various "noble" groups. The term *ǧareer* has been adopted by the people themselves. It refers to the "hard hair" of the descendants of Bantu-speaking farmers and slaves, in contrast to the "soft" hair of the "real" S. (who consider themselves descendants of Arab *šayḫs* rather than of African ancestors). Some of the Bantu-speakers have been brought to the southern S. peninsula as slaves in the 19th cent. Others most probably have lived and farmed there already before S. pastoral-nomads and agro-pastoralists came and subjugated them (Cassanelli 1982; Declich 2000; Luling 2002; Besteman 1999). Slaves worked on plantations, small farms and in households. In the second half of the 19th cent., many slaves ran away; others were freed when the European colonial powers arrived in the Horn and officially abolished ↗slavery. Nonetheless, inequalities and social hierarchies remain in S. society until today.

Furthermore, a distinct social hierarchy exists between the occupational or "caste" groups, such as Midgan (tanners, shoemakers, hunters), Yibir (professional magicians, hunters) and Tumaal (smiths), and the pastoralists in the north. The former are segmented into small lineages following the S. pattern and were until recently attached in servile status to pastoral nomadic families and lineages.

Finally, settlements organized by Sufi orders (↗Islamic brotherhoods) and scattered throughout the Somali peninsula display religious hierarchy and attachment to a specific locality. They are led by *šayḫs*, and, apart from religious education, its members engage in agriculture. Within these *ǧamee^{c}ooyin* (S. sp.: *jameecooyin* sg., *jameeco*), members' genealogical ties and loyalties are deliberately disregarded (Lewis 1994; Hersi 1977; Luling 2002).

I. Geography

The Somali Republic (Som., *Jamhuuriyadda Soomaaliya*; Arab., *Ǧumhūrīyat aṣ-Ṣūmāl*) with a territory ca. 637,657 km^2 covers the ↗Horn of Africa from the port of ↗Zayla^c (Som. Seylac) in the north-west to Cape ↗Gardafui in the north-east to ↗Kismaayo in the south. In northern S., the hot coastal zone (*guban*) along the Gulf of Aden is distinguished from the mountain range (*golis*), the cooler high plateau (*oogo*) and the further hinterland stretching south-east into Ethiopia (Hawd; s. ↗Ogaden). Central and southern S. is lowland declining towards the Indian Ocean. Here flow the only two permanent rivers (sg., *webi*) of the country, the Šabeelle (↗Wabi Šäbälle) and the Juba (in Ethiopia ↗Ganaalee), which originate in the Ethiopian highland.

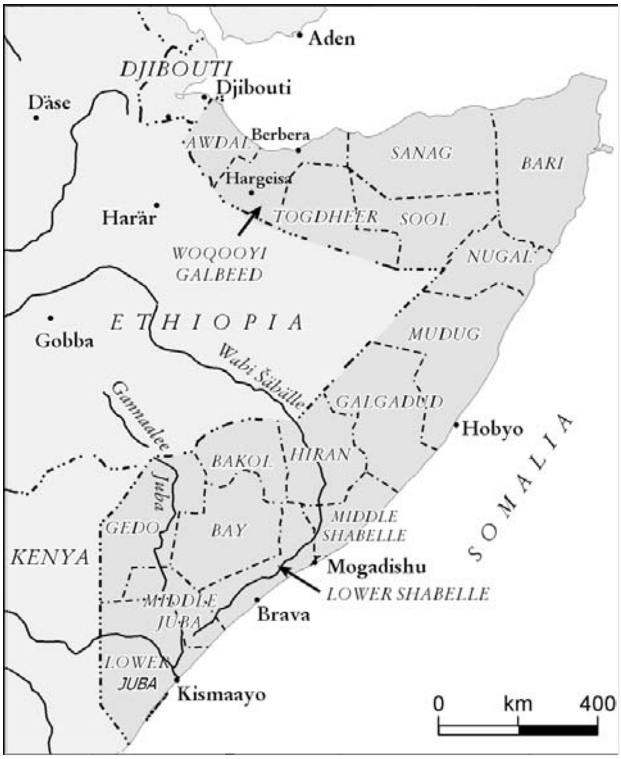
The four main seasons in the Somali territories are the long rainy season *gu* (April to June), the windy dry season *ḥagaa* (July to August), the short rainy season *dayr* (September to November) and the long hot dry season *ǧilaal* (December to March).

II.Peoples and languages

The Somali population in the Horn of Africa increased from less than a million in 1900 to about two million in 1950. In 2001 the UNDP Human Development Report estimated the total population in S. to be 6.38 million. Another four to five million Somalis are living in Ethiopia, Kenya and ↗Djibouti. More recently, droughts and civil ↗war have caused large scale displacement and migration in and from S.

Almost 100 % of the population follow Sunni Islam; most belong to one of the Islamic ↗brotherhoods. Somalis belong to several large clan families that descend from two mythical ancestors, Sab and Samaale. The descendants of Sab are mostly agro-pastoralists, while those of Samaale are traditionally pastoral-nomads. Most Somalis trace their origin in the patriline back to Arab ancestors (↗Somali ethnography).

In southern S., there are many people of "African" or "mixed" origin who are traditionally farmers, agro-pastoralists, craftsmen or merchants. Some of these "other Somali" (Luling 1984, 2010) have most probably occupied the southern Somali Peninsula before the pastoral nomads came. Others, particularly the forefathers of many today so-called Bantu, were brought as slaves to southern S. in the 19th cent. (Cassanelli 1982). Certain place names and oral traditions also point to an earlier ↗Oromo oc-



cupation of Somali territories (CerSom I).

The Swahili population of the old cities along the Benaadir coast derives from contacts between Arabic, Indian and other visitors/migrants with the local population since the 7th cent. Somalis without a pastoral-nomadic background were traditionally looked down upon by the pastoral-nomads who dominate politically. The former, however, were frequently adopted by the latter and integrated into their genealogical system.

Early ethnographic descriptions (e.g. Burton 1856; CerSom I–III) mention differences in Somali origins and customs. For most of the 20th cent. the people were nevertheless perceived as a homogenous ethnic group united by culture, religion, and tradition (Touval 1963; Laitin – Samatar 1987). Yet, underneath the nationalist and ethnic facade the Somalis as well as Italian colonialists in the south adhered to fine racist distinctions between "pure" Somalis on the one hand and those of "African" or mixed origin on the other (Dainelli 1931; Besteman 1999; Declich 2000; Helander 2003).

Discrimination and power inequality also affected the ↗Somali language. Somali is the official language of the country and there are two main dialects, *Af-Maxaa* (spoken mostly by the descendants of Samaale in northern and south-western S.) and *Af-Maay* (spoken by the descendants of Sab in central S.). *Af-Maxaa* has a number of sub-dialects. Some inhabitants of the Benaadir coast speak Swahili dialects. Those whose ancestors came to S. as slaves in the 19th cent. from various parts of East Africa sometimes still speak Bantu languages. In 1972, *Af-Maxaa* was adopted as the national language, written in the Latin alphabet. Cultural homogeneity was produced through the standardization of this version of Somali at the cost of the other, often quite divergent versions of the language (Mukhtar 2010).

When the civil war broke out in southern S. in 1991, the non-pastoralists became the main victims of marauding and looting clan militias (Bestemann – Cassanelli 1996; Van Lehmann – Eno 2003). Today they are known as Somali minority groups.

III. Economy

In northern S., most people traditionally live as pastoral nomads keeping sheep, goats and camels (↗Pastoralism). Animals and animal products are used for subsistence as well as for export to the Arab Peninsula. In southern S. farming is possible along and between the two permanent rivers. Additionally, people engage in animal husbandry. Some inhabitants of the ca. 3,000 km long coastal strip from the Gulf of Aden to the Indian Ocean are fishermen. Particularly along the mountainous northern coast, in the area of today's Puntland, people collect frankincense (↗Incense) and wild honey (Ahmad Yusuf 1994). Since ancient times ↗trade is the life-line of the coastal towns and the settlements in the interior of the Horn. It was the basis of the Somali sultanates that were established in the peninsula from the 12th cent. onwards.

In the 19th cent. large quantities of ↗cotton and sesame were produced in and exported from the Muqdisho (↗Mogadishu, s. EAE vol. 5) area. Swahili and Arab landlords had established a profitable plantation economy there, based on slave labour. Later, the Italians continued the plantations with banana and other cash crops (Hess 1966).

The post-colonial economy of S. depended largely on external aid. During the cold war period S. attracted support from the "West" and the "East" due to its strategic position in the Horn of Africa opposite the Arab Peninsula (Simons 1996). Urbanization, desertification and civil war made pastoral nomadic life increasingly arduous. At the beginning of the 21st cent., the economy of northern S. is still based on animal husbandry. Trade in the form of import-export transactions via the ports of ↗Berbera, Boosaasso, Mogadishu and Kismaayo is the driving force behind the local and regional economy. Private business, for instance in the telecommunications sector, flourishes in S.'s peaceful zones. An important new commodity in S. is ↗*č̣at* (Som. *qaad*). It comes in from Ethiopia and Kenya and is paid in hard currency. The mild stimulant is consumed mostly by Somali men. Its consumption has increased dramatically since the outbreak of the Somali civil war. Finally, remittances sent to relatives by the huge Somali diaspora secure the daily

IV. State symbols

The flag of S. was adopted in 1954 and shows a five-pointed white star on a light blue background. The star represents the five regions inhabited by Somalis: the Ogaden Region of Ethiopia, the Northern Frontier District of Kenya, Djibouti, as well as former British and Italian Somaliland. The coat of arms adopted in 1956 shows two leopards supporting a blue shield with a white star on it. The national anthem is called *Soomaaliyeey toosoo* ('S. wake up') and was adopted by the Transitional National Government in 2000. The music was written by ᶜAlī Mire ᶜAwāle (Cali Mire Cawaale) to the lyrics of Yusūf *hağği* Adan (Yuusuf Xaaji Aadan) in the 1940s.

Markus V. Höhne – Nicole Hirt

Somalia, political history

The British Protectorate of Somaliland (↗British Somaliland) gained its independence on 26 June 1960, and ↗Italian Somaliland followed on 1 July 1960. On that day both lands united to form the Somali Republic with ↗Mogadishu as capital.

Somali politics in pre-colonial and colonial times were dominated by pastoral-nomadic and agro-pastoralist conditions. Political organization was, apart from a few small sultanates existing between the 12th and the 19th cent. (e.g., ↗Ifat, ↗ᶜAdal, and Ağuuraan), flexible, family-based and not centralized. One effort to establish internal cohesion was undertaken by ↗Aḥmad b. Ibrāhīm al-Ġāzī (Axmed Gurrey), ruler of ↗Harär in the early 16th cent. He refused to pay tribute to the Ethiopian emperor and united Muslim troops in a war against the Ethiopian rule that led to the near collapse of the Christian empire.

Within these early sultanates power was in the hands of ruling families. In the Somali hinterlands centralised authority was absent. Economic and political life functioned largely through forging flexible alliances and making use of multilayered clan identities (Waller 1985; Schlee 1985). In the middle of the 19th cent., the important trading spots Marka (↗Merka), Baraawe (↗Brava) and Mogadishu in the south were under the suzerainty of the Sultan of ↗Zanzibar. North-eastern S. was under the rule of the ↗Mağeerteen sultanates. The port of Zaylaᶜ in the north-west, once part of the ancient Sultanate of ᶜAdal, was in the 19th cent. a small sultanate and part of the ↗Ottoman Empire.

Starting from the first half of the 19th cent., ↗Egypt, Britain (↗United Kingdom of Great Britain) and ↗France showed interest in the Horn of Africa. The British occupied Aden in 1839. In 1869 the Suez Canal was opened. and this increased the strategic importance of the region. Egypt was first to establish its rule over north-west S. in 1869; its forces, however, had to retreat to fight the Mahdīya (↗Mahdists) in the Sudan in 1884. Subsequently, France and Great Britain moved in and eventually established French Somaliland (later ↗Djibouti) and ↗British Somaliland, respectively.

↗Italy strived to gain possessions in southern S. in the mid 1880s. It acquired a protectorate over the Benaadir in 1889. ↗Italian Somaliland, including the north-east of the Somali Peninsula, was established in 1905 and completed with the transfer of "Jubaland" from British to Italian control in 1925. From a modern Somali perspective, Ethiopia is perceived as an African colonial power. Its expansion into northern Oromo and western Somali territories began with the Ethiopian conquest of Harär in 1887. Henceforth, the Ethiopian empire set out to consolidate its eastern periphery and to subjugate its inhabitants through military force (Barnes 2000). In 1897, Ethiopia and Great Britain concluded a treaty establishing Ethiopian rule over the region including the Hawd, which has rich pastureland and is thus very important for Somali herders. The treaty was renewed in 1954 (↗Treaties and conventions, s. EAE vol. 5).

The state as a mode of political organization was introduced only by the European colonial powers, together with an export oriented economy based on livestock production. Of course, political changes and contact with Europeans and Ethiopians also influenced Somali culture and society. Some Somalis feared Christian domination and had recourse to armed resistance. The most famous anti-colonial movement was the Dervish uprising led by ↗Muḥammad ^{c}Abdallāh Ḥasan (Maxamed Cabdille Xassan). It shook northern S. but also had repercussions in the south. In the vast and sparsely populated semi-desert of northern S., British and Ethiopian troops had difficulties in coming to terms with the mobile Dervishes. Their insurgency lasted for 21 years, between 1899 and 1920 (Samatar 1982).

After the "rebels" had been defeated, the British and Italian administrations spread relatively unhindered into the interior of the Somali Peninsula. Together with colonial penetration, a political and economic middleclass developed in the few urban centres. Its members were the first carriers of Somali nationalism. In the 1940s, when the British had ousted the Italian fascists from the Horn and, with the exception of French Somaliland, had united all Somali territories under their military administration, the first political parties were established. The most popular party was the Somali Youth Club, later re-named Somali Youth League. The Somali parties had a strong nationalist orientation and most advocated speedy independence. The proposal of the British Foreign Secretary Ernest Bevin to keep the Somalis united under British trusteeship was, however, rejected by Italy, the ↗United States of America and the Soviet Union (↗Russia, relations with). In late 1949, the ↗United Nations' General Assembly decided to endow Italy with its former colonial Somali territories as a trusteeship and with the obligation to prepare for independence within ten years. Britain kept its Protectorate in the north-west. Despite the fact that the development of political self-administration went much slower in British than in Italian Somaliland, still the northerners, driven by nationalist sentiments, demanded independence from the British. The protectorate finally gained its freedom five days before the Italian administered territories. In the haste of events and nationalist euphoria the act of union was ill-prepared and in fact was only accepted retroactively in a referendum in June 1961 (Lewis 2002).

The first decade of independence (1961–69) was characterized by internal administrative hurdles and conflict with the neighbours Ethiopia and Kenya over Somali-inhabited territories. The former derived from the two different colonial traditions including different languages and systems of administration. The latter were caused by the irredentist policy followed by all post-colonial Somali governments. The aim was to establish a "Greater S." including all Somali-inhabited territories in the Horn. This vision was expressed in the Somali flag, which depicts a white star on blue ground; the star's five points symbolize Italian, British, French (Djibouti), Ethiopian (↗Ogaden) and Kenyan (Northern Frontier District) Somaliland. Only two had united in 1960; the rest was missing (Somali Peninsula 1962). Parliamentary democracy came to an end in 1969, when dozens of descent-based parties competed for parliament. People lost confidence in the corrupt and nepotistic political class.

In October of the same year a group of military officers led by General Muḥammad Ziyād Barrī (Maxamed Siyad Barre) toppled the civilian government. The new government called itself the Supreme Revolutionary Council (SRC). It suspended the constitution, curtailed freedom of expression, introduced new forms of community-based political organization such as "orientation centres" for political education, and established a strong security apparatus (Ahmed Samatar 1988). It propagated nationalism and the abolishment of "tribalism". Reference to one's "clan" and the use of the usual patrilinear kinship-terms for non-relatives, such as *ina-adeer* (cousin) for peers and *adeer* (uncle) for elder men, were forbidden and replaced with *ǧēlle* ('comrade'; Som. *jalle*). In 1970 "Scientific Socialism" was adopted as the new ideology of the state. In the Somali case, this was a mixture of Marxist-Leninist ideas and Islamic norms. It was coupled with a strong personality cult of Muḥammad Ziyād Barrī as "father of the nation". The SRC also initiated economic and social reforms. Somali nation-statehood climaxed in the mid-1970s. In 1974 S. enhanced its profile internationally by entering into a treaty of friendship with the Soviet Union, joining the Arab League and hosting the summit of the ↗Organisation for African Unity (OAU).

In 1977, Somali military, supporting the Western Somali Liberation Front, attacked Ethiopia, soon after the outbreak of the *Därg* ↗revolution. This led to a breach in the relations of S. and the Soviet Union, the latter switching allegiance to the new socialist regime in Addis Abäba. In spring 1978, S. was crushingly defeated by Ethiopia and its socialist allies (Soviet Union, Cuba, and the German Democratic Republic, among others). The end of the "Greater S." plans brought internal problems to the attention of many Somalis. The government had not overcome nepotism and "tribalism". On the contrary, it became increasingly clear that power rested with the President's own and some of his close relatives' descent groups to the detriment of others (Lewis 1994). Most of the reforms introduced in the early 1970s had failed, apart from the introduction of the Latin alphabet for Somali and a country-wide alphabetization campaign.

With the Somali Salvation Democratic Front (SSDF) and the Somali National Movement (SNM), two important guerrilla-movements emerged in 1979 and 1981 respectively. They were hosted by Ethiopia; Libya and ↗Yemen provided the SSDF with weapons and equipment. The SNM was mostly supported by the diaspora. The guerrillas proclaimed agendas of national liberation and conducted hit-and-run attacks on military and political targets in S. Internally, the movements were largely based on clan-affiliation; the SSDF was dominated by Maǧeerteen, and the SNM recruited most of its fighters from ↗Isaaq clans.

In the 1980s, S. managed to establish good relations with the USA and other Western powers which stabilised the government with a steady flow of financial, humanitarian and military aid. This enabled Muḥammad Ziyād Barrī to stay in power and to suppress the mounting political and armed resistance and paved the way for state-collapse. Corruption was ubiquitous, the regime reacted increasingly paranoid and with brute force against any kind of opposition, and finally decided to bombard the cities Hargeysa (↗Hargeisa) and Burᶜo in north-western S. after they had been briefly captured by SNM fighters. The civilian costs were enormous. With the end of the Cold War Barre lost his allies in the West. His regime was finally overthrown and the President had to flee Mogadishu in January 1991. The United Somali Congress that had been founded in 1989 as a ↗Hawiye guerrilla organization took control of the capital. Other guerrilla groups established themselves in their clan-homelands. After their victory over Barre, the Somali guerrillas did not manage to make peace or agree on a new and inclusive political formula. Fighting erupted between them and until the time of writing (2010) S. remains a country without effective and legitimate government. In some regions, however, alternative political structures and state-like entities such as Somaliland and Puntland have been established (Hagmann – Höhne 2009).

Songs

In Ethiopian ↗music traditions, there are many types of S. In order to regroup different types of S. this entry categorizes themes and sub-themes of S. that can be found in several circumstances and ritual occasions, such as, e.g., ↗weddings, feasts of merit and ↗funerals (s. ↗*Ǝngʷərgʷərro* lamentation S.).

Praise and blessings

In many Ethiopian cultures, S. are used to offer praise and blessings during daily activities or rituals related to life or the annual cycle. Singing is omnipresent in the rituals of the monotheistic religions (cp., e.g., ↗*Ḏikr*; ↗*Mawlid;* ↗*Zema*), but ↗ancestors, heroes and well known living people as well as ordinary members of society and animals may also be praised in S. Among the ↗Maale of southern Ethiopia, praise and benediction are the main S. themes in all situations. The younger members of society praise their elders with ↗music, and, in return, the elders bless the younger members (Ferran 2005).

For the many agro-pastoralist cultures in Ethiopia, many praise S. are related to farming and herding activities. In their S., the ↗Arsi Oromo praise the cattle, the horses, the land and their ancestors, which are all central to their culture. Men can sing alone or gather together on happy occasions after a harvest, in a bar or during a ↗wedding to praise the cattle (*faaruu loonii*) or the horses (*faaruu farda*), especially when riding them to a wedding (Qashu 2006, 2009). For the Western ↗Gurage, S. related to agro-pastoral activities can be divided in sub-categories: S. dedicated to the ↗*ənsät*, to cows, bulls and veals (Ǝnnämor: *are*, *womfir* and *mägära*), to the plough of the land (*yətshud däs*) and to the cut of the grass (*yəfwatš däs*; Kruczynski 2004).

A major theme of S. all over Ethiopia is praise in honour of those who could obtain special achievments or benedictions. Praise S. can be dedicated to the spiritual beings of the Western Gurage and the Oromo pantheon, for the specific help they gave to people: the fertility of women, land or cattle, the strength of warriors, etc. Among the ↗Arsi, these S. among other spiritual repertoires are those called ↗*ateete.* They are generally sung by a group of women, praying to the female deity or to ↗Waaqa for many reasons: for rain (↗Rainmaking), to resolve conflict, security or peace, for a successful ↗birth, to motivate those going to war, to help women in difficulty, for a newborn cow, etc. (Qashu 2006). Human beings can also be praised for their positive action in favour of the group. Until the conquest of the southern Ethiopia among many ethnic groups, e.g., among the Western Gurage, a person who raided cattle outside his group or who successfully defended his family, lineage or clan against a foreign aggressor was praised on his return home for this particular deed. Repetition of such actions led to the composition of S., listing those deeds for special rememberance. These were performed during his feast of merit (s. ↗Meritorious complex) where he received a specific warrior-title or during mourning. S. of this type praise a lineage or a clan by listing its most famous heroes (Kruczynski 2004).

S. that praise heroes are found all over Ethiopia. They are known as ↗*fukkära* and *qärärto* (or ↗*šəlläla)* in Amhara regions, as *fakar* and *geerarsa* in Oromo, as *gerarsa* in ↗Wälaytta, ↗Gamo and ↗Gofa, as *merto* or *sorayto* in Maale, as *merta* in ↗Hamär (Strecker 1979) as *merat* in Arbore and as *mäläsay fäqär* in ↗Harari; they are also sung by the ↗Ñaŋatom (Tornay 2001), the ↗Añwaa and the ↗Nuer.

Most heroic S. are monodic and associated with hero worship; transmission of oral history and reinforcement of group identity are facilitated by these S. Among the Arsi, a *qondala* (male official hero who killed an enemy or a wild animal) can sing about several themes, including the history of his clan and family ancestors, the general history of the area, his personal heroic exploits, war, his lovers, etc. His unaccompanied solos often alternate with *faaruu loonii* (cattle praising S.), and are characterized by their descending lines, their fast singing and their use of poetic speech (such as metered verses, rhyme, alliteration, consonance, assonance, parallelism, etc.), allowing the singer to create poetic verse that flows with ease (Qashu 2008). Among the Western Gurage, each clan possesses a specific corpus of heroic praise S. Such S. can be divided into three main categories: male or female solo S. composed for the occasion of a man's heroic deed; solo/choir S. praising one or many heroes of a specific clan, relating the most important political events of the clan's past; and responsorial female S. composed of verses about war or ↗weddings, with refrains that mention all the heroes of a specific lineage or clan. Most of the time, all three types of S. can be accompanied by the ↗*atamo*. During the 20th cent. this tradition has given birth to S. praising men for their action as lawyers defending the interest of their group in front of the Ethiopian tribunals, which shows that the tradition of singing praises is subject to constant variation and evolution (Kruczynski 2004, 2008).

Among the ↗Mağangir the *sanza* (s. ↗Instruments, musical) is used to accompany the S. in order to encourage the warriors to fight, particularly against the Dinka. The Nuer people sing accompanied by several *sanza* during night ceremonies called *Dempire*, in order to celebrate one of the spirits of the night, the Mgundeng, using responsorial S. in which a soloist who plays the *sanza* answers the assembly (Lacombe 2006). Among the Hamär, S. of the ancestors (*aᵓeke gadi*) recall occasions of historical importance, transmitting texts that narrate the past and serve to bless the community attending the performance (Strecker 1979).

Among the Amhara, joust and heroic S. mix together on festive occasions. *Qärärto* is the favorite genre of the Amhara peasantry, especially in ↗Goğğam. It is a S. of joust and defiance performed mostly by men on holidays, weddings and collective harvesting. There is a unique non-measured melodic line (*zema*), fluid and highly ornamented, interrupted by voice register breaks (*qəlaṣ*) and recto tono passages (*qäs bəlo*). Each utterance corresponds to one poem (*gəṭəm*), and requires a short introduction (*azmač*). The voice is nasal and high pitched. Each singer takes his turn and sometimes carries on with a *fukkära*, a poetry recitation or improvisation, recited or sung very rapidly. Though informal, the competition is real and the stakes high: talent and ablility are evaluated and commented on, the performances being a basis for their courage and reputation. Excited by alcohol, singers often brandish wooden sticks or rifles, feigning aggression and glorying in being heroes. Such performances led to *qärärto* being defined as war S. in the literature (Morand 2004, 2008, 2010).

During Arsi weddings praises are sung for the bride and groom and for their fertility. When the bride leaves her mother's house, mothers can sing *hobbee damee* to encourage and praise her as she goes. Once the bride and groom return to the groom's home, the women in his family greet them with S. about the couple's beauty and happiness: *ašoo ašilaa* ('groom and bride') and *fay fayoo* (beautified; Qashu 2004; 2009).

Harari wedding S. (*bäläču fäqär*), usually performed by women in solo (*salley*), in duet (*kotankot* and *ǧaliyei*), or collectively (*därsi*) and accompanied by *däf* tambourine, ↗*käräbu* drums, and ↗*käbäl* idiophones, generally praise the married couple and their families. Each phase of the ceremony is accompanied by specific S. which are performed in a different manner according to the singers' social status and ability.

Identity and culture in songs

S. are a means of creating cultural identity. Subtle musical differentiation between ↗Agäw, Betä Əsraᵓel, Christian and Muslim communities as developed historically in the Christian highlands is an example among many others (Tourny 2007). Among the ↗Arbore, music and lyrics are considered important keys to understanding historical processes, relating to identity and the dynamics of war and peace. S. texts in Arbore form an exclusive body of oral history. Most S. are topical, addressing morals and values (e.g., praise, condemnation, devotion) by recounting historical and present events and the people associated with them. They are always embedded in historical contexts and are both explicit and poetic. While mentioning specific people and places they make use of a rich body of metaphor. The content of these S. are common knowledge, therefore performance of only parts of the text evokes the whole (Gabbert 2006; 2008).

The Oromo also use S. to construct and reaffirm group identity. Through the verses and references to topics such as everyday life, history and ancestors, they reiterate important cultural elements and the elders pass information on to the younger members of society. For example, when the men of one clan go to get the bride from another clan, the involved group (*hamoomota*) sings of the clan's exploits while on their way to get the bride and the dowry, which can be seen as a means of reinforcing clan unity (Qashu 2008, 2009).

S. are used in many contexts of daily life as a means of cultural reinforcement, of communication and of negotiation during times of peace and war. In some societies, wedding S. and dances are a means of consolidating group unity and cultural identity. Among the Arsi, men who go to get the bride sing of clan unity (also *hamoomota*) while women inside and near the house help the bride make the psychological transition through the crying S. (*baye-bayee*, 'departure S.') and through her friends crying over her departure (*tartarrii birraa*, 'until spring, perhaps'). Outside, a third group in society, the youths, dance while singing of typical youth topics such as school, boys, different kinds of personal or family problems and the departure of the bride, singing *tiirii* and *šiišiikaa* (Qashu 2004).

Among the Western Gurage, weddings (*ağäbänyä*) include two types of S. The first one are S. generally performed by a group of young girls. These recreational S. focus on weddings exclusively, on the beauty of the bride, on the complementarities of the engaged couple, etc. The second type is performed by two married women. These S. are presented in two parts: the saddling of the bride's horse before her departure from her parent's home, and a list of warriors belonging to her husband's clan she will be integrated in (Kruczynski 2004).

In Harär, S. are called *gey fäqär* ('S. of the city'). Texts and melodies are highly permeable and may be adapted to the circumstances; different themes may be mixed within the same song: most frequently texts concern religion, love, friendship, praise, marriage and family life and, above all, the city of Harär, its culture and the surrounding countryside. S. texts may also describe the conditions in which they are performed or contain jokes, family genealogies, historical and religious parables, proverbs, aphorisms; they may also include riddles as well as sacred hymns, prayers, blessings, paraphrases of religious texts and of ancient literary manuscripts (↗ *Masnoy*). Harari S. thus convey a significant part of the local heritage and cultural identity. Their performance requires specific skills such as instrumental technique, textual improvisation, recollection and adjustment of a shared poetic and musical oral heritage. In the 1950s to 1970s, popular groups called *mugad* were musically active in Harär. More recently, Harari pop musicians reached the market with S. on topical themes such as pacifism, water scarcity, home-diaspora relationships and the preservation of Harari cultural and religious identity.

Poetry and songs

In many societies all over Ethiopia, S. and poetry are strictly interconnected. In Harär, e.g., *fäqär* is a polysemic term indicating S. and poetry, as well as other activities of entertainment. As in many other cultures, S. texts and melodies are not considered as separate entities but as a unit. Verses and couplets of *gey fäqär* are synthetic and dense; signification is conveyed through poetically inspired metaphors and infused with religious and moral advice. Rhymes, assonances, fixed formulas and non-significant syllables (*wa, le, wey*) are widely employed. Poetic intensity and subject range may vary according to circumstances and performers; improvisation and composition are always open to new themes. The most popular couplets are played recurrently in songs, combined and juxtaposed with fixed or improvised verses through formulaic procedures (Sartori 2008).

Oromo S. are mainly monodic, with a single melodic and rhythmic formula that is repeated; they are sung in choirs that alternate, with verses that have a specific amount of syllables. As with many other cultures, most Oromo verses are only understandable within the cultural context, as the verses are steeped in references to local history, the clan, the ancestors, the landscape, the cattle, and other animals or cultural items, e.g., a milk container (*barree*). With their strong tradition of herding cattle, many Oromo S. refer to the spatial and temporal setting of spending time outdoors with the animals (Qashu 2006, 2008).

Among the Amhara joyous events are also celebrated with S. *Zäfän* are festive songs, often combined with dance, that can be performed on holidays (in the church yard after the ceremony, and later on at home), and weddings, as well as by children on informal occasions. The repertoire consists of fixed melodies built on a call and response pattern between a single singer and a choir, accompanied by hand clapping and sometimes by the ↗ *käbäro* drum. Both men and women can sing and dance, and there is as yet no evidence of any clear differentiation according to circumstances. The soloist sings a short poem (*gəṭəm*) that fits with the *zema* (melodic line) of the *zäfän*. The choir then either repeats the poem or sings a short refrain (*azmač*). Collective joy and exuberance are the main features of this genre.

In most of the Maale S., lyrics consist of very short sentences, phrases or isolated words which are enunciated one after another without logical links between them (Ferran 2002: 187). The singers use different literary techniques to praise their elders: they make allusion to their clan, their special bond-friends, and their heroic (war or hunting) deeds, etc. Unmarried singers can also seduce their suitors by S. To do so, they sing indirect messages to their lovers: they praise the clan, the region and the friends of their lovers, they invite them to come with them in the bush, they metaphorically compare love and the lovers to the sweetness of honey, etc. Last but not least, mourning is expressed by S.: *kaye* is one of the techniques used to praise the deceased persons.

Themes of children's songs

In every culture, children express themselves through music while they play. Among the Harari, S. performed by mothers and children together as well as lullabies (*ušurur*) are considered as *wiğ mätfeqär*. Ethiopian lullabies present a vast musical and textual variety. Among the Səlṭe, lullabies (*ororo*) may include historical verses; in Eastern Ethiopia, the Somali perform lullabies called *ololo* or *hobey*. S. often accompany recreational and educational games and may present differences according to the children's age and sex; specific S. are also associated with annual events (during the *Ašura* feast children play *weršato*) stages in child growth (a baby's first steps are accompanied by *tatti tamätti* nursery rhyme) and the daily routine (on their way home, children sing *gar korärna* or *miša gar*; Sartori 2008). Among the Oromo, lullabies are known as *šororo*. Oromo children play riddle games such as *hibbo*, which can be followed by cattle praising S. (*faaruu loonii*). When children are with their older siblings and parents, they also try to learn some of the S. their elders sing (Qashu 2006).

Šonke

The Sufi shrine of Š. (ሾንኬ) is situated in the hills of Ǝssoyyä Hǝǧirota, ca. 15 km south-east of Kämisse in today's ↗Qallu *wäräda*, South Wällo zone. It is historically related to two shrines located in the neighbourhood of Harbu, in the Albukko area of Qallu, Ǧäma Nǝguś and Gäta. Ǧäma Nǝguś is the most important of the three shrines and the biggest Sufi centre in the Qallu region (↗Islamic brotherhoods).

Š. was founded by the well-known Sufi scholar and mystic (↗*Walī*), *šayḫ* Muḥammad Ǧawhar b. Ḥaydar of the Sammāniya brotherhood, popularly known as *abbayyä* Š. or Šonkǝyyä. He had deep religious knowledge and introduced the annual celebration of the Prophet's birthday (↗*Mawlid*) on a large scale for the first time in these ↗Argobba and ↗Oromo inhabited mountain retreats. After his death in 1935 (HusIslam 137), Š. was transformed from a major ↗*zāwiya* (or *ḫalwa*) into a shrine for the veneration of his grave.

The mausoleum is separated from the ↗mosque and the other buildings by a stonewall. The grounds of the enclosure are regarded as ritually clean and sacred. The office of the custodian of the shrine (*ḫalīfa* or ↗*aggafari*) is inherited by the eldest son who is said to have received the power of blessing and of working miracles from the *walī*. He organizes the yearly ↗pilgrimage (*ziyāra* or *wärra*), accommodates pilgrims and acts as a functionary for the *mawlid*.

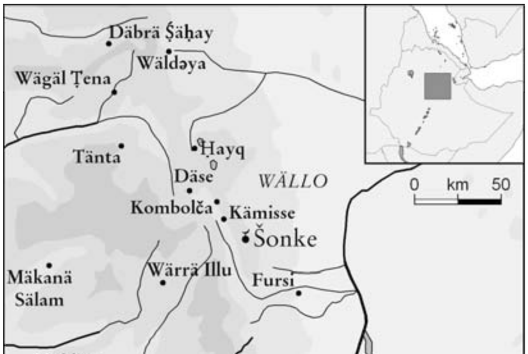
At present, Š., like other shrines, has a resident ↗*šayḫ* who teaches the ↗Qurʾan and exegesis (*tafsīr*), Islamic jurisprudence (*fiqh*), theology of the oneness of Allāh (*tawḥīd*), and the *Ḥadīṯ* to itinerant students (*däräsa* or *qallǝčča*). Such *šayḫs* live on the products of their own plots of land cultivated by their students or community members. They also depend on grain contributions from peasants who search for blessing (*baraka*) for the well-being of their families.

Š. attracts hundreds of pilgrims annually from Qallu and from northern Šäwa, especially during the *mawlid* in the third Islamic month (*Rabīʿ al-awwal*). The large majority of them are Muslim cultivators, traders, weavers, craft workers, religious scholars (*ʿulamāʾ*) and itinerant students (*däräsa* or *qallǝčča*) but Christian Amhara from the areas of Gǝdǝm, Qäwät, Yǝfrata, and Anṣokǝya are also known to visit the site.

Adherents of Šonkǝyyä make the journey to Š. to fulfil a vow (*nazr*, cp. ↗*sǝlät*) or in return for a favour already granted through the intercession of the saint. The shrine is visited for a variety of needs (*ḥāǧa*). The pilgrims seek protection against different types of affliction through ↗prayer (*duʿāʾ*).

The pilgrims usually arrive a few days before the main event. They either stay with residents of Š. or in the nearby hamlets of Färäǧa, Mägaräǧa and Ṭollaḥa, or set up their temporary shelters in the open space surrounding the permanent structures. These consist of a mosque and the saint's grave at the residence of the shrine's custodian.

In Š., only men are active participants of the cult of the saint while women provide the audience for rituals and feature prominently in the background. On the eve of the festival, animals brought by the participants are slaughtered and the meat distributed. Pilgrims first circumambulate and prostrate



themselves in front of the saint's tomb (*ḍarīḥ*) and kiss the walls of the main building.

The principal ceremony consists of the recitation of litanies and panegyric poems that extol, glorify, and honour the Prophet and *abbayyä* Š. and his immediate family members. During the ceremonies some people may have mystical experiences and enter into an altered state of consciousness. Those suffering from mental derangement and those possessed by evil ↗spirits (cp. ↗Possession cults), as well as the most emotionally involved devotees, cry out and fall into trance, which is regarded as a physical form of the struggle of the evil spirit to be released. This is followed by a visit to the residence of the custodian of the shrine where pilgrims hand in their gifts (*hadīya* or *ǧäbata*) in cash or kind after bowing, and kissing his right foot as an expression of humility and in search of the mystic's *baraka* through the medium of the *ḫalīfa*. By the end of the third day, participants start to leave the Š. shrine after exchanging blessings with shrine custodians and making vows to return to next year's pilgrimage.

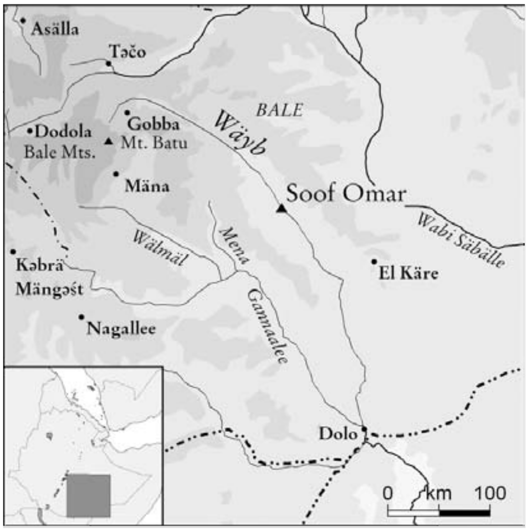
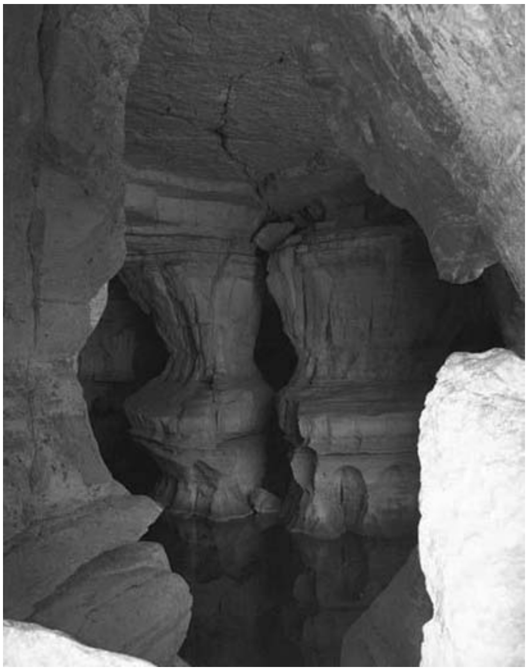
Soof Omar

The caves of S.O. were carved by the ↗Wäyb River which originates on the slopes of Mount Batu, ↗Bale. Over thousands of years, the river carved out the caves of S.O. further downstream.





Inside the Soof Omar caves; photo 2007, courtesy of Kim Smith

The river first flows over early and middle cenzoic volcanic traps. At Ayyo Makoo it enters into the cave system, flowing under the Hulučа natural bridge (ca. 1,300 m A.S.L.) and under recent mesozoic calcareous layers. It rises up again downstream after a 16 km underground course: it is thought to be one of the largest underground rivers in the world. It flows through narrow corridors and caves the exploration of which started during the Italian occupation in the 1930s.

The first cave is used as a mosque, the second one is known as the Chamber of Columns with balconies and 20 m high limestone stalagtites (Gerster 1974: 66, n. 42); a third cave is said to have been excavated by God to hide the Muslim saint ↗Soof Omar (Guida 467f.). Speleologists have surveyed the main course of the Wäyb River but have not yet explored the whole ramifications of corridors and caves.

The Arsi Oromo go on pilgrimage to the place where Soof Omar is believed to have hidden himself from the "pagans". This pilgrimage is less known and attended than the pan-Oromo pilgrimage to ↗Šayḫ Ḥusayn. Only a few tourists visit the barely accessible site, with its imposing karstic landforms. Coming off the Ginir to Goro road, a poor track leads to the place where local guides collect entrance fees. A few travel agencies offer a visit to the caves in addition to the Bale National Park.

Soof Omar

According to the oral traditions of the Arsi-Oromo S.O. (or *ṣūfī* ᶜUmar), originated from Təgray from where he moved as a Muslim missionary to the region of ↗Bale (Braukämper 2002: 156). The term *soof* (*ṣūfī*) which is commonly added to his name indicates that he was a member of a brotherhood associated with mysticism. It is not specified, however, of which particular *ṭarīqa* (↗Islamic brotherhoods) he was a member. It can only be stated that the Qādirīya seemed to have been most influential in the ↗Bale region.

Apart from stories of miracles hardly any concrete facts have been transmitted about the life and the deeds of S.O. Poems and hyms in praise of S.O. are composed and sung by the Oromo Muslim faithful (Attalläläčč Dässaläññ 1981/82). As oral tradition relates, and according to an Arabic hagiography of *šayḫ* Nūr ↗Ḥusayn, S.O. was the favourite disciple of that holy man, whose activity in the Bale region can probably be dated to around 1300 (Braukämper 2002: 131; Gori 1996: 67f., 74). However, it appears doubtful whether he was Nūr Ḥusayn's contemporary. In the genealogy of the Sakmarra clan of the ↗Arsi, who claim descent from S.O., a person Sakmarra (corruption of *šayh* Umär) is to be found only 11 to 13 generations ago. Even if we take into account that the genealogies are considerably telescoped, it seems hardly justifiable to date him as far back as the 13th/14th cent. S.O. is reported to have died in Hamarra in the Gololča district of Bale. The oral data suggest that the veneration of S.O., presumably as an appendix to the *šayh* Nūr Ḥusayn cult, did not commence before the second half of the 19th cent., when Islamization among the Arsi-Oromo was advancing. A locality with natural caves created by the Wäyb River in northern Bale was named S.O. and became his most important place of worship.

Sorghum

S. is one of the most important grains in sub-Saharan Africa. The species of S. cultivated in Africa are:

a) *Sorghum bicolor*, a primitive type grown in western and northern Ethiopia;
b) *Sorghum guinea*, a form grown in higher rainfall areas but in Ethiopia only in Gamo Gofa;
c) *Sorghum caudatum*, grown in the lowlands of western and southern Ethiopia;
d) *Sorghum Durra aethiopicum*, grown in the eastern and northern highlands of Ethiopia and Eritrea (Harlan et al. 1972: 173).

In Ethiopia, S. *bicolor* (Amh. **ዘንጋዳ**, *zängada*), a primitive species that closely resembles the wild forms, is grown on a small scale in all areas where S. is cultivated. Some claim that it was originally introduced from the Near East. Harlan (1976) and his colleagues, however, postulate that S. was first domesticated in the savannah zone from Chad to the Sudan, based on historical biogeographical evidence. They reject the earlier theory that S. was domesticated in Ethiopia, and indeed specifically state that there is no evidence to support an Ethiopian origin (Stemler – Harlan – de Wet 1975: 333).

The *bicolor* type has two major subspecies, one with longer grains that remain separate when boiled in water. The food made of it is called *nəfro*, which is usually eaten as snack. This long-grain S. becomes too soggy or crumbles too easily when made into bread. The S. *bicolor subspecies aethiopicum*, or short-grain type, has shorter grains that become sticky when boiled in water. In Ethiopia, the *aethiopicum* became the exclusive type cultivated and consumed (Buzi 1938: 124; Harlan 1969: 311; Huffnagel 1961: 21).

S. cultivation is labour intensive. However, under favourable conditions S. produces a good yield. S. is first ground and then made into bread. Preferences differ from one area to the next. For example, the preferred variety in the lowlands is the short type lacking gluten and producing a very distinctive flavour. The long-grain S. does not taste good to the ᶜAfar, whereas it is the preferred S. in the Amhara highlands. In the lowlands, people often say that they have not eaten until they have eaten S. ↗*ənǧära*, which is often associated with the lowland collective identity as it constitutes the main ↗food. However, for the Amhara, S. grains are a symbol of poverty, in contrast to ↗*ṭef* (Fekade Azeze 1998: 145, 192).

S. is rich in symbolism and considered beautiful (cp., e.g., Heller 1999: 230). S. stalks are not only used for decorative purposes and protection against the evil eye (↗*Buda*), but also have ritual values. Popped S., e.g., is served in auspicious occasions such as the ↗coffee ceremony. Furthermore, harvest rituals are a major cultural institution, an important agent in maintaining the significance of S. Among the Amhara, these rituals are enacted in a cosmic cycle of ↗gift exchange during which new crops of S. are offered in return for the original seeds given by God. In fact, the symbolic power of S. derives to a large degree from the daily commensality and discourse among members of a social group. Similarly, S. stems (*ṭənqəš*, *Sorghum vulgare saccharatum*) are particularly popular with children.

Spain, relations with

Contacts between the Iberian peninsula and Christian Ethiopia date at least to the early Solomonid period. *Aṣe* ↗Wədəm Räᶜad ("Re Voddomaradeg") in the early 14th cent. sent an embassy "ad regem Hispaniarum", of which only few traces are recorded, offering an alliance against the Muslims (Beckingham 1989: 341, 343; Fiaccadori 2009: 29; cp. ↗Italy, relations with). It was probably following this that ↗Prester John was first located in Ethiopia on a map of 1339 drawn by Angelino Dulcert in Mallorca (Beckingham 1989: 340f.; in a later variant of the *Letter* of Prester John "Voddomaradeg" was identified with the Prester; Ullendorff – Beckingham 1982: 7f.). In 1427/28 *aṣe* ↗Yəsḥaq sent envoys with a letter to king ↗Alfonso V of Aragon in Valencia, suggesting a marriage alliance and asking for irrigation experts. In his answer the king proposed a wedding with princess Joana d'Urgell, and he instructed his ambassadors to look for the possibility of an Ethiopian marriage for Infante Don Pedro. However, the ambassadors, Phelip Faiadel and Pere de Bonia, never reached Ethiopia, as Alfonso says in a letter to *aṣe* ↗Zärᵓa Yaᶜəqob of 1450. This Ethiopian ruler had sent a diplomatic mission, pompously received in Naples (newly belonging to Alfonso's realm) in July 1450. In return, the king of Aragon sent two missions to Ethiopia, led by Miguel Desiderio in 1452, and Antoni Martínez in 1453, who also did not arrive (for the 1428 memorandum for the Aragonese ambassadors and a description of the 1450 reception of the Ethiopian Embassy, s. Garretson 1993; cp. Girma Beshah – Merid Wolde Aregay 1964: 13f.; Soldevila 1925).

Individuals from S. came to the region much earlier. A funeral inscription of the ↗Dahlak islands mentions an "al-Andalusī" (5th cent. H. = 11th cent. A.D.), i.e. a Muslim originating from southern S. before the Christian conquest of Andalusia (Schneider 1983). The 12th-cent. report of the Jewish traveller ↗Benjamin of Tudela indicates a possible visit of the Ethiopian region. Also, the medieval history of a Spanish Catholic saint found its way to Ethiopia. The Miracles of Mary (↗*Täᵓammərä Maryam*) contain passages referring to St. Däqsyos of "Ṭəlṭəlya", who has been identified as St. Ildefonso de Toledo. A 13th-cent. French version of the story (the saint's name now being distorted to St. Hyldefund[us]) was translated into Arabic (there: "al-Defsyus") and came to Ethiopia through Egypt (the *q* in the name resulting from an erroneous reading of *f*). The Ethiopic version is dated to the 15th cent. (CerMaria 305–38).

In the 16th to 17th cent. S. was again involved in the region, first indirectly through ↗Portugal and then directly during the union with Portugal (1580–1640). A member of the Portuguese expedition of Christovão da ↗Gama, Miguel de ↗Castanhoso, was of Spanish origin, as well as a few Jesuit missionaries (↗Jesuits) who worked in Ethiopia (Andrés de ↗Oviedo, and the most influential Pedro ↗Páez). Moreover, the Spanish silver dollar, coined in Peru and other Spanish colonies (cp. Schienerl 1982), became the dominant ↗currency in the Indian Ocean and was widely used in the Horn of Africa until the massive import of the ↗Maria Theresa thaler in the 19th cent. For example, Spanish dollars were used in the Ethio-Sudanese border slave trade in the early 19th cent. (↗Slavery), followed by a flow of Spanish dollars into the northern Ethiopian highlands. The Təgrayan *ras* ↗Wäldä Śəllase gave a large sum of Spanish silver dollars to an Egyptian embassy sent by the Egyptian ruler ↗Muḥammad ᶜAlī. The coin also influenced local terms for money in the north; the Arabic *riyāl* (Kunama: *iriyani*, 'money', equivalent to ↗*qərš*) is derived from the Spanish term real (Smidt 2009).

In the 19th cent., just before the inauguration of the Suez Canal, S. briefly contemplated some sort of presence in the Horn of Africa. In 1867/68, a Spanish military observer participated in the ↗Napier expedition (Moorehead 1962:241), and a great number of mules used by this expedition were purchased in S. During the reign of *aṣe* ↗Yoḥannəs IV, S. initiated a first diplomatic contact with Ethiopia. In 1880, the explorer Juan Víctor Abargués de Sostén (b. 1845, d. 1920), a resident in Egypt, was sent by the Real Sociedad Geográfica de Madrid with a letter from Alfonso XII to the Ethiopian ruler. He aimed at promoting more sympathy for the Catholics in the northern borderlands and inquired into the possibility of commercial contacts and the establishment of a Spanish enclave on the Red Sea coast (Gómez de Valenzuela 1998; Mañé Rodríguez 2005b); for a critical discussion of his partially wrong geographic descriptions s. Stecker 1884.

During the Spanish civil war, the only airplane of the short-lived Basque Republic was purchased in 1936 from *aṣe* ↗Ḫaylä Śəllase I when Ethiopia fell into the hands of Mussolini; it was renamed *Negus* (Pankhurst 2005/06). Moreover, the "Spanish question" was an important factor pushing Great Britain to recognize the Italian conquest of Ethiopia in April 1938: in return for this recognition, Mussolini promised to retreat from S. Mussolini, however, in break of the agreement, immediately reinforced his troops in S.; however, only after ↗Eden's return to government and Italy's declaration of war on Britain and France in June 1940 (↗World War II), the recognition of the conquest of Ethiopia was withdrawn (Spencer 1984:88).

In 1951, S. established permanent diplomatic relations with Ethiopia. The first Spanish Ambassador was José Luis Florez Estrada, who presented his credentials on 19 September 1962. In 1970 *aṣe* Ḫaylä Śəllase I went to S. on a state visit and was received by General Franco. The return visit was paid by the then crown prince Juan Carlos (Asfa-Wossen Asserate 2007:306). In 1962 a Spanish Embassy was opened in Addis Abäba. Relations with Ethiopia soured, however, after the *Därg* took power. They resumed only in the 1990s and were strongly revitalized in the 2000s. The Spanish Minister of Foreign Affairs visited Ethiopia in 2008, followed by a return visit by his counterpart in 2009. Within the framework of the Spanish policy towards Africa, Ethiopia is considered a High Priority Country; both countries collaborate in the Spanish international initiative "Alliance of Civilizations" and other global initiatives.

An aspect of globalization is the massive presence especially of Spanish fishery fleets at the Somali coasts in the late 1990s, with the effect of over-fishing; after years of resistance by Somali fishermen a modern form of piracy developed at the Somali coast, among others as a response against European 'fish-stealing' (Matthies 2010).

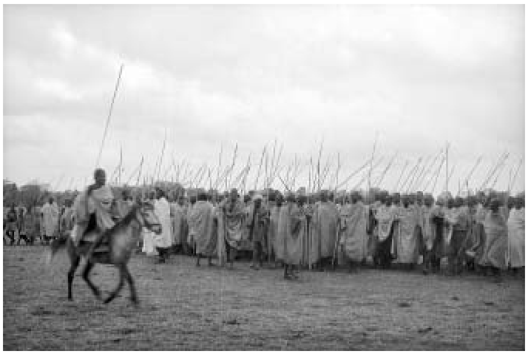
Wolbert Smidt

Spears and lances

S. and L. (Amh. ጦር, *ṭor*) are traditionally counted among the most important Ethiopian offensive, defensive, and hunting weapons. They differ in the way they are used: the S. is thrown at distant targets and it is constructed with this aim in mind (shaft thickness and length, form and length of the head [i.e. the blade with a socket or spike fastened to the shaft], sometimes with a stabilizing S.shoe); on the other hand, the L. is a thrust weapon, much more solid, and used in close combat (definition and technology s. Hirschberg 1986; Schmitz 1963: 51f.; cf. Schilde 1929: 125; Paulitschke 1893: 115f.; VSAe I, figs. 37.4, 7). S. and L. are not properly distinguished in the literature and it is often difficult to identify the differences.

Due to the perishable materials used, archaeological evidence is rare. It can be assumed that, in prehistoric times, S. were made of wood with shaft and head in one piece (Rohrer, 127, figs. x, 4). During excavations in ↗Aksum iron spearheads and lance-points presumably of two-part weapons produced in late antiquity have been found (s. Munro-Hay 1989: 221ff., figs. p. 224ff.); the “Stele of the Lances” from Aksum shows a L. (below) and a S. (above; Munro-Hay 1989: 152; MHAksum 13, fig. 2, p. 217) and an obelisk fragment shows two spearheads (CRStor pl. xxxi); the Aksumite king ↗MḤDYS is shown on a coin carrying a S.; this coin is, however, most probably a medieval forgery (s. Hahn 1996a, fig. 10; s. also ↗Coinage).

A written document from Byzantine times (Malalas XVIII, ed. Migne 1860: 670; Hahn 1996: 92 fig. 33; MHAksum 219) and the medieval description of a king’s coronation (MHAksum 164) show S. and L. as symbols of prestige and as attributes of kings and rulers. On religious ↗paintings S. and/or L. are documented in the hands of victorious saints (cp. 16th–18th cent. ↗equestrian saints; St. ↗George; PankBord fig. p. 367; Mercier 1979, figs. 16, 38; MHAksum fig. 1; Spring 1993, pl. 26). Until the 20th cent. S. were symbols of power used in rituals and ceremonials throughout Ethiopia (e.g., ↗Dizi [cp. ill. EAE vol. 2, 177], fig. “Headman’s ritual” in south-east ↗Käfa; Schmitz 1963: 91f.; among the ↗Wälaytta; s. ill. of “King’s spear (or lance)” among the ↗Amaaro in VSAe III, 46, 107f.; Amborn 1990: 79, n. 40). The imperial heavy cavalry (for “black” cavalry, s. PankBord 366f.) was equipped with sturdy L. in the 17th/18th cent. Warriors and soldiers of the ↗infantry and light ↗cavalry of the south armed themselves with S. and L. until the 20th cent. (s. Paulitschke 1893, pl. XI, fig. 32; PankEcon 551); there were short S.



Arsi council members with spears and lances, south of Kofale; photo 1972/74 by Ulrich Braukämper; courtesy of the Frobenius Institut, Frankfurt am Main (37-Br014-36)

for both armies such as javelins (Spring 1993: 98) or zargunchos (PankIntro 144, 164f.) and, in addition, L. for the foot soldiers.

Until the 20th cent., the S., together with the ↗shield, completed a private individual's basic equipment for fighting and ↗hunting (VSAe I, 183; VSAe III, 202; except for the *ṭiiya* ↗*waata* (↗Boorana), who use only bows and arrows, VSAe II, 135, 138; Paulitschke 1893: 113f.); in nearly all Ethiopian regions the S. was carried as a prestige object, as a symbol of freedom and bravery (Rohrer 1932: 125) and was essential as a ritual device (cp. ill. EAE vol. 2, 82; VSAe III, 70; VSAe I, 151). The value of S. and L. cannot be overestimated, as shown by rules such as the following: if an ↗Arsi broke an entire S. shaft with spearhead and S. shoe, he had to pay five cattle to the owner of the S. (VSAe I, 481).

The S. consisting of head (mostly iron, seldom ↗bamboo blade with spout) and shaft (wood, iron, bamboo) was normal in historical times; spouts and S. shoe were stabilized, decorated and protected by metal caps or metal spirals.

The metal required was mostly imported in the form of bars from ↗Egypt (↗Handicrafts, ↗Iron; Amborn 1990: 60 here n. 2; PankIntro 18); later it was also imported from ↗India and ↗Europe (cp. PankEcon) and was converted by local blacksmiths (Amborn 1990: 58–89).

The spearheads, L. points and S. shoes of the "common Ethiopian type" nearly all look the same (VSAe II, 45; PankEcon 561). However, there are exceptions for certain purposes and there are local differences in length, width and proportion: The S. of the Uraaga (southern ↗Guǧǧi; VSAe II, pl. 16, 1–3; 45) resemble the S. of the Maasai with their very long point and the long heavy shoe; ritual S. of the Guǧǧi, ↗Sidamo and Därasa (↗Gideʾo) are provided with barbs (*habaara*, VSAe II, 282); a special "holy S." (*booda*) with a wide S. shoe (*somaaya*) was used by the Arsi for ritual sacrifice (VSAe II, 503). The ↗Dorze held traditional competitions with blunt spearheads (VSAe III, 207); among the ↗Yäm S. with barbs were only used by dignitaries and proven warriors (VSAe III, pl. 25, 2); the kings of the Amaaro, ↗Limmu Ǝnnarya and Käfa preferred a two-bladed (bident) spearhead (*šefo*; Lindblom 1934: 162; VSAe III, 338). Multi-bladed ceremonial S. were common among the Burǧi-Konso (Amborn 1990: 79). The ↗ʿAfar used spearheads of high quality, leaf-shaped with blackened oval curvature inside the lower part which was divided by a clearly raised middle rib (Spring 1993: 103); the same was to be found among the ↗Ṣamay and ↗Dime (s. VSAe I, pl. 37, 7). The spearhead of the Konso with saw teeth was extremely dangerous (Spring 1993: 104; Hallpike 1972: 333).

A special S./L. variation is the harpoon whose point is fastened with a string at the upper end of the shaft and is provided with a "swimmer" (s. Hirschberg 1986: 200). The Omotic-speaking ↗Harro people on ↗Gidiččo island (Lake ↗Abbayya) used to hunt ↗hippopotamus with 3-m-long harpoons and 30-cm-long blades (VSAe II, 700, pl. 44, 2).

Ursula Hellwag

Special court

The S.c. was an institution of consular jurisdiction between 1920 and 1935. When, under *aṣe* ↗Mənilək II, ↗trade between Europeans and Ethiopians increased, it became obvious that the new legal problems could not be dealt with under traditional ↗law – ↗customary law and the ↗*Fətḥa nägäśt*. Thus, the French minister, ↗Klobukowski, in 1908, concluded a treaty between ↗France and Ethiopia, under which all European nationals were entitled to be plaintiffs or defendants before the S.c., in order to solve conflicts arising from civil or commercial-legal disputes (↗Treaties and conventions, s. EAE vol. 5). The S.c. had to apply the law of the defendant, i.e. English or French or another European law – or the Ethiopian law whenever an Ethiopian was the defendant in a court case.

The S.c. did not come into existence until the end of World War I. In its early years the S.c., as a mixed court, was said an instrument of western dominance. However, mixed courts were of great importance to developing an international private and commercial body of law. The S.c. was composed of learned judges from European countries or from America, but in order to protect the sovereignty of Ethiopia it had to be presided over by an Ethiopian. Their names and their periods of presidency are as follows:

Blattengeta ↗Ḫəruy Wäldä Śəllase 1920
Ḫaylä Suməyye 1922
Näggadras ↗Afäwärq Gäbrä Iyäsus 1923
Wälde Bäšah 1926
Näggadras Dästa 1927
Täsämma Däbalqe 1928
Wärqu Yəttäṭäqu 1929
Azzaž ↗Wärqənäh Ǝšäte 1929
Balambaras Qəṭaw 1930
Čärənnät 1931
Blatta ↗Ayyälä Gäbre 1932
Blattengeta ↗Loränso Taᵓəzaz 1935

This list of the twelve Ethiopian presidents from 1920 to 1935 includes some of the best known Ethiopians of that time. They had to represent their own legal tradition and culture in a dignified way in the face of heavy foreign criticism of the Ethiopian legal system; this criticism had political implications, even threatening Ethiopian independence. Often, persons were appointed who were acquainted with foreign thought and life, some of them owing their knowledge to foreign missionary education.

The following legal problems are well reflected by the court cases: human rights, contract law in general, evidence, compensation, execution of judgements and counter-claims, appellate decisions, equity, conflicts of law, problem of language, compensation for moral damages. The President of the Appellate S.c. was the Regent, *ras* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I). The cases of the Appellate S.c. had a much higher quality in composition, reasoning and conclusions.

The S.c.'s decisions often refer to traditional Ethiopian legal institutions (↗Law: Traditional legal institutions). Arbitration is mentioned very often; sometimes the case is referred for reconsideration by a group of elders (↗*Šəmagəlle*) or by members of a Court of Reconciliation, or such procedures had already been tried. Traditional law preferred to settle disputes in a friendly way and tried to avoid bringing them to court. The First Instance of the S.c. often tried to act as a kind of arbitrator or to give advice to the parties on how to settle the case or solve their problems.

It is interesting to see that cases after 1930 are more sophisticate than before. The attitude of the European consuls was characterized by ignorance of Ethiopian law, and a feeling of the superiority of European law. They often refer to customary law as "Ethiopian law". This "Ethiopian law" pre-existed the S.c., which however, certainly influenced and modernized customary law. By doing so, it bridged the gap between traditional Ethiopian legal concepts and modern European law, thereby paving the way for a modern codified law in the 1950s and 1960s.

Heinrich Scholler

Speedy, Tristram Charles Sawyer

Captain S. (b. 26 November 1836, Meerut, India, d. 9 August 1910, Chatsworth, Church Stretton, Shropshire) was a British-India army officer who visited Ethiopia four times, and was intimately involved in bringing up *aṣe* ↗Tewodros II's son ↗ᶜAlämayyähu.

Son of a British officer James S., S. was educated privately in Cheltenham, England, before obtaining a British army commission in 1854.

Tristram Speedy with Prince ᶜAlämayyähu; photo ca. 1868, from the collection of the British Embassy (Ambassador's Residence)

He had himself transferred to the Loyal North Lancashire Regiment in order to serve in India. He was nearly 2 m tall. S. was heading to visit his parents in New Zealand, when in 1860 at Jeddah he was approached for help by an Ethiopian priest returning from pilgrimage to ↗Jerusalem. The two men agreed to travel together to Ethiopia, where S. sought to hunt big-game. At ↗ᶜAdwa, however, he met the German botanist Wilhelm ↗Schimper, who told him about Tewodros's pro-European interests. S. proceeded inland to the monarch's camp. Tewodros received him warmly, but, finding S.'s title and surname difficult, called him "*baša* Fälläqä", a common Ethiopian name loosely equivalent to "speedy" (lit. 'he gushed').

Tewodros instructed S. to reside at ↗Gafat, his settlement for foreign craftsmen. S. tried to leave but was apprehended by Tewodros's men. He eventually obtained the permission to depart, and went hunting towards the Sudan frontier. He proceeded to the port of Massawa, where the British consul, Duncan ↗Cameron, appointed him his deputy. Tewodros, angered by this switch of allegiance, thereafter considered S. his "enemy" (RasTheo vol. 2, 63, 339).

Wishing to resume his journey to New Zealand, S. left Massawa in 1864, but was summoned by Robert ↗Napier in 1866 to participate in the Mäqdäla expedition. S. served as its political adviser, purchasing officer and translator (Southon – Harper 2004: 76–117).

After the fall of Mäqdala in 1868, S. was entrusted with the care of Tewodros's widow, ↗Ṭəru Wärq, and the orphaned son, ᶜAlämayyähu. After the queen's death on the journey to the coast, S. gained almost exclusive control over the prince. This became even more complete when the latter's tutor, *aläqa* ↗Zännäb, was dismissed on the boat to Egypt. Back in Britain, S. took the boy to the Isle of Wight to meet Queen Victoria. S. married Cornelia Cotton, who assisted him greatly in looking after ᶜAlämayyähu. Following an overseas British police career, S. later took him to India and Penang, in Malaysia, but lost custody in 1871. S. retired in 1877. Wearing Ethiopian dress he later gave "entertaining" lectures on the country.

Regarded as an expert on Ethiopia, S., who spoke some Amharic, was chosen to accompany William ↗Hewett's mission of 1884 to *aṣe* ↗Yoḥannəs IV; wrote memoranda urging the latter's need for access to the sea, preferably at Massawa; and tried to assist the implementation of that year's Tripartite Treaty on the ground (ZewYohan). S. later joined the Rennell ↗Rodd mission of 1897 to *aṣe* ↗Mənilək II – the last of the three 19th-cent. Ethiopian rulers he met.

Richard Pankhurst

Spencer, Diana Mary

S. (b. 1924, London, d. 2009, Blackeney, Oxfordshire) was a British explorer whose works provided a detailed first-hand account of everyday Ethiopian life, but primarily of its ecclesiastic art. S. first reached Ethiopia in 1964, to join her husband, Oscar, who was a UN adviser stationed in Addis Abäba. She became involved in a research project on the history of Ethiopian art initiated at the ↗Institute of Ethiopian Studies by Stanisław Chojnacki and Richard Pankhurst. In this capacity, she travelled extensively by mule and on foot. Between 1965 and 1975 she made ca. 20 trips to remote churches and monasteries in the Ethiopian highlands in search of rare ↗manuscripts and ↗paintings. She studied Amharic in the Mission Language School in Addis Abäba and attended classes in Gəᶜəz and Ethiopian church ↗literature, ↗theology and liturgy at the ↗*qəne bet* of the Bäᶜatti Maryam church. Her expeditions were carried out with the support of the Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase and of the patriarch *abunä* ↗Tewoflos.

Diana Spencer at “Blakeney”, her home in Buckland, Faringdon, Oxfordshire, UK; photo 2004, courtesy of Michael Gervers

S.’s observations and findings contributed greatly to our knowledge of Ethiopian religious art and culture. Her main discovery was the signed work of the Venetian painter ↗Brancaleone, and several other pieces which could subsequently be ascribed to him on stylistic grounds. Also significant were her records concerning the Byzantine paintings of St. ↗Mary, which in Ethiopia were ascribed to St. ↗Luke and as such received the status of miraculous icons. Moreover, at ↗Amba Gəšän, she was successful in photographing part of the oldest known illuminated manuscript of the ↗*Täˀammərä Maryam*, as well as the miniatures from the famous *Maṣḥafä* ↗*ṭefut*. This achievement has never been repeated since.

S. described the objects she had seen and photographed in a series of articles. She also generously shared her material with interested scholars and thus contributed to important works on Ethiopian art and spiritual life.

New Files*, 2009, 14f.; DIANA SPENCER, “Trip to Wag and Northern Wällo”, *JES* 5, 1, 1967, 95–108; EAD., “In Search of St. Luke Icons in Ethiopia”, *ibid.* 10, 2, 1972, 67–95; EAD., “Travels to Godjjam: St. Luke Icons and Brancaleon Re-discovered”, *ibid.* 12, 2, 1974, 201–20; EAD., “The Discovery of Brancaleon’s Paintings”, in: *PICEA* I, 53–55, 152–53, figs. 85–94; EAD., “The Monastery of Ahəya Fäǧǧ Qusqwam in Wallo – its Illuminated Manuscripts and Other Treasures”, in: PAUL HENZE (ed.), *Aspects of Ethiopian Art from Ancient Axum to the 20th Century*, London 1993, 73–82; EAD., *The Woman of Tedbab*, Surrey 2003.

Ewa Balicka-Witakowska

Spencer, John Hathaway

S. (b. 19 September 1907, Rome, d. 25 August 2005, New York State) was principal foreign advisor to the Foreign Ministry of *aṣe* ↗Ḫaylä Śəllase I from 1943 to 1974. He grew up and was largely educated in the ↗United States, graduating from Grinnell College, Iowa (1929). Later he went on to get his A.M. (1931) and L.L.B. (1941) degrees from Harvard University, a Diplome from the Institut des Hautes Etudes Internationales (1933) in Paris and his Doctorat d’Etat in international law at the University of Paris (1935).

In 1935, *aṣe* Ḫaylä Śəllase I sought another advisor to handle the increased work load in the Ethiopian Foreign Ministry brought on by the deepening crisis in Italo–Ethiopian relations. On the recommendation of his French professors and at the young age of 28, S. began handling correspondence concerning diplomatic questions, especially those concerning violations of the laws of war by the Italians. After the Italian conquest of Ethiopia (↗Italian war 1935–36), he joined the Emperor in Geneva and helped editing his historic address to the ↗League of Nations on 30 June 1936. He then returned to the United States to work for the government in various capacities.

In 1943, at the personal request of the Emperor, S. left the position of aid to Admiral Conolly to take up a position as principal legal advisor to the Ethiopian Ministry of Foreign Affairs and the Ethiopian government, which he held from 1943 to 1961. Among his tasks were the negotiations over the future status of ↗Eritrea which culminated in the federation of Eritrea and Ethiopia in 1952 (↗Ethiopian–Eritrean Federation).

S. was a key advisor in Ethiopia’s relations with Britain (↗United Kingdom), ↗France, the United States and the ↗United Nations, especially at the San Francisco Conference in 1945. He played a significant role in Ethiopia’s negotiations with Britain and the restoration of Ethiopian sovereignty in 1944, the negotiations that led to the eventual withdrawal of the ↗British military administration in the 1950s and the long term concerns over the waters of the ↗Nile. With the French he was mainly involved in drafting agreements concerning the ↗railway to ↗Djibouti and boundary arbitration agreements. His role with the United States was more extensive, and involved advising on land lease problems, the Treaty of Friendship of 1951 and on various defence agreements. He was especially proud of his key role in founding ↗Ethiopian Airlines and establishing its close relationship with Trans World Airlines. Within Ethiopia, he advised on the drafting and codification of civil, commercial, maritime, criminal and procedural ↗law and was an advisor on the Revised ↗Constitution of 1955. Throughout his tenure as senior legal advisor he acted with great vigor, integrity and precision.

After 1961 S. returned to the United States and taught at several universities but remained very much engaged in Ethiopian affairs, especially in matters regarding Ethiopia's territorial integrity and human rights violations. He was one of the most prominent of Ethiopia's foreign advisors during the 20th cent.

Peter Garretson

Spices and herbs

Both S. (dried parts of pungent, aromatic plants), and H. (stems, leaves, flowers and/or roots of fragrant plants) are used to flavour ↗food and ↗drink, are extensively used in Ethiopia, especially in the northern highlands. Regional dishes in the southern highlands and in the lowlands are not as highly spiced. Harär cuisine is milder and resembles neighbouring Arab cookery, whereas dishes in the south, often based on the stem and root of the ↗*ənsät* plant, tend to be fermented, but not highly spiced. In Wälaytta, however, a spicy paste made from hot green peppers is popular. Among the agro-pastoral groups in the far south, whose diet is based on cereals and livestock products, the cuisine is mild rather than spicy. S. and H. are also used in traditional ↗medicine.

In the northern highlands, S. play an important part in basic combinations of ingredients that can be stored in powder form, until needed to produce dishes that are eaten with the staple bread, **እንጀራ** (*ənğära*, ↗Bread). Apart from spiced butter, there are two such kinds of combination: one is based on powdered dried cereal, such as barley, or dried legumes, often beans, peas or lentils; the other comprises either powdered S. mixtures such as **አፍርንጅ** (*afrənğ*, powdered red pepper seeds served with meat) or S. mixed into a paste with water or an alcoholic drink such as ↗*ṭäğğ*. Examples are two red pepper pastes: **ድልህ** (*dəlləh*), and the popular **አዋዜ** (*awaze*). Most such basic mixtures also contain ↗salt.

By far the most characteristic and important element in Ethiopian cookery is ↗*bärbäre* powder. Its essential ingredient is red pepper (*Capsicum frutescens* and *Capsicum annum*). Before ripening, while still green, it is known as **ቃርያ** (*qarya*). Eaten raw, it is often stuffed with chopped onion and sometimes with tomato, *qarya* is also an essential ingredient of a special hot paste. The red pepper plant was brought to Europe from Central and South America, and spread widely in the 16th cent. When and how it reached Ethiopia is unknown. While Alvares does not mention *bärbäre* he reports that ↗Lent-time sauces contained mustard seed and were "very hot" (BeckHuntAlvar 390). Probably the first known mention of red pepper cultivation is by Barradas (1996:111), who observed it among the Təgre. During the following centuries red pepper was established all over northern Ethiopia (cp., e.g., Nersessian – Pankhurst 1986:626f.; Wylde 1901:266).

A powdered mixture of many S. added to *bärbäre*, itself also called *bärbäre*, is used in meat and fish stew (**ወጥ**, *wäṭ*), and in raw meat dishes, except **አልጫ** (*alləč̣č̣a*) ones. Though the original meaning of *alləč̣č̣a* was "without salt", its actual meaning is "without *bärbäre*", and it is therefore mild. In some areas, **ጨው** (*č̣äw*, 'salt') refers to *bärbäre*. The proper grinded salt is known as **አሽቦ** (*ašəbo*). *Bärbäre* is also the basis of the following: the hot paste **አዋዜ** (*awaze*); **ሽሮ** (*šəro*), a hot sauce made from powdered pulses; hot barley meal made from roasted, dried and powdered barley (**በሶ**, *bässo*); dried meat strips (**ቋንጣ**, *qʷanṭa*); **አነባበሮ** (*annäbabäro*) or spiced cottage cheese (**አይብ**, *ayb*), on a soft *ənğära* base; barley meal with spiced butter (**ጭኮ**, *č̣əkko*), etc.

Other basic ingredients of *bärbäre* powder are mentioned here and in the following paragraphs, roughly in the order in which they are combined: shallot and onion (*allium ascalonicum* and *allium cepa*, both Amh.: **ቀይ፡ ሽንኩርት**, *qäyy šənkurt*). Both are perennial and have been cultivated for so long that their origins are uncertain. Although used extensively fresh and roasted, shallots and onions are also dried after cooking and then powdered. In this form they are essential ingredients of *awaze* and of *šəro* as well as of most other pastes and stews.

Garlic (*allium ursinum, a. sativum,* **ነጭ፡ ሽንኩርት** *näč̣č̣ šənkurt*) is believed to have originated in Central Asia and is one of the world's oldest cultivated plants. It is perennial and grows easily in Ethiopia at different altitudes. Garlic in quantity is an essential ingredient in Ethiopian cooking. Dried, it is used in other powders, i.e. in the basic flours made of barley, broad bean or chickpea, and in barley and other pastes. Garlic is also an ingredient of many meat dishes. Ethiopian bread, ዳቦ (*dabbo*), is also made with powdered garlic.

Ginger (*Zingiber officinale*, Amh.: **ዝንጀብል**, *zənǧäbəl*) is believed to have come from India as early as the 13th cent. Cultivated in the south-west, it is now sold in local markets, and is an important ingredient, extensively used in food preparation. Its powder can be substituted for fresh S.

Rue (*Ruta chalepensis*, Amh., **ጤና፡ አዳም** (*ṭena addam*, lit. 'health of Adam') is a toxic herb that grows vigorously in the country. Rue's aromatic, bitter flavour is much appreciated, and a tiny sprig is often added to flavour ↗coffee, ↗tea and milk. Rue leaves are also added to sour milk to make yogurt. Its seeds are used in *bärbäre* powder.

Basil (*Ocimum sanctum, var. anisatum, o. basilicum*, Amh.: **በሶብላ**, *bässobəlla*) spread from its native India at least 4,000 years ago. Basil is a stimulant and digestive, growing in the wild but also cultivated near houses. The Ethiopian variety is smaller and more pungent than varieties elsewhere. The dried flowers and seeds are used in the preparation of pastes and stew, whereas the fresh leaves are used to flavour butter.

Bishop's weed (also white cumin, Ethiopian caraway, *trachyspermum copticum, t. ammi, carum copticum,* Amh.: **ነጭ፡ አዝሙድ**, *näč̣č̣ azmud*) grows wild in Ethiopia, and is an ingredient of many pastes, powders and sauces.

Ethiopian cabbage (*Brassica integrifolia*, Amh.: **ጎመን፡ ዘር**, *gommän zär*) grows widely in the country. The seeds have a hot, pungent taste. The leaves provide the basic vegetable to accompany traditional dishes.

All the above ingredients are used to make *bärbäre*. They are mixed with water, allowed to stand, and then dried in the sun. The following is a selection of S. that, after roasting and pounding, can be added, depending on regional traditions, and personal preferences.

Ethiopian cardamom (*Aframomum corrorima, Aframomum angustifolium*, Amh.: **ኮረሪማ**, *korärima*), originally growing in forests of the south-west, is now cultivated around Lake Ṭana and in Eritrea. When the nut-like seed pod is prised open it reveals dark brown seeds. These, when powdered, are widely used in many dishes.

Cinnamon (*Cinnamomum zeilanicum, Cinnamomum cassia*, Amh.: **ቀረፋ**, *qäräfa*), a native of Sri Lanka was imported into Ethiopia already in Aksumite times (Schoff 1912:301, index). The bark is ground and used to flavour many dishes, including chicken stew, as well as cakes and bread, tea and coffee.

Cloves (*Eugenia caryophyllata,* Amh.: **ቅርንፉድ**, *qərənfud*), originated in Indonesia and the trade moved to Zanzibar, renowned for its distinctive scent of cloves. As the plant thrives only in a humid, tropical climate near the sea, it has always been imported. It is the favoured flavouring added to tea, and sometimes to coffee.

Coriander (*Coriandrum sativum*, Amh. **ድምብላል**, *dəmbəlal*, also **ኮረሪማ**, *korärimma*), a hardy annual, is the oldest known S. It grows easily in Ethiopia, and is widely cultivated. The fruits are used in the preparation of *bärbäre*, and ground, to flavour *wäṭ*, *ənǧära* and *dabbo*, and tripe dishes.

Cumin (*Cuminum cyminum,* Amh.: **እንስላል**, *ənsəlal,* **ከሙን**, *kämun*), indigenous to Egypt, cultivated elsewhere since earliest times, has long been known in Ethiopia. The seeds have a powerful, warming and aromatic flavour. Cumin is widely grown and is indispensable in Ethiopian cuisine. The ground seeds are used to flavour *wäṭ*, and in the preparation, in northern Ethiopia, of pan-baked bread (**ሀምባሻ**, *hambaša*). Black cumin (*Nigella sativa,* Amh.: **ጥቁር፡ አዝሙድ**, *ṭəqur azmud*) is widely cultivated in Ethiopia, and may be indigenous. It is used to flavour *dabbo*. It is also added to a popular snack, *dabbo qollo,* that, in olden times along with dried meat and roasted barley, chickpea and sunflower seeds, sustained soldiers on long marches.

Fenugreek (*Trigonella foenum-graecum*, Amh.: **አብሽ**, *abəš*), an annual, originally from the eastern Mediterranean, has been cultivated for thousands of years. The nourishing properties of fenugreek seeds have long been known in Ethiopia, and mothers traditionally give their children a drink made from the seeds whipped in cold water. Dried and roasted, fenugreek powder is used to spice hot pepper and other dishes, especially barley flour (**በሶ**, *bässo*). Spiced butter, used in cooking, also often contains fenugreek powder. It is likewise an ingredient of a dish made of *ənǧära* in dried pea and meat sauce.

The aromatic, glossy leaves of the evergreen myrtle bush (*Myrtus communis,* Amh.: **አደስ**, *adäs*) are dried and crushed to be used as a condiment. They are also mixed with butter as an ingredient in Ethiopian hair cream, and as a fumigant, to perfume rooms (↗Incense).

Nutmeg (*Myristica fragrans*, Amh.: **ገውዝ**, *gäwz*), which is native to Indonesia, is cultivated in many other tropical countries, but had to be imported into Ethiopia. As well as being an optional ingredient of *bärbäre,* it is added to the dough of the northern steamed bread, **ኅብስት** (*ḫəbəst*).

The black or white pepper (*Piper nigrum*, Amh. **ቁንዶ፡ በርበሬ**, *qundo bärbäre*) vine grows wild in the equatorial forests of India. It has been a rare, expensive import since at least medieval times (BeckHuntAlvar, vol. 2, 407; BeckHuntAlm 63). Today it is widely used in many Ethiopian dishes.

Two species of Abyssinian thyme, (*Thymus schimperi* and *Thymus serrulatus*; Amh.: **ቶስኝ**, *tosəññ*) are endemic in the upper Ethiopian highlands: *Thymus schimperi* in the central, east and north of the country, and *Thymus serrulatus* only in the north. Thyme is an ingredient of many Ethiopian powders and sauces.

The second most frequently used S. mixture after *bärbäre* is **ምጥመጣ** (*məṭmäṭa*) powder, so called after its main ingredient, *miṭmiṭṭa* (*Capsicum microcarpum, Capsicum minimum*). It is added dried and finely powdered, to food, or mixed, with Ethiopian cardamom, cloves and salt. *Miṭmiṭṭa* is eaten with cheese, with **ዱለት** (*dulät*, 'offal'), cooked and minced tripe, liver and beef, and, invariably, with **ክትፎ** (*kətfo*), raw, or warmed minced beef with spiced butter. *Məṭmäṭa* is also eaten with fresh, raw beefsteak, and may well have been what Bruce (BruNile III, 303) observed spicing raw meat at banquets in Gondär, in around 1770.

A few other S. occur regularly in Ethiopian dishes. The most common is perhaps tumeric (*Curcuma domestica/longa*, Amh.: **እርድ**, *ərd*). Formerly imported into Ethiopia from Asia, it is now successfully grown in the country. Stews of a yellowish green colour which thereby signal that they are without *bärbäre*, are flavoured and coloured with powdered tumeric roots.

Other S. include black mustard (*Brassica nigra*; Amh.: **ሰናፊጭ**, *sänafič̣*). Indigenous to the Mediterranean, it grows wild in Ethiopia, and is prepared by crushing seeds and adding water, oil and salt. *Sänafəč* is used in preparing bean, barley and chickpea paste.

At least eight of the above-named S. are commonly used in preparing purified butter, **ንጥር፡ ቅቤ** *nəṭər qəbe*: ginger, garlic, onion, fenugreek, bishop's weed, basil, cardamom, and tumeric. Tea and coffee are also regularly spiced. The most common tea S. are cinnamon, Ethiopian cardamom, cloves and ginger and, recently, Cardamon (*Elleteria cardamomum*, *Amomum cardamomum*, Amh.: **ሄል**, *hel*). Coffee, formerly often salted, is currently taken with sugar. Tea may be served with a sprig of fresh mint, and coffee, with a few leaves of rue.

The most popular indigenous alcoholic drinks invariably rely for flavouring on ↗*gešo*. Though growing elsewhere in Africa, it is in common use chiefly in Ethiopia. The leaves are added to ↗*ṭälla* and in distilling spirits, whereas the twigs are used in the preparation of *ṭäǧǧ*. Alcoholic drinks can also be flavoured with the leaves, young stems and fruits of ground fennel, likewise known as anise (*Foeniculum vulgare, Foeniculum officinale, anithum foeniculum*; Amh.: **እንስላል**, *ənsəlal*). It is also used to spice bread.

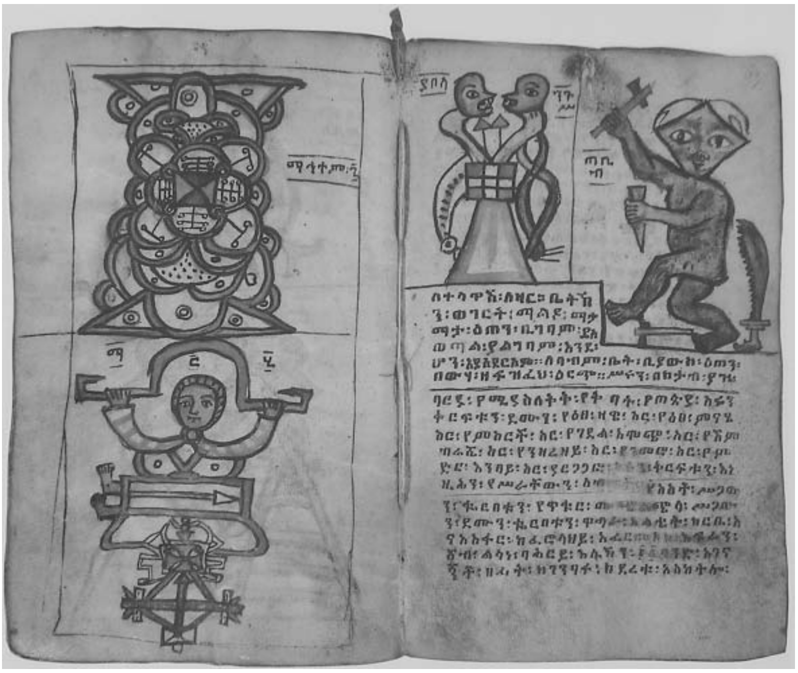
Spirits

The term S. covers a wide range of lower spiritual beings known in most traditional ↗religions as well as in Christianity and Islam. As a category, "S." is quite insufficient because for every religion or local form of religion a different definition may be necessary, and often even emic concepts do not clearly define the different types of spiritual beings. The traditional Christian idea of S. is



Spirits depicted on a talisman: left page on the top a *Mäḫtäm 7*, on the bottom the spirit *Marhi*, right page on the left the mythical spirit-king "ʿAbola", residing on a hill nearby Lake Ṭana, on the right a "craftsman", 19th cent.; from Mercier 1992: 47 pl. 8

further discussed in the articles ↗*däsk* and ↗demons (cp. also ↗Devil) while the article on the ↗*ǧinn* considers Islamic concepts. However, many characteristics of S. belief described here may be found in autochthonous folk-religions as well as is in the traditions of Christians and Muslims. In many cases concepts of S. and the belief in specific S. cross-cut ethnic and religious denominations. Diverse forms of amulets and other protective charms against harmful S. are very widespread (↗*Mäftəḥe śəray*, s. EAE vol. 5; ↗Magic scrolls; ↗*Ṭälsäm*).

While some categories of S. are only thought of as a collective, others are imagined as individuals with personal names. The supernatural power ascribed to S. ranges from that of a minor pixie up to the might of a divinity. In some cases a certain S. is not more than the localized manifestation of a high-god (or, vice versa, the high-god is a S. after apotheosis). The nature of S. is often considered to be ambiguous, benevolent, or harmful. S. belief often reflects human fears. Thus, the wild bush, the unhealthy lowlands, watercourses, sickness as well as strangers or alien ethnic groups are frequently associated with dangerous S. If the S. are disturbed by human action and provoked by moral misbehaviour they may bring ↗diseases and misfortune. Therefore, in order to maintain a peaceful co-existence with the S., people carry out offerings at places related to them or hold specific ceremonies. Strongly related to the challenges of daily life, the S., similar to the ↗saints in Christianity, may receive even more attention than higher spiritual entities.

Certain types of S. are said to roam in the ↗water and in ↗trees (cp. ↗*Adbar*), gorges and mountain-tops, while others are connected to animals, persons or magical objects (e.g., ↗*Kallačča*). The shape of S. is often imagined as being invisible or unseizable (shadows, fire, smoke), or as being animal-like or human-animal hybrids (s., e.g., ↗Hyenas [s. also ↗*Buda*], ↗Leopards, ↗Monkeys, ↗Serpents). Others are considered to be anthropomorphic. The *habuusa* S. in Hadiyya and Kambaata, for example, are described as "negroid" dwarfs, who have a human-like social organization (BrKam 272f.). Among Təgrəñña-speakers the **ዛርቲ** (*zarti*) and the **ደቂ፡ ሕድርትና** (*däqqi ḥədərtəna*), hosted by natural phenomena, are described as "beautiful females", and usually receive small regular offerings. Some S. are considered evil (then called **ሸይጣን**, *šäyṭan*, or Gəʿəz **አጋንንት**, *aganənt*, sg. **ጋኔን**, *ganen*), especially those occupying water ponds (as in many cases *ǧinn* are said to do); some are rather neutral, or even helpful such as protective spirits (Smidt 2010).

The old ↗Oromo religion was characterized by the idea that most things have a sacred aspect, personified by an individual *ayyaana* S. According to explanations given to Bartels, people, animals, plants as well as mountains or rivers have their own *ayyaana*, which is thought of as a manifestation of ↗Waaqa's creative power. The *ayyaana* protects the person with whom it is linked. Thus, the killer of a man has to appease the *ayyaana* of his victim. The term *ayyaana* is today also employed for various types of possession S. Harmful *ayyaana* are called *seṭana* ('demons'; BartOrom 112, 159, 221; cp. VSAe II).

The idea that the S. of the deceased maintains a connection to the human world is widespread. The dead are often feared. According to the tradition of the Konso, they remain as shadows in this world and scare the living (Hallpike 1972: 222–304; VSAe II, 573). The Kambaata, like the Hadiyya, believed that in some cases the soul stays in the world as a shadow (*wida*) until it is liberated through the offerings carried out by the family (BrKam 274f.). The belief that the souls of the dead may return if they do not receive offerings is prevalent (cp., e.g., among the Komo and Uduk; CerPeople 32, 35).

Most prominent is the belief in the S. of specific ↗ancestors, culture heroes or famous warriors, who are believed to protect their lineage group and land. Among the ↗Gurage and Hadiyya two types of protecting ancestor S. are inherited. One through the male line, another, the *idoota* S. (derived from Gurage *idoot*, 'mother'), through the female line. The *idoota* S., as the ↗*ateetee* S. among Oromo and Amhara, is believed to be present in a magical object called ጨሌ (*čälle*, 'necklace, beads'), which has to be anointed with butter yearly (cp. Aspen 2001: 125; VSAe II 513, 549).

An important category of S. forms a central part of ↗possession cults. Possession S. are believed to establish a permanent link with a medium and, at certain occasions, to manifest in an altered state of consciousness. In some cults such S. (e.g., *Zar*) afflict the medium with disease and, for healing, have to be satisfied with regular offerings (ጭዳ, *čəda*) and honoured by feasts during which they manifest. Furthermore, certain ↗healers, practising in different religions, act as exorcists, who drive out harmful S., such as, e.g., the *aganənt* of northern Ethiopia (s. above). Among the Amhara, there are also other, much less dangerous, S. who stay permanently with a person, the ቆሌ (*qolle*). Such persons are called *balä qolle* ('owner of *qolle*', also *qolläñña*). The *qolle* should not be disturbed, as this is believed to cause danger or trouble.

A very powerful type of possession S. (e.g., the ውቃቢ, *wəqabi*, among the Amhara, or the ↗*Eqo* S. of Käfa) endows its human representative with magical powers and great social authority. Mediums of such S. act as high-priests of an established cult organization with a relatively large following. Their S. mediumship often is handed down to the direct descendants of the officeholders (cp., e.g., ↗*Gäramanǧo*; ↗*Qalləčča*).

Spirit possession ↗Possession cults

Sports

S. were widely practiced in traditional Ethiopia, particularly during church ↗feasts. The most prestigious ↗game in the Christian highlands was *gugs* (ጉግስ) or mock ↗cavalry warfare, which was played by two teams of horsemen, each of whom would carry up to three light spears, and perhaps a shield. The players would throw or brandish these at each other, and at the end of each round attendants would give them such weapons as had fallen to the ground. ↗*Gänna*, or traditional Ethiopian hockey, was a more popular game.

Ethiopian sportsmanship also found expression in ↗hunting and ↗horse-riding. Another S., reported in 18th-cent. ↗Gondär, consisted of public trials of strength with lions (PankHist I, 170). There were likewise numerous traditional children's S., many accompanied by rhyming couplets or ↗songs. Popular games included hide-and-seek (ድብብቆሽ, *dəbəbbəqoš*), mimicking of birds and animals, wrestling, and trials of endurance (Mittwoch 1910; Cohen 1911; Griaule 1935) as well as the board-game ↗*gäbäṭa*.

Westernization and the growth of ↗Addis Abäba in the early 20th cent. coincided with the establishment of the first modern-style schools (↗Education), several of which had sports-masters (↗Mənilək II Secondary School, ↗Ḫaylä

Śəllase I Secondary School), and with the advent of a young new ruler, *ləǧ* ↗Iyasu. All this led to the modernization – and popularization – of new forms of S.

Addis Abäba's imperial horse-racing club was founded in 1910, and a polo-club in 1933 (Rey 1923: 44; ZerÉth 140f.; cf. ↗Ǧan Meda). Football was first introduced by foreigners residing in Addis Abäba towards 1924. In 1935 the first official international game took place between Ethiopia and Djibouti and in December that year a group of youngsters founded the 1935 Saint George Football Association.

Partly through the initiative of Yədnäqaččäw Täsämma (1921–87), the son of ↗Täsämma Ǝšäte, the post-Liberation period witnessed the founding of several national S. organizations, among them the Ethiopian Sports Federation and the Ethiopian Football Federation, both in 1944. Football was by then the most popular Ethiopian S., but others included lawn and table tennis, basketball and volleyball, boxing and wrestling, cycling, horse and motor racing, and athletics of all kinds. Some sportsmen came directly from school, while others were seconded from the ↗Imperial Bodyguard, ↗army, ↗air-force or ↗police.

At that time, foreigners, especially Scandinavians, played a vital role in promoting the practice of S. in schools. The Finnish-born Swede (↗Sweden, relations with) Onni Niskanen largely contributed to the introduction of athletics in schools and military institutions. S. activities, however, were not properly integrated into the education curriculum until the fall of ↗Ḫaylä Śəllase I's regime (Gaudin 2009: 98f.; cp. ↗Provisional Military Administrative Council).

The triumph of Ethiopia's 26 year old runner ↗Abbäbä Biqila at the 1960 Olympiad at Rome set the stage for many later Ethiopian successes (Atnafu Makonnen 1960: 286–94). Ethiopia has mostly excelled in track and field and, since 1960, its athletes have won a total of 38 medals (18 gold, 6 silver and 14 bronze). Besides Abbäbä Biqila, its most renowned S. figures are ↗Mammo Wälde, Məruṣ Yəfṭär, Bälaynäh Dinsamo, Ḫaylä Gäbrä Śəllase, Fāṭuma Roba and Därartu Tulu.

Other important figures related to Ethiopian S. were the journalist Solomon Täsämma (1933–79) and the coach Nəguśe Roba (1935–92). Solomon covered the national team's matches for many years and authored a widely popular column, the "Sport Fana", in the daily ↗*Addis Zämän*. Nəguśe, an athlete himself, was a long-time coach for the Ethiopian Athletics Federation and a total of six medals were won at the Olympics by athletes he had trained.

Richard Pankhurst

Sports in Eritrea

Traditional S. and games, such as ↗*gäbäṭa*, **ቃርሳ** (*qarsa*, 'hockey'), **ሀልኮ** (*həlko*, 'wrestling') and camel racing, were and still are played by different age and gender groups among the different ethnic groups in Eritrea. The practice of modern S. began during the Italian colonial period (↗Colonialism). These included football, basketball, bicycling, motorcycling, car racing, boxing, swimming and ground tennis. In the early years of the colonial period, the large majority of players and contestants were Italians but gradually Eritreans also became involved.

During both the ↗British Military Admini-stration and the Ethiopian occupation, the number of Eritrean participants increased. Over the years football and bicycling became widely popular and in both S. Eritrea produced contestants of national and international reputation. When Ethiopia won the Third Africa Cup of Nations in 1962, more than half of the national team members including the goal keeper were Eritreans. During the war of liberation, especially between 1970 and 1991, S. in Eritrea was at its lowest point.

At present, the Ministry of Education of the State of Eritrea has a S. curricula for elementary, junior secondary and secondary schools and teachers training institutes in which physical education is a requirement. Since the independence in 1991–93, there has been a significant increase in the number and types of modern S. and in the number of amateur and professional players and teams and S. infrastructure. National S. matters involving continental, transcontinental and olympiad competitions are today overseen by the Commission for Sports of the State of Eritrea.

In the 2004 Athens Olympic Games Zärsännay Taddäsä gave Eritrea its first Olympic medal (bronze).

St. Chrischona Pilgermission

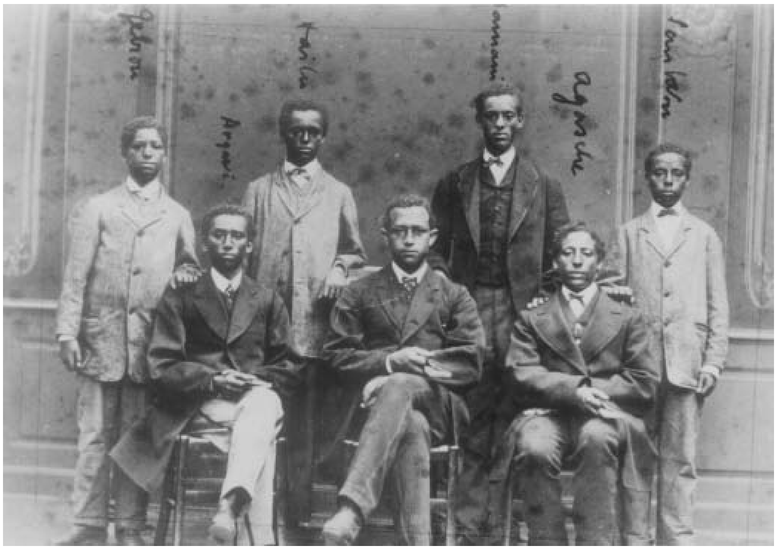
The S.C.P. ("St. Chrischona Pilgrim Mission") is a Protestant missionary institution founded in 1833 by the Pietist Christian Friedrich Spittler as "Pilger-Missions-Gesellschaft" in Basle (Kober 1887). In 1840 it moved to the St. Chrischona ('St Christine') hill at Bettingen, in the canton of Basel-Stadt. Starting from 1854, following earlier plans of Spittler, the S.C.P. initiated several missionary endeavours in Ethiopia, some of them having great influence on the development of modern Ethiopia.

The mission in Ethiopia was established under the direction of the S.C.P. and the Anglican bishop ↗Gobat of Jerusalem in 1855, following a demand of ↗Tewodros II for craftsmen (RubActa II, 10f.; Smidt in VarAeth). Three missionary endeavours were subsequently formulated: initiating reform within the Ethiopian Church, converting the ↗Oromo and, thirdly, the ↗Betä Ǝsraʾel. German (and one Swiss) craftsmen and lay-missionaries were sent by the S.C.P. via Jerusalem to Ethiopia in 1856–62 (↗Bender; ↗Brandeis; ↗Flad; ↗Kienzlen; ↗Mayer; ↗Saalmüller; ↗Waldmeier, and others). They worked as artisans on behalf of Tewodros's interests, while plans for an Oromo mission remained unsuccessful. Tewodros founded the craftsmen's settlement ↗Gafat, where most settled; they produced a carriage, built a road and cast cannons (cp. Moritz ↗Hall). The S.C.P.'s policy was to "revive" Christian belief through private preaching, reading the Bible, teaching and translation work (mainly in Amharic; s. ↗Amharic literature). They were not ordained, as there were no plans to establish a Protestant church. The greatest success was that the ruler's secretary ↗Zännäb in ↗Mäqdäla became the first Ethiopian evangelist and reformer within the Ethiopian Church in 1858 (Flad 1968: 32).

The "Abyssinian mission" was accompanied by the establishment of the "Apostolic Highway" by the S.C.P. (Baumann 1999), a chain of missionary stations from Cairo to the Ethio–Sudanese border, which connected Ethiopia with Jerusalem. Freed slaves – mostly Oromo – were taught the Gospel at these stations, the most southerly of which was ↗Mätämma. Soon, the missionary Flad left the S.C.P., wishing not to link himself too closely with "worldly power" as the other missionaries had done and in order to focus on proselytizing the Betä Ǝsraʾel in ↗Ǧända, later also Darna, but he kept an informal affiliation to the S.C.P.

From the 1850s onwards the S.C.P. printed religious literature and Bible translations in a number of Ethiopian languages (Amh., Tgn., Tgr., Oromo; s. Darlow – Moole 1911; ↗Bible translations, modern), often in collaboration with the ↗British and Foreign Bible Society. This was an important factor in the rapid rise of ↗printing and reading in vernacular languages, breaking with the strong ↗Gəʿəz tradition of the church (↗Incunabula).

Conflicts between Tewodros and British diplomacy led to the arrest of all Europeans starting from 1863/65, including most S.C.P. missionaries. The prisoners were only released in 1868 by the ↗Napier expedition. S.C.P. activities in Ethiopia temporarily ceased and soon thereafter the "Apostolic Highway" was closed. However, missionary endeavours continued to be promoted by the S.C.P. In the 1870s the Bible readers movement of ↗Ḥamasen emerged, initiated by ↗Wäldä Śəllase Kənfu (educated at the S.C.P.), whilst local converts, the "black brothers", under the formal



The first group of Ethiopian students of St. Chrischona in late 1871, from left to right: Gäbru Dästa (Gobbaw), Mikaʾel Arägawi, Ḫaylu, Wilhelm Schimper junior (Ǝngədašät), Sämʾanni, Agaže, Sänbätu; from the collection of the St. Chrischona-Pilgermission, Library

leadership of the ↗London Society for Promoting Christianity among the Jews, continued with the "Fäläša mission", in close contact with the S.C.P. (co-directed by ↗Mikaʾel Arägawi). Several attempts at initiating an Oromo mission (e.g., with the help of the S.C.P.'s Bible translator ↗Ruufoo) were made, and in 1869 Bender and his wife founded a school in ʿAdwa, where *aläqa* Zännäb worked on his Oromo Bible translation.

The S.C.P. felt responsible for an Oromo mission, which had been originally initiated by ↗Krapf. The life of the former Oromo slave ↗Fathme, who also visited the S.C.P., served as a "founding legend". Shortly after her death the S.C.P. leader Ledderhose published her biography in 1855, followed by several attempts to establish an Oromo mission. The first S.C.P. missionaries, Stamm and Deiß, reached the Sudanese border chiefdom of ↗Qubba, close to Oromo territories, in 1867, but were forced to leave (ArEvang 255). In 1871 Johannes Mayer came to Šäwa to establish an Oromo mission; a few years later, the Ethiopian evangelizer Gobbaw (↗Gäbrä Ǝgziʾabəḥer Dästa), educated at the S.C.P., became an Oromo missionary in Goǧǧam among the Guduru. It was, however, only in 1880 that a permanent Protestant Mission was able to be opened in Oromo areas dependent on Šäwa, when ↗Mənilək gave a *gʷəlt* in Balli on the border of Arsi to Mayer. Mayer established a school there, with several S.C.P. teachers, such as Jakob Mayer from Brackenheim (b. 1846, later Westbay City, USA), Gobbaw and an Oromo convert, also a former S.C.P. student. They also produced texts in local languages. Mayer's collaborators Greiner and Yosef Gallu from Illuu translated *Dr. Barth's Bible-Stories* into Oromo (1881). In the beginning of the Šäwan military campaigns against Arsi in 1886, however, they were expelled, and the Oromo mission was abandoned. Nevertheless, due to the affiliation of Mikaʾel Arägawi to the S.C.P., the mission stayed engaged in Ethiopia until the 1920s, also accepting students from Ethiopia, such as ↗Sənəddu Gäbru. Several former students of the S.C.P. played an important role at the establishment of close diplomatic relations with ↗Germany in 1905/06 (Smidt in WenDAE I).

Wolbert Smidt

Staatsbibliothek zu Berlin, Preußischer Kulturbesitz

Founded in 1661 as Churfürstliche Bibliothek (since 1701 Royal Library, 1918 Prussian State Library), the S.B.B.-P.K. held only few Oriental manuscripts in its early period. The first three Ethiopic manuscripts (Ms. or. fol. 117, Ms. or. quart. 162, Ms. or. oct. 59) were part of the collection of the Orientalist Theodorus Petraeus, acquired in 1682. They were studied by ↗Ludolf. During the 19th cent. the stock of Ethiopian manuscripts was enlarged in various ways, whilst the purchase seemed random. Two of the six manuscripts from the ↗Isenberg collection are important in view of their theological content. 40 manuscripts which are catalogued as the "Petermann'sche Sammlung" were the most significant acquisition in 1873. When ↗Dillmann's catalogue was published in 1878, the Royal Library held 87 Ethiopian manuscripts, some of them of great value on account of their age and contents. Dillmann characterized three of them as "Prachthandschriften" particularly because of their illuminations and script, and he dated six manuscripts to the 15th cent. at the latest. In 1905, the librarian and Orientalist, Johannes Flemming (1859–1914) from Bonn, as a member of the German embassy to Ethiopia headed by ↗Rosen, was officially appointed to collect manuscripts and bought 70 codices and 10 parchment scrolls. In 1906, a few other items were sent to Berlin by the ↗Deutsche Aksum-Expedition (the Littmann collection). These acquisitions were concisely described by Flemming and ↗Chaîne.

During World War II the library evacuated the Oriental (including the Ethiopian) manuscripts to western deposits for safekeeping. Only 1,500 Oriental manuscripts, including Ethiopic scrolls, were kept in Berlin. No Ethiopian manuscripts were lost but after the war the collection had to face the partition, until reunification in 1991. Today the complete holding is concentrated in the Oriental Department of the S.B.B.-P.K.

The microfilms of ↗Hammerschmidt's 1968 expedition to Lake ↗Ṭana were the last major addition to the main corpus of Ethiopian manuscripts. The 182 microfilmed manuscripts represent the holdings of three monastic libraries and include such precious cultural heritage items as the ↗Kəbran Gospel.

In recent years the S.B.B.-P.K. has continued to purchase items or receive donations.

At present, the holdings number 511 Ethiopian manuscripts – mostly parchment written in ↗Gəᶜəz, some in ↗Amharic and a few also containing texts in ↗Təgrəñña. The Oriental manuscript collection of the Bayerische Staatsbibliothek – founded in 1558 and preserving 167 Ethiopian manuscripts [the first Ethiopic acquisition: a Psalter (Cod. aeth. 1) from the Johann Jakob Fugger collection], – and that of the S.B.B.-P.K. are the largest and most important German holdings of codices (outstanding manuscripts from the S.B.B.-P.K. for example: Ms. or. fol. 596, Ms. or. oct. 220, Ms. or. oct. 555, Ms. or. oct. 1270, Hs. or. 3542). They offer a broad range of Ethiopian literature emerging mostly from Christian and Ethiopian Orthodox ecclesiastical life.

The Ethiopian manuscripts of the S.B.B.-P.K. are described in printed catalogues by Dillmann (DillmBerl), Hammerschmidt (HamTana I, II) and Six (HamSixBerl, SixTana III), the latter two authors published in the *Verzeichnis der orientalischen Handschriften in Deutschland* (VOHD XX). Since 2001, the journal *Aethiopica* has been introducing newly acquired Ethiopian manuscripts and items to the public.

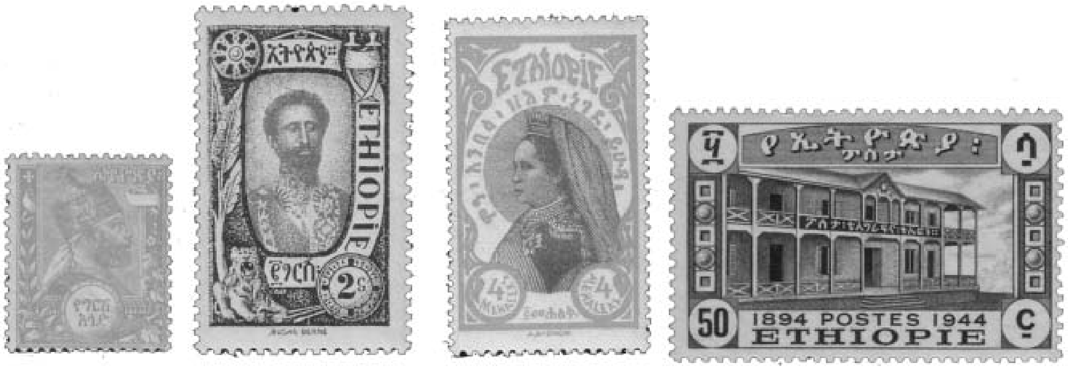
Stamps

S. were issued in Ethiopia starting from the late 19th cent. They were already used in the 1880s at the Egyptian post-office of Massawa (↗Massawa Governorate; ↗Postal system) and at the colonia ↗Eritrea by the Italian administration. In the French colony of Somaliland (formerly Obock), S. were first issued by the French administration in 1893 (Dubois 1998:10). From this period until today, the design and issue of S. in Ethiopia, Eritrea and Djibouti changed – sometimes dramatically – according to the political status of each country. The S. of the Horn of Africa are today sought after by collectors, but are also considered as historical sources. S. convey messages and reveal the aspirations and thoughts of the authorities who ordered issued them (Dubois 1998).

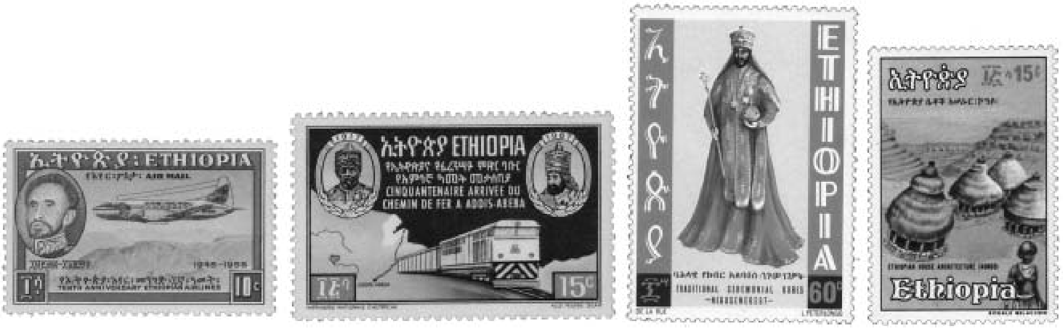
The first issue of S. in Ethiopia appeared after *aṣe* ↗Mənilək II had contested the ↗Wəčale treaty. Following the advice of his councillor Alfred ↗Ilg, the Emperor demonstrated his sovereignty, among others, by ordering the production of coins (↗Coinage) and S. with his effigy in Paris via Léon ↗Chefneux. The S. were engraved in 1894 by E. Mouchon, author of all the French S. of this time. Facilitated by the French government (↗France), this raised objections in England and Italy, accusing Paris of creating useless S. for political purposes. As in the whole Horn of Africa, the local populations didn't make use of S., which were first of all used by Europeans. Moreover, S. legends were exclusively in Amharic, which restricted their use to internal communication between ↗Harär and ↗Addis Abäba (Tristant 1977:51).

In 1895 the first S. were used in Harär. Abroad, S. were sold at the Universal Exposition of Paris of 1900, as a way to propagate Ethiopia and her sovereign (Wheeler 1984:54). In 1908, having thwarted Italian opposition (Shinn - Ofcansky 2004:324), Ethiopia succeeded in joining the Universal Postal Union and a second edition of S. was issued with captions in Amharic and French that could be used for national and international correspondence. After governmental changes (↗coup d'état of 1916, s. EAE, vol. 2, 1081) and the coronation of ↗Zäwditu, further new issues were created. Five million S. were printed in ↗Switzerland in 1919. A new issue was designed in 1925 but came out only in 1928, at the time of the inauguration of the new General Post Office. Seven million were printed in Paris with the effigy of Zäwditu and of *ras* Täfäri, in art deco style.

On the occasion of his coronation in 1930, ↗Ḫaylä Śəllase I ordered commemoration S., which were designed by Stephan Papazian with a crowned ↗lion, a star, orb and sceptre. A new issue came out in 1931, showing images of the royal family – Ḫaylä Śəllase, ↗Mänän and the Emperor's father, *ras* ↗Mäkʷännən Wäldä Mikaʾel – but also of Mənilək's statue, and a bridge, symbol of technical modernization. These S. were to transmit the message to the world that Ethiopia was a sovereign country engaged in technical development, a response to colonial propaganda. The last set before the war (1935), dedicated to the ↗Red Cross society, was printed in Switzerland but did not reach Ethiopia. The Ethiopian Post Office and most of Ethiopia's philatelic archives were destroyed in 1936 by fire when Addis Abäba



Stamps of Ethiopia of the 1910s to 1940s, from left to right: first issue of Mənilək II of 1895 (*yägərš alad*); 1919 issue of *ras* Täfäri (2 *gərš*); 1928 issue of Empress Zäwditu (4 *mäḥaläq*);1944 issue showing the old post office at Addis Abäba of 1928 (50 *santim*); from the collection of Ulf Lindahl



Stamps of the 1950s to 1980s: 1955 issue celebrating the 10th anniversary of the Ethiopian Airlines (10 *santim*); 1967 issue celebrating the 50th anniversary of the railway's arrival at Addis Abäba, stamp design by the Art School director Allä Fällägä Sälam (15 *santim*); 1974 issue showing Ceremonial Robes of the Court; 1984 issue showing traditional houses in Konso; from the collection of Ulf Lindahl

was looted by local people prior to the Italian troops entering the city (↗Italian war 1935-36). The fascists, having already used S. as a means of propaganda since 1929, immediately created new S. for Ethiopia with the effigy of the Italian king and "Imperatore d'Etiopia". In 1938, they created a special set for ↗Africa Orientale Italiana, valid for Ethiopia, Eritrea and Somalia altogether (Mignemi 1982: 138).

After World War II, the diversity of the S. production increased in the Horn of Africa as elsewhere thanks to the progress of printing. When Ethiopia regained its independence in 1941, England facilitated the printing of a new definitive issue: adapted from a photograph (↗Photography), it showed Ḫaylä Śəllase in the coronation robe and with his crown (Michaelides 1972: 93). Numerous issues of Ethiopian S. were printed in various countries (India, England, United States, Czechoslovakia among others).

By 1964, 68 post offices had been created in Ethiopia and a mobile postal service delivered mail to remote areas of the country (Shinn – Ofcansky 2004: 323). The S. were also sometimes offered by Ḫaylä Śəllase during ceremonies. They dispatched the official messages of the regime, bearing most of the time the effigy of the king, promoted ↗tourism in Ethiopia or celebrated national and international organizations (s. Michaelides 1972). In 1970, a national Postal Museum was established based on the collection donated by Ivan Adler and the former Ivan Adler Philatelic Museum of Haile Selassie I University (Shinn – Ofcansky 2004: 324). Regularity and diversity of Ethiopian S. printing were not interrupted by the *Därg*'s ↗revolution, nor by the fall of the communist's regime in 1991. Only the effigy of Ḫaylä Śəllase disappeared from the S., and his anniversaries were replaced with annual commemorations of the new regimes. An Ethiopian Philatelic Society was founded in the United States in 1970 which publishes a quarterly bulletin, **የምኒልክ፡ መጽሔት** – *Menelik's Journal.*

In Eritrea, the ↗British Military Administration used British S. overprinted until 1951. Af-

terwards Eritrea was included into the Ethiopian postal system, until 1993 (Yvert – Tellier 2007: 174–80). However, in 1978 two sets of S. were issued for use within the liberated areas of Eritrea to publicize the liberation struggle. The first set commemorated the 8th anniversary of the ↗Eritrean People's Liberation Front. These S. were provisionals. S. issued for local use in 1991 became valid for international mail in 1993 (Scott Publishing Co 2007: 1018). Since then new sets are issued several times a year by the government. Besides motives showing the fauna or flora, nationalist subjects are common and Latin, Amharic and Arabic characters are employed (Yvert – Tellier 2007: 174–80).

In the French colony of Somaliland, S. were issued by the French administration from 1893 until its independence in 1977. 563 series were created within this period, with 282 different designs, intended to show the colony to the French people. The main topics were the local fauna and flora, the people (first warriors, then musicians, shepherds, traders, women or salt-workers) and political subjects (such as the first governor, Léonce ↗Lagarde). The story of the archaeological discoveries was also related. The different issues legitimize the French presence in the area and glorify the colonial achievements. The Republic of Djibouti has issued national S. immediately after the proclamation of its independence in June 1977. The name of the new State on the S. altogether with the designs of its flag and terrtitory symbolized its sovereignty (Dubois 1998: 10, 29).

Several cases of Ethiopian S. falsifications were discovered during the 20th cent. The falsifications done by J.A. Michel, director of the Ethiopian Posts from 1904 in Harär, have been extensively discussed in the philatelic literature. Another prolific faker in the late 1960s and 1970s was Theo Michaelides (Sciaky 2001; 2003).

Stanley, Henry Morton

S. (b. 28 January 1841, Denbigh, Wales, d. 10 May 1904, London) was a journalist and explorer. Of poor background, in 1858 he emigrated to the United States. He participated in the American Civil War after which he began a career as a journalist.

On 16 December 1867, S. presented himself at the offices of the *New York Herald* in hopes of securing a position as a correspondent to cover the looming war between Britain and Ethiopia, following the arrest of Europeans by *aṣe* ↗Tewodros II. James Gordon Bennett, owner of the newspaper, did not offer S. a post but agreed to pay for individual articles that contained "exclusive intelligence". S. agreed to pay his own expenses and to only file his reports with the *New York Herald*.

On 20 January 1868, S. arrived in Suez and bribed a senior telegraph clerk to send his telegrams before those of other correspondents. Later that month, he arrived at ↗Zula Bay where he found a large British-Indian invasion force that included 30 steamers at anchor, 30,000 men, 13,600 of whom were fighting troops, 44 elephants, 2,500 horses, and 16,000 mules (↗Napier expedition). S., who passed himself off as an American, marched with the British forces to ↗Mäqdäla. During the journey he established excellent relations with senior British officers, including General Sir Robert Napier, the commander-in-chief of the invasion force.

In late May 1868, S. travelled alone to the coast, ahead of all the other correspondents, at the height of the rainy season. On 6 June 1868, he arrived at Suez and telegraphed a batch of articles to the *New York Herald*. On 26 June 1868, S. entered Alexandria and learned that his dispatches had caused a sensation. Ironically, a fault in the cable between Alexandria and Malta prevented other correspondents from sending their news items for several days. Many in Britain doubted the veracity of S.'s cables. A week later, cables from the correspondents of the *Telegraph*, *The Times* and the *Standard* arrived in London and confirmed the accuracy of S.'s dispatches.

Overnight, S. became one of the world's preeminent war correspondents. An elated Bennett revelled in the dismay of the entire British press corps and praised "his man" for "his vast superiority in style of writing, minuteness of detail and graphic portrayal". S. secured a permanent post on the *New York Herald*. Shortly afterwards, Bennett ordered S. to find David Livingstone, which became the cause for S.'s later fame.

Stanton, Edward

Sir S. (b. 19 February 1827, d. 24 June 1907) was a British officer and diplomat deeply involved in Ethiopian affairs, especially in the period of the ↗Egyptian–Ethiopian war of 1875–76.

S. had a long and varied career. On 19 December 1844, he entered the Royal Engineers as a 2nd Lieutenant. He saw active service in South Africa (1852) and the Eastern Campaign (1854–55); in 1860 he became Britain's Consul General in Warsaw. On 15 May 1865, S. became British Agent and Council General in Cairo, a posting that involved monitoring conditions in Ethiopia and the Horn of Africa.

In August 1870, *däggiyat* Kaśa Mərça (later *aṣe* ↗Yoḥannəs IV), informed London that he had appointed the Messrs Henry S. King & Company as his representatives in London. He also indicated that he would be sending envoys to London with presents for Queen Victoria. The Foreign Office told S., then Consul-General at Alexandria, to prevent the embassy from proceeding to London as it was unclear whether the envoys could pay their expenses. After three months of debating the issue, the Ethiopian envoys handed over a letter and presents for Queen Victoria but the British government failed to receive them. S. assessed the value of the gifts at £ 1,500 and recommended that the British government provide the envoys with a battery of mountain guns and some war rockets. He also indicated that the envoys were hoping to recruit artisans and mining engineers but this never happened.

In August 1872, *aṣe* Yoḥannəs deployed troops to ↗Akkälä Guzay which caused the population to flee to the wilderness of the Egyptian border region, followed by Egyptian accusations that they had invaded Egyptian territory (↗Massawa Governorate). Following Egyptian threats to "counteract", Lord Granville, the British Foreign Secretary, instructed S. to persuade the *ḫidīw* to seek arbitration in order to resolve the border dispute. However, his efforts were unproductive. On 12 January 1873, the *ḫidīw* announced that he had decided to deploy troops to Bogos, i.e. ↗Kärän, to protect the ↗Bilin who were Egyptian subjects; in fact, Bogos had been annexed in July 1872 by ↗Munzinger *bāšā*, and preparations for further annexations were already going on. On 4 March 1873, S. reported that 5,000 Egyptian troops had clashed with an Ethiopian force of 1,000 cavalry and 400 soldiers, killing at least 175.

In addition, Egypt was planning to take control of the ↗salt trade, on which Ethiopia depended. S. warned London that the *ḫidīw*'s seizure of the salt mines would make Ethiopia dependent on Egypt; in February 1875, ↗Arakel *bey*, the Egyptian governor of Massawa, actually seized the ᶜAfar salt mines. However, military victories by *aṣe* Yoḥannəs at ↗Gundät (1875) and ↗Guraᶜ (1876) ended Egyptian expansion.

On 25 November 1875, Ismāᶜīl Ṣādiq, *ḫidīw* Ismāᶜīl's Minister of Finance, and S. signed an agreement that altered Egypt's stake in the Suez Canal Company and 176,602 shares out of a total of 400,000 ordinary shares, were signed over to British government against the sum of four million pounds sterling. On 24 December 1875,

S. informed London that the Anti-Slavery Society had issued a memorandum to Lord Derby demanding a military intervention against the *ḫidīw*. However, Lord Derby, Britain's Foreign Secretary, informed S. that London had refused to deploy troops to Ethiopia. After completing his assignment, S. was appointed chargé d'affaires in Munich. He retired from the army with the rank of General.

State symbols, Ethiopian

Coat of arms

The first official imperial Ethiopian coat of arms was created during the reign of *aṣe* ↗Mənilək II. Earlier coats of arms attributed to Ethiopian emperors appeared only in European publications, and there is no evidence that they were authorized by the sovereigns concerned. Nonetheless, these early designs influenced the emblems adopted by various Ethiopian emperors and kings, and were to be reflected in coats-of-arms used during the reign of *aṣe* ↗Ḫaylä Śəllase I.

The earliest recorded mention of a royal motif is believed to have been in the 14th cent. Chojnacki cites a 14th-cent. Spanish manuscript stating that ↗Prester John had as his emblem a black Cross of Lorraine (a double armed cross) on a white background. Another version was said to be a simple cross flanked by croziers (Chojnacki in PICES 3, 139).

It is believed that the earliest published coat of arms *per se* attributed to an Ethiopian sovereign appeared in Portugal in the 15th cent. It consisted of a row of three shields, each surmounted by a coronet, and depicting from left to right, the cross, scales of justice and a heraldic ↗lion *rampant* with a Latin ↗cross (Ramos 1997:3 [ill.], 375, n. 3). In 1573 in Antwerp a design probably inspired by the Jesuits and stated to be the armorial bearings of *aṣe* ↗Ləbnä Dəngəl appeared as an inset on a map designed by Ortelius. The design consisted of a lion *rampant* holding a Latin cross on a shield with projecting *fleurs-de-lis* (Pétridès 1964:232f.). In 1660 Manoel de ↗Almeida's *History of Ethiopia* incorporated a coat-of-arms showing a lion *rampant* facing left on a shield carrying a motto in Latin, "Vincit leo de tribu Iuda" ('The Lion of the Tribe of Judah has won') and surmounted by a coronet with a cross on top (Tellez 1660, before map 1). Although there is no evidence that this coat-of-arms was sanctioned by *aṣe* ↗Fasilädäs, it was clearly based on knowledge of the traditional Ethiopian motifs.

In 1681 a revised version of the coat of arms was published by ↗Ludolf (LudHist) on a map based on information gathered from the Portuguese Jesuit ↗Tellez (Pétridès 1964:232f.). The design consisted of a lion *passant* holding a Cross of Lorraine. According to Ludolf, "The Habessines also call'd the Posterity of their Kings Israelites: neither do they think any other person worthy of the Scepter but the male Issue of Menilehec; who for that reason bear the Lyon in their Royal Coats, with this Imprese, The Lyon of the Tribe of Judah has overcome: to demonstrate that they are descended from the Tribe of Judah and the Line of David" (Ludolf 1684:105). The design carried the title *Insignia Regis Regum Aethiopiae*. The motto *Vicit Leo de Tribu Iuda* was written around the top of the shield and appeared in Gəᶜəz at the sides of the shield: **ሞአ፡ አንበሳ፡ ዘእምነገደ፡ ይሁዳ** (*Moᵓa anbässa zäᵓəmnägädä Yəhuda*, 'The Lion of the Tribe of Judah has Conquered', cp. also Conti Rossini 1939).

On the title page of the Commentary to his *History of Ethiopia*, published in 1691, Ludolf reproduced another, more elaborate version of the same coat of arms (s. Pétridès 1964:232f.), incorporating two *supporters*, one carrying a spear and one cross staff. Another, more decorative version of the "Ludolfian" design appeared on Coronelli's map published in Venice in 1693 (ibid.). These bearings were basically those published by Ludolf but with ribbons and other decorative devices suited to its use on the map. However, the lion had become *passant guardant*, i.e. with head turned facing the viewer. In 1726 a version of the "Ludolfus" design was published in Paris, on a map based on information provided by Lobo (ibid.). The design was virtually unchanged except for the removal of the Gəᶜəz version of the motto, and the addition of the words, *Armes de l'Empereur de l'Abyssinie*.

Meanwhile different versions of purported Ethiopian coat-of-arms were published by the French in the 17th cent., and at The Hague in *Les Souverains du Monde* in 1722 (*Le Monde ou la Géographie Universelle* 1663; Pétridès 1964:232f.), incorporating a crucifix, and in one case, a crown of thorns – not motifs of the Ethiopian Orthodox Church. Presumably these were the designs referred to by Pétridès, quoting the writer Morié's claim that around 1600, Ethiopia's armorial bearings composed of a crucifix consisting of a silver figure of Christ mounted upon a gold cross, on an azure field.

In the late 18th cent. James ↗Bruce reported, that the Portuguese replaced the lion *passant* in some of their publications by a lion *rampant* which later again was returned to a lion *passant*, "that he was in the time of Solomon, without any symbol of either religion or peace in his paws" (BruNile 479). However, Ethiopian acceptance of the heraldic formats is evidenced by the fact that during the 18th and 19th cent., various seals had copied the heraldic lions *rampant*, *passant* and *passant guardant* (Pankhurst 1986; SalTrav fig. 6).

With the notable exception of *nəguś* ↗Sahlä Śəllase of Šäwa, who embodied his own name ('The [Grace of the] Trinity') in an emblem consisting of a traditional Ethiopian painting in a treaty with Great Britain (Rubenson 1987: facing 59) the "Lion of Judah" theme was maintained in the royal emblems, and is described by Victor Bouton in his *Nouveau Traité des Armoiries* (1887) as constituting "the arms of the King of Ethiopia" (Pétridès 1964: 241).

In the early 20th cent., *aṣe* ↗Mənilək II commissioned the design of a new imperial coat-of-arms. Dominated by the colours of the Ethiopian national flag (red, yellow and green), it inherited the basic shape of the earlier, Portuguese-inspired, shield-and-crown, but dispensed with the shield itself in favour of all-encompassing maroon and gold drapery, and converted the surmounting coronet to ceremonial swags. The design combined traditional Ethiopian symbolism with the European paraphernalia of empire. The first publication of the coat-of-arms, believed to have been arranged in France, incorporated a *blazon* below the tableau bearing a Gəʿəz poem, or *qəne*, in praise of the Emperor, with an introduction in Amharic. Written by the designer of the coat-of-arms, and explaining the symbolism of the design, the legend provides the date 1898 A.M., i.e. 1905/06 A.D. The designer wrote a booklet containing further information on the symbolic meaning of the new coat-of-arms (Ḫaylä Maryam Särabyon 1905), which was subsequently summarized in a pamphlet published in 1943 by *blattengeta* ↗Märsəʿe Ḫazän Wäldä Qirqos.

The central feature in the Mənilək II coat of arms is the Solomonic throne, on which is inscribed the Star of the House of David, containing in vermilion the character **ም** ('M'), surmounted by a miniature of the Mənilək crown. Surmounting the back of the throne is another depiction of the Mənilək crown, in gold. Guarded by two lions, and standing on a carpet in the colours of the Ethiopian flag in red, yellow and green, the throne is inscribed: **ኢትዮጵያ፡ ታበጽሀ፡ እደዊሃ፡ ኀበ፡ እግዚአብሔር** (*Ityoṗya tabäṣṣəh ədäwiha ḫabä əgziʾabəḥer*, 'Ethiopia shall stretch out her hands unto God'; Ps. 68: 31). Reminiscent of traditional Ethiopian paintings of the Virgin, the throne is flanked by the Archangels Gabriel and Michael. Mounted above the throne is an open book, inscribed: **አልፋ፡ ወዖ** (*alfa wäʿo*, 'alpha and omega'). The conquering lion, *passant guardant*, is in the foreground. Shown in the attitude of the triumphant Paschal Lamb of God, the lion wears the Mənilək crown and carries a staff with *croix pattée* and a flag bearing the motto, *Moʾa anbässa zäʾəmnägädä Yəhuda* (s. above). This lion was to be adopted as the imperial motif in all subsequent imperial Ethiopian seals and coats of arms (and even ↗*ṭäǧǧ* bottles). The entire tableau of throne, archangels and conquering lion is framed and festooned in a theatrical proscenium of maroon and gold velvet swags with tasselled tie-backs, surmounted by Mənilək's crown featuring St. George of Lydda on horseback. The drapery providing the back-drop consists of golden fur with black flecks, known as *erminois*, a sign of

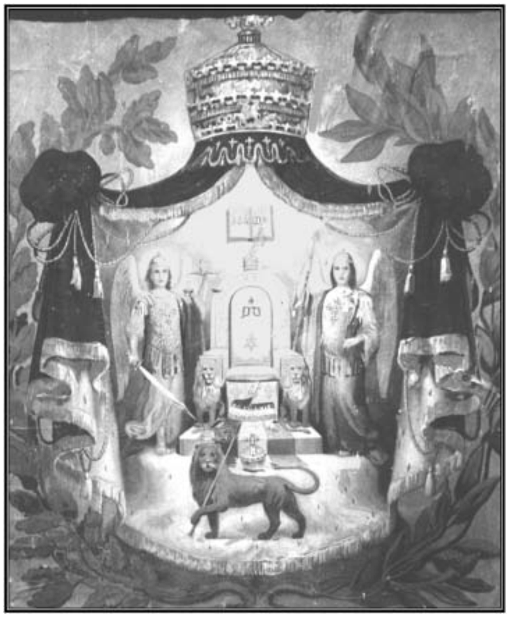

Fig. 1: The coat of arms of *aṣe* Mənilək II, designed by Ḫaylä Maryam Särabyon, ca. 1905; photo courtesy of the author

royalty, suggesting professional heraldic influence in the design. According to Märsəᶜe Ḫazän, the coat of arms appeared on the *lanqa* (type of cape) of Mənilək's coat.

↗Zäwditu maintained Mənilək's basic design (Rey 1927, frontispiece), indicating that the coat of arms had taken on a dynastic quality. The Empress's retained the same surmounting crown, but there were minor changes, the most notable being the removal of the **ም**, the miniature crown, the five-pointed star and the banner with motto.

During the reign of ↗Ḫaylä Śəllase I, there were a number of versions of the imperial coat-of-arms. These versions emerged over time as changes were made, and also arose from the different purposes to which the coats-of-arms were put. The most notable modification was the adoption of Ḫaylä Śəllase's coronation crown in place of the Mənilək crown. In addition, the conquering lion faced right instead of left, and was made to carry the flag. Subsequent versions again reversed the direction of the lion, and put swords in the hands of the archangels.

Ḫaylä Śəllase's coat of arms was the inspiration for imperial and national motifs, badges and emblems which were to appear on coins, medals and uniforms. Of particular interest is the flag of the Ethiopian Airforce, which was a copy of the heraldic lion on the 17th-cent. French "crucifix" coat of arms, but with the addition of a crown on the head of the lion, and wings, to denote flight. The flag of the *abun* depicted a winged heraldic lion *passant guardant*, crowned, and clearly representing the Paschal Lamb of God.

Flags and banners

The Ethiopian national flag was created at the end of 19th cent. However, in the past banners were used and the terms **ሰንደቅ** (*sändäq*) and **ዓላማ** (*ᶜalama*) applied jointly nowadays to designate the flag were used separately. In the 16th cent., the term *ᶜalama* probably referred to two types of objects, one being a staff either with a brass globe surmounted by a cross or with ribbons at the top which – in the 17th cent. – were used by military units. The second consisted of banners either in plain colours or with globes painted on them. In the late 17th or early 18th cent. the borrowed term *sändäq* was introduced to designate military banners in swallow tail form and in variously arranged colours occasionally including a lion or globe. It appears that royal standards also existed and were displayed during the battle as well as being used to indicate the place for the establishment of a royal camp. In addition, provincial rulers were known to have displayed standards whenever they declared war.

During the ↗*Zämänä mäsafənt* banners were used only for religious ceremonies. *Aṣe* ↗Yoḥannəs IV reintroduced the display of banners on state occasions. This consisted of two red bands separated by a yellow on which the lion passant was brocaded. The Emperor also had his own standard, which was crimson at the top amethyst blue at the bottom, while on the white band in the middle, the Lion of Judah was painted with a defiant tail and a crucifix in his

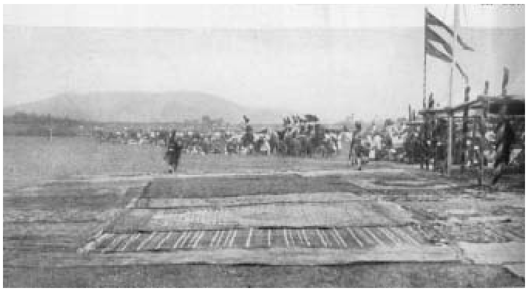

Fig. 2: The Ethiopian flag in the period of *aṣe* Mənilək II during a parade in honour of Ferdinando ↗Martini, consisting of three separated stripes; photo 1906, from Cipolla 1909: 997, offprint collection of the Hiob Ludolf Centre for Ethiopian Studies, University of Hamburg

right paw. The blue staff was surmounted by a large gilt cross. Mənilək, King of Šäwa, had crimson and white or plain red pennons being carried during his military campaigns, while the royal colours were red, white, yellow and green. Following his accession to the throne as emperor of Ethiopia, the three colours – green, yellow and red – appear to have prevailed but were still displayed as separate pennons.

In 1891 ↗Mənilək II commissioned a flag in Switzerland consisting of five horizontal red, green, white, blue and red bands. Later, in October 1897, he ordered three red, green and yellow pennons to be sewn together and incorporated into one piece for display during the 1898 Franco–Ethiopian expedition to the White Nile. This innovation can, in effect, be considered the true birth of the national flag, which consisted of a horizontal band of red at the top, a band of yellow in the middle with the **ም** (‘M’) monogram embroided on it and a green band at the bottom (s. ill.). At the same time, the two words were joined together and the new term **ሰንደቅ፡ ዓላማ** (*sändäq ᶜalama*) came to signify the flag, while the name *bandera* borrowed from Italian – served as a synonym. It seems, however, that no official announcement was ever made relating to the creation of the national flag and, as a result, differences of opinion persisted as to the arrangement of the colours. In 1913 ↗Ḫaylä Maryam Särabyon published a pamphlet advocating that a red band should appear at the top, while *ras* Täfäri (future *aṣe* ↗Ḫaylä Śəllase I) and the leaders of the 1916 ↗coup d’état (s. EAE vol. 2, 1081), were in favour of a green one and this eventually prevailed. The same people were also proponents of the idea of time-honoured origins of the Ethiopian flag.

The simple tricolor flag thus established was used by private citizens, while on official state flags the yellow band bore the same coat of arms as the one appearing on the coins of the realm. During the 1974 ↗Revolution, the crown was initially removed from the lion’s head and the cross on the standard replaced by a spearhead. The new emblem then evolved into three successive versions – the first consisting of the outline map of Ethiopia within a circle with the motto “Ethiopia First” appearing across the map. The *Därg* then created a substitute emblem with an ear of corn surrounding the representation of a plow shown within a dentate wheel and 14 rays of light extending from it. In 1987, with the establishment of the Democratic Republic of Ethiopia, the new state emblem included the same ear of corn and the dentate wheel but substituted a star for a plough, and added a facsimile of the top of an Aksumite stele. This emblem was subsequently cancelled after the political change of 1991, and in the constitution of 1995 green, yellow and red were confirmed as the national colours. A newly created official emblem was then superimposed on these colours and consists of a blue circle surrounding a five-pointed star with five rays radiating from each angle.

National anthem

The text of the pre-war Ethiopian National Anthem, which was composed in Amharic, and began with the words **ኢትዮጵያ፡ ሆይ፤ ደስ፡ ይበልሽ** (*Ityoṗya hoy, däss yəbäləš*, i.e. 'Hail Ethiopia, May you Rejoice'), is of apparently unknown authorship. The music is, however, known to have been composed by the ↗Armenian musician Kevork Nalbandian (1887–1963), reportedly in 1926. Born in Aintab in Turkey he had arrived in the Ethiopian capital in 1924 and served for the next decade as musical director of Addis Abäba schools. With the help of a group of Armenian youngsters, known in Amharic as the *arba ləǧočč* ('40 children'), who were given asylum in Ethiopia by *ras* Täfäri Mäkʷännən in 1924, he had also founded an Armenian choir (Pankhurst 1981: 388).

The anthem was first sung in March 1927 by students of the Täfäri Mäkʷännən School (Pankhurst 1955: 589). The Amharic text of the anthem, with a French translation, and musical notation is published by Zervos (ZerÉth 30f.). The music was played at the Emperor's coronation, in 1930, as well as on other pre-war state occasions. The playing of the anthem acquired some diplomatic importance in 1940–41, during ↗World War II, when British Government hesitancy in recognizing Ethiopia as a full ally found expression in the British Broadcasting Corporation's unwillingness to play it in a weekly radio programme devoted to the anthems of the Allies (s. Pankhurst 2003: 118–34). After the Liberation in 1941 the anthem continued in general use until the Ethiopian ↗Revolution of 1974 when it was replaced by entirely different words and music. After the collapse of the *Därg*, yet another anthem was composed (lyrics by Derege Mälaku Mängäsa, music by Solomon Lulu).

Richard Pankhurst

Stecker, Anton

S. (b. 19 May 1855, Kosmanos [Kosmonosý], Bohemia, d. 15 April 1888, Jungbunzlau [Mladá Boleslav]) was an Austrian explorer. Son of a textile factory executive, he studied natural sciences, in particular zoology and anatomy, at the University of Prague, graduating with a Ph.D. in 1877. He continued his studies in Heidelberg and Berlin, where he met such famous explorers as Gustav Nachtigal, Gerhard ↗Rohlfs and Ferdinand von Richthofen. In 1878 he accompanied Rohlfs on an expedition from Tripoli to the oases of Kufra. They had to abandon their planned route to Wadai and went on a diplomatic mission to Ethiopia.

In December 1880 S. and Rohlfs departed from Massawa to Däbrä Tabor where *aṣe* ↗Yoḥannəs IV held residence. His mission accomplished by handing over two letters from the German Emperor Wilhelm I, Rohlfs returned to Germany, while S. stayed for the next two years (1881–83). S.'s interests were extensive. They covered not only biology, but also ethnography, geography, geology, etc., and even biography. His travel route led him first to Lake ↗Ṭana, where he drew the first reliable map of the lake on a scale of 1 : 200,000 (March 1881). With an Imperial travel permit and letters of recommendation for Goǧǧam and Käfa, S. turned southward, crossing the Abbay in early 1882. He went to ↗Guduru, Horo and ↗Leeqa, but his plans to get into Käfa failed, as he soon saw himself a pawn in the hands of *nəguś* Mənilək (↗Mənilək II), who made him a prisoner suspecting that he was a spy for his rival, *nəguś* ↗Täklä Haymanot of Goǧǧam. S. was released when two Italians, Giacomo ↗Naretti and Orazio ↗Antinori, interceded on his behalf. He then turned to the lacustrine area, exploring and mapping the ↗Zəkʷala crater lake and Lakes ↗Wänči and ↗Zʷay. He had, however, to drop his plans of advancing further south, when Mənilək, ever mistrustful, sent him back to the north and handed him over to *aṣe* Yoḥannəs.

S. also visited Goǧǧam, Gondär and Aksum. Returning to Däbrä Tabor, S. was decorated with the Order of Solomon. After an excursion to the

Səmen mountains, he finally set off to Massawa which he reached in July 1883. Yoḥannəs had entrusted him with a letter to the Austrian Emperor Franz Joseph. Unfortunately, when he returned to Europe he was already severely ill with tuberculosis of the lung, making it impossible for him to work through his extensive travel notes and records, which for the most part remained unpublished.

Werner Petermann

Steer, George

George Lowther S. (b. 22 November 1909, East London, South Africa, d. 25 December 1944, Burma) was a British journalist, who reported for the London *Times* on several military campaigns, including the Italian invasion of 1935–36 (↗Italian war 1935–36) and the subsequent Allied Liberation Campaign of 1940–41 (↗World War II; ↗War of Liberation).

Oxford-educated, and a committed Anti-Fascist, S. devoted his entire life to journalism. His writings on the Italian invasion of Ethiopia were significant in revealing to the world the Italian use of poison-gas. He is better remembered for his reportage on the bombing of Guernica in 1937 during the Spanish Civil War.

After ↗Mussolini's entry into the European war, S. was influential in persuading the British Government to accept the restoration of *aṣe* ↗Ḫaylä Śəllase I. He was later put in charge of British war propaganda in Italian-occupied Ethiopia and founded the air-borne Amharic publication ↗*Banderaččən*. S. was the author of two books on Ethiopia (1936; 1942), both reprinted with new historical introductions in 2009. He died as a result of a wartime motor accident.

Stelae

The term S. (sg., stela or stele) is in general use to designate upright monoliths of varied form which have been erected in many parts of northeast Africa, including much of Ethiopia and Eritrea, from at least the 5th millennium B.C. The equivalent of S., ሐውልት (*ḥawəlt*, pl. *ḥawlat*) in Gəᶜəz and Amharic and *ḥawəlti* in Təgrəñña, has the rather wider meaning of 'monument'.

The term "obelisk", sometimes applied to the largest Aksumite S., is a misnomer. Following prevalent usage by students of Graeco-Roman archaeology, some Aksumite inscribed stone slabs are also sometimes referred to as "S."; this practice has given rise to confusion and is not followed here since these slabs served a different function, not being regarded as *ḥawəlt*.

The only firmly attested function of the African S. is as grave-markers (↗Graves; ↗Burial). The best known and most impressive examples are at ↗Aksum and related sites, within the period 400 B.C.–A.D. 400, but other forms are far more widely distributed both geographically and chronologically.

Stelae in Eritrea and northern Ethiopia

Excavations near Kassala, on the ↗Gaš/↗Märäb River in Sudan close to the border with Eritrea, have revealed that plain, uncarved S. served as grave-markers as long ago as the third millennium B.C.

S. came into vogue at least as early as the mid-first millennium B.C. in the region where the Aksumite kingdom subsequently flourished. Examples attributable to the period commonly if inappropriately designated pre-Aksumite are known at ↗Betä Giyorgis immediately northwest of Aksum, and (less certainly) at ↗Yəḥa. Later, Aksumite, examples are known from numerous sites, but most notably from Aksum itself. They range in size and elaboration from simple elongated pieces of rock less than 1.5 m long to a huge example ca. 30 m long, weighing

520 tonnes and elaborately carved on all surfaces. Such S. were erected to mark graves which themselves varied in elaboration from simple pits containing minimal grave goods to complex monumental tombs with rich contents.

The largest S. and most elaborate tombs are concentrated in the terraced area now commonly called the S. Park on the northern side of Aksum, which is believed to have served as the royal burial area for at least the first four centuries A.D. Here, six S., all of nepheline syenite quarried ca. 4 km to the west, are carved in representation of multistorey buildings; only one of them – the third largest – is still upright, with a height of 23 m and an estimated weight of 150 tonnes. The pieces of the second largest, which fell and broke many centuries ago, were taken to Italy in 1937 by order of ↗Mussolini, re-assembled and erected in Rome; they were returned to Aksum in 2005.

The largest of these six S. may never have been successfully erected and lies broken; it is thought to be the largest single block of stone which people have anywhere, at any time, attempted to stand upright. One of the elaborate tombs which this S. had been intended to mark was located by archaeological excavation in 1974 and more fully investigated in 1993–95. Comprising a central passage and ten sidechambers, it was built in a large pit and then buried, its interior rendered to give the impression that the whole structure was carved from the rock. This tomb is dated to the mid-4th cent. A.D. and, since it can be shown to be the latest in a sequence of progressively increasing grandeur and more westerly location, seems to be that of the last Aksumite king to be buried according to pre-Christian tradition. The storeyed S. that still stands would thus date from the late 3rd or early 4th cent. A.D. More certain attribution of these tombs is not possible since, remarkably for a literate civilization, none of these Aksumite monuments bears any inscription. The only inscription that may be relevant is too fragmentary to be read; it was found in another 4th-cent. tomb nearby and formed part of a circular brass plaque probably intended for mounting on the apex of a S. (s. Schneider in Phillipson 2000: 512f.).

Research in the 1990s yielded information on how the great Aksum S. were quarried, transported, carved and erected, as well as how the second-largest one had been intentionally destabilized to make it collapse. Most of the S. in a second burial ground at Aksum – the so-called Gudit S. Field – are smaller and less refined, marking a burial ground for people of lower status. Although royal burials were no longer marked by S. after the conversion to Christianity, it is possible that the tradition was continued in lower status contexts.

S. are known from a number of other Aksumite sites and a few, unlike those at the capital, are inscribed; the information thus revealed, while limited, is compatible with that deduced archaeologically at Aksum. One example, 5.8 m high at ↗Mäṭära in Eritrea, bears the pre-Christian crescent-and-disc symbol and an unvocalized Gəᶜəz ↗inscription (RIÉ no. 223); re-erected during the colonial period beside the main road but probably not in its original location, it was reported seriously damaged by the Ethiopian military in 2001. The inscription, in a style attributed to the late 3rd cent., indicates that the S. was erected by a certain ᵓGZ "for his ancestors". Another 7-m S., at ᶜAnza, near Ḥawzen, bears an inscription (RIÉ no. 218) of similar age indicating that it was erected for BZT, a local ruler.

Stelae in central and southern Ethiopia

S. are widespread in southern Ethiopia. From Mänz to the south of ↗Sidamo, thousands of S. have been erected, forming sometimes impressive complexes. The oldest of them, the "phallic" S. from Sidamo, are probably not earlier than the 10th cent. Other S. in ↗Konso and Gawwada (Gewada) are still being set up today on the ↗graves (↗burials) of important persons.

Several variant forms may be recognized. In Gadillo Meda, ↗Mänz, a group of S. present anthropomorphical and "phallic" shapes. The first are carved with stylised human faces, and the others with designs.

In ↗Soddo (Gurage), several S. forms have been identified. S. with silhouettes have a triangular shape, with the vertex at the bottom. They present stylized human faces, arms and ornamentation (necklace, bracelet). One of the most remarkable of this type is found in Osole and is 2.90 m long.

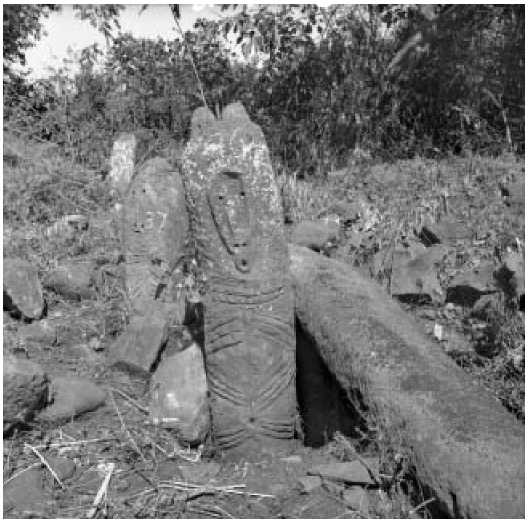

Fig. 3: Stelae from the Fela mountain, southern Ethiopia; photo 1934–35, courtesy of the Frobenius-Institut, Frankfurt am Main (13-0063)

In the same Soddo region, S. with sword forms have been produced from rhyolite slabs cut with an iron adze. The largest, found on the site of ↗Ṭəya (Tiya), measures five metres. Decoration, which occurs only on one face, is divided into three tiers: at the lowest tier there is a perforation; the next tier is decorated with different shapes – in W, X or O – which may represent the male organs, human organs, ribs and male breasts. The upper tier contains sword forms and sometimes a figure in preaching position. These S. are normally placed in circular settings around burial tombs. Other S. forms include figures in preaching position.

To the east of Lake Abbaya there are numerous cylindrical S. topped by a spherical form, which could be of phallic inspiration. They are gathered in complexes containing in some cases more than 1,500 S., as at Tuttiti. The largest ones are 6 to 8 m high. Some bear carvings with figurative shapes. The "phallic" S. served as markers of individual graves. They are associated with long funeral tumulus.

Roger Joussaume

Stella, Giovanni Giacinto

S. (b. 15 August 1822, Carcare, Savona, d. 20 October 1869, Šətäl) was a ↗Lazarist missionary. He began religious studies at the seminary in Genoa and studied Theology in Turin. In 1847, he left for ^{c}Agamä, where the Lazarists ran a school. However, to avoid persecution, he moved to Gondär, where he relied on the protection of *ras* ↗Ali Alula. In 1849, he accompanied Guglielmo ↗Massaja on his trip in Šäwa.

Then, S. moved to a location near Massawa until, in 1851, he made a journey of exploration with his companion Giuseppe ↗Sapeto through the lands of the Mänsa^c, Bogos and Ḥabab. Drawing on good relations with the locals, he later supported a project to establish an agricultural colony (↗Bilin history). This, and the fact that he was living with an indigenous woman since 1851 brought his superiors Massaja, Pierre-Louis ↗Bel and Lorenzo ↗Biancheri to ask him to abandon the religious habit in 1866 (cf. MasMis^2 vol. 4, 136f.).

In 1865, S. obtained from *däǧǧazmač* ↗Ḫaylu Täwäldä Mädḫən a concession of about 233 km^2 of land in the Šətäl, on the footsteps of mount "Tiazol". On 20 February 1867, he founded an agricultural colony, which soon ended in failure due to opposition by the local community and Werner ↗Munzinger. With the latter S. was embroiled in a fierce conflict leading to an attempt on ↗Munzinger's life in which S.'s own brother-in-law was involved. He died, soon thereafter due to a blood clot in the brain.

Francesco Surdich

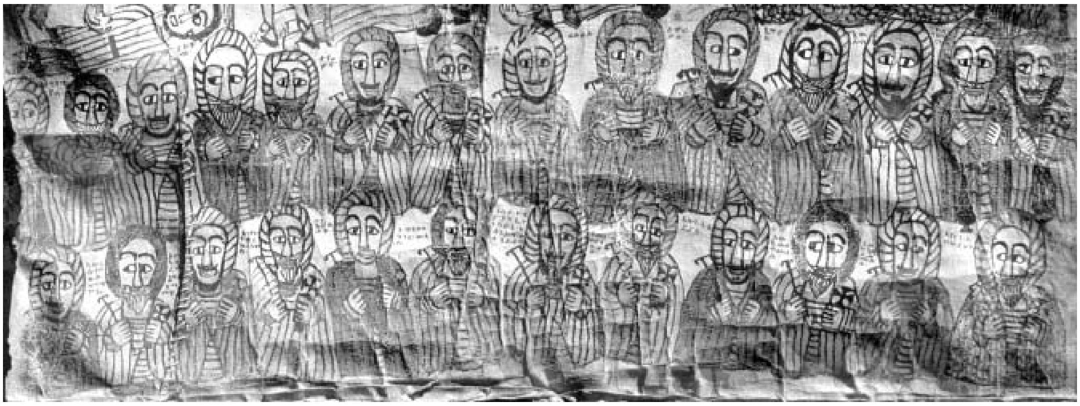
Stephanites

The S. were a movement within Ethiopian ↗monasticism (s. EAE vol. 5) called so after their founder and spiritual leader *abunä* ↗Ǝsṭifanos ("Ǝsṭifanosites" would be the correct designation of the movement, but "S." is prevalent in the literature). The movement rose to prominence in the 15th cent. and continued until the 16th cent., when it was formally reconciled with the main body of the ↗Ethiopian Orthodox (Täwaḥədo) Church (EOTC).

Quite a number of texts referring to the S. have been published and studied, most of them are works of ↗hagiography that originated in the circles of the S. (including the Vita of *abunä* Ǝsṭifanos, s. Getatchew Haile 2006). On the other hand, the historical record is confused by the continued efforts of the opponents of the S. to discredit them by attacking their views, presenting them in a biased way or creating scurrilous stories about their leaders (cp. CRRicBerhan I, 43–53 [text]; Wendt 1962: 13, 38 [text]; FotiCr 92 [tr.] and Cerulli 1933: 101ff.).

Scholars have offered differing interpretations of the movement emphasizing its "fundamentalist" (Getatchew Haile 1983), "heretical" (Beylot, Taddesse Tamrat 1966), regional and anti-royal (KapMon) character. It should be noted that these explanations are not necessarily mutually exclusive and that, moreover, sources written long after the events offer differing presentations of the movement's tenets and activities.

The head of the movement, *abunä* Ǝsṭifanos, was born at the end of the 14th cent. and assumed a monastic vocation from around age 20. After a while, he became a critic of what he viewed as the lax practices of the monks of his period. He succeeded in being ordained a deacon and a priest by



Prominent Stephanite monks and *abbots* of Gundä Gunde, fragment of a painting on parchment, second half of the 17th cent., Mäqälä, Təgray, Museum of Yoḥannəs IV; photo 2005, courtesy of Michael Gervers

abunä ↗Bärtälomewos, but his criticisms generated a conflict and led to his expulsion from his home monastery (probably Däbrä Qʷäyäṣa of *abunä* ↗Samuᵓel, in ↗Šire).

Joined by a group of followers who shared his proclivity for asceticism and regimentation, Ǝsṭifanos moved to the area of ↗Täkkäze, on the margin of Šire (ca. 1428, according to the Vita of ↗Abäkärazun, the date which can be considered the movement's starting point; Conti Rossini 1910: 13 [text]). There he established a rigid monastic organization which emphasized poverty, absolute self-subsistence, equality and independence from secular authorities (Getatchew Haile 2006: 26–29 [text]). The motto of returning to "true asceticism" based on the Scriptures as opposed to the traditional monastic order "inherited from the fathers", and the claim of implementing these principles in the practice of the monastic life, may be considered the basis of Ǝsṭifanos's teaching. His enemies in the monastic circles made attempts to discredit him, but the movement gained followers in various monastic communities of ↗Təgray, and Ǝsṭifanos personally enjoyed the support of some local rulers such as the governor of Šire and the than ↗*təgre mäkʷännən.*

When summoned to the royal court, Ǝsṭifanos was initially able to convince the emperor (probably *aṣe* Ḥəzbä Nañ ↗Täklä Maryam) that he posed no threat to royal power or the unity of the Church. Later, however, he collided with *aṣe* ↗Zärᵓa Yaᶜəqob. Ǝsṭifanos appears to have disapproved of the Emperor's religion initiatives including the "excessive" veneration of the Holy ↗Cross, the millenarian doctrine of ↗Däbrä Ṣəyon and the introduction of the festivals of St. ↗Mary (cp. Piovanelli 1995: 207–11). Perhaps even more importantly, he rejected royal supremacy and authority in spiritual matters and refused to participate in court judiciary procedures. Furthermore he taught to observe both Saturday and Sunday as ↗Sabbath, with reference to the ↗*Senodos* (e.g., Getatchew Haile 2006: 28 [text]; similarly to the ↗Ewosṭateans, though he was later accused of observing Saturday, but not Sunday). At some point after 1434 (after his first meeting with the Emperor), Ǝsṭifanos moved to the remote monastery of ↗Gundä Gunde (ᶜAgamä) which soon became the main centre of the S. movement.

Despite the attempted intervention of one of Zärᵓa Yaᶜəqob's teachers, Bärtälomewos, who was close to Ǝsṭifanos (Beylot 2000), the Emperor had the latter imprisoned (ca. 1437). Ǝsṭifanos's death in December 1444 was a blow for his followers; during the remainder of the 15th cent. they were forced to survive as refugees. The Chronicle of Zärᵓa Yaᶜəqob describes brutal persecutions of the S. (s. PerrZarY 69f., 92), since, apparently, after the council of ↗Däbrä Məṭmaq, the Emperor did not feel any need to be too diplomatic with the S. Internal disputes and divisions also appear to have taken their toll on the S.

Shortly before his death in 1476, Abäkäräzun selected twelve monks to travel to ↗Jerusalem to be ordained. The decision was dictated by the necessity to keep performing Christian rituals under the conditions of the excommunication by the EOTC (Caquot 1961: 74f. [text]). They departed during the leadership of his successor ↗Gäbrä Mäśiḥ (I). It appears that a few were successful in their attempts to be ordained (most notably *abunä* ↗ᶜƎzra, by "*abba* Yoḥannəs" – Hovhannes Missirtzee, Armenian Patriarch of Jerusalem [1485–91]?; ibid. 78f. [text], but cp.

Cerulli in PICES 3, vol. 2). It did not resolve their conflicts with the rest of the Church and the royal power (specifically *aṣe* ↗Ǝskəndər). Moreover, tensions existed between the leader of the pilgrims, ᶜƎzra, and Gäbrä Mäśiḥ and it was only after the latter's death (1522) that his successor *abunä* ↗Habtä Śəllase (I) translated ᶜƎzra's remains to Gundä Gunde.

Aṣe ↗Naᶜod appears to have been more favourably inclined towards the S. and to have been instrumental in their reintegration into the EOTC during the period of Metropolitan *abunä* ↗Yəsḥaq. For their part, the S. appear to have softened their position and accepted prostration if not worship of St. Mary; the excommunication was lifted by the Metropolitan (Caquot 1961: 81f. [text]; Getatchew Haile 1983: 100ff.).

The local rulers such as the *təgre mäkʷännən* Zärᵓa Śännay, and the court officials who governed Ethiopia during the regency of *aṣe* ↗Ləbnä Dəngəl did not share Naᶜod's tolerance of the S. and the persecutions were renewed (Beylot 1984:28). However, Ləbnä Dəngəl appears to have been less antagonistic, which allowed the next head of Gundä Gunde *abunä* Habtä Śəllase (I) to consolidate the movement during the upheavals of the early 16th cent. It is interesting to note that ↗Alvarez, in his rather garbled report of the S.'s (*estefarruz*) opposition to the Cross, makes no mention of any opposition to the veneration of St. Mary (BeckHuntAlvar 170; cp. also Kur in PICES 10, 360). *Abunä* Täklä Näbiyat led the S. from ca. 1539 to 1553; sources from the 16th cent. indicate that although the S. received holy orders from the Metropolitan, they continued to be viewed with suspicion by some parts of the Church for many generations. Their infamy as **ፀረ፡ ማርያም** (*ṣ́ärä Maryam*, lit. 'enemy of Mary') or **ደቂቀ፡ እስጢፋ** (*däqiqä Ǝsṭifa*, 'children of Ǝsṭifanos') was perpetuated by some writings (including stories in the ↗*Täᵓammərä Maryam*; cp. CerMaria 94–103; Cerulli in PICES 3, vol. 2; cp. also Conti Rossini 1925: 514f.).

The S. movement was gradually ousted from Šire and some other parts of Təgray, but instead obtained strong backing from the ↗Irob people living around Gundä Gunde. The monastery appears to have been destroyed and or abandoned on several occasions (1452, 1458?, 1500). The members of the movement as well as its leaders often resided in other locations including Desᶜa and Mänbärta. The 16th-cent. *abba* ↗Isayəyyas is credited with establishing an additional monastic community at ᶜAlaqət. Even though the ideology of the S. was influential during the active period of the movement, the "network" of Gundä Gunde seems to have remained small, limited to a few sites mostly in its vicinity and a few monastic communities like Asir Mätira and Maryam Dibo, in East Təgray (Kələttä Awləᶜalo, s. EAE vol. 5; cp. Gigar Tesfaye 1979), of which not much is known.

In the course of the time, the oppositional character of the movement must have changed. In the 17th cent., Gundä Gunde appears to have been well incorporated into the cultural and religious life of the ↗Gondärine kingdom (cp. ↗Mäzgäbä Śəllase); it possessed *gʷəlt*-lands and later was much revered by such leaders as *ras* ↗Wäldä Śəllase and *däǧǧazmač* ↗Säbagadis. The bitter legacy of the persecutions of the S. has been preserved mostly as an internal memory of the community.

The S. developed a rich literary tradition, represented first of all by the manuscripts of Gundä Gunde, which contain the Vitae (↗*Gädl*) of most monastery's heads and prominent monks (cp. KinBibl; and such important works as the *Vita of the Fathers and Brothers of Däbrä Gärzen*, s. Beylot 1990; *The Teaching of Ǝsṭifanos and Abäkärazun*, s. Beylot 1970) and also other rare ancient works of the EOTC (cp. Schneider 1963; Mordini 1953: 39–55, etc.). Many of these manuscripts also preserve a particular style of illumination – the so-called Gundä Gunde style – which had spread to other regions (cp. Heldman in PICEA 1).

Despite the importance of the S. movement for the history of Ethiopia, as yet we have neither a comprehensive critical history of its background and development, nor a clear idea of its real geographical scale, historical significance and influence.

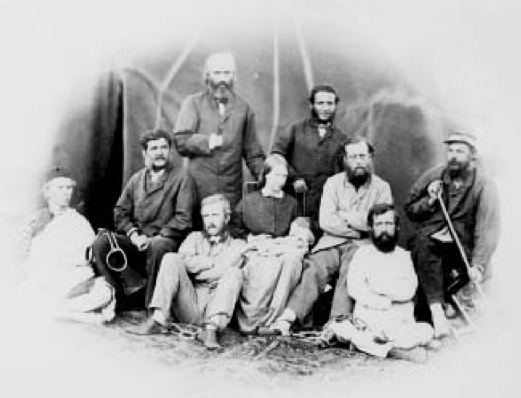
Steven Kaplan

Stern, Henry Aaron

S. (b. 1820, Hesse-Cassel, d. 1885, London) was a missionary for the ↗London Society for Promoting Christianity amongst the Jews who was active among the ↗Betä Ǝsraᵓel.

The son of German Jews, S. was educated at Frankfurt am Main. He moved to London in 1839, where he chanced upon the Operative Jewish Converts’ Institution. In 1840, he was baptized in the Palestine Place Chapel. Ordained a deacon in 1844 by Bishop Alexander of Jerusalem, he travelled as a missionary to Iraq, Persia, Kurdistan and South Arabia.



Henry Stern (third from left, standing) with other missionaries of the “Falasha Mission” just after their liberation by the Napier expedition; photo 1868, from the collection of Wallraff-Richartz-Museum, Agfa-Fotorama, Cologne

S. arrived in Ethiopia in 1860. He obtained an audience with *aṣe* ↗Tewodros II, who referred him to the metropolitan *abunä* Salama. S. regarded the establishment of a mission among the Betä Ǝsraᵓel as a stepping-stone to infiltrating and reforming the Ethiopian Orthodox Täwaḥədo Church, but received permission to proselytize among non-Christians only, on condition that all would be baptized into the Orthodox Church, and never converted to Protestantism.

In Gondär, in discussions with the Betä Ǝsraᵓel leaders, S. challenged their disbelief in Jesus Christ as the Messiah, and scorned their rudimentary knowledge of the Bible. S. attacked the Betä Ǝsraᵓel institution of ↗monasticism, as well as the priesthood, sacrifices, medicinal amulets, and other religious practices.

S. travelled extensively in the Betä Ǝsraᵓel area. In Dämbəya he met his future major opponent *abba* Mähari. S. visited the villages of Gorgora Eyla and Ačärge in Bägemdər, where he described Betä Ǝsraᵓel weavers and male and female potters.

Leaving ↗Flad in charge of the Mission, S. returned to the ↗United Kingdom in 1860/61, to write and publish his journal (*Wandering* … 1862), where he described the way of life, occupations and customs of the Betä Ǝsraᵓel.

In 1863, soon upon his return to Ethiopia, S. was imprisoned at ↗Mäqdala by Tewodros along with nine fellow missionaries and British diplomatic staff. They were freed in 1868 by the military expedition under Sir Robert ↗Napier.

S. spent his remaining years converting Jews to Christianity in London's East End.

One of the local Betä Ǝsraʾel converts to head the London Society mission in later years, Iyob Nəguśe, had once been appointed guide to S. by *abba* Mähari.

Shalva Weil

Stitz, Volker

S. (b. 3 June 1943, Heiligenstadt, Thüringen, Germany, d.[?] 22 June 1975, Lake Ṭana) was a cultural geographer who since the mid-1960s spent much of his time in Ethiopia and did most of his fieldwork in Šäwa, Wällo, Goǧǧam and Gondär. In 1972, S. obtained his doctorate in geography at the University of Bonn with a thesis on the human geography of Central Ethiopia. It was published in 1974.

S.'s research comprises demography (particularly migration and settlement changes during the last 300 years between the ethnic and religious rivals, Amhara, Oromo and Argobba), the various agrarian systems (including the complex patterns of land use) in the Ethiopian highlands, and Ethiopian Christianity. For this gifted scholar cultural geography included anthropology, sociology, linguistics and history as well.

S. had already collected a lot of material for his *Habilitation* which he planned to obtain in rural and agricultural sociology at the University of Gießen. The focus was on the agricultural structure in Šäwa under the influence of the capital Addis Abäba. In June 1975, for a project of the University of Tübingen, he started together with his talented assistant and translater for Gəʿəz, Täsfay Yoḥannəs, to collect material on Ethiopian monasteries in the Lake Ṭana region. Here they often travelled by boat. They were already missed since 22 July 1975 when four weeks later the empty wreck of their boat was discovered, but neither the corpse of S. nor that of his assistant were found.

S. was a restless worker. During his short life as a scholar he performed distinguished work and was able to fill up many desiderata.

Hermann Amborn

Straube, Helmut

S. (b. 6 May 1923, Neiße, Oberschlesien, d. 22. March 1984, Munich) was a noted German scholar of African and ↗Ethiopian Studies. After Word War II, in which he was severely wounded, he studied ethnology, geography and history at the University of Frankfurt am Main. In 1952 he obtained his Ph.D. in ethnology with a thesis on African religion under the supervision of Adolf Ellegard ↗Jensen. In 1967 he habilitated at the University of Cologne with a study on Nilotic-speaking peoples. In 1968 he obtained the chair of the Institute of Ethnology and African Studies at the University of Munich where he served as director until his death. In 1976 he was elected member of the Bavarian Academy of Science.

S. (s. ill. for ↗Solomoon Daaimo) carried out fieldwork in south-western Ethiopia in 1954–56 and 1973–74 among Omotic-speaking peoples such as the ↗Šeko, ↗Koorete, ↗Yäm, ↗Borodda, ↗Dita, ↗Dorze, ↗Očollo, and East Cushitic speakers such as the ↗Burǧi. In comparative studies he analysed the contrasting organizational patterns of centralized sacred kingdoms (Šeko and others) and the acephalous Burǧi society. In his book *Westkuschitische Völker Süd-Äthiopiens* (1963 [= VSAe III]) he offers a general view of southern Ethiopian cultures which, in spite of limited space, is hard to surpass in its completeness, bringing out their complex structures as well as their connecting features. His analysis of the divine ↗kingdoms and his research about awarding leading offices (*halaqa*) through "feasts of merit" (↗Meritorious complex) are pioneering studies.

S. felt himself akin to *Kulturhistorie* (culture-history), but he did not overlook the weaknesses of this approach, whence his intention to help historical ethnology achieve a more workable and reliable basis. In order to realize this, he saw possibilities in a broad interdisciplinary approach that integrated information from ethnography, prehistory, geography and linguistics. This synoptic-holistic approach is, for example, visible in his studies on the "agrarischer Intensivierungskomplex" ('agricultural intensification-complex'; Straube 1967, 1971). The 1967 essay was inspired by the agricultural achievements of the hill-farmers of the Burǧi-↗Konso cluster whom he admired greatly. Long before ecology was "discovered" in Western Europe and North America, S., in his topical texts, indicated that southern Ethiopian agriculture was ecologically more appropriate than many modern methods praised as "progressive", which were, however, not adapted to local conditions. He also proved that extensive ↗plough-agriculture and intensive hoe-cultivating are not only technologically different, but based on deep socio-political differences.

His comparative studies allowed him not only to discover the historical and cultural connections of southern cultures to what is now northern Ethiopia, but also to point to a region of close cultural relations, which he analyzed as reaching from the east coast to the southern Nile area. Beside these influences he emphasized the endogenous development of certain social and economic characteristics (Straube 1977, 1984; Amborn 2009: ch. 7).

Strelcyn, Stefan

S. (Szlama S.; b. 28 June 1918, Warsaw, d. 19 May 1981, Manchester) was an eminent Polish Semitist and Ethiopisant.

After completing school in Warsaw, S. enrolled in the Engineering School in 1935. Due to the anti-Semitic policy of the Polish government and because of his leftist ideas, in 1938 S. fled to Brussels, where at the Free University he studied archaeology, Semitics, Egyptology, and Coptic. He also joined the Polish Army in France. After the German conquest of Belgium he fled to Paris, and in May 1940 to Montpellier, where he attended Oriental courses (as well as general linguistics and history of art). His active participation in the French *Résistance* earned him the *Croix de Guerre* at the end of the war. In 1944 S. was arrested by the Vichy Government, and deported to Germany, near Leipzig. His parents had died in Poland under Nazi occupation.

After the end of the war, together with his wife Maria (née Kirzner), and their two sons, S. settled in Paris, where he came in contact with Marcel ↗Cohen, similar to him in political and ideological attitudes, but above all in great interest in the languages and culture of Ethiopia. Being in contact with Cohen, who was for a long time a member of one of the most important groups of Ethiopisants in the world (most of them persecuted Jews: Wolf ↗Leslau, Déborah ↗Lifchitz, Maxime ↗Rodinson, and others – not to speak of Cohen and S. themselves), and with the cultural climate of a city like Paris at that time, S. began his work on cataloguing of ↗manuscripts and the study of traditional ↗medicine/plants/↗magic, the two main fields he would excel in.

In Paris he became *élève diplomé* of the ↗Institut national des langues et civilisations orientales, the École nationale des langues orientales anciennes, the École pratique des hautes études, secretary of the Groupe linguistique d'études chamito-sémitiques; he was employed in the Centre national de la recherche scientifique.

In 1950 S. was expelled from France because of his political activities, and became Associate Professor of Semitic Studies in Warsaw until 1952, and Full Professor of Semitic Studies from 1954 to 1969. He was also Head of the Department of Semitic Studies, of the Institute of Oriental Studies, and of the Centre of African Studies; as well as Department Director in the Institute of Oriental Studies of the Polish Academy of Sciences, and Vice-President of the Committee of Oriental Studies in the same Academy. In 1967 he received the Ḫaylä Śəllase I Trust Prize Award for ↗Ethiopian studies.

In 1969, following the increasingly anti-Jewish attitude of the Polish government, S. fled to the ↗United Kingdom, where, after one year as a Visiting Lecturer at the ↗School of Oriental and African Studies in 1970, he became Lecturer, and afterwards Reader, at Manchester University. He was appointed as Fellow of the British Academy in 1976, and Fellow of the Royal Asiatic Society in 1977. He also lectured at the Accademia Nazionale dei Lincei, at the invitation of Enrico ↗Cerulli, in 1974–78, and at the Collège de France in 1980.

S. was an all-round scholar both in the field of Semitic studies and in that of Ethiopian studies. In this latter, he attained unequalled competence in the study of magical and medical texts, together with their parallel fields of plant names and of Old Amharic. He also achieved excellence in cataloguing manuscripts.

Student movement, Ethiopian

The Ethiopian S.m. is connected to the rise of political and social consciousness among university students at the Ḫaylä Śəllase I University in Addis Abäba (↗Addis Ababa University) from the late 1950s. During the 1960s it was the most outspoken and visibly the only consolidated opposition to ↗Ḫaylä Śəllase I's government. It became the strongest and most persistent S.m. in Africa and came to an end during the Red Terror of the military regime in 1977–78 (↗Provisional Military Administrative Council, ↗Revolution).

Although what happened on the home stage was most important, the S.m. also included organizations of Ethiopian students abroad, particularly in the United States of America, Canada and Europe in the 1960s and 1970s. Publications like *Challenge* and *Combat* (USA), ታጠቅ (*Taṭäq*, 'Arm yourself') and ትግላችን (*Təglaččən*, 'Our Struggle') (Europe) sometimes inspired the consciousness on the home front, while the events at home were closely followed and fed the movement abroad. Imperial autocracy, with a weak ↗Parliament, a low degree of freedom of association and expression as well as the social and economic conditions in the country were seen in a new light when young people were given university education within a boarding system and interconnected with other worlds of experience through foreigners, such as students and delegates of the ↗Organisation of African Unity from other African countries as well as American and European teachers.

The University Service (1964), in which students spent one year, mostly as teachers, provided extended knowledge of Ethiopian conditions and provided connections with secondary school students all over the country. The S.m. started as a careful challenge of authority through poetry, stage plays and the paper *News and Views* (published between 1959–66), and developed in radicalism due to the suppressive measures from the government and increasing police brutality, which instigated boycotts from the mass of students. A second stage was the demand for participation through freedom of speech and organization, a third stage was one of confrontation and revolution. Provocative rhetoric and demonstrations were staged around demands to the government. The most central and persistent ones were the slogan "Land to the Tiller", and demands about expansion in the education sector. Activists were inspired by the Marxist, Leninist and Maoist revolutionary wave in the student world at large. Through their theoretical certainty (scientific socialism) and autocratic methods, Marxist activists won the hegemony among students. In 1967 a turning point in activism was the student paper 'Struggle' (also known as ትግል, *Təgəl*; published between 1967–70) and the formation of the University Students Union of Addis Ababa; this replaced de facto the National Union of Ethiopian University Students, which required consent from the colleges in ᶜAlämayya and ↗Gondär, which delayed decisions, due to the difficulties of communication.

In 1968, the Ethiopian Student Union in Europe dominated the foundation of the new Marxist-Leninist political organization ↗*Mäᵓison* on a secret students' congress in Hamburg at the University campus. The year 1969 was the most confrontational, involving also high school students all over the country (with student leaders such as ↗Walällәññ Mäkʷännən and ↗Ṭəlahun Gəzaw). The S.m. was a motor in the downfall of the Emperor in 1974 and presented visions of alternative political systems in party organizations such as the ↗Ethiopian People's Revolutionary Party and *Mäᵓison*.

A. Overview

I. Geography

S. (*Ǧumhūrīyat as-Sūdān*, 'Republic of the Sudan') is Africa's largest country by area, spanning 18° of latitude and embracing 2,505,813 km^2 of north-east and central Africa. S. shares borders with ↗Eritrea and ↗Ethiopia in the east, with ↗Kenya, Uganda and the Democratic Republic of Congo in the south, the Central African Republic and Chad in the west, and with Libya and ↗Egypt in the north-west and north. S. consists of a huge plain surrounded by mountains on three sides: the Red Sea Hills (east), Ǧabal Mara (west), and on the south-eastern frontier the Didinga Hills and the Dongotona and Imatong mountains. In the south-central region of the vast plain are the isolated Nuba Mountains, the Ingessana Hills, and the Boma Plateau near the Ethiopian border.

The ↗Nile and its tributaries make the country inhabitable, and dominate many aspects of life. The White Nile and the ↗Abbay both flow into S., and meet in Ḫarṭūm (↗Khartoum). As well as being a major source of water, the Nile is an increasingly important source of power, and is used for transport. Despite this, large parts of the land in the north are dominated by deserts, where farming is only possible on the 18,630 km^2 (2003) of irrigated land. Thus, arable land makes only 6.78 % of the territory. In contrast, the south has a huge potential for agriculture.

Main towns are the capital Ḫarṭūm (Khartoum), Al ʿUbayyid (El Obeid), Būr Sūdān (Port Sudan), Wad Madanī, Kassalā (↗Kassala), al-Qaḍārif (↗Qadarif), Umm Durmān (Omdurman) and Gūbā (Juba), the capital of the semi-autonomous region of Southern Sudan.

II. Peoples and languages

Estimates of S.'s population are unreliable. The 1993 census, which was only conducted in the north, put the population at 24.9 million. The National Population Census Council conducted a census in April–May 2008, which came to the (highly disputed) result of 39,154,490 (Ministry of Council of Ministers). S. has great ethnic, religious and linguistic diversity. The 1956 census that was the last to give detailed ethnic information, indicated that there were 19 ethnic groups and 597 subgroups. The largest population segment comprised those who define themselves as Arabs. However they were not an overall majority, even in the north, where they accounted for around 40 %, followed by Dinka (12 %), ↗Beğa (7 %) and ↗Fellata (6 %). The latest census neither included questions of ethnicity, nor religion.

The overly young population has been rapidly growing. An International Monetary Fund (IMF) estimate comes to an average population growth of 2.6 % a year in 1979–2007. An estimated 43 % of the people lived in urban centres; over 40 % were under 15. Southern S. is inhabited by ca. 25 % of the population, a figure that is contested by the South. ↗Islam is the state religion, but only around 60 % of the population are Muslims and there are non-Muslim groups in the north, too, mainly in the Nuba Mountains, the Red Sea Hills and in parts of Dārfūr. Followers of traditional ↗religions make up about 60 % of the southern population, and Christians at least 20 % (IMF estimates).

Arabic and English are official languages. It is estimated that ca. 400 other languages and dialects are spoken in S. from the ↗Afro-Asiatic, ↗Semitic and ↗Nilo-Saharan language families. Among the biggest ethnic groups (over 500,000 speakers) are Beğa, Dinka, Fur, ↗Nuer, Kanuri, etc.

III. Modern history

After 1899, following the defeat of the ↗Mahdists, S. had been established as an Anglo-Egyptian condominium, but was largely administered as a British colony. During much of the colonial period, the south of the country, which was non-Muslim and non-Arabic speaking, was governed separately from the north, a policy that had emphasised existing divisions. Dārfūr has a divergent history, too; it was an independent sultanate until 1916, when it was incorporated into S.

Already in the run-up to independence, in 1955, a year before formal independence (1 January 1956), the civil war between the north and the south started which was only ended by the Addis Abäba peace agreement in 1972 that lasted until 1983.

In terms of governance, the late 1950s and 1960s saw periods of weak democracy alter-

nating with military rule, as groups within the northern power circles – differing on issues such as ties with Egypt, Islamic law, devolution and socialism – struggled for influence. In 1983 however, amid political pressure from his own constituencies and in an attempt to circumvent the peace accord, President Ǧaᶜfar Muḥammad an-Numayrī ordered the review of its provisions, especially in the areas of security arrangements, border trade, language, culture and religion. As a result, the South that had enjoyed relative independence was divided into three administrative provinces, Islamic law (*↗Šarīᶜa*) was introduced and emergency rule implemented. Tensions had accumulated in the process, the Southerners being also wary of economic exploitation in the development of southern oil resources (first discovered near Bentiu in 1978) and in the construction of the Jonglei Canal (which was planned to divert water from the White Nile). Already in May 1983 the Sudan People's Liberation Army, the armed wing of the Sudan People's Liberation Movement (SPLM), led by Colonel John Garang) was formed in Itang, on Ethiopian territory. When *šarīᶜa* was implemented in September of the same year, the second civil war gained momentum.

The war continued even after an-Numayrī was ousted and a democratic government was elected with aṣ-Ṣādiq al-Mahdī's Umma Party having the majority in the parliament. The disintegration of the economy was exacerbated by severe drought and crop failure in 1984/85. Al-Mahdī headed a series of unsuccessful coalition governments, but eventually failed to address the country's political and economic problems.

On 30 June 1989 colonel ᶜUmar al-Bašīr led a group of army officers to overthrow the government, forming a new cabinet dominated by the National Islamic Front (NIF; renamed the National Congress Party in 1998), which had originated as the Sudanese wing of the Egyptian Muslim Brotherhood. The new regime purged the army and developed its own parallel security forces and institutions to mitigate the political threat posed by the military. Following the 1989 coup, the NIF government intensified its operations against the rebels in the South, leading to the forced displacement and killing of many thousands of civilians.

The second civil war continued throughout the eighties and nineties for 21 years and would only end in 2005. Despite this another conflict has developed into war, in the region of Dārfūr, since 2003, with unprecedented consequences since the President of the S. has been judged guilty of crimes against humanity by the International Criminal Court, as the first ruling president ever.

IV. Government and political system

S.'s current political system is laid out in the 2005 Interim National Constitution, which is based largely on the Comprehensive Peace Agreement (CPA). The Government of National Unity (GNU) is formed by the National Congress Party (NCP) and SPLM within a power-sharing agreement: The president must rule in conjunction with two-vice-presidents. If the president is a northerner, as is the case in the GNU under ᶜUmar al-Bašīr, the president of Southern S. – currently Salva Kiir, the head of the SPLM – is guaranteed the position of first vice-president. The Government of Southern S. (GOSS) receives 50 % of revenue from oil fields in the south (after 2 % is set aside for the oil-producing states), has tax raising powers and is responsible for the allocation of funds for Southern S.'s development. In addition to the national government and GOSS political institutions in Khartoum, each of S.'s provinces has its own legislature and executive.

The 2005 constitution established a bicameral parliament. In the 450-member National Assembly, 52 % of seats are allocated to the NCP (some of which have been given to the Eastern Front and to Darfūri opposition groups that have signed peace agreements), 28 % to the SPLM and the remainder to S.'s other political factions from the north and south. The upper house (the Council of States) has two representatives from each of S.'s 26 states, all appointed by the president.

The legal system is based on a combination of British common law and *šarīᶜa* with separate judicial hierarchies for each, courts of appeal at provincial and national levels, and a constitutional court (appointed by the president). Under the 2005 constitution, a National Judicial Service Commission was established to manage the national judicial system. Following the CPA, a commission on the legal rights of non-Muslims in Khartoum was established.

According to the interim constitution, Sudan is a decentralized country, divided into 26 states, based on previous administrative divisions. Despite the federal structure though, S. remains a highly centralized polity, as evidenced by widespread discontent in outlying regions over economic marginalization and a lack of effective political representation.

Main political parties are the NCP (formerly the NIF), a Sudanese offshoot of the Muslim Brotherhood, has been the ruling party since the 1989 coup, and the SPLM (a mainly southern-based movement, the SPLM took up arms to fight for a democratic, federal Sudanese state). Other important political parties are the Umma Party, which draws its support from the Anṣār, an Islamist movement that ruled Sudan in the late 19th cent., and the Democratic Unionist Party (DUP), which favoured union with Egypt after independence and is associated with the Ḫatmīya Sufi order (↗Islamic brotherhoods). Both, however, have been weakened and divided by the long rule of the NCP and its efforts to co-opt them, which led to the formation of pro-government splinter factions such as the Umma Party (Reform and Renewal) and the DUP-Sharif al-Hindi. The National Democratic Alliance (NDA), an umbrella body of opposition and rebel groups formed in 1989 after the NPC's coup, has also suffered from disunity, with many members leaving. In 2005 what remained of the NDA – by then a mainly DUP-led body – signed a reconciliation agreement with the government and was allocated two cabinet posts in the GNU, and 20 seats in the National Assembly. The mainstream Umma Party has refused to take up its allocation of seats, as has the Popular Congress, a party set up by Ḥasan at-Turābī after his expulsion from the NCP in 2000.

V. Economy

S. has significant oil reserves that it began exporting in 1999. Fields are currently in production or under development in southern and central S. Commercially viable deposits of oil or gas are also thought to exist in the north and offshore beneath the Red Sea. Moreover, small reserves of iron ore, copper, chromium ore, zinc, tungsten, mica, silver and ↗gold exist in different parts of the country. Despite this, S. has remained poor, ranking 150 out of 178 countries in the United Nations Development Program's Human Development Report of 2009.

Although S. remains a predominantly agricultural economy, the development of the oil industry is altering the economic structure. Agriculture – which mainly serves domestic needs, although sesame, ↗cotton, livestock and gum Arabic are exported – has suffered because of underinvestment in irrigation maintenance, disruption of cultivation by conflict and a poor transport network that hampers ↗trade. Development of the oil sector since 1999 has led to a rise in the flow of foreign investment and has enabled the government to raise public expenditure, which has consequently increased as a proportion of GDP. Nominal GDP is US-$ 1,522 per capita (IMF estimation, 2008).

VI. State symbols

The flag of S. displays three equal horizontal bands of red (top), white, and black with a green isosceles triangle based on the hoist side. The former flag, from 1956 to 1970 displayed three equal bands of blue, yellow and green from top to bottom.

The current national anthem of the S., called *Naḥnu ǧund allāh ǧund al-waṭan* ('We are the army of God and of our country'), was that of S.'s Armed Forces prior to independence. The coat of arms displays a secretary bird, a symbol of Arab nationalism, carrying a shield from the *Mahdīya*, with two scrolls on top and bottom reading, *An-naṣr lanā* ('Victory is ours') and *Ǧumhūrīyat as-Sūdān.* The coat of arms was adopted in 1969 and is also used as the presidential seal.

B. Sudan relations with Ethiopia

The S. shares a long border with Ethiopia and was relevant to much of Ethiopia's modern history in various pivotal aspects. The mutual relations were often bellicose. For example, by the mid-4th cent. king ↗Ezana of Aksum destroyed the kingdom of ↗Meroë in the northern S. Prior to the 19th cent., S. was more of a geographical concept, but not a crystallized political entity. The term *Sūdān* in Arabic refers to 'black skinned people', and *bilād as-Sūdān*, the 'land of the blacks', was used to connote the territories south of ↗Egypt and west to the land of *al-Ḥabaša* (↗Abyssinia), whose people were of mixed, lighter colour. In Greek inscriptions of ancient Christian Sudanese kingdoms (s. ↗Nubia, EAE vol. 5), their country was called ↗Aithiopía, and till the 19th cent. the Sudanese region was regularly called Ethiopia (also "Lower Ethiopia") in European travel literature, in differentiation to "Abyssinia" or "Upper Ethiopia" further south (whose self-designation was, however, *Ityopya*, thus similar to the early Sudanese kingdoms). Starting from the Egyptian occupation of extensive Sudanese lands in the early 19th cent. the term S. was preferred for the newly created political entity, and the term "Ethiopia" began to be used by foreigners exclusively for the country east of the S.

↗Islam, as a political and religious order, was prevented from its very incipience from expanding into the S. by both the Ethiopian and the Nubian Christians, and was able to penetrate in its more popular forms only as of the 11th cent. Local kingdoms, like ↗Sinnār that emerged in the 16th cent. (↗Funǧ dynasty), adopted Islam, but not to the extent of unifying the entire land under one political and religious order. From an Ethiopian point of view, pre-modern S. was mostly a territory en-route to Egypt and the ↗Middle East, as well as a land of occasional incursions and ↗trade relations. The slave trade was part of these relations until the 1930s (↗Slavery).

S. was first reshaped as a comprehensive political entity following the revival of Egypt under the rule of ↗Muḥammad ᶜAlī. In 1820, the Egyptian-Ottoman army (↗Ottoman empire) conquered the upper ↗Nile down to the great lakes area, and established ↗Khartoum as the new capital of a harsh and exploitive Egyptian administration, creating a new political neighbour of Ethiopia. However, Muḥammad ᶜAlī's idea of solidifying the S. into one pillar of a Nile empire was short-lived. The local resources and manpower proved much less attractive and the option to penetrate into Ethiopia – still disunited in her ↗*Zämänä mäsafənt* – was shelved. In any case, Muḥammad ᶜAlī's attention was diverted to the core of the Middle East, and Sudanese affairs were left mainly to his men on the spot. They soon began an active, local conflict with the Ethiopian rulers along the vast borderlands, resorting to mutual raids and the harbouring of ↗*šəfta*-bandits on both sides. One Egyptian raid from the S. into the border region ↗Qʷara was said to have installed anti-Islamic sentiments in the future *aṣe* ↗Tewodros II. A more concrete legacy was the establishment, under Egyptian inspiration in 1840, of the Sudanese town of ↗Kassala in ↗Taka. Subsequently it became the headquarters of the Mīrġānī *ṣūfī* fraternity (↗Islamic brotherhoods), which, during the following decades, initiated the Islamization of many of the ethnic groups of future ↗Eritrea (cp. ↗ᶜAd Šayḫ; ↗Təgre). Increasing raids of Sudanese–Egyptian client-groups of ↗Barka near Kassala into the adjacent Eritrean highlands, followed by Egyptian claims over ↗Käran, influenced the political development of the whole region (↗Bilin history).

Under Muḥammad ᶜAlī's grandson, the *ḫidīw* ↗Ismāᶜīl, Egypt resumed efforts to unite the entire Nile Valley starting from the 1860s. The attempt at modernizing the administration of the S. affected Ethiopia in two ways. First was the Egyptian campaign to annex the African ↗Red Sea coast and connect it to the S.; the Ottoman coastal province, ↗Ḫabeš *eyaleti* (Ottoman 'Abyssinia'), became Egyptian and was included into the administrative structures of the S., followed by the annexation of adjacent territories. This led to direct conflict with the Ethiopia of *aṣe* ↗Yoḥannəs IV, with major consequences for the histories of both Ethiopia and Egypt (↗Egyptian–Ethiopian war, 1875–76). Second was the popular Sudanese response to the Egyptian imperial enterprise. This took the shape of a messianic Islamic movement, the Mahdīya (↗Mahdists). Emerging in 1881, the Mahdīya managed to expel the Egyptians in 1885 (cp. ↗Gordon), and establish a full-fledged Islamic state, which survived to 1898. It was the formative, all-Sudanese, religious and political experience that led to the birth of the modern Sudanese identity and the establishment of modern S. as Ethiopia's most meaningful neighbour.

Under the Mahdi, Muḥammad Aḥmad, the messianic leader (d. 1885), and his successor the *ḫalīfa* ᶜAbdallah at-Taᶜāʾišī (killed 1899) the Sudanese Mahdīya adopted an Islamic-political approach to all issues, including Christian Ethiopia. This approach was principally dichotomous. It contained rather flexible pragmatism on one hand, including the readiness to "leave the Ethiopians alone as long as they leave you alone" (according to the famous saying attributed to the Prophet ↗Mūḥammad). However, on the other hand, the Mahdi and his successor were also motivated by the Islamic radical claim that Ethiopia had already, in the days of the Prophet, been a part of the "land of Islam", and should therefore be redeemed through a ↗*ǧihād*. Since *aṣe* Yoḥannəs IV "did not leave the Muslims [of Ethiopia] alone" and worked to Christianize them, and since he also undertook to save the besieged Egyptians from the Mahdīya (in June 1884, in the ↗Hewett Treaty), the Sudanese soon opted for a *ǧihād*. Their raids into Ethiopia culminated in the battle of ↗Mätämma and the accidental death of Yoḥannəs, resulting in the transfer of power in Ethiopia to Šäwa. Under *aṣe* ↗Mənilək II, as Ethiopia adopted a more moderate policy toward Islam and toward the Mahdīya, relations with the Mahdist state improved gradually and even rose to the level of cooperation and the exchange of diplomatic missions.

Ethiopia's Prime Minister Aklilu Habtäwäld (right) during a state visit of Sudan's Prime Minister *sayyid* Muḥammad Aḥmad Maḥgūb (left) in Addis Abäba in 1964; from *Sestante* 1965:7

In 1898, the British, already occupying Egypt since 1882, destroyed the Mahdist state and established their colonial rule in Khartoum. They did so as though it were a British-Egyptian condominium (declared in 1899; ↗United Kingdom of Great Britain). In practice, the British administered S. with Egyptian resources and sought to develop Egyptian agriculture through the management of the Nile waters in S. and in Ethiopia. Throughout the first half of the 20th cent., Egyptian nationalists conceived of the S. as an integral part of Egypt (their slogan was "Unity of the Nile Valley") and consequently most aspects of Sudanese history up to S.'s independence in 1956 revolved mainly around the British-Egyptian-Sudanese triangle. Ethiopia, however, remained relevant. The British in Khartoum and Cairo kept insisting on their vision of an all-Nile water control system, including a British-built and managed dam in Lake ↗Ṭana and the Blue Nile (↗Abbay), a concept resisted by *aṣe* ↗Ḫaylä Śəllase I.

The S. was the main base from which the British liberated Ethiopia from the Fascists in 1941 in ↗World War II (cp. ↗Käran, battle of). It remained a land in which Ethiopians sought either political refuge or better education, and a country that radiated Islamic learning into Ethiopia.

In their period of plight, under Mussolini's yoke between 1936 and 1941 (↗Africa Orientale Italiana), Ethiopians were cordially received in the S. Sudanese public opinion at that time was supportive of Ethiopia's struggle for freedom and Sudanese troops formed the backbone of the British army that destroyed the Fascist occupiers and enabled Ḫaylä Śəllase to regain independence. When S. itself gained independence in January 1956, there began a period of intensive, multi-faceted relations. Relations between the governments of Khartoum and Addis Abäba remained mostly friendly and survived the changes in their regimes. No major, direct border conflict or territorial claims marred relations, though the 1902 treaty between Mənilək II and the British divided some groups along the agreed-upon border (↗Boundaries, history of: Sudan). However, two issues frequently emerged to do so. One was the Ethiopian-Eritrean problem. In 1958, a pro-Nasserite regime under General Ibrāhīm Abbud captured power in Khartoum and in 1959 signed a water agreement with Egypt that ignored Ethiopia's rights to the Nile waters and proved committed to the Arab-oriented ↗Eritrean Liberation Front (ELF). For 30 years after the 1961 establishment of the ELF, the S., while maintaining relations with Addis Abäba, rendered assistance to the various Eritrean movements. It enabled the Ethiopian movements which opposed Mängəśtu's regime (↗Provisional Military Administrative Council), as well as many Ethiopian refugees, to find shelter in the mid-1970s and to establish bases in the S. In that period, the ↗Ethiopian People's Revolutionary Party operated in the S. and ↗Wälqayt. Ethiopia, for its part, did not remain indifferent to the inner-Sudanese issue of the Southern S. After the emergence of the Christian movements for autonomy in the South, first the Anya Anya in 1955, and later the Sudan People's Liberation Movement Army under John Garang in 1983, the governments in Addis Abäba actively helped their cause. Sudanese help for the Eritreans and Ethiopian help for the Southern Sudanese were subject to changes according to the developing relations between Addis Abäba and Khartoum.

Sudanese–Ethiopian relations were also influenced by major global and regional developments. After the decline of pan-Arabism, the Sudanese government of Ǧaᶜfar an-Numayrī (1969–85) oriented itself toward Sādāt's Egypt and her pro-Western policy. An-Numayrī, who in February 1972 signed a treaty with Ḫaylä Śəllase, joined Egypt and Saudi-Arabia four years later in opposing Mängəśtu's pro-Soviet strategy in the Red Sea area. In 1976–77, relations between Ethiopia and the S. deteriorated but improved following reciprocal presidential visits in 1980. S. indirectly enabled Israel to bring the ↗Betä Ǝsraᵓel from Ethiopia in her 1979–85 operation, but itself, still under an-Numayrī, began moving toward an Islamic regime. The return to a renewed version of political Islam was inspired by both the legacies of the Mahdīya and the supranational movement and local branch of the Muslim Brothers. It culminated in a 1989 alliance between General ᶜUmar al-Bašīr and the Islamic scholar Ḥasan at-Turābī, which again damaged relations with then Marxist Ethiopia. Though a new, open regime came to power in Addis Abäba in 1991, no improvement was immediately recorded. The S. of Bašīr and Turābī further radicalized the Islamization of politics and law and, from 1991, hosted the leader of global, militant Islam, ᶜUsāma b. Lādin. The latter turned the S. into a headquarters for Islamicist movements in Ethiopia, Eritrea, and Somalia, operations which culminated in an attempt on the life of Egyptian president Ḥusnī Mubārak during his 1995 visit to the Ethiopian capital. The Ethiopians, for their part, resumed active military help to the Southern Sudanese. Following the removal of ᶜUsāma b. Lādin from Khartoum in 1996 and the break between Bašīr and Turābī in 1999, good neighbourliness was restored.

As of the 1990s, Sudanese, Islamic public discourse also revolved around the essence of S. and its regime. The more Arab-Islamic-fundamentalist wing preaches further centralization of government. In this context, they denounce the new Ethiopian model of federalism, and recycle anti-Christian legacies connected with the historical image of Ethiopia as an enemy of Islam. Their Sudanese rivals, standing for openness toward S.'s own diversity, try to promote what they define as an African Islam – more pragmatic, popular, and tolerant. In this context, they also refer to Ethiopia, this time as a model of Christian-Islamic co-existence. In trying to emphasize this kind of Sudanese, African Islam, some even argue that the ↗*naǧāšī*, the righteous Christian king who helped the Prophet and then embraced Islam, was a Sudanese rather than an Ethiopian.

C. The Ethio-Sudanese borderlands

Life in those communities living in what was to become the Ethio-Sudanese border has been characterized by cultural connections and social interaction across the international boundary (↗Boundaries: Sudan). From south to north, we find the ↗Añwaa and ↗Nuer living in varying degrees of cooperation and confrontation in the fertile planes of ↗Gambella. Likewise, the ↗Gumuz (Bega) of ↗Beni Šangul have lived on both sides of the porous border for centuries as much as the ↗Uduk, Shilluk and ↗Berta did. In the north, a prominent border region was Zäge in ↗Goǧǧam, west of Lake ↗Ṭana. The people of these borderlands established a complex network of interrelations both among themselves and with the changing powers of Ethiopia and S.

Over centuries, the southern borders were vital trading places for ↗coffee, ↗gold, ↗ivory, skins, and slaves (↗Trade; ↗Slavery; ↗Sinnār). When in the 19th cent. highland traders from Ethiopia had direct access to weapons and ammunition from mainly Italian resources (↗Fire-arms), the border people became increasingly targets for raids. Those militarily strong enough managed to manipulate the major regional powerbrokers and acquired arms not only to protect themselves, but to actively participate in the trading and raiding system.

In Gambella a main trading post was established 1904 that replaced the older trading routes of ↗Mätämma and ↗Kurmuk. It channelled over 75% of Sudanese coffee imports from Ethiopia during its heyday in 1925, besides rubber and beeswax. The port closed with the Italian invasion in 1935.

The shared frontier lands of S., Ethiopia and ↗Eritrea have never been under full control of central governments. As a result they have long provided an environment for so-called ↗*šəfta* groups or bandits, some of which have taken on a political character. One of the best known *šəfta* rebels in Ethiopian history was the future king ↗Tewodros II, who operated in the borderlands west of Lake Ṭana.

Cross-border and regional intervention was often crucial in overcoming supposedly internal conflicts that spit over the borders. Most prominently, in the cases of the Addis Abäba Agreement 1972 that ended the first Sudanese civil war, and in the Comprehensive Peace Agreement for Southern S. that ended the second civil war, regional intervention (Ḫaylä Śəllase in 1972, and the Intergovernmental Authority on Development in 2005) was crucial in overcoming long-lasting impasses. Due to the lack of policing of the border and marginalization of its ethnic groups, the border regions are still fertile grounds for armed groups, thus downgrading their potential as trading centres in the emerging economy of the region.

Sudan Interior Mission

The S.I.M. (since the 1960s SIM, i.e. Serving In Mission) was established in 1873 by Walter Gowans, Rowland Bingham and Thomas Kent. In 1902 it had established a permanent presence at Patigi, Nigeria. At that time Africa south of the Sahara was known as "The Great Soudan", hence the original name. Towards 1925, Bingham incorporated the Abyssinian Frontiers Mission led by Thomas ↗Lambie and George W. Rhoad into the S.I.M.; this institution was interested in beginning new work in southern Ethiopia.

On Christmas Day 1927 the first S.I.M. group arrived in Dərre Dawa. Being strongly influenced by Roland Allen's work (1912), S.I.M. Ethiopia was, from its inception, very different from S.I.M. Nigeria. The first missionaries were essentially itinerant preachers who trekked incessantly, mostly in ↗Sidaama, ↗Wälaytta and ↗Hadiyya, and preached in the local languages. Many converts became itinerant preachers themselves and no religious meetings were held in missionaries' homes or compounds. The S.I.M. also received the support of ↗Ḫaylä Śəllase I, who promoted missionary efforts to educate and provide some basic health services and allowed missionaries to preach in local languages other than Amharic among unchurched people in southern Ethiopia.

When the missionaries were forced out by the Italians in August 1938 they left behind three small groups of converts and a few individuals in other places. These new converts called themselves "Jesus People" to distinguish themselves from Ethiopian Orthodox Christians and met in "prayer houses" rather than churches.

In 1941 the first S.I.M. missionary returned to a new scene. Instead of the 100 baptized believers they had left, they now found about 10,000 (Fargher 1996) as well as hundreds of autocephalous churches in Wälaytta and Hadiyya that would later form the ↗Qalä Ḥəywät Church. The missionaries were welcomed as visiting partners and, because of their convictions about mission and church, they did not become members of the new churches. Moreover, Ḫaylä Śəllase no longer allowed missionaries to work just as itinerant preachers, but required that they should be involved in ↗education and medical work. Amharic was also enforced and use of local languages proscribed.

From 1944–74 S.I.M. built mission stations in non-Orthodox areas where sooner or later new Churches sprang up. They also played a major role in developing church leadership through theological education.

Despite stringent restrictions under the *Därg* Regime (↗Provisional Military Administrative Council), S.I.M. has retained its presence in Ethiopia and expanded in many directions since that time, ministering in partnership with the Qalä Ḥəywät Church.

Suez Canal ↗Red Sea

Sulṭān

The Arabic word S. (سلطان, pl. *salāṭīn*, originally 'power, authority'), underwent the same semantic change as many other abstracts which became titles (cf. Engl. *majesty*, *excellency*). Starting in the 11th cent., S. was used for the 'holder of power or authority'. In this way, the petty rulers who had obtained *de facto* independence from the central authority of the caliph (↗*Ḫalīfa*) were called S. in the sources, though this was not yet their title. The Salǧūkids appear to be the first to claim the term "S." as their official title, after removing the Būyids, and making themselves "protectors" of the caliph in 1060 (Kramers – Bosworth 1997).

In Ethiopia, the rulers of the ↗Maḫzūmī dynasty, beginning with Ḥarba^{c}ir in 1108, are called S. in the history of the dynasty (Cerulli 1941). However, it may be that the titles were anachronistically inserted by the much later author of the history. In the ↗Walašma^{c} Chronicle, the first ruler who bore the title S. was ↗Sa^{c}daddīn Abū l-Barakāt Muḥammad b. Aḥmad Ḥarb Ar^{c}ad (Cerulli 1931: 41 = CerIslam 138 [text]). This appears a more realistic date, since it must have needed some time before the title had covered the distance between the centre of the Islamic world and its periphery.

In the ↗*Futūḥ al-Ḥabaša* (BassHist) the title S. is used in opposition to the title ↗*imām* on the one hand, and to the title ↗*amīr* on the other. When opposed to *imām*, S. designates the secular ruler whose legitimacy is based on his noble descent, while *imām* designates the religious leader who derives his legitimacy by enforcing ↗*šarī^{c}a* and waging ↗*ǧihād*. As opposed to *amīr*, the S. represents the central power, *amīr* being the title of lower officials and generals.

The opposition between S. and *imām* is preserved also in later times. The founder of the ↗Awsa state, ↗Muḥammad Gāsā I b. Ibrāhīm claimed the title *imām* and so, till 1763/64, did several of his successors, who felt themselves to be religious leaders, especially because they fought a continuous *ǧihād* against the non-Muslim ↗Oromo. Usurpers, on the other hand, were called S. or *amīr* (Cerulli 1931: 70–87 = CerIslam 173–95; Wagner 1979). In the 19th cent., the Oromo rulers of ↗Wärrä Himäno in ↗Wällo emphasized their religious legitimacy by their use of the title *imām* and the assertion of prophetic origin (HusIslam 127).

The difference between S. and *amīr* became less clear after the time of ↗Nūr b. Muǧāhid. His successor ↗^{c}Uṯmān b. Badlāy (1567–69) is called *amīr* only in the sources, while the rulers of ↗Harär, starting with ↗Ṭalḥa b. ^{c}Abbās, were called S. (Cerulli 1931: 62ff. = CerIslam 164–67 [text]), though they all were independent rulers and the territory over which they ruled was the same.

The rulers of the ↗^{c}Alī b. Dā$^{\circ}$ūd dynasty are all called *amīr* in the Arabic and, later, also in the European sources (Cerulli 1942; Tedeschi 1974), but they themselves also used the title S. in their official documents (Abdurahman Garad 1990: 270, 280). The seal of ↗Muḥammad b. ^{c}Alī b. ^{c}Abdaššakūr, however, only contained the title *amīr* after his own name and that of his father. This is also the title he used in his letters of submission to ↗Muḥammad Ra$^{\circ}$ūf (RubActa III: 188–91).

The rulers of modern Awsa from ↗Mahámmad "Illálta" Ḥanfaḏé's grandfather ^{c}Asa Aydāḥis and up to the present ruler, ^{c}Ali Miráḥ, bear the title S., as a translation of the traditional title *amoyta*, though they have been under Ethiopian rule since 1896 (↗Millee). S. was also the title of the petty ↗^{c}Afar chiefs of the coastal area, who concluded treaties with the French and the Italians in the second half of the 19th cent.

It seems that the title S. was not used in the Muslim kingdoms of Western Ethiopia.

Ewald Wagner

Šum

Š. (**ሹም**, pl. *šumamənt*) is an Amharic term derived from Gə^{c}əz ***ሥዩም***, *śəyyum* (pl. *śəyyuman*), a participle from the verb **ሠየመ**, *śäyyämä*, 'to appoint' (cp. ↗*Nəguś*), and thus meaning 'the appointed one, chief, administrator, governor' (cp. Amh. **የተሾመ**, *yätäšomä*). The office held by Š. is called *śimät* (Amh. **ሹመት**, *šumät*). The term belongs to the most ancient layer of ↗Gəᶜəz vocabulary and is well attested in the Gəᶜəz ↗Bible; in the vernacular languages, it was used for composites (denoting someone in charge of something), but most of all the term was used with respect to the administration.

The system of Š.-governors has been described as basis of Ethiopia's political system and ↗government, which is attested as early as the time of *aṣe* ↗Yəkunno Amlak, in whose charter the Š. of ↗Ǝndärta and the Š. of (unidentified) Däbrä Maᶜəṣ́o are mentioned (CRDLib no. 10); probably as reference to the reality, not as a stylistic figure, the term appears already in a charter of *aṣe* ↗Lalibäla (ibid. 7). Later on, the term is richly attested in Ethiopian documents (cp. Bausi 2006: 137, 2007: 90) and in other sources.

The territory of the Empire subjected to regular duties and taxation was governed by the Š. who were appointed governors of regions of various size and population. While Š. is a general denomination and every appointed chief could be called Š., there were distinctions among them frequently reflecting the status and position of their respective regions within the monarchy. The Š. of some politically important provinces with a high level of autonomy were appointed by the emperor himself. Most of these Š. were traditionally representatives of the local ruling families and used to inherit their offices. Such were, e.g., the Š. of ↗Šire (*šum šire*), ↗ᶜAgamä (*šum ᶜagame*), ↗Tämben (*šum tämben*), the ↗*Wag šum* (also used as fixed titles in the sources) and some others. In order to get the appointment (or to be reconfirmed in it), the candidates had to personally come to the emperor, rendering homage. However, the emperor could send and impose also an appointee from the outside, with no link to the region, dismissing claims of the local ruling families (e.g., as punishment).

Historically, some of the most important (who were also Š., yet were referred to by their respective titles) were the ↗*baḥər nägaš*, ↗*təgre mäkʷännən*, ↗*nägaš* of Goǧǧam, *däǧǧazmač* of ↗Bägemdər, the governors of ↗Šäwa (↗*Ṣäḥafe lam*, ↗*marəd azmač* etc.), the ↗*käntiba* (later *däggiyat*) of ↗Ḥamasen, and ↗*ᶜaqaṣen* of ↗Säraye etc. The extension of the realms and the strength of the authority of these governors varied in the course of history, similarly to the status of the Š. under them. In some of the governorates, the appointee was to traditionally receive a specific military rank (e.g., ↗*fitawrari*, ↗*däǧǧazmač* or ↗*ras*, later *nəguś*). Upon his appointment (and annually) the Š. was obliged to pay a fee, **መሾሚያ**, *mäš(ś)omiya*. The appointment was made public in the region by an ↗*ᶜawaǧ*; and the governor was entitled to bear insignia of his power (e.g., to be accompanied by a fixed number of ↗*nägarit*-drums). When such a Š. was referred to, the name of the region he governed was to be mentioned (cp. MahZekr 638ff., 648f.).

Another type of Š. was represented by governors appointed by and directly subjected to the royal appointees or representatives ("viceroys") governing territories composed of several provinces or territorial units. Having been appointed, the Š., in their turn, used to appoint further Š. of the smaller entities down to the ↗*č̣əqa šum*s. The power of the Š. on any level was checked up by the rights of *gʷəlt*- and *rəst*-holders, and by the rights and customs of local communities. Formally, the tenure of the office was not unlimited and any governor could be recalled, but the Š. often tried to extend the time and made their positions hereditary. The transition to the modern administration, with a clear hierarchy and the administrators controlled by the royal power was effectuated only in the 20th cent., mostly after the Italian war and occupation of 1935–41.

Šum šir

The Amharic phrase Š.š. (**ሹም፡ ሺር**) derives from the roots *šomä*/*mäšom* ('to appoint') and *šarä*/*mäšar* ('to demote'). This expression denotes a process of appointments to higher positions in the government (↗*Šum*), with the implication that every time someone is promoted, someone else must be removed from that position to make place for him. Although strictly speaking the announcement of a Š.š. episode designated the mere posting of a list of appointments, the process frequently connotated that those who had lost favour with the emperor were being demoted – typically through letters from the Ministry of Pen. Calling those so demoted the recipients of *šumät*, a promotion, had dual benefits: it enabled those demoted to save face, yet also preserved them in a pool of potential appointees whose loyalty could be counted on in the event of a more favorable appointment at a later time.

Although the expression was apparently known in earlier times, it became widely used only during the regime of *aṣe* ↗Ḫaylä Śəllase I and, indeed, came to represent the quintessence of the political ethos of his regime. The Emperor's political prowess rested on mastery of a nonviolent mode of political control over all his appointees, manifested through a variety of techniques including widespread surveillance, *divide et impera*, and patterns of forgiveness. Š.š. figured as perhaps the most dramatic and subtle of these. It meant that since those who are appointed are subject to possible demotion, they must be always on good behaviour, for those demoted (or others) could come back to replace them. The feeling of uncertainty thus instilled becomes a motive of "good behaviour", which meant intense and unquestioning loyalty to the Emperor.

Š.š. episodes fascinated the public, in part from what was often perceived as an unjust demotion, as in the cases of dedicated public servants such as ↗Gärmame Nəway who was sent from the comforts of Addis Abäba to be governor of ↗Wälamo and then of ↗Ǧiǧiga in the late 1950s, and of Attorney General Bäräkät Ab Habtä Śəllase, who was exiled to be Mayor of Harär in the 1960s (Bereket Habte Selassie 2007). On the other hand, the adroitness with which the throne maneuvered these shifts aroused a certain admiration for the political skill they manifested.

Perhaps the most notorious case of Š.š. was that of *ṣäḥafe təʾəzaz* ↗Wäldä Giyorgis Wäldä Yoḥannəs, one of the most powerful men at court in the immediate postwar decade. When Ḫaylä Śəllase I found his trusted courtier becoming too prominent and proactive, he banished him to a provincial position. The Emperor's words on that occasion exemplify both his adroitness and the way in which he flaunted his will over that of the Ethiopian public: "Although We Ourselves told you that both your heart and feet have become increasingly distant, you do not seem to have given it much weight. You have ignored our repeated request to divulge what it was you promised to tell Us in London. You have neglected your work and your character has changed. Since this might be because of overwork, and in order that you might correct yourself, We have decided to transfer you to another post" (Bahru Zewde 2004: 46).

With the introduction of more coercive forms of political control under the ↗Provisional Military Administrative Council after 1974, the manipulation of political subjects by the centre became less subtle. Fear of demotion became replaced by fear of open harassment, threats, imprisonment, disappearances, and death. Yet the mindset that underlay the Š.š. syndrome has continued as has the more general underlying cultural disposition for indirect meanings exemplified by the poetic trope of ↗*sämənna wärq*.

Donald N. Levine

Šumbaš

Š. (**ሹምባሽ**, Tgn. also *šumbaši*, Ital. *sciumbàsci*, Ottoman Arab. *šumbāšī*) was an Italian military rank bestowed to Eritrean soldiers (↗*Askari*) commanding a company (*maresciallo*). Š. was the highest rank which could be achieved by an *askari*, placed above the *bulukbaši* (*sergente*, a head of a *buluk*, i.e. 'subsection'), and the *muntaz* (*caporale*), the lowest rank of a junior officer (Nicolle – Ruggeri 1997; Guerriero 2005). The Š. was split into two ranks, the head Š. ("sciumbasci capo") and the Š. A Š. was the junior officer or sergeant serving as intermediary between the indigenous troops and the commanding Italian officer. Also an indigenous commander of a police company (*carabinieri*) was called Š. (*sciumbasci zaptiè*). These terms were also used in Italian Somalia (alternative term: *jusbasci*).

When Italians took over the Egyptian Red Sea Province (↗Ottoman Empire) in 1885, and later proclaimed the colony of ↗Eritrea, they partially left the administrative and military system of the Egyptians untouched. Locals serving in the

Egyptian army of ↗Massawa and ↗Kärän, including mercenary forces (the *başibozuk* or *basci bazuk*, lit. 'damaged head', i.e. 'leaderless'), entered into Italian services. The Italians preserved the Egyptian–Ottoman military ranks and later employed them for all *askari* in Italian services.

The term acquired negative fame in Ethiopia during the ↗Italian war 1935–36, as it designated locals in the services of the enemy. Occasionally the term is still used today in polemics against political leaders, who allegedly do not serve "national interests".

Summer Institute of Linguistics

The SIL came into being in 1934 as a linguistic summer training course for two students, led by SIL's founder William Cameron Townsend. The course was repeated in 1935 with five students attending. Word about the course spread among linguists. This led to an invitation to the present linguistics institute of the University of Oklahoma, which resulted into the incorporation of the SIL in 1942.

According to the definition on SIL International's homepage, "SIL is a faith-based organization that studies, documents, and assists in developing the world's lesser-known languages". SIL focuses on community-based programs for lesser-known language communities. It assists in training local people to assume increasing responsibility for sustainable literacy programs in their own communities and languages.

SIL staff has been working in Ethiopia since the early 1970s. After the downfall of the *Därg*, SIL was duly registered as a Non-Governmental Organization in 1992. Since then, SIL's partners have included Addis Ababa University, the ↗Institute of Ethiopian Studies (IES), the Ethiopian Languages Research Center, the Ministry of Education, the Ministry of Culture and Tourism (previously: Youth, Sports and Culture), the Regional Bureaus of Education in the Southern Nations, Nationalities and Peoples Region and in the Beni Šangul–Gumuz Region, various partnerships on zonal and *wäräda* level, Ethiopian churches, and other agencies. Most recently, the Benč–Maǧi Zone and SIL Ethiopia signed an agreement on language development and a mother-tongue based multilingual education program for the languages spoken in the zone.

SIL works in partnership with local speakers to adapt or translate literature for publication on subjects such as nutrition, farming, health (including ↗HIV/AIDS), and some or all of the ↗Bible. SIL's involvement and the translation goals for each language are decided in close interaction with churches and communities, and often with other organizations. Workshops are also given within communities to train local leadership in language-related topics enabling them to become trainers themselves. The local language is used as the medium of instruction whenever applicable.

As a leader in researching the world's endangered languages through language survey, SIL facilitates language development to prevent the extinction of language and culture. In Ethiopia, the IES and SIL launched the *Survey of Little-Known Languages of Ethiopia* (SLLE, 1992–95) to get a clearer picture about language development needs in Ethiopia. Many of these, plus current survey reports, have been published electronically (SILESR). SIL's publication *Ethnologue*: *Languages of the World* is widely regarded as the most comprehensive reference volume of its kind. The 16th edition (2009) catalogues 6,909 known living languages.

In Ethiopia, SIL staff has taught at the Linguistics Department of ↗Addis Ababa University and gives ongoing training in such areas as ↗literacy, lexicography, discourse analysis, computer programs, etc.

For the purpose of assisting linguists in their fieldwork and research, SIL produces software for linguistic data management (SIL FieldWorks, Speech Analyzer, etc.), fonts (e.g., *Abyssinica SIL* for the Ethiopian context which is based on Ethiopic calligraphic traditions), publications (*LinguaLinks Library Linguistics Bookshelf*) and other resources.

Today, SIL International has a staff of over 5,000 from more than 60 countries. SIL staff has done linguistic investigation in more than 1,800 languages spoken by over 1.2 billion people in more than 70 countries. In Ethiopia, SIL is currently involved in more than 20 language development projects throughout the country.

Ralph Siebert

Sumyafaᶜ Ašwaᶜ

S.A. (or Sumūyafaᶜ Ašwaᶜ, Sabaic SMYFᶜ ᵓŠWᶜ, Gr. Ἐσιμιφαῖος, and variants) was a puppet king of ↗Ḥimyar enthroned by the Aksumite invaders in the early 530s [A.D.].

S. is attested with certainty only in the undated fragmentary construction ↗inscription Istanbul 7608*bis* (l. 1), to which two more fragments (Wellcome A 103664 a, b) should be added, albeit they do not adjoin it, nor are immediately connected to each other. The contents of the whole inscription cannot be restored, but it is clear that he bore the so-called very long title of Ḥimyarite kings (ll. 1–2: *mlk/S[bᵓ/w-ḏ-Ryd-n/w-Ḥḍrmwt/w-Ymnt/w-ᵓᶜrb-hmw/Ṭwd-m | w-T]hmt*, 'King of Sa[baᵓ and of ḏū-Raydān and Ḥaḍramawt and Yamanat and of their Arabs of the highlands and of the c]oast') and was a vassal of the rulers of ↗Aksum (l. 3: [...*ᵓm*]*rᵓ-hmw/ngšt/ᵓksm-n*, '[...] their [lo]rds, the rulers of Aksum'; in l. 8 they are called *ᵓmlk/ᵓksm-n*, 'kings of Aksum'). The use of the Trinitarian formula at the beginning (l. 1: [*b-s*]*m/w-šr*[*ḥ/Rḥmn-n/w-bn-hw/Krśtś/Ġlb-n/w-mn*]*fs/qds*, '[in the na]me and with the suppo[rt of the Merciful and His son Christ the Victorious and the] Holy [Spi]rit') and at the end of the text (l. 16: ...*b-sm/Rḥmn-n/w-bn-hw/Krśtś/Ġlb-n* ..., '... in the name of the Merciful and His Son Christ the Victorious...') leaves no doubt as to his Christian faith. The dependence of his régime on the Aksumite state is perfectly rendered by the expression "kings of Ḥimyar and governors of the kings of A[ksum]" (l. 7: *ᵓmlk-m/l-Ḥmyr-m/w-ᶜqbt-m/l-ngšt/ᵓ*[*ksm-n*]; the existence of his coregents is not impossible). The name ↗Ǝllä Aṣbəḥa also occurs in this text, although with the omission of a character (l. 6: ... *s-mlk-n/ᵓl-ᵓbḥh/mlk/Ḥbšt* ..., '... to (?) the king Ǝllä A(ṣ)bəḥa, king of Abyssinia').

It is generally accepted that S.A. is identical with "Esimiphaios", who, according to Procopius of Cæsarea (*De bello Persico*, I, XX), belonged to the Ḥimyarite royal family and was set up as king by "Hellêstheaios" (i.e. Ǝllä Aṣbəḥa) before the latter's return to Ethiopia after the victory over the Jewish king "Dounaan" (Ḏū Nuwās; ↗Yūsuf Asᵓar Yaṯᵓar). He was still on the throne in April–September of 531, when the Byzantine Emperor ↗Justinian sent the ambassador Ioulianos (Julian) to both Hellêstheaios and Esimiphaios, and then was deposed by Abramos (↗Abraha).

The name SMYFᶜ alone, as well as with the epithet ᵓŠWᶜ, was borne by several members of the Yazᵓanite aristocratic clan in the early 6th cent., and in all probability the king S.A. was of the same origin. His identification with the author of CIH 621 dated from February of 631, although dubious, is not excluded.

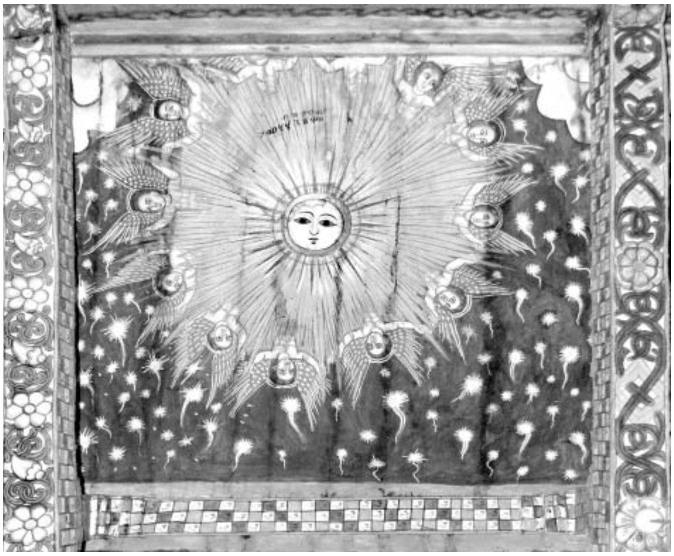
Sun

Ideas and practices associated with the S. (Gəᶜəz: **ፀሐይ**, *ṣ́äḥay*; Amh.: **ፀሐይ/ፀሐይ**, *ṣ́äḥay*; Tgn.: **ፀሐይ**, *ṣ́äḥay*; Orom.: *aduu*) are found throughout Ethiopian cultures. The movement of the S. above the earth causes the alternation of day and night, which is sometimes depicted as "someone going home at night and coming out in the morning" (LevWax 65; ↗Time and Space). The day is also divided up into sub-divisions which mark the movement of the S. across the heavens. While these may be socially determined in some instances, on the whole Hallpike's statement regarding the ↗Konso that "most of the divisions of the day are related to the S., and the degree of light it is producing, and its position in the sky" (Hallpike 1972: 173, esp. 174) would appear to hold true; elsewhere in Ethiopia as well.

The S. was also used as the basis for regulating the annual solar ↗calendar among those people who used this system rather than a lunar calendar. An important part of the Book of ↗Enoch (ch. 72–82), originating in late Judaism, describes the relationship between the 364-day solar calendar and the lunar year. A similar solar calendar appears in the Book of ↗Jubilees.



Creation of the Sun, mural on the ceiling of the second vestibule, Däbrä Marqos church, Goǧǧam, end of the 19th cent.; photo 2008, courtesy of Michael Gervers

Among some groups in southern Ethiopia traditions and myths identify clans or special groups, particularly kings with the S. or with the idea of descent from the S. (VSAe I, 47, 57, 185, 213; VSAe II, 105, 331). The S. (and in some cases the ↗Moon) thus became symbols for the eternity of God-given or divine ↗kingship. This idea is echoed in a passage in the ↗*Kəbrä nägäśt* where, following the removal of the ↗Ark of the Covenant from ↗Jerusalem, King ↗Solomon has a vision in which the S. no longer illuminates the land of Judah, but sheds its light on "Rom" and Ethiopia. As he explains, "the sun that appeared unto me long ago when I was sleeping with the Queen of Ethiopia was the symbol of the holy [↗]Zion" (Budge 1932: 85). In this passage the S. appears to represent both divine favour and the Ark of the Covenant.

This theme of the S. and kingship, obviously inherited from the early Christian tradition, is also present in Ethiopian pictorial vocabulary. For instance in several representations of the ↗crucifixion the S. is depicted as a darkened eclipse and the Moon as a blood-red disc, which underlines the eschatological setting of the crucifixion (Balicka-Witakowska 1997: 67–72; ↗Eschatology). It was also suggested that some representations of the anthropomorphised solar discs placed in ↗*mäqdäs* or its vicinity (e.g., in the churches Betä Maryam ↗Lalibäla, Ǝmäkina Mädḫane Aläm (↗Ǝmäkina churches), ↗Gännätä Maryam, ↗Qorqor Maryam) recall the ancient concept of *Christus Sol Invictus* or *Christus Sol Iusticiae* (Lepage 1999: 953–56). The same idea lays behind the dedication of some monasteries and churches to Ṣäḥay i.e. Christ (e.g., ↗Däbrä Ṣ́äḥay Qʷəsqʷam). From the 18th cent., the apocryphal story about Jesus-Child walking in the S. ray (↗*Täʾammərä Iyäsus*) enters the painting programme decorating the south wall of the *mäqdäs*.

In the 19th cent. the idea of relation between kingship and the S. is present in the paintings (usually placed above the main door of a church) which represent the soul of a ruler ascending to heaven and juxtaposed with the picture of the S. The thought is clarified by the accompanying inscription in which the soul is compared to the S. (e.g., Däbrä Ṣ́äḥay in Säqota, s. DEEDS 1993:013: 007).

As among many peoples, Ethiopians viewed solar eclipses with awe and considered them portentous events. According to several passages in the ↗*andəmta* commentaries, eclipses were caused by a dark star called *Aqäd* which covered the S. (or the moon) every 500 years. "There is a dark star, which has no light, called *Aqäd*. Each 500 years it forms a conjunction with the sun (or) moon, and darkens it" (Pankhurst in PICES 8, 89 referring to personal communication with Roger Cowley). Such events were noteworthy and usually recorded in royal chronicles or other chronological works (e.g., a solar eclipse of 1241, ms. BN Éth. 126, s. Pankhurst in PICES 8 for more examples). Eclipses were often seen as prophetic in nature and believed to forecast "the death of the king and the coming of a terrible civil war" (Bruce in Pankhurst in PICES 8, 95). Even in recent years eclipses were the occasion for prayer and concern that drought, famine, or other calamity were imminent (ibid. 102).

In Ethiopic literature the image or the topic of 'light' (ብርሃን, *bərhan*) is used to represent Christianity and the true faith. The eclipse or other loss of S. light would thus be catastrophic not only on a practical level but also in an eschatological-theological sense. Thus the S. was used as a metaphor to explain the belief in the ↗Trinity. According to the *Gädlä* ↗*Ǝsṭifanos* there were some who taught that "the Father is Sun, the Son is light and the Holy Spirit its heat", but Ǝsṭifanos taught that all three persons of the ↗Trinity were "the S. of righteousness" (Getatchew Haile 2006: 38 [text] = 32f. [tr.]; cp. also the discussion of the concept by Piovanelli 1994).

While S.-worship does not appear as a major element in the traditional ↗religions of Ethiopia, it does form part of the image of pre-Abrahamic polytheism (cp. Leslau 1951: 26).

Although the S. is welcomed for its warmth on cold mornings and for causing seeds to germinate, it is also feared as a source of illness and even death. When the S. shines on soil moistened by rain or urine, it is believed to cause genital sores. Some Ethiopians believe that when the S. strikes a part of the body that is sweating or unclean, a kind of "sunstroke" may develop, in the form of an irritation, rash, or herpes. Excess exposure to the S. is also believed to cause headache, eye diseases, earache and other symptoms (Hodes 1997: 30f.).

Steven Kaplan

Sundström, Gustaf Richard

S. (b. 18 August 1869, Sånga, Sweden, d. 16 June 1919, Kärän, Eritrea) was an early Swedish missionary in ↗Eritrea.

S. studied theology in Stockholm, medicine in London, and languages in Florence. Employed by the ↗Evangeliska Fosterlands Stiftelsen, he was stationed at Gäläb (s. EAE vol. 5) from 1898 to 1913 and at ↗Kärän from 1913 to 1919 where he supervised the erection of a new mission station. During this period he was appointed by the Italians as city physician for Kärän.

S. is remembered more for his linguistic work and scientific interest than for his activities as a missionary. In 1902 he started, together with Karl Gustaf Rodén, to prepare religious ↗Təgre songs, the *Cantici di Sion*, for publication. During the 1905 ↗Princeton Expedition, Enno ↗Littmann, greatly supported by S., obtained a collection of texts on the oral historiography of Təgre groups documented by S. (s. Paret-Schall 1955: 29; only one was published, Höfner 1961; LitPEA). S. took also part in excavations at ↗Adulis in 1906 before they were prohibited by the colonial administration (cp. Sundström – Littmann 1907). Objects from there were later received by a museum in Asmära and are now kept in the Eritrean National Museum (↗Archaeology). In 1907 S.'s assistant ↗Näffaᶜ Wäd ᶜƎtman, a young man converted by S., accompanied him as his informant to ↗Germany were Näffa and Littmann later worked together (LitPEA). S. translated religious texts such as parts of the Bible into Təgre (↗Bible translations, modern), produced a grammar and a Təgre–Italian dictionary. He also translated Təgre texts into Swedish (Sundström – Littmann 1906). He also recorded Təgre poems, proverbs, riddles, legends and historical traditions on a T.A. Edison ↗phonogram (ArEvang 358).

Works published in Asmära were partly posthumous. His translations of portions of the Bible were printed with the support of the ↗British and Foreign Bible Society in 1925. More unpublished manuscripts by S. were reported to be kept in four different places (Rodén 1938).

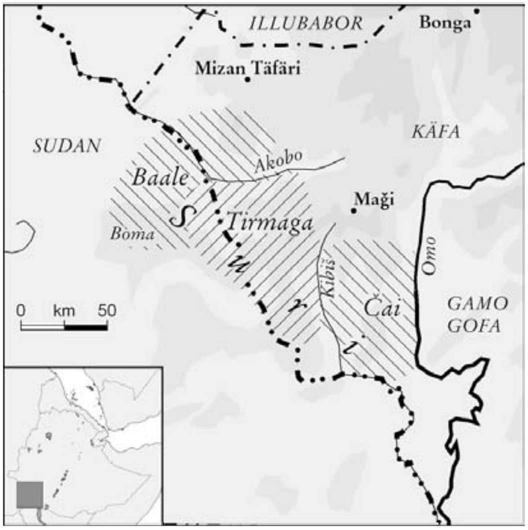
Suri

S. (or Suuri) is an ethnic name which randomly applies to three groups living in south-western Ethiopia and in the adjoining area of Sudan (↗Čai, ↗Tirmaga and ↗Baale), speaking different languages (South-East Surmic for the Čai and Tirmaga, South-West Surmic for the Baale), but sharing similar cultural patterns, such as, e.g., the wooden or clay lip-plugs worn by the women. The name S. does, however, not apply to the ↗Mursi, another group which, though linguistically and culturally close to the Čai and Tirmaga, lives on the east bank of the Omo.

The ethnonym S. has now replaced the name Surma in scientific literature, but the latter is still used by the ↗Dizi and other highland peoples to refer to the three Surmic-speaking groups (Čai, Tirmaga and Baale) living in the lowlands between the ↗Omo and the Boma Plateau. It should be noted that other general terms are also used by other neighbouring ethnic groups to refer to this cluster: *Tama* by the ↗Meᵓen, *Ɖwòk* by the ↗Añwaa, and *ŋiKoroma* by the ↗Ñaŋatom and the Toposa.



The ethnonym "Suuri" is only used by the Čai and the Tirmaga on specific occasions, and only to distinguish themselves from surrounding groups. The case of the Baale, who live on both sides of the Ethio–Sudanese border, complicates the issue: Čai and Tirmaga may refer to the Baale as "Suuri" when they want, for a specific reason, to consider them as part of the same group; otherwise, they mostly call them *Balisèn*. The Baale of Ethiopia only reluctantly call themselves "Suuri", a name which, in their language, refers to the Čai and the Tirmaga, while among Baale-speakers of Sudan (who call the latter "Tirmaġa"), "Suuri" seems to be the name by which they refer only to themselves (cf. Klausberger 1985; Lyth 1947).

Surmic

The S. language family is a branch of the ↗Nilo-Saharan phylum, found in south-west Ethiopia and adjoining Sudan. In the past, this group had been known as "Didinga-Murle" (Tucker – Bryan 1956:87f.) and "Surma" (Bender 1971). The former term refers to two closely related languages of the S. family, and the latter is an ethnonym (s. ↗Suri). It was from this ethnonym that the term S. was derived.

The original geographic home of the S. peoples was probably somewhere near ↗Maği. The ↗Mağaŋgir have migrated north from there (Unseth – Abbink 1998:108), the ↗Murle have migrated clockwise around Lake ↗Turkana (Arensen 1983:56). Ethno-linguistic identities within the S. group have not been rigid, with ample evidence of people's identities shifting from one ethno-linguistic group to another (Tornay 1981; Turton 1979; Unseth – Abbink 1998).

Today, the various peoples who speak S. languages use various subsistence practices: some of them are nomadic herders, others settled farmers, or swidden farmers. They live in a variety of terrain, from the lowlands of Sudan and the banks of the ↗Omo to mountains over 2,300 m A.S.L.

The ↗Nilotic language group is considered the closest relative of S.; both groups combined probably constitute a separate unit within Eastern Sudanic, a subgroup of Nilo-Saharan (cf., e.g., Bender 1996:25–29).

The S. group is divided into Southern S. and Northern S. The South S. branch, in its turn, consists of South-western and South-eastern S. branches (Fleming 1983:532f.; Unseth 1988). The South-western S. languages, including Didinga and Tenet, are spoken mostly in Sudan (only ↗Baale and Murle are also present in Ethiopia). Other S. languages are spoken only in Ethiopia: ↗Meᵓen, the ↗Čai-Tirma-Mursi cluster and the ↗Kʷegu-Muguği cluster (South-eastern branch); and Mağaŋgir (Northern branch).

The classification is mostly based on lexicostatistic analysis, but the evidence of shared innovations, mostly from phonology and lexical domain, has also been brought into discussion. A possible lexical innovation in South S. is the root for 'fire' (Baale *gó*, Murle *goo* etc., vs. Mağaŋgir *máɗ*, with parallels in Nilotic). Furthermore, South-eastern branch is characterized by a phonological innovation **l* > **r*, and a number of lexical innovations ('cow' *bi* in Čai, Tirma etc., vs. *taŋ* in Mağaŋgir, Murle etc.). A shift from a quinary numerical system (found in Northern and South-western S.) to a ten-based system in South-eastern S. is another argument in support of this group as a genetic unit (Unseth 1988).

Lexical innovations that distinguish S. from the rest of Nilo-Saharan include **(r)er* 'to die' (Bender 1977:19) and **abi/u* 'big' with a reduplicated plural form. Other probable pan-S. roots include *kɛ(l)ɛg* 'animal' and *akaat*, *ʌkʌʌt* 'tongue' (*kaɗa* in Mağaŋgir).

Much foundational fieldwork and analysis of S. languages was done by H. Fleming and M. L. Bender. The most complete descriptions of Ethiopian S. languages are of Murle (Arensen 1982) and Tirma (Bryant 1999). The starting point for linguistic and anthropological research into S. studies is Dimmendaal – Last (1998).

All S. languages are presumed to be tonal, have implosive consonants, and have distinctive vowel length. Some have as many as nine vowel qualities, and more detailed study may confirm this in other S. languages, also. Strikingly, only Meᵓen and Kʷegu have sets of ejective consonants.

S. languages share a system of marking the number of both the possessed and the possessor in possessive pronouns (s., e.g., Unseth in EAE vol. 3, 627–29). They all distinguish at least four cases by suffixes. Number of nominals is typically marked by way of suffixation, either in the singular or in the plural; alternatively, both the singular and the plural are marked, e.g., by way of the common Nilo-Saharan *t/k* pattern. Adjectives are formed by stative relative clauses.

In Mağaŋgir and South-west S. languages, relative clauses (which include adjectives), demonstratives, adverbs, numerals, genitives, and possessive pronouns follow their heads; noun derivations and subject marking on verbs are marked by suffixes. Verb–Subject–Object order predominates in indicative main clauses. The existence of postpositions in these verb-initial languages is typologically exceptional (s. Arensen et al. 1997; Dimmendaal 1998b:43f.). In the South-eastern branch, there is considerable variation in word order. Contrary to Arensen et al. (1997), Dimmendaal (1998b) reconstructs for proto-S. a verb-second word order, with subject and object either preceding or following the verb.

Susənyos

Aṣe S. (**ሱስንዮስ**, regnal name **ስልጣን፡ ሰገድ**, Səlṭan Sägäd I; b. ca. 1571, d. 16 September 1632) was ruler of Ethiopia from 1607 to 1632. He was the son of Prince Fasilädäs and *wäyzäro* Ḥamälmal Wärq (the daughter of a provincial chief) and the great-grandson of *aṣe* ↗Ləbnä Dəngəl. S. was brought up at his father's residence in Goǧǧam. At around 1585, the ↗Oromo attacked the area, killing Fasilädäs and several others. S. was taken captive and resided amongst the Oromo for over two years. During this time, he learned their customs, language and warfare.

After the death of *aṣe* ↗Śärṣ̌ä Dəngəl in 1597 and the accession of *aṣe* ↗Ya^{c}əqob, S. became a potential claimant to the throne. Consequently, he was deemed to be a threat by the leading nobles who contrived to exploit the inexperience of the new sovereign, Ya^{c}əqob. S. was thus forced to take refuge in Goǧǧam and Šäwa, where between 1597 and 1607 he lived the peripatetic life of a bandit, mainly amongst the Oromo.

In the meantime, Ya^{c}əqob began to draw the wrath of the nobles for displaying too much independence and was ultimately exiled to Ǝnnarya in September 1603. Ya^{c}əqob was succeeded by *aṣe* ↗Zädəngəl, but the latter was immediately ousted by S., with the support of *ras* ↗Atnatewos and other dignitaries. However, the nobility feared that a robust monarch would check their political aspirations and ushered Ya^{c}əqob back from exile. Upon his return, S. was deserted by his Amhara supporters and Ya^{c}əqob was restored to the throne. The Emperor was prepared to give S. the lands of Amhara, Wäläqa, Mänz and Šäwa and his father's *g*^{w}*əlt* (PerChron vol. 1, 74f.) as a *quid pro quo* for accepting Ya^{c}əqob's authority, but the offer was rejected. On 10 March 1607, S. ultimately defeated and killed Ya^{c}əqob at the Battle of Gol, whereupon the victor reassumed the helm. To bolster his legitimacy, S. was anointed at the Church of Aksum, the ancient coronation site of Ethiopia's emperors, and took the name of Səlṭan Sägäd I (PerChron vol. 1, 123f.).

At around the age of 35, S. became the undisputed ruler of Ethiopia, but he inherited a kingdom fraught with trouble. The Emperor was constantly forced to fend off the intrigues of discontented nobles and dignitaries, including several of his own kin, whom he had personally elevated, and impostors claiming to be Ya^{c}əqob (BecRASO VI, 203–20). From the very outset of his reign, S. became embroiled in bitter struggles against assorted prophets and religiously-inspired insurrectionist movements, which challenged the Emperor's authority as well as his pro-Catholic tendencies.

Another of S.'s chief concerns was the Oromo, with which he was well-acquainted, as the Oromo had fought on his side before his rise to power. In less than a decade at the helm, and in stark contradistinction to his predecessors, S. managed to keep the Oromo at bay by stoking their inner rivalries (PerChron vol. 1, 79–86).

S. also launched several unprecedently fierce campaigns against other non-Christian groups. Following battles in Lasta, Bägemdər, and Goǧǧam between 1607 and 1615, many Agäw were either enslaved or exterminated (BecRASO VI, 325–30). The Emperor also devised a systematic plan for Christianizing the Agäw, which was presided over by his Jesuit allies (BecRASO XI, 434f.; ↗Jesuits). Although S. was driven to action by the need for resources, these campaigns were also essential to solidifying the empire's central authority on the periphery and its territorial integrity (AbSea 203).

At around the same time, the expanding imperial presence in the Lake ↗Ṭana region cast a shadow over the Fälaša (↗Betä Əsraʾel). In 1614, ↗Gedewon supported a rebellion that was spearheaded by the dispossessed nobility of Ṣällämt, Wägära and Səmen. In response, S. appointed ↗Yolyos (the husband of his favourite daughter) governor of Wägära, Səmen, Ṣällämt, Wag, and southern Təgray for the express purpose of subduing the insurrections. The Emperor and Yolyos laid siege on Amba Misraba, a Betä Əsraʾel fortress, and inflicted heavy losses on its defenders. Thereafter, he launched an extremely aggressive campaign against the Betä Əsraʾel; their lands were confiscated and many were killed, subjugated, or forcefully baptised, effectively bringing to an end Betä Əsraʾel's local autonomy (PerChron vol. 1, 154ff.; BecRASO VI, 443f.).

During S.'s reign, the Jesuit mission made considerable in-roads in Ethiopia. With the help of the Jesuit fathers, he constructed several stone churches near Lake Ṭana, a two-storied residential palace, and a bridge over the River Abbay (BecRASO V, 76f., 330). The Emperor developed a keen interest in religious reform and the Catholic faith. He encouraged the translation of Catholic texts into ↗Gəʿəz and one of his favourite pastimes was allegedly to listen to the religious discussions held in his court (PerChron vol. 1, 216ff.; BecRASO XI, 419–26). By 1622, he received communion from Father Pedro ↗Páez and officially converted in 1624 (BecRASO VI, 396–400).

Some scholars have suggested that with his conversion to Catholicism the Emperor attempted to establish an autocratic, centralized regime (Chernetsov in PICES 10, Ramos 1999). S. studied the Jesuits' political philosophy and their conception of an absolutist state and sought to bolster his authority by collaborating with the missionaries and other Portuguese elements (cf. also AbSea 194–227).

Missives that S. sent to the Pope and the Habsburg king indicate that the former endeavoured to renew his ties with the Portuguese in order to obtain the military aid for countering the Oromo's incursions (BecRASO I, 257–64). His royal chronicle, however, is relatively tight-lipped concerning the Jesuit mission and the rise of Catholicism in Ethiopia. Perhaps the author was wary of sullying the Emperor's reputation by portraying him as a benefactor of the Catholics.

The first signs of serious discontent to S.'s pro-Catholic policies surfaced in several provinces that had adopted a firm anti-Catholic position. In 1617, the residents of Šire fled from their decimated region due to the heavy tribute that was thrust upon their shoulders. The only group that remained was the clergy, who had received a larger share of the tribute for mediating between the government and the local population (CRAxum 74ff., 90ff.). That same year, *abunä* ↗Səmʿon offered his blessings to a rebel force – headed by Yolyos, the recently deposed governor of Təgray – which engaged the Emperor's army at Säda (Dämbəya) under the banner of the Ethiopian Orthodox faith and was defeated (PerChron vol. 1, 163–70; BecRASO II, 392–402; Perruchon 1987: 174).

The arrival of Alfonso ↗Mendes in 1625 marked a turning point in the Emperor's commitment to Catholicism vis à vis the Alexandrian faith. From that point on, S. gradually forced assorted governors to embrace the Catholic faith. Those who refused were dismissed, while the enthusiasm of the apostates varied. Nevertheless, the peasants and elements within the Ethiopian Church threw their support behind a spate of local insurrections, which were led by nobles. In 1628, ↗Täklä Giyorgis, the governor of Təgray and S.'s son-in-law, launched a pair of uprisings. These measures were supported by the local populace who, according to Mendes, had been compelled to accept the Catholic faith under duress (BecRASO XII, 361–78). As a result of the popular agitation and pressure exerted by the Oromo and rebel groups on the margins of the empire, the government began to totter (Perruchon 1897: 177–80).

By 1630, S. was forced to annul many of his pro-Catholic measures and thus allow the Orthodox Christians' to practice their faith (BecRASO XII, 428). Two years later, he abdicated the throne and transferred control to his son Fasilädäs, who would eventually restore the Ethiopian Church to its erstwhile standing. He died shortly after and was laid to rest with great pomp and ceremony at ↗Gännätä Iyäsus (BecRASO VII, 191–95).

Leonardo Cohen

Susənyos

St. S. (Copt. **ⲥⲓⲥⲓⲛⲛⲓⲟⲥ**, Arab. سوسنيوس, Eth. **ሱስንዮስ**), one of the so-called ↗equestrian saints, died as a martyr in Antiochia during Diocletian's persecutions (284–316).

According to the Coptic Synaxarium, S. is commemorated by the ↗Coptic Church on 26 *Barmūdah* which corresponds to the 26 *Miyazya* in the Ethiopian ↗calendar. For that day, the Ethiopic ↗*Sənkəssar* contains a concise account of his life and martyrdom, in which two layers can be distinguished:

1) the historical core, which can be connected with the persecution of Christians at the beginning of the 4th cent. with added hagiographic elements and *topoi* such as S.'s marvellous conversion and baptism, his fight against the restoration of the worship of idols and the description of his death as a martyr, and
2) a *historiola* reflecting the popular beliefs of this time inserted in the hagiographic material: S. detected that his sister, possessed by Satan, gave birth to a monstrous son and that she is able to take by magic the shape of a bird or serpent and kill newly-born children. S. speared his sister, her child – considered the son of Satan, – her husband and husband's father for practicing magic.

The pattern of the story of S. can be traced back to the protective pre-Christian Near Eastern god Sasm (Sesem) whose fight against demonic forces has later influenced Jewish magic beliefs (Naveh – Shaked 1998: 111–22) as well as the Christian legend of S. (Fauth 1999) which is preserved in a large variety of versions: Greek, Armenian, Coptic, Ethiopic, Slavonic etc.

The extensive Vita of S. is included in the collection ↗*Gädlä sämaʿətat* in one case only (ms. BN d'Abbadie 179, used by ↗Esteves Pereira for the edition); it has the same narrative structure as the *Sənkəssar* notice but is more extensive and detailed.

Parallel to the presence of S. in the official ecclesiastical literature, there is a widely known version of S.'s story which occurs in many ↗magic scrolls. This text is comparatively widespread because it was believed to be an effective protective means for pregnant women, women who have gaven birth and newly-born children (cp. ↗Medicine). However, this version shares with the ecclesiastical tradition of the Vita of S. (*Gädlä Susənyos*) only one motif: the fight of the saint against the child-killing female demon. The other elements of the Vita (conversion to Christianity, wonders, martyrdom) are absent in the texts of the magic scrolls.

Another distinctive detail of the "magic" version of the story as reflected by the large majority of magic scrolls (Fries 1893 represents rather an exception) is that the child-killing demonic creature is not the sister of S. (as in the *Sənkəssar*, ColSyn XI, 578–81), but, according to the popular beliefs of the Ethiopians, the witch Wərzəlya. She is believed to cause the death of newly-born children, and be consequently defeated and speared, but not killed by S. To avoid her imminent death, Wərzəlya makes a kind of agreement with S.: she will never attack women who carry a text containing the name of the saint. The main elements of the magic version of S.'s story were taken from Coptic magical literature which also notes a "Susennios" who slays the demonic "Berzelia".

The Ethiopian iconography of this story follows Coptic representations. S. is depicted on the walls of churches with other equestrian saints (for ↗Däbrä Bərhan Śəllase of Gondär, s. Jäger – Pearce 1974: 51f.; the oldest depiction is probably the one in the church of ↗Yəmrəḥannä Krəstos) and on magic scrolls as sitting on his horse and piercing the recumbent Wərzəlya with his spear (Mercier 1992: 169, ill. 130; Wagner 1967, ill. 1; Worrell 1910, ill. 4). There are also representations of S. praying (Mercier 1979: 106, ill. 34; 1992: 168, ill. 129).

Suyūṭī, as-

S. (السيوطي, full name Abū l-Faḍl ᶜAbdarraḥmān b. Abī Bakr Ǧalāladdīn as-Suyūṭī; b. 1445, d. 1505, Cairo) was an Egyptian Muslim learned man, considered the most prolific author of the whole Arabic-Islamic literature (for his biography and bibliography s. Haywood in EI^{2}; Brockelmann 1902: 143–58, 1938: 178–98).

In his almost unlimited literary activity, beside a *maqāma* (rhyming prose text) under the title *Nuzhat al-ᶜumr fī t-tafḍīl bayna l-bīḍ was-sūd was-sumr* (publ. Damascus 1349 H. = 1930/31 A.D., an anthology of texts in praise of women of different skin colour, s. Akbar Muhammad 1985: 59f.), S. specifically devoted two works to Ethiopians (*Ḥabaš*). These are the *Rafᶜ šaᵓn alḥubšān* (recently ed. in Saudi Arabia and Lebanon; Suyūṭī 1995/96) and the *Azhār al-ᶜurūš fī aḫbār al-ḥubūš* (ed. 1995 and 2006, s. Brockelmann 1902: 158, 1938: 198, for a list of its manuscripts). The latter is an abridgement of the former.

The *Rafᶜ* was conceived by S. as an enlarged and improved version of ↗Ibn al-Ǧawzī's *Tanwīr al-ġabaš*. It is made up of seven chapters and an introduction. The content basically aims at highlighting the high rank of the Ethiopians as an ethnic group: the most famous *Ḥabaš* of the past are mentioned and magnified, particularly those who lived at the same time with the Prophet ↗Muḥammad. The ↗*Naǧāšī* and his story are widely described and the Ethiopian words in the ↗Qurᵓān are listed and explained. The topic had been previously dealt with by S. in his *Itqān fī ᶜulūm al-Qurᵓān* (1968 vol. 2, 105–20) and *al-Mutawakkil* (s. also CerStud I, 3 n. 1 [= CerIslam 283 n. 1]).

While the relationships between Ibn al-Ǧawzī's *Tanwīr* and S.'s *Rafᶜ* have still to be analyzed in detail (but s. Rotter 1967: 16f. for a first general assessment), S.'s work on *Ḥabaš* seems to be the direct source of the *Ṭirāz al-manqūš fī maḥāsin al-ḥubūš* by ↗Muḥammad b. ᶜAbdalbāqī al-Buḫārī al-Makkī (Rotter 1967: 18f.).

Since earlier times, the works of S. have been apparently known in Ethiopia, as elsewhere in Africa (Sartain 1971). In the ↗*Futūḥ al-ḥabaša*, the author refers to S.'s *al-Kašf ᶜan muǧāwazat hāḏī l-umma al-alf* (Brockelmann 1902: 151, 1938: 187; published in the collection *al-Ḥāwī lil-fatāwī*, 1982/83 vol. 2, 86–92) to refute the silly sayings of some unlearned people about the approaching end of the world at the end of the first hegira millennium (BassHist I, 2f. = II, 3f.; Stenhouse 2003: 3).

In contemporary Ethiopia, S.'s *Rafᶜ* was widely used by Sayyid b. Muḥammad Ṣādiq for the writing of his compendium of Ethiopian Islamic history and culture called *Manhal al-ᶜaṭšān fī taᵓrīḫ al-ḥubšān*.

Alessandro Gori

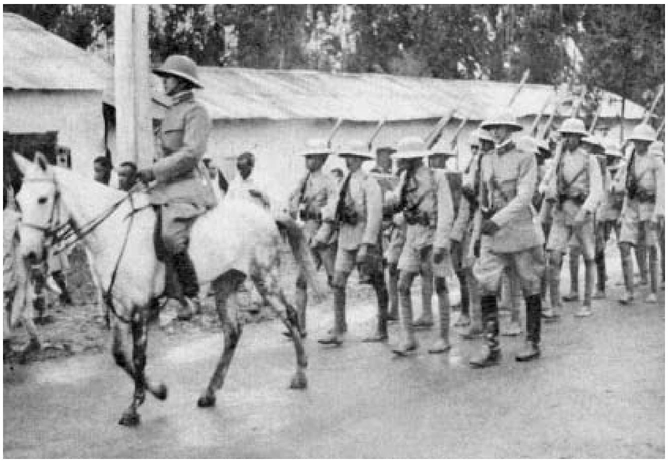
Sweden, relations with

Relations between S. and the Horn of Africa started in 1866 when the ↗Evangeliska Fosterlands Stiftelsen (EFS) selected the ↗Oromo lands for missionary work. The Oromo region was difficult to reach, however, therefore the Swedish missionaries decided to stay at ↗Massawa, from where they carried out work among the ↗Kunama in June 1866. Other missionary stations were founded in ↗Ǝmkullu and in ↗Gäläb (s. EAE vol. 5), ↗Ṣäᶜazzäga. The best-known student of the Swedish mission in Ǝmkullu, ↗Onesimos Näsib, translated Swedish songs into ↗Oromiffaa (s. also ↗Bible translations into Oromo). Five expeditions to reach the Oromo failed but temporary work at ↗Harär (1895–96), and finally, in ↗Naqamtee (1898) became possible.

The first official contact between the two countries was in June 1924, when *ras* Täfäri (later ↗Ḫaylä Śəllase I) met the Swedish King Gustav V and Archbishop Nathan Söderblom. As a result, a few Swedes were attracted to Ethiopia, among them Fride ↗Hylander and Knut Hanner who later became Swedish Consul in ↗Addis Abäba. Swedish military staff was recruited in 1934 to train at the Holäta cadet school (↗Holäta Military Academy).

When the Italians attacked Ethiopia in 1935 (↗Italian war 1935–36), the Swedish Red Cross organized a mobile health service, equipped with Mission vintage cars and with Hylander as leader. When an ambulance was bombed on 30 December 1935, the dramatic news spread quickly in S. and the Swedish public became aware of Italian war crimes. The EFS suffered under the Italian rule over ↗Eritrea and had to withdraw; in 1935 several Swedish missionaries were expelled from Eritrea.

The pilot Carl Gustaf von Rosen bolstered the whole of the ambulance crews with his private airplane. He became an important adviser to the Ethiopian ↗Air Force when it was created in the 1940s–50s. Small Saab Safir planes were bought from S., and later 16 light Saab B-17 bombiers. Von Rosen was killed 1977 during an Somali attack in the Ogaden war.



Swedish officers with Ethiopian officer aspirants during a manoeuvre; from Rikli 1935: 72

Direct recruitment of Swedish professionals by the Ethiopian government started in late 1945. The main areas were education, health, aviation training in what later became known as ↗Däbrä Zäyt, and the training of police and of the ↗Imperial Bodyguard. A special case was the Imperial Board of Telecommunications which started operating in 1953, aided by an international loan.

Ethiopia was the first African country to receive Swedish technical development assistance from 1955 on. The first two projects were the Ethio-Swedish Building Technology Institute and the Ethio–Swedish Pediatric Clinic, followed by nutrition projects and by the construction of elementary schools in the countryside.

Ethiopian and Eritrean immigrants (some of them refugees) were well received in S. and were considered as one of the best integrated groups. By November 1975 there were some 900 Ethiopians in S. The changes of government in Ethiopia in 1974 and 1991 had no considerable impact on the relations. Among continuing long-term collaboration projects *Flora of Ethiopia and Eritrea* (Hedberg et al. 1989–2009) should be mentioned. ↗Ethiopian Airlines has introduced non-stop flights between Stockholm and Addis Abäba.

Swedish Universities offer Ethiopian Studies within African, Byzantine and Semitic Studies (such as currently in Uppsala or Falun). Early 20th cent. Swedish involvement in the region let to scholarly research. Among the prominent scholars the following should be mentioned: Karl ↗Winquist took an active part in translating the Bible into ↗Təgrəñña and ↗Təgre. Gustaf ↗Sundström participated in the 1905 ↗Princeton Expedition and obtained a collection of texts on the oral historiography of Təgre groups. Johannes ↗Kolmodin mainly studied the lesser-known languages of the region, and published collections of ↗Ḥamasen ↗oral literature. Oscar ↗Löfgren's work was mainly distinguished by his catalogues of Ethiopian manuscript collections in S. and his contribution to Ethiopian ↗philology.

The first Ethiopian manuscripts reached Uppsala in ca. 1716 through the hands of Henrik Benzelius, a Swedish Orientalist; it was only in 1894 that the next Ethiopian manuscripts were donated to the Uppsala University Library by August Bergman, an EFS missionary (LöfUpp 7).

Switzerland, relations with

The first reports on Ethiopia by the Swiss date back to renaissance pilgrims, such as Hans Bernhard von Eptingen (1460) and Ludwig von Tschudi of Glaris (1519; cf. CerPal vol. 1, 256). The latter described Ethiopians in ↗Jerusalem, and their language and script, in a manuscript kept in St. Gallen (partly published in Lüthi 1936 and CerPal vol. 1, 370f.). The interest of humanists in Oriental languages led to the early printing of samples of the ↗Gəᶜəz script, e.g., by Sebastian Münster (1489–1552), professor at Basle University, in his *Chaldaica Grammatica*, published by Johannes Frobenius in 1527. Münster also made reference to Ethiopia in his *Cosmographia* (Basle 1544). Several 17th cent. publications from Geneva refer to Ethiopia, such as the *Opus de emendatione temporum* of the Orientalist Joseph Justus Scaliger, in which he discusses the script and the *Computus Ecclesiae Aethiopicae*. The Orientalist Johann Heinrich Hottinger (1620–67) of Zurich presented his research on Gəᶜəz in his *Promptuarium sive Bibliotheca orientalis* (Heidelberg 1658; Zürich 1664) which also shows his interest in Ethiopian history, similar to his correspondent ↗Ludolf (cp. de Fischer 1956: 278–81).

The first Protestant mission in Ethiopia was strongly linked with S. One of the first missionaries (1830–32, 1834) was the Swiss Samuel ↗Gobat, from Crémines, a student of the Basle Mission. Like later missionaries, he and his assistant, the carpenter Aichinger from Württemberg, associated themselves with the local power élite (e.g., the latter built the Č̣ərqos church for *däğğazmač* ↗Säbagadis in ᶜAddigrat before 1842). The ↗St. Chrischona Pilgermission was initiated by the Pietist Christian Friedrich Spittler, who actively propagated a mission to Ethiopia. In 1854 a number of students of this mission were prepared to go to Ethiopia, which was established in 1856 under mixed Swiss–British leadership. Gobat, who was the co-leader of the

mission, consecrated the Swiss Theophil ↗Waldmeier, who joined the mission shortly thereafter. Several Ethiopian pupils were sent by them to S. for education (Smidt 2005).

After the closure of the mission in 1868, all missionary endeavours (initiating a reform within the Ethiopian Church, converting the ↗Oromo and the ↗Betä Ǝsraʾel) were continuously promoted and then re-initiated by Swiss missionary circles. One result was the Bible readers movement of ↗Ḥamasen, led by ↗Wäldä Śəllase Kənfu; another, the "Fälaša mission", continued by local converts (especially by ↗Mikaʾel Arägawi after his return from S.); and several attempts in Basle and the canton de Vaud of initiating an Oromo mission (e.g., with the help of the Bible translator ↗Ruufoo). The Oromo mission in Šäwa (1871–86) was joined by Germans and Ethiopians educated in S. (e.g., Johannes ↗Mayer). The "Fälaša mission" remained the longest under Swiss leadership. After Mikaʾel Arägawi, the Swiss Friedrich Flad of St. Légier, born in Ethiopia (son of missionary Martin ↗Flad), became its director in the 1920s, followed by his son-in-law Willy Heintze. ↗Sənəddu Gäbru, daughter of the Swiss-educated missionary, later official, ↗Gäbrä Ǝgziʾabəḥer Dästa, and the first female Member of Parliament in Ethiopia, had studied in Lausanne, after receiving a first education in St. Chrischona.

The Flad family kept their good relations with the Ethiopian leadership, which was one reason why ↗Ḫaylä Śəllase's daughter ↗Ṣäḥay was educated in the house of Flad in Vevey. Due to these contacts, in 1936 Ḫaylä Śəllase repeatedly asked S. to grant him asylum to live in Vevey, but was rejected on the grounds of neutrality; in December 1936 S. recognized Italian ↗Africa Orientale Italiana.

Another aspect of Swiss involvement was scholarly, followed by political and economic involvements. The Orientalist Werner ↗Munzinger, son of the first Swiss president after 1848, established himself in the Eritrean border regions and became a leading ethnographer and linguist (on other explorers s. de Fischer 1956: 288ff.). As a governor in Egyptian service, supported by ↗Haggenmacher, he was responsible for Egyptian expansion into Ethiopia. ↗Mənilək of Šäwa had planned to hire Munzinger, but after the latter's death decided to employ Alfred ↗Ilg as his engineer and later chief advisor for foreign affairs. Upon his initiative, *ras* ↗Mäkʷännən Wäldä Mikaʾel visited Zurich in 1902. Victor Buchs from Estavayer-le-Lac (1866–1953) was a photographer and explorer in the highlands from 1889 to 1895, after settling in Massawa as the agent of an Italian firm. The ethnographer George ↗Montandon explored "↗Gimira" in the early 20th cent. S. had no colonial ambitions, which was an important reason why Ethiopian rulers invited the Swiss to establish themselves in Ethiopia permanently (e.g., the ↗Evalet family in 1898, followed by the Hess family in 1902 and others). The ↗postal system was built up first by Ilg, then by its Swiss Director Jean-Adolphe Michel from Bern. After the ↗League of Nations was founded in Geneva, Ethiopian delegations regularly visited S. (e.g., *blattengeta* ↗Ḫəruy Wäldä Śəllase in 1923, 1936). Journalistic interest was keen beginning with Ilg's stay in Ethiopia (the most important documentation being the film and photos of

Martin ↗Rikli of 1935).

Economic relations were officially codified in 1933 by a treaty of friendship and commerce (interrupted in 1936). During the war, the merchant André Evalet became Swiss honorary consul in Addis Abäba, and later a delegate of the International Committee of the Red Cross (1941–43), and assistant of the Swiss Emergency Aid Corps. Diplomatic relations between the two countries were established in 1952. Swiss diplomatic representation in Addis Abäba (since 1955) oversees relations (trade; missionaries; humanitarian activities, especially from the 1970s onward; Compensatory Financing Program). The development of bilateral relations is also reflected in more recently concluded treaties, e.g., agreements on the protection of investments (1998), on air traffic (2000) and on the co-operation in the field of science and technology (2008).

The Ethiopian legal system was influenced by Swiss law. The Swiss professor Jean ↗Graven developed the Ethiopian penal codes starting from the 1950s (↗Criminal codes; ↗Criminal Procedure Code). His son Philippe Graven, was also involved in the development of the Ethiopian legal system and taught law at Addis Ababa University in the 1950s to 1960s. André Evalet, during his exile in Eritrea, translated the Eritrean ↗Constitution into Amharic. Construction regulations (↗Urbanization) were drafted in 1959 by Edouard Perret, who successively became the Emperor's favorite architect (designing the ↗Jubilee Palace, the Parliament clock tower etc.).

Starting from the 1930s, S. was an important source for the import of arms. The industrialist Emil Georg Bührle (1890–1956) of Oerlikon exported arms from the beginning, and was nominated Ethiopian honorary consul in 1933. In 1954 Ḫaylä Śəllase included a visit of his weapons plant on his first state visit to S. The Oerlikon-Bührle Holding AG kept close relations with Ethiopia. In 1968 the company illegally delivered weapons to Egypt (zones of crisis being excluded from export from S.), Ethiopia providing cover for it by declaring that the weapons were purchased for its airforce. In addition, weapons were exported to Nigeria during the Biafra war, again covered by the Ethiopian government (Winter 1970: 39). In 1970 Dieter Bührle was convicted for this.

Scholarly interest in Ethiopia also continued throughout the 20th cent., especially at the Völkerkundemuseum of Zurich, but also other museums; geographers at Bern University have a focus on Eritrea and Ethiopia. In the 1970s the photographer Georg Gerster from Winterthur was crucial in promoting a better knowledge of the ancient rock-hewn churches and other cultural sites of Ethiopia (GerKir). The geographer Conrad Keller wrote on Ethiopian paintings; Ernst Friedrich Rohrer published on the material culture of the Amhara (s. also Lüthi 1936).

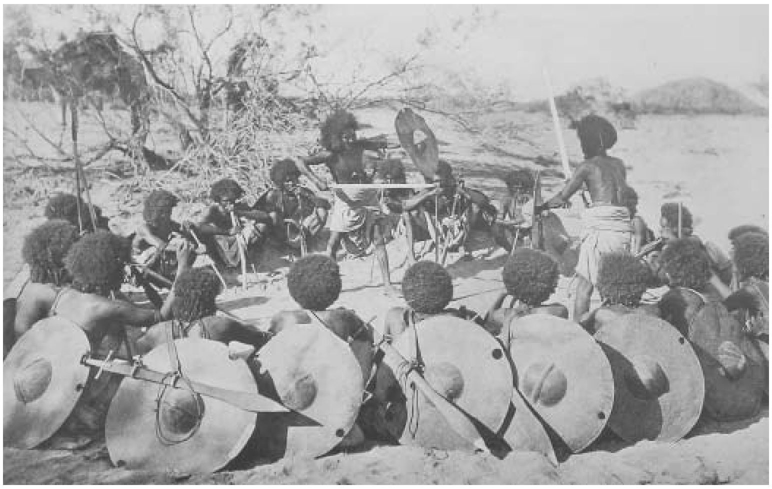
Swords and knives

S. (Gə^{c}əz, Amh., ሰይፍ, *säyf*, cp. Arab.; Tgn. ሰይፊ, *säyfi*, or ሴፍ, *sef*; Or. *goraadee*, *seefii*) are general cut and thrust weapons for close combat, with a double edged blade, cross guard, grip and pommel.

Although no S. have been found in Ethiopian archaeological sites, their existence in ancient times is proved by images on coins (↗Coinage; Munro-Hay 1989: 219). Records from the ↗Solomonic



A group of Beğa men attending a swordplay-training; in the foreground displayed are typical Beğa scabbards and shields; from Cooper 1928: 481

dynasty up to modern times document the usage of S. in the whole of Ethiopia. In many regions of Ethiopia S. were produced by local ↗blacksmiths but with imported steel. Already the ↗*Periplus of the Erythrean Sea* refers to weapons imported from Egypt to Ethiopia, S. included as well as ↗iron and steel imports from India and in later times from Europe (Huntingford 1980: 21f.; PankBord 19f.; PankEcon 70; Amborn 1990: 60, 69ff.). Imported S. were of high value, and often richly decorated with gold, silver or tin (Schmitz 1963: 61; PankIntro 164). Many imported S. were reworked by native smiths to match the local taste; or foreign smiths were engaged at court. Already in the 15th cent., Turkish Mamluks were manufacturing S. for their Ethiopian masters.

The S.-grip was made out of wood or horn (rhinoceros or buffalo), less frequently out of metal or ivory; composite grips were produced from several materials, or had inlays. The hilt ended with a pommel out of horn or metal (brass, gold or silver, chased or ornamented). The scabbard, exclusively out of leather, was fitted to the shape of the S., often decorated with silver or gold wires, chains or trimmings. Luxury scabbards consist of two layers of leather, the upper one often made from stamped Moroccan leather; they might additionally have velvet coverings. The scabbard was carried by two leather straps across the shoulder (Amborn 1990: 152f.).

Since the Solomonic dynasty, nobles and high dignitaries wore luxury S. which were not used for fighting but for demonstrating their power (PankIntro 164; Spring 1993: 98, for ill. s. Spring 1993: pl. 22, 26). The royal ↗infantry and ↗cavalry were equipped with bows, arrows, ↗spears and S. (PankIntro 159; PankEcon 58; Spring 1993: 98). With these they fought the well mounted army of ↗Aḥmad b. Ibrāhīm al-Ġāzī in the 16th cent., which had S. alongside ↗fire-arms, spears and ↗shields (PankIntro 162; PankBord 191, 242). Turkish scimitars were part of the equipment of the royal troops in ↗Gondär from the 17th–18th cent. (PankIntro 173; PankBord 396).

In the 20th cent., soldiers of the royal guard carried luxury S. wrapped in red velvet when parading behind the emperor (Rohrer 1932: 120). S. have always been sought-after rewards for excellent service, as status symbols, or as barter objects (Spring 1993: 98).

In the whole of Ethiopia all kinds of straight S. were used (Rohrer 1932: 122). All these S. were worn on the right-hand side (Spring 1993: 98).

The ↗Nara used to hunt mostly with broad S. With these they attacked even ↗elephants and rhinoceroses (PankIntro 117). The ↗ᶜAfar were known for using bows and arrows, spears and S. in fighting (PankBord 63). The Amhara in Šäwa favoured until the 20th cent. a special double-edged S. with a curved blade, its shape resembling a sickle up to 120 cm in length. These curved blades enabled the aggressor to afflict serious injuries on the enemy (Benitez-Johannot – Barbier 2000: 96; Spring 1993: 99).

In southern parts of Ethiopia S. are still today used as weapons or for hunting (Rohrer 1932: 120f.; s. ills. VSAe I pl. 38, 5a/b, VSAe II pl. 16, 12, VSAe III 25f., 202, pl. 25.4). Among the ↗Dorze and ↗Zala S., carried by warriors on horseback, are used in battle or for ↗hunting elephant and giraffe (VSAe III, 202, 258). The equipment of ↗Yäm-warriors consisted of a spear, a shield and a short double-edged S. worn around the waist (VSAe III, 327).

Together with S. and K., daggers played an important role as weapons in Ethiopia. Prehistoric daggers could have been made from flint or ↗obsidian. The oldest evidence is found on a relief from the funeral temple of Hatschepsut who exchanged goods with the emperor of ↗Punt, Perehu. The relief depicts Perehu with a dagger, similar to those still found in Eritrea and Sudan (PankIntro 6f.; Schilde 1929: 94). Luxury daggers were a sign of prestige and wealth, though records of them are rare; a golden dagger was awarded by Susənyos to a ruler of southern Ethiopia (PankBord 369; Rohrer 1932: 124).

In southern Ethiopia daggers are not only an indicator of wealth but also of male maturity (Spring 1993:104). Many of the southern ethnic groups, such as the ↗Guǧǧi, ↗Arsi, ↗Gideᵓo, ↗Sidaama, ↗Wälamo and ↗Käfa, favour a curved, double-edged dagger (VSAe II, 44, 282, 426, pl. 16.10; Spring 1993:105). There are two types of daggers among the ↗Somali. In the south there are daggers in the shape of a leaf with an 8–10 cm blade, horn grip and leather scabbard, in the north (esp. ↗ᶜIssa) there are daggers with curved blades, a wooden grip with a brass pommel and brass decorations on scabbard and grip (Spring 1993, pl. 103; Rohrer 1932: 124). The ↗Hadándowa wear their daggers on wide belts around their chests (Spring 1993: 104).

K. are usually one-edged and are used rather as tools than weapons. Stone K. seem to be one of the first achievements of mankind, as prehistoric finds prove. Over thousands of years K. were made from different materials: stone (Chalcedony), ↗obsidian, bone, shell, bamboo, bronze and iron (about metal-deposits in Ethiopia s. ↗handicrafts; Munro-Hay 1989: 22, 241f., ills. 222–26; PankIntro 255f.; Amborn 1990: 69f.). K. show the same designs as S., despite their length.

Since antiquity European and Oriental "Turkish K." have been worn by the ↗*Təgre mäkʷännən* (PankIntro 182; PankEcon passim). Among some Oromo groups composite grips made out of several materials are favoured (Amborn 1990: 78). A leather scabbard, fitted to the K. is completed with leather strips that are tied to the belt (Hirschberg 1988: 308; Rohrer 1932: 124).

K. are still today essential equipment for many ethnic groups in the south as hunting weapons or tools for handicrafts (VSAe II, 138). A special curved slashing blade with a rounded head is used by the Guǧǧi, Arsi, Gideᵓo, Wälaytta and Sidaama (VSAe II, 282, 423, pl. 16.9; Hirschberg 1999: 163). Boorana and Guǧǧi use in addition a sharp pointed K., which they obtain, like other metal tools, from the ↗Konso. Special slaughter K. (VSAe I, 138; Amborn 1990: 79f.), K. for ritual acts (Benetiz-Johannot – Barbier 2000: 100; VSAe II, pl. 15.11), and several harvesting K. can be distinguished (VSAe I, pl. 33.1, 2; VSAe II, pl. 15.13; VSAe III, 93, 155, 299, pl. 24.6, 34.3; for harvesting ↗*ənsät* Amborn 1990: 59, 79f.). There is a custom among the ↗Banna, ↗Hamär and ↗Ṣamakko of tying K. to the left forearm. The grip of those K. reaches the back of the hand and is covered with leather. The same K. can also be tied around the waist or diagonally across the chest. Among the Ṣamay K. are valuable instruments of payment or barter objects (VSAe I, 352, 367, pl. 30.7).

A very special K. is the wrist K. of the Banna, ↗Turkana and Karo. The blade of the K. is a disc with a hole in the middle which is worn like a bracelet. When not used the sharp blade is covered with a leather protector; without this the K. is a lethal weapon (Hirschberg 1986: 180; VSAe I, pl. 36.9). The ↗Aari, ↗Mali and Banna also use a wide cutlass with curved blade which is affixed to a bent grip made of wood.

Sycamore

The S. (*Ficus Sycomorus*, Orom. *odaa*, Amh. ሾላ,

A sycamore tree on an early 20th-cent. postcard; from the collection of Lorenz Jensen, Hiob Ludolf Centre for Ethiopian Studies, University of Hamburg

šola, Tgn. **ሰግላ**, *sägla*, also *sagla*) is one of the larger ↗trees found in Ethiopia. It was among the species registered by ↗Schimper in 1844. S. trees grow in ↗bushlands, wooded ↗grasslands and ↗woodlands of the ↗*wäyna däga* agro-ecological zone. The ↗wood is used as fuel, the fruits (figs) are edible and the latex is used in traditional medicine. Beehives may hang in its crown. The leaves of the tree have a benefical effect on the soil condition.

Due to the large leaves a big specimen (up to a height of 25 m) may offer enough shade for different kinds of larger social gatherings and are therefore often found at market places. Culturally, the S. is held in high esteem and it is even considered as sacred among different ethnic groups and by the pre-Christian as well as folk ↗religions. Their custom does not allow such specimen to be cut (cp., e.g., KapMon 118ff.).

In different cultural settings the terrain under certain S. trees may, until today, be used as location for rituals and political assemblies, such as the ↗*bayto*-meetings in Təgrayan and Eritrean areas and especially the ↗*čaffee* of the ↗Oromo. Among the Oromo the ground under the S. served as a location for rituals including ↗sacrifices, oaths and ↗*gadaa* ceremonies. Many political assemblies regularly took place around sacred S., as it is indicated by the historical toponyms of the six most important Oromo assembly places: Odaa Bisil in Maccaa (↗Mäččа), Odaa Bultum in Bartuuma (↗Barentu), Odaa Nabee (Odaa Nabi) in ↗Tuulama, Odaa Garres (↗Boorana), Odaa Makoodi in Walloo (↗Wällo) and Odaa Rooba in Arsii (↗Arsi). However, the *muka yati* ('the tree of the meeting') is not always a S., other big trees may serve that purpose as well. The modern Oromo nationalist movements chose the *odaa* as a strong symbol of the "democratic" tradition of the *gadaa* system and of Oromo identity in general. The tree is depicted on the flag of the banned Oromo Liberation Front as well as on the official flag of the Oromiyaa Region.

Syncretism

S. is a concept describing the process of adoption, reinterpretation and merging of religious ideas and practices. S. may be understood as a "cultural laboratory" of religion in which confrontation and exchange with external systems are processed and sometimes new systems evolve. Berner's (1982) terminological model, roughly summarized here, differentiates between two levels on which S. may be considered: (1) the system as a whole and (2) the level of elements. Furthermore, he distinguishes between (a) systematization, S. of two or more religious systems, and (b) rationalization, i.e. internal S. of subsystems. S. on the system level may result in the irreversible formation of a new religious system, a "synthesis". In other cases systems may remain separate, while on the level of elements features are exchanged, adopted, or merged (Berner 1982: 92; 2001: 148f.; for a recent critical discussion of the concept of S. s. Stewart 1999: 40–62).

Despite the terminological accurateness of Berner's heuristic apparatus, the analysis of S.

continues to be difficult when applied to ethnographic field material. The complexity and ever shifting nature of the socio-religious field as well as the many ways of cultural mimicry often do not easily allow an identification of specific types of S. An element may be accepted from another religion in form but a different denotation may be ascribed to it or evolve through the interplay with the new context. In many cases it is not possible to figure out the origin or age of a given element.

Examples of syncretistic processes are manifold in Ethiopia and Eritrea. In principle, traditional ↗religions are more easily exposed to S. than ↗Christianity and ↗Islam. The latter religions are to a great extent based on written texts and, therefore, are comparatively standardized and conservative. However, in practice, the integration, and sometimes complete assimilation, of originally alien or heterodox elements were common throughout the history of these religions. Purist movements and reforms at times enforced a re-standardization and the official denial of any S. Important attempts to "purify" the ↗Ethiopian Orthodox (Täwaḥədo) Church, for example, were made by *aṣe* ↗Zärᵓa Yaᶜəqob, *aṣe* ↗Yoḥannəs I and *aṣe* ↗Yoḥannəs IV. Since the beginning of the 19th cent., purist Islamic movements have been engaged in abolishing putative S. among their co-religionists (cp., e.g. ↗Ḥasän Ǝnǧamo).

The two world religions, however, could not always protect themselves from being re-structured by syncretistic processes into new religious systems. The former Islam of the ↗Hadiyya, for example, after being separated from the centres of Islamic learning during the 16th cent., and being influenced by local religions, developed into ↗*fandanaano*, a new self-contained socio-religious system (Braukämper 1992: 199–204; in PICES 13, 314). Likewise, Christianity, as such, could not survive in the southern regions after the end of the first Solomonic expansion period (15th to middle of 17th cent.). Only some "survivals" were maintained as part of, or parallel to, new autochtonous folk-religions, such as *anṭoqoṭora* among the ↗Ǝndägañ, or the old religions of the ↗Kambaata, or of the ↗Käfa (Bustorf in VarAeth; Braukämper 1992: 196–99, 203; BrKam 240–69).

A well-known syncretistic mechanism is the integration of elements of a local religion by a religious system encroaching from outside. This has once happened, e.g., in the case of the cult of the patron-spirit ↗trees (*adbar*) practised in Ethiopian Orthodox folk-religion. A typical example here is also the takeover of pre-Christian sacred places by the Church (e.g., ↗Yəḥa).

Certain fields of the socio-religious sphere, such as ↗healing and ↗magic, may facilitate S. on the level of elements. In order to be blessed or to overcome ↗disease, infertility and other afflictions, people tend to ignore religious (and ethnic) boundaries and, e.g., consult a religiously foreign healer or visit the shrine of a saint of another religion. This is the case, e.g., in the cult of *ayyo* ↗Momina (s. EAE vol. 5) at ↗Faraqasa which is attended by Muslims and Christians (Gemechu Jemal 2007). Similarly, the Muslim centre of ↗pilgrimage of ↗Šayḫ Ḥusayn, is visited sometimes by Christians. Another example is the sacred sites on top of Mount ↗Zəqʷala, where a combination of Christian Orthodox and Oromo ritual traditions has been observed (Kriss – Kriss-Heinrich 1975).

Many syncretistic phenomena have a quite inter-religious character. The belief in certain ↗spirits and ↗possession cults, for example, crosses religious boundaries and by this fosters S. This is especially true in the case of the ↗*zar* complex, shared by Christians, Muslims and, in localized form, attested also in autochthonous religions. Moreover, some religious or magico-religious elements can be generally considered as inter-religious features, common to a great number of folk-religions (e.g., the belief in the evil eye [↗*Buda*]).

Syncretistic processes result from inter-religious (often also inter-ethnic) contact or confrontation. Thus, a multi-religious environment as well as missionary influences are conducive to S. In a multi-religious setting, for example, exogamous marriage rules may in some cases result in families practising the religion or cult of the husband's group parallel to, or combined with, that of the wife's group (s., e.g., ↗Bilin). In other cases the ↗conversion of one of the marriage partners is required (s., e.g., ↗Wällo).

Dirk Bustorf

Syphilis

S., according to Ethiopian tradition, was introduced into the country by the Portuguese in the 16th or 17th cent., and was later diffused by Arab and other travelling merchants (Parisis 1888: 132; MasMis vol. 3, 52; Mérab 1912, vol. 2, 72ff.). In the early 19th cent. Antoine d'Abbadie (1890: 596) was told by old Ethiopians that the ↗disease had arrived less than a hundred years earlier, while medicinal baths apparently for S. were constructed at Gondär in the 17th or early 18th. cent. Popular belief, in Ethiopia as elsewhere, linked S. with smallpox. S. was thus known in Təgrəñña as **ፍንጣጣ** (*fənṭaṭa*), whereas Amharic used this term for small-pox – and referred to the venereal disease as **ኩፍኝ** (*kuffəññ*). S., because of its assumed foreign origin, was also called ↗*färänǧ*'s disease; and, on account of its supposed arrival through the eastern lowlands, **የዓዳል፡ ፋንጣጣ** (*Yäᶜadal fanṭaṭa*) or **የዓዳል፡ ኩፍኝ** (*Yäᶜadal kuffəññ*).

S., because of sexual laxity, was widespread in Ethiopia (PankEcon 627–80; ↗Sexuality). Little stigma was attached to the disease. In the early 19th cent. Pearce (1831, vol. 1, 299) reported that it was "never kept secret, but, as soon as it is discovered, those afflicted make it known to all their friends and neighbours", – who would then visit to condole.

Traditional Ethiopian medical texts, and travellers's reports, indicate that a wide variety of local medicines, mainly but not exclusively herbal, were used in S. treatment. Some cures were taken orally; others applied externally (Pankhurst 1975: 202–09). Because of the seriousness of the disease it was soon also treated with foreign medicines. Sudorifics, principally sarsaparilla (the root of the smilax plant from Central America) and mercury compounds, which had revolutionized practice in Renaissance Europe, reached Ethiopia within a century. Vapour bathhouses (BruNile II, 211), known as **ወሻባ** (*wäšäba*), used for the treatment of S. were erected in the vicinity of the Gondär castles, and later reported at Ankobär and Ǝnṭoṭṭo (Pankhurst 1975: 211f., fig. 1, 2). The use of sarsaparilla, though soon abandoned in Europe, continued in Ethiopia throughout the 19th and early 20th cent. Ethiopian vapour baths by the close of the 18th cent. also made use of mercury products (Foster 1949: 107). Mercury ointment soon afterwards gained popularity, while Salversan, or Medicine 606, had reached Addis Abäba by 1912.

Richard Pankhurst

Syrian influences in Ethiopia

S.i. are the matter of discussion. Whereas some scholars both in the past and more recently provided material arguing for the existence of such influences, others regarded the material as not entirely convincing. When speaking about S.i., one has to bear in mind that what will be called "Syriac" influences concerns mainly the sphere of linguistics, testifying most often to direct contacts. The "Syrian" influences may, on the other hand, bear testimonies to direct but, more often, indirect contact, for instance, in cases of religious literary works that were often transmitted via the intermediary Arabic translations. The adjective "Syrian" is to be understood as derived not from the country name (Syria) but from the ethnonym Syrians, i.e. Aramaic-speaking Christians who inhabited (and, to a degree, still inhabit) the vast region including today's Syria as well as partly Iraq and Turkey. In view of some scholars, S.i. can be found in various spheres of Ethiopia's religious and cultural life.

The influence of the Syriac language (Christian Eastern Aramaic, originally the dialect of ↗Edessa into which the Bible was translated and which therefore gained a high literary status and prestige, also among the speakers of other Aramaic dialects) upon Gəᶜəz is a linguistic phenomenon, also of cultural relevance. Several scholars (s. below) have provided more or less extensive lists of loanwords from Syriac, but also from Jewish Aramaic dialects, similar enough to Syriac, so that it is difficult to decide which one is the actual source for the borrowing. Most loans belong into commercial and religious spheres, the examples for the latter including such notions as:

> *Bəryamin* (from Syr. *Bəryāmīn* 'Books of Chronicles', itself from poorly understood Hebrew *Dib̲rey hay-yamîm*); ↗*qäsis* (Syr. *qaššīšā* 'presbyter, priest'); *haymanot* ('[Christian] faith', from Syr. *haymānūṯā*); *arämi/arämāwi* ('Aramean, pagan', from Syr. *ārmāyā*, *ārāmāyā*: most Christian Arameans began to call themselves, and to be referred to by others as *Suryāyē* 'Syrians', while the older ethnic term 'Arameans' became synonymous with 'pagans'); s. also lists in Nöldeke 1910:32–46, Conti Rossini 1928:155, Marrassini 1990:38f., Witakowski 1990:191f., Marrassini 1999:328f.; Knibb 1999:27f.

The matter is in need of a deeper investigation. The theory that the so-called ↗Nine Saints were Syrian Monophysite monks has been recently proven wrong (Marrassini 1990, 1999). Nevertheless there must have been many other Syriac-speaking monks who did not leave traces in written sources, or else it would be difficult to explain the loanwords.

The participation of Syrians, including the Nine Saints, in Gəʿəz ↗Bible translation, once generally accepted, is now regarded questionable, at least in the Aksumite period (Marrassini 1999). Due to the fact that the oldest Ethiopian manuscripts are several hundred years later than the date of translation, it is difficult to prove whether the Syriac influences that are present there entered the text already in the Aksumite period or due to a later revision, for which Syro-Arabic Biblical manuscripts were used (examples from Ez in Knibb 1999:30ff.), in which case we are confronted with ultimately Syrian, if not Syriac, influences. Evidence of such S.i. can also be found in the Ethiopic N.T. translation, which may perhaps be more safely accepted for an early epoch (assuming that the names of Biblical figures would not be changed in the revision process): while many N.T. names have clearly Greek forms, e.g., *Bartolomewos*, there are cases such as *Wäldä Yona* (Mt 16:17; Gr. Βαριωνα or Βαρ Ιωνα; Syr. *Bar də-Yōnā*; Hoffmann 1972:358), which in Gəʿəz is not transcribed from Greek but translated from Syriac (Syr. *bar*, 'son').

Traces of the use of a Syriac *Vorlage* aside the Greek can also be found in ↗pseudepigrapha and apocrypha, e.g., in the *Lives of the Prophets* (Knibb 1985:19).

Another case of S.i. in literary sphere is mediaeval and post-mediaeval translations from Arabic, in which elements of Syriac origin, transmitted textually or orally, can be found. This is the case of, e.g., the Syriac *Cave of Treasures*, the material of which is present in ↗*Qälemənṭos*, or the *Legend of* ↗*Abgar*, *king of Edessa*, added to the ↗*Täʾammərä Iyäsus*, but also transmitted separately. The name of Abgar's city (Syr. *ʾOrhāy*), the cradle of Syrian Christian culture, was known (via Arabic *ar-Rūhā*) in Ethiopia and used in the form Roḥa for ↗Lalibäla. The list of Syriac-writing authors whose works have been translated into Ethiopic, even though through Arabic, is long (s., e.g., ↗Aphrahat, ↗Ephrem, ↗Jacob of Serug and examples in Witakowski 1990:195f.).

Some works of Ethiopic theological literature contain excerpt of several Syriac (e.g., ↗Jacob Baradaeus) and Syrian (↗Severus of Antioch) writers. Within the ↗monastic literature, the so-called *Mäṣaḥəftä mänäkosat* contain three compositions of Syriac/n origin: ↗*Filkəsyos*, ↗*Arägawi mänfäsawi* and *Mar Yəsḥaq* (↗Isaac of Nineveh). Similar examples can be found in liturgical texts: e.g., the ↗*Anaphora of St. James, the Lord's Brother* is of Syriac origin (Hammerschmidt 1987:44f.).

Although the liturgy (↗*Qəddase*) has not been sufficiently investigated, several elements are almost certainly of ultimately Syriac origin, such as the use of the *flabellum* (↗*Märäwəḥ*).

↗Architecture of early Ethiopian ↗church building types was possibly derived from the Syrian pattern (Monneret de Villard 1937; Buxton 1970:97), whilst the influence may have been mediated via ↗Egypt (De Contenson 1961:41ff.). The patterns of basilicas excavated in ↗Adulis and ↗Mäṭära come from northern Syria (Anfray in PICES 4).

In art, it has been pointed out that the Abba Gärima Gospels (11th/12th cent.) had imported illuminated folios inserted that were produced in Syria-Palestine and exported to other regions of the Christian Orient (Leroy 1960; Buxton 1970:137).

Little, however, can be found in historical sources on direct Syro-Ethiopian contacts. Frumentius (↗Sälama Käśate Bərhan) and Aidesios are said to have come from Tyre, i.e. the territory of the Patriarchate of Antioch. We know of Syrians officiating as metropolitans of Ethiopia in the 13th cent., during the reign of *aṣe* ↗Yəkunno Amlak, most probably because no metropolitan was sent from Egypt at that time. His son *aṣe* ↗Yagbəᵓa Ṣəyon regarded the situation as highly irregular (TadTChurch 69ff.), and sent letters both to the Patriarch of Alexandria, John VII, and to *sulṭān* Baybars requesting that a new metropolitan be sent. On the other hand, it happened that Ethiopians themselves were actively seeking consecration at the hands of the patriarchs of Antioch. An Ethiopian monk Tomas is known to have requested Patriarch Ignatius II David (1222–52) to be consecrated during the latter's visit to ↗Jerusalem. The Syriac historian who reports this, Grigoryos Bar ᶜEbroyo (ed. 1874: 656ff.), knew that this would be in violation of the rights of the Patriarch of Alexandria.

In general, the S.i. seem to be a natural consequence of the fact that both the Ethiopian and the Syrian Orthodox Churches belong to the same theological tradition, that opposes the Greek Orthodoxy as established at the Council of ↗Chalcedon in 451 (↗Jacobites). Over the centuries the contacts could take place in Jerusalem, in Egypt (where there was a Syrian monastery, Dayr as-Suryānī), or in Ethiopia, and even in Syria sporadically visited by Ethiopians (there are Ethiopic inscriptions in Wadi Qaddisha in Lebanon).

It should also be noted that for a long time Ethiopia, as an independent country with the official religion equal to that of the Syrian Orthodox Church, played an important role in the religious-political imagery of the Syrians. In the 7th cent. it found its expression in the *Apocalypse* of ↗Pseudo-Methodios, a composition with which the ↗*Kəbrä nägäśt* has connections.

ŚᶜZN(H)

Ś. (conventionally vocalized as Śəᶜazana; pseudo-Sab. ŚᶜḎNᵐ, Gr. Σα(ι)ζανᾶς, *Sa(i)zanâs*; cp. DAE I, 48) is the name attested for an arguably younger brother of King ↗ᶜEzana in four of the latter's ↗inscriptions: two in Gəᶜəz, with pseudo-Sabaic versions (RIÉ, nos. 185 I.3 and II.5, 185bis I.3 and II.5), and two in Greek (RIÉ 270.9, 270bis.7). Ś. is mentioned here with the king's other younger brother ḤDFH or *Ḥadəfah (ps.-Sab. ḤDFHᵐ, Gr. *Ἁδιφας, *Hadiphas*, *Ἁδηφας, *Hadēphas*): the two, actually brothers or half-brothers, led together a successful expedition against the ↗Beǧa tribes revolting in the north, and took a huge booty thereof.

In 356, the Byzantine Emperor Constantius II wrote a letter in Greek, fully quoted by Athanasius of Alexandria (*Apol. ad Constantium imperatorem*, 31, 1987: 158ff. = ed. Brennecke et al., 304ff.; cp. 29, *ibid.* 152f. = 302f.), to the Aksumite *týrannoi* ('lords, princes') ᶜEzana and Ś. (*Azanâ kaì Sazanâ*), requesting them to send back to the Arian patriarch George, in Egypt, Bishop Frumentius (↗Sälama Kaśate Bərhan), who had been unfittingly ordained by the Orthodox Patriarch Athanasius in Alexandria; at the end of the letter, the two addressees, clearly regarded as fellow Christians with whom discuss ecclesiastical matter, are greeted as *adelphoì timiṓtatoi* ('most honourable brothers').

Such a controversial document, introducing Ś. at the same level of ^{c}Ezana, raises the question of the former's status. Within the framework of the far-fetched "dual-kingship" theory, it has been suggested that he was a co-regent or, better, a co-ruler of his brother, as it would also appear from the much later traditions on ↗Abrəha and Aṣbəḥa; in this connection, some of the coins bearing the name of ↗Ousanas have been identified as Ś.'s (Hahn 1983: 131f.; 1984: 130; s. already SerHist 100ff., 105, 108; but cp. Godet 1986: 190f.). Apart from Ousanas, who is rather likely to be ^{c}Ezana's elderly brother, and from Abrəha and Aṣbəḥa, for whose legend sounder interpretations can be resorted to (s. ↗Ǝllä Aṣbəḥa), it is true that, even if the text transmitted by Athanasius is an accurate copy, there are no means "of knowing how well-informed the Roman chancery was about the Ethiopian sovereign and his family" (MHAksum 156). Yet, given the late chronology of the letter vs. the earlier, still pagan inscriptions above (in which Ś. bears no special title, nor is he differentiated form the other king's brother), the possibility of a dual reign toward the end of ^{c}Ezana's tenure should be considered, for the sake of succession. If so, in elevating the rank of his brother (by then in charge of a specific area of the kingdom?), ^{c}Ezana could have simply followed the Roman example of Constantine I, who associated his sons with him as caesars, but remained the sole augustus until his death. If so, we do not really know, however, whether Ś. ever succeeded his famous brother.

T

Täʾammər

T. (**ተአምር**, also **ተኣምር**) is the plural form of Gəʿəz *təʾəmərt* meaning 'sign, indication' (derived from the verb *ammärä*, 'to show, indicate'). In its broad sense, it refers to any sign, note, indication or conspicuous feature (cp. Amharic *mələkkət*); in the religious sense, it refers to a phenomenon appearing as a prodigy or omen, indicating the presence or intervention of divine power. It further denotes a happening considered by the beholders as logically inexplicable, violating or reversing the natural course of things (i.e. a miracle). However, in the Ethiopic Bible T./*təʾəmərt* corresponds to Greek τημεῖον, 'sign' (e.g., Mt 12:38), otherwise the term *mänkər*(*at*) is for 'wonders', corresponding to Greek θαῦμα/pl. θαύματα; *ḫayl*(*at*) means 'mighty work(s) (of God)', cp. Greek δύναμις/pl. δυνάμεις (e.g., in Mt 11:20; cp. all three terms in Acts 2:22, Rom 15:9).

The term T. came to be conventionally translated as 'miracles' mostly in respect to the specific genre of Ethiopian ↗hagiography (the same genre exists also in other Oriental and Occidental traditions). The first miraculous accounts which entered ↗Gəʿəz literature were those included in the ↗Bible; a few more became known thanks to later translations, like those described in the *Gädlä* ↗*sämaʿətat* or *Gädlä* ↗*ḥawaryat.* Remarkably, in the early samples of Ethiopian hagiography the miraculous accounts are mostly missing (e.g., the homilies in honour of ↗Sälama Käśate Bərhan, ↗Kaleb) or kept short merely hinting at the intervention of divine power in earthly events (cp. the ↗angels calling Mäṭaʿ [↗Libanos] in the night, s. Getatchew Haile 1990: 36f.).

The proper examples of the genre of "miracles" came most probably with the introduction of the works devoted to St. ↗Mary, esp. the ↗*Täʾammərä Maryam*, with the first accounts having been translated into Gəʿəz by the late 14th/early 15th cent. (cp. an early collection in Bombeck 2003: 217–33). However, it is difficult to trace back precisely the genesis of the Ethiopian T.-genre. In fact, all the Vitae of Ethiopian saints (cp. ↗*Gädl*) are expected to contain miraculous accounts which, along with the ↗*kidan*, were considered the main proof of the saint's sanctity and the main reasons to venerate and adore him. In many (but not in all) cases, the Vitae were extended by the descriptions of wondrous events which happened after the death of the saint, due to his miraculous intervention. In a few cases they took place when the saint was still alive (for ↗Yared, s. Conti Rossini 1904: 30f.; several such miracles for ↗Märḥa Krəstos, s. Kur 1972), but normally all the miracles are posthumous. Many of these stories seem to originate from oral folklore legends which were translated into Gəʿəz and given a characteristic literary shape. Typically, the T. are short narratives developing through three stages: 1) problem, 2) intervention of divine power [sudden change of the situation] on behalf of the saint, 3) solution of the problem [didactic conclusion].

The Vitae usually predate the collections of the respective T. In the manuscripts, they usually follow the Vitae. Each account is preceded by an introductory formula, e.g., **ተአምሪሁ፡ ለአቡነ፡** [...] **ጸሎቱ፡ ወበረከቱ፡ የሀሉ፡ ምስሌነ**, *täʾammərihu läʾabunä* [...] *ṣälotu wäbäräkätu yähallo məslenä* ('The miracles of our father [...] May his prayer and blessing be with us'). In some cases T.-series count many dozens of stories (↗Täklä Haymanot); in a few cases, the Vitae are absent, and only the T.-series are available (↗Alaniqos, ↗Zärʾa Buruk).

The topics of the T. are somewhat stereotyped: healing, exorcism, resurrection, help in dangerous situations (war, captivity, attack by robbers, natural calamities etc.) to the venerators of the saint and punishment for those who disrespect him; visionary experiences and miraculous journeys etc. In many T.-series, subjects related to the everyday life dominate. Contributing less to the history of the Vita's protagonist, the T.-collections are considered manifold sources of information on the social history of Ethiopia (cp. Taddesse Tamrat 1970; Getatchew Haile in PICES 7).

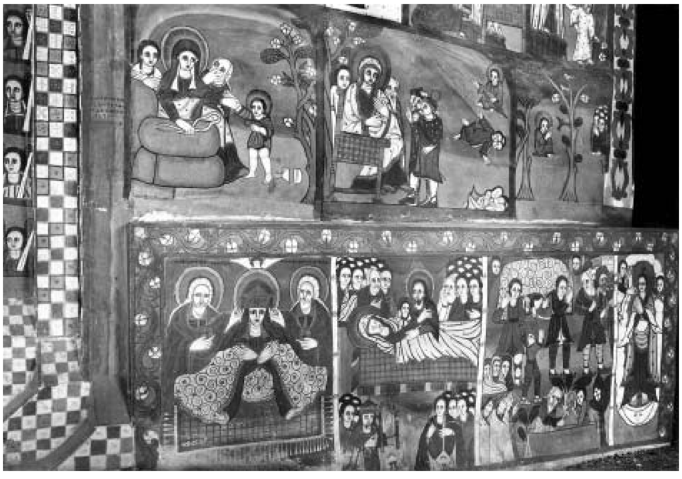
Denis Nosnitsin

Täʾammərä Iyäsus

The T.I. (**ተአምረ፡ ኢየሱስ**, 'Miracles of Jesus'; CANT 45) is a lengthy apocryphal gospel, very popular in Ethiopia. It is also known as the *Alʾatqärfa* (**አልአትቀርፋ**, or also *Ǝlʾatqärfa* **እልአትቀርፋ**, etc.: the form of this incomprehensible word has never been systematized). Galbiati (1957: xlii, and later Löfgren 1960: 111) explained it as a corruption of Arab. *al-abuqrifā* ('apocryphon'; *b* and *t* in Arabic script being very similar).

The T.I. is primarily a translation of the Arabic *Apocryphal Gospel of John* (CANT no. 44), composed originally between the 8th cent., when one of its sources, the *Book of Rolls* (cp. ↗*Qälemənṭos*), seems to have been composed (GrafLit vol. 1, 287), and 1196, the date of the oldest known manuscript (van Esbroeck 1975: 598). Translation into Ethiopic was made perhaps as early as the 14th cent., and in any case before or during the reign of *aṣe* ↗Zärʾa Yaʿəqob, since it is known that he donated a manuscript of the T.I. to the monastery of Däbrä Kärbe (Löfgren 1961: 137). The earliest extant manuscript seems to be the 15th-cent. VatLib Cerulli et. 238 (Arras – Van Rompay 1975: 142).



Miracles of Jesus, wall painting in the church of Ǝnda ʿAdwa Śəllase; photo 1906 by Theodor Lüpke (Deutsche Aksumexpedition), courtesy of the Brandenburgisches Amt für Denkmalpflege, Wüsdorf

The T.I. is a collection of episodes, called "miracles" (↗*Täʾammər*), which follow the gospel story from the annunciation to St. ↗Mary up to her assumption, but completed with several original episodes (a list of 45 in Arras – Van Rompay 1975: 136f.; and 56 in Witakowski 1995: 288ff.). It is preceded by an introduction describing the creation, the mutiny of the angels, Adam's fall and Cain and Abel. Some of the original, non-canonical, episodes have a folkloric character and concern animals, such as the one concerning Jesus's help in restoring stolen cattle (no. 9), others involve O.T. figures who, resurrected for the purpose, testify to Jesus's divinity (e.g., Sarah, Rachel and Rebecca in no. 22).

Some of the manuscripts contain a longer version with additional miracles: a series of 13 taken from the ↗*Infancy Gospel of Thomas* (s. EAE vol. 5), sometimes added at the end of the T.I., sometimes as miracle no. 8, and the ↗Abgar and Jesus legend.

The sources of the T.I., which have yet to be investigated closer, include both the canonical and apocryphal gospels (↗Pseudepigrapha), e.g., the *Protevangelium of James* (↗*Lədäta lämaryam*) the *Gospel of Nicodemus*, and the *Book of Rolls*. Many of the sources are of Syriac origin (arriving through Arabic), like, e.g., the above-mentioned Abgar story (Witakowski 1995: 290–98).

The text was used for liturgical and monastic readings: some manuscripts contain notes specifying when a given episode should be read (Witakowski 1995: 280). The reading usage apparently led to copying of chosen episodes in separate manuscripts, and even combining them with some episodes of the ↗*Täʾammərä Maryam*, thus creating a new composition entitled *Täʾammərä Maryam wä-Iyäsus* (ibid. 281).

The popularity of the T.I. is testified by the existence of many manuscripts (containing all or some of the "miracles") that are extant in practically every major Western collection, as well as in Ethiopia (s., e.g., EMML I–X). The T.I. was published in Addis Abäba in 1940, and reprinted in 1993/94. There is no full critical edition yet, but Grébaut published the first 30 episodes in the ↗*Patrologia Orientalis* (1917, 1920, 1923) and a few more in various journals (1918–19, 1920–21, 1930), although on a limited manuscript basis.

The illuminated manuscripts of the T.I., which appear first in the second half of the 18th cent., are rare. Their miniatures show either stylistical transition from the First to the Second Gondärine school of ↗painting (e.g., Dublin, Chester Beatty ms. 913) or represent variants of the Second Gondärine style (e.g., Paris, BN d'Abbadie 226; London, BritLib Orient. 8824). The miracles performed by Jesus the Child, being a part of the pictorial suite based on the ↗*Nägärä Maryam* (s. EAE vol. 5), were included in the programme designed in the 18th cent. for circular churches, to decorate the southern wall of the ↗*mäqdäs*; the most often depicted narratives are: Child Jesus makes birds of clay and makes them fly; he walks on a sunbeam; he changes the children who are teasing him into monkeys; he carries water in his robe when his jar is broken.

Witold Witakowski

Täʾammərä Maryam

The T.M. (**ተአምረ፡ ማርያም**, 'Miracles of Mary'), a collection of narrative pieces focusing on the miracles (cp. ↗*Täʾammər*) performed by St. ↗Mary, is one of the most important works of ↗Gəʿəz literature.

The T.M. has accompanied the development of Ethiopian literature since the 15th cent., and has also come to play a prominent role in Ethiopian liturgy (↗*Qəddase*). It is read during the daily church services, each Sunday at the end of the Mass (before the final blessing) and during the 33 yearly Marian ↗feasts (s. Fritsch 2001:62ff., 216 no. 11, 253 and 314f. [but not compulsory for the Fast of the Assumption]; HabUff 242ff.).

One of the most popular Christian works, the T.M. also typifies the specific attitude of Ethiopian literature towards the gradual reception, assimilation and adaptation of foreign elements, as well as the creation of indigenous ones. The T.M. has a general paradigmatic value as an example of the way cultural East-West relationships developed during the Middle Ages, from West to East, but also from East to West (cp. CerMaria; CerLett; Cerulli 1956, 1966, 1968).

Miracles of St. Mary in Europe and the Christian East

The nucleus of the T.M. was composed in the 12th cent. in France, on the basis of the tales about the miracles performed by St. Mary in her main shrines in connection with an epidemic of ergotism (St. Anthony's fire). The text gained great popularity and was continually enriched by new stories circulated in the whole Catholic West, from Spain to Hungary, from Iceland to Italy, later on also in Greece and Cyprus. Since several older manuscripts started with the stories connected to Hildephonsus, the bishop of Toledo (657–67 A.D.), who was particularly devoted to St. Mary and authored the mariological opus *De*

Virginitate Sanctae Mariae contra tres infideles, it is to him that some traditions have ascribed the redaction of the miracles. In fact, the text was composed in Dominican circles and the languages were French, Latin (mainly used in prose texts), and all the vernacular languages of Europe (especially used in poems). Translated into Arabic between 1237 and 1289 (possibly in several stages) in the Latin Orient from a European manuscript, the T.M. spread to Palestine, Syria and Egypt, everywhere aquiring new episodes connected to the important places of Marian cult. Since the 17th cent., when reading from the miracles of Mary became part of the liturgical service of the ↗Coptic Church, only a fixed collection of 74 miracles was copied in Arabic manuscripts.

Miracles of St. Mary in Ethiopia

At the end of the 14th cent., probably on the initiative of *aṣe* ↗Dawit II the T.M. was translated into Gəʿəz from a Copto–Egyptian *Vorlage* which in its turn might have closely followed the European model. A manuscript prepared for *aṣe* Dawit and documented in 1967 by Diana ↗Spencer is still kept in the *ʿəqa bet* of ↗Amba Gəšän (containing 75 miracles according to Mercier 2004: 13f., 36f.). A contemporary manuscript, most probably written in the same scriptorium (presently kept in ↗Betä Ləḥem church, Gayənt), has only 15 miracles, added to the homiletic texts about St. Mary.

In Ethiopian manuscript tradition, the T.M. varies considerably in length, different manuscripts including any number of miracles between one (which can also occur as marginalia) to several hundred. In the unpublished list compiled by William Macomber, the T.M. in Ethiopian tradition contains up to 640 narratives. The "standard" collection, according to the tradition of the ↗Ethiopian Orthodox (Täwaḥədo) Church, should contain 365 miracles, i.e. one for each day of the year.

The T.M. played an important role in the promotion of the cult of St. Mary by *aṣe* Zärʾa Yaʿəqob. He introduced the reading of three miracles during the Sunday liturgy and during the services for Marian feasts, as well as sponsored the extensive copying of the text and its distribution to churches. During his time, the text of the miracles was preceded by an introduction (*Mäṣḥafä śərʿat*, 'Book of the Regulation', Budge 1923: xlvi–lvii; cp. CerMaria 17–22), authored by Zärʾa Yaʿəqob and dated to 1441/42 (*ibid.* 91ff.). It contained prescriptions concerning the readings of the T.M. and specified the rituals required at those occasions: particular blessings, chanting of Halleluiahs and salutations of St. Mary, prostrations in front of her icon, incensing etc. According to this text (known also as the *Canon of al-Muʿallaqah*, from the name of the famous church, lit. 'The Hanging One', in Old Cairo), the rules were established in the Coptic Church. However, they are known only from Ethiopian manuscripts, no Coptic or Arabic copy having come down to us. It seems that Zärʾa Yaʿəqob also stimulated the composition of new local miracles; some of them, connected to the Emperor (e.g., EMML no. 4618, fols. 132r–44v) and mirroring his religious ideas were obviously composed with propaganda purpose (cp. Getatchew Haile 1992: 65f.; cp. ↗*Raʾəyä täʾammər*).

At the turn of the 15th and 16th cent., the number of stories increased to a couple of hundred (e.g., 150 in the ms. of Veroli, Biblioteca Giovardiana, dating to 1517 [Cerulli 1933: 103, CerMaria 24]; 202 miracles in EMML no. 3872) and in the 17th and 18th cent. to over 300 (303 miracles in BritLib Orient. 637, of the second half of the 17th cent.; 316 in ms. BritLib Orient. 643, of 1717 [WrBriMus nos. 84, 91 resp.]; 354 in EMML no. 3051). Since the 17th cent., a canonical group of 33 miracles was repeatedly copied, but a varying set of other miracles followed in each manuscript. The additions consisted of some apocryphal stories about the life of St. Mary, partly taken from the ↗*Nägärä Maryam* (s. EAE vol. 5); the miracles worked by her and Child-Jesus during the journeys of the Holy Family in Egypt, Lebanon and Ethiopia, as told in the *Homily on Mount Qusqām* by ↗Theophilus of Alexandria (CANT no. 56; Conti Rossini 1912; cp. Davis 2008: 137ff.), in the *Vision* of ↗Timothy of Alexandria and other texts (cp. Ricci 1949, the miracle of the Virgin in Lebanon from ms. BN d'Abbadie 158 [CRAbb no. 56], fols. 163v–76r, with variants from ms. BritLib Addit. 16.193 [DillmLond no. 42], corresponding to Budge 1922: 202–35; Witakowski in MiscAethKur); excerpts or the whole narrative of the *Mäṣḥafä* ↗*lədäta lämaryam*, the *Mäṣḥafä* ↗*fəlsäta lämaryam*, readings from the ↗*Sənkəssar*, pieces from the ↗*Gädlä sämaʿətat* (their insertion might be explained as a consequence of the material transmission of text and illustrations, cp. CerMaria 71f.). Finally, stories recalling some historical events and monastic and political controversies were included: e.g., *aṣe* Dawit's campaign to ↗Sinnār, Zärʾa Yaʿəqob's campaign against ↗Aḥmad Badlay and his persecutions of the ↗Stephanites and the ↗Zamikaʾelites etc. (cp. Cerulli 1933; CerMaria 94ff.; Tedeschi 1971–73; Getatchew Haile 1982a, 1983, in PICES 6), as well as episodes from the lives of ↗saints, monks and nuns (cp. ↗Hagiography) recounting the intervention of St. Mary on their behalf (cp. Velat 1947, on a miracle in ms. BN d'Abbadie 222 [CRAbb no. 52], fols. 96r–98v [↗*Rədätä bərhan*]; Cerulli 1967, on two miracles concerning the Ethiopian community in ↗Cyprus from ms. VatLib Aeth. 272 [van Lantschoot 1962: 474ff.], fols. 186v–91v, and 169v–204r; Conti Rossini 1923–25, on a miracle concerning the purported translation of the *Mäṣḥafä ↗ḥawi* by patriarch Gabreʾēl b. Turayk, from ms. d'Abbadie 222 [CRAbb no. 53], fols. 110r–12r).

Apart from the miracles in which the events take place in Ethiopia, the overseas stories transmitted in the T.M. can be grouped into a few "literary cycles". According to the countries in which the events develop, the most important cycles are those of:

(a) Spain, Toledo, Oviedo, also including tales connected with the pilgrimage to Compostella, of which there is apparently no trace in the Western collections;
(b) Italy, esp. Rome and its churches (Santa Maria in Aracoeli, Santa Maria Maggiore, San Paolo *extra moenia*, San Lorenzo), but also Pavia and the pilgrimage route along the Via Francigena;
(c) France, cathedrals and abbeys which were the subject of the earliest collections (Laon, Soissons, Chartres, Coutances, Rocamadour, Mont Saint-Michel); after the translation of the collection into Arabic, probably in the Latin Orient, new tales were inserted, originating from
(d) Syria, esp. a group of tales concerning the church of Saint Mary of Ṣaydnāyā, at Damascus, earlier (since the 12th cent.) also circulating in Western collections;
(e) Palestine, with tales on ↗Jerusalem (also including the motif of the 'holy fire' ceremony at the Church of the Holy Sepulchre) and Bethlehem;
(f) ↗Egypt, which plays the most important role among the Oriental cycles and has contributed tales connected with several monasteries: ↗Samuel of Qalamūn (Fayyūm), Macarius (desert of Scete), ↗Dayr al-Muḥarraq (Qusqām), Məṭmaq (al-Maġtas), the White Monastery of ↗Shenute, and others.

In Ethiopia, the creation of new miracles was followed by the tendency to adapt the foreign, in the first place European, events to a familiar milieu and ambience, e.g., by elimination or changing of European names (frequently distorted by Arabic intermediate versions), or mention of indigenous religious feasts etc. This process was already initiated by the Copts. In many Ethiopian manuscripts from the 18th and 19th cent., the miracles belonging to the original European series are simply omitted.

The selection of miracles seems to have been arbitrary, most probably depending upon the personal choice of the scribes or the persons who commissioned the manuscripts. Although the stories within a collection were not arranged according to any apparent criterion, there is a group of miracles present in almost every significant manuscript. The "canonical set" of 33 miracles fixed at the beginning of the 17th cent. begins with the episodes concerning Hildephonsus of Toledo and ends with a short hymn (↗*Akkonu bəʾəsi*), which recalls one of the Marian miracles and is followed by a supplication. The hymnographic pieces begin to be added at the end of each miracle in the 16th cent. (e.g., ms. Uppsala, O. Etiop. 11, cp. Cerulli 1956), and their number increased with every new miracle (e.g., Berlin, Petermann II Nachtrag 45, with 85 miracles and hymns [Cerulli 1957a]). The verses were sung by the congregation between the readings, which is the reason why they were included in manuscripts used for the services rather than in those meant for private devotion.

Editions and translations

Neither a critical nor a complete edition of the T.M. is so far available. An edition of the T.M. was published by Budge (1900), followed by two volumes of translations (1922, 1923). Groundbreaking studies on the T.M. and its relationship with Western and Arabic collections, also including editions and translations, were contributed by Cerulli (from 1933 to 1969, cp. esp. CerMaria). Besides scattered articles, partial German (Bombeck 2003: 450–76, with a facsimile edition of the ms. of the Betä Ləḥem church, Gayənt), French (Colin 2004) and Italian translations (Raineri 2007) have also been produced. The following is a list of complete and partial editions to date [s. also the bibliography above]:

Stefan Bombeck (ed., tr.), *Die Geschichte der heiligen Maria in einer alten äthiopischen Handschrift,* Bottrop 2003; Ernest Alfred Wallis Thompson Budge (ed., tr.), *The Miracles of the Blessed Virgin Mary, and the Life of Ḥannâ* (*Saint Anne*) …, London 1900 (Lady Meux Manuscripts, Nos. 2–5) [43 miracles]; Id. (tr.), *Legends of our Lady Mary the Perpetual Virgin and her Mother Ḥannâ*, London 1922 [^{2}1933] [110 miracles]; Id. (tr.), *One Hundred and Ten Miracles of Our Lady Mary*, London 1923 [^{2}1933]; CerMaria (Lit.); Enrico Cerulli, "Una tradizione medievale sulle origini di Venezia e le sue fonti orientali", *RSO* 24, 1949, 145–60; Id., "Il volo di Astolfo sull'Etiopia nell'*Orlando Furioso*", *RRALm* ser. 6^{a}, 8, 1932, 19–38, here 28–33; Id., "La festa etiopica del Patto di Misericordia e le sue fonti nel greco *Liber de transitu* e nel racconto latino dei Cinque Dolori di Maria", in: *Silloge Bizantina in onore di Silvio Giuseppe Mercati,* Roma 1957b (Studi bizantini e neoellenici 9), 53–71; Id., "Tre nuovi documenti sugli Etiopi in Palestina nel secolo XV", in: *Studia Biblica et Orientalia edita a Pontificio Instituto Biblico* …, III, *Oriens Antiquus*, Roma 1959 (Analecta Biblica. Investigationes Scientificae in Res Biblicas 11), 33–47; Id., "Il 'suicidio della peccatrice' nelle versioni araba ed etiopica del Libro dei Miracoli di Maria", *Annali IUO* nuova ser. 19, 2, 1969, 147–79; Gérard Colin (tr.), *Le livre éthiopien des miracles de Marie (Taamra Mâryâm)*, Paris 2004 [213 miracles]; Getatchew Haile, "A Note on Writing History from Forgotten Documents", *NEASt* 2, 1, 1980, 71–75; Id., "Inside the Royal Confinement", *NEASt* 4, 1, 1982b, 19–25; Osvaldo Raineri, *Dal libro etiopico dei miracoli di Maria*, Como 2007 (Quaderni Fondation Carlo Leone et Mariena Montandon 6); Veronika Six, "Water – the Nile – and the *Tä'amrä Maryam*: Miracles of the Virgin Mary in the Ethiopian Version", *Aethiopica* 2, 1999, 53–68; **ተአምረ፡ ማርያም።** … **ግዕዝና፡ አማርኛ** (*Täᵓammərä Maryam. … Gəᶜəzənna amarəñña*, 'The Miracles of Mary … Gəᶜəz and Amharic'), ed. by Täsfa Gäbrä Śəllase, Addis Abäba 1988 A.M. [1995/96 A.D.] [402 chs.; cp. HamSixBerl 37]; Salvatore Tedeschi, "Un sovrano musulmano citato nel Libro etiopico dei Miracoli di Maria", *Bulletin de la Société d'Archéologie Copte* 21, 1971–73, 135–48.

The popularity of the T.M. in today's Ethiopia is demonstrated by quite a number of church editions (usually with an Amharic translation, cp. a list in HamSixBerl 37). The largest T.M. edition (Gəᶜəz–Amharic, with almost 400 miracles) was published in Ethiopia in 1995/96.

Manuscripts, catalogues and descriptions

Hundreds of manuscripts of the T.M. are known, including from one (also occuring as *marginalia*) up to several hundreds of miracles. Already Conti Rossini (1900: 632) lists 50 manuscripts of the work; for a list of catalogued manuscripts with references, cp. also Marrassini (1984–86: 93ff., no. 4, ms. Firenze, Biblioteca Medicea Laurenziana, Acq. e doni 681, fols. 2–113, 130 miracles, 1728). It should be additionally noted that mss. Lady Meux 2 and 3 (publ. by Budge 1900, 1922 and 1923 [s. above]) are now ms. Oslo – London, Schøyen Collection, Ms. 248 (formerly Lady Meux 2 [= ms. A in CerMaria], ca. 1682–1706, 39 miracles) and ms. Dublin, Chester Beatty Library 914 (formerly Lady Meux 3 [= ms. B in CerMaria], cp. Cerulli 1965a: 290f., 40 miracles). St. Petersburg collection now keeps mss. II.4 (95 miracles, second half of the 15th cent., from Jerusalem through Rome, ↗Santo Stefano dei Mori, cp. Cerulli 1965b) and VI.1 (not V.1 as in Marrassini), fols. 186v–199 (15 miracles, 17th cent., cp. Turaev 1906: 37–45, 123–26).

The other known manuscripts of the T.M. in European collections are (isolated or very small groups of miracles are not considered): Ṭānāsee 127 = Dāgā Esṭifānos 16 [1–7 plus 8–314 miracles, 17th cent.] (cp. SixTana III, no. 16); Ṭānāsee 165 = Dāgā Esṭifānos 54 [3 miracles, 17th cent.] (ibid., no. 54); München, Museum für Völkerkunde, 86–307647 [7 miracles out of a collection of 25, donated by *aṣe* Zärᵓa Yaᶜəqob] (ibid. no. 180); München, Bayerische Staatsbibliothek, Cod. aeth. 107 [50 miracles, 18th cent.] (cp. SixBay no. 105); VatLib, Aeth. 323 [59 miracles, 19th/20th cent.] (cp. Raineri 1993: 136ff.); VatLib, Cerulli Etiop. 114, fols. 121r–40r [9 miracles, 19th cent.], Cerulli Etiop. 172 [48 miracles, 19th cent.], Cerulli Etiop. 173 [33 miracles, 18th cent., richly illustrated], Cerulli Etiop. 192 [33 miracles, 19th cent.], Cerulli Etiop. 196 [305 miracles, 1888/89], Cerulli Etiop. 319 [19th/20th cent.] (cp. RaiCer); VatLib, Raineri 54 [6 miracles, 19th/20th cent.], Raineri 55 [62 miracles, 1563–97], Raineri 56 [55 miracles, 18th–19th cent.] (cp. Raineri 1998); VatLib, Comboni Etiop. A 33, fols. 169r–218v [7 miracles, 17th/18th cent.] (cp. Raineri 2000, no. 33), Comboni Etiop. F 3 [15 miracles, 20th cent.] (ibid., no. 125), Comboni Etiop. F 9 [5 miracles, 20th cent.] (ibid., no. 131), Comboni Etiop. F 25, pp. 9–46 [4 miracles, 20th cent.] (ibid., no. 147), Comboni Etiop. H 1, pp. 1a–12c [8 miracles, 20th cent.] (ibid., no. 201), Comboni Etiop. H 8 [pp. 3a–48b, 4 miracles, 19th cent.] (ibid., no. 208), Comboni Etiop. S 1 [76 miracles, 20th cent.] (ibid., no. 273), Comboni Etiop. S 16 [6 miracles, 17th/18th cent.] (ibid., no. 288); Zürich, Völkerkundemuseum der Universität 16107, fols. 103ra–33rb (cp. Six 1996: 133ff., no. 11); London, Sam Fogg Collection [258 miracles, 1700–50, illustrated] (cp. Appleyard 1996: 92ff., no. 64; cp. also Id. 1993, nos. 16, 42, 43); Roma, Pontificia Università Gregoriana, Museo Archivio Giuseppe Vedovato no. 28 [16th cent., illustrated] (cp. Bucarelli 2007, no. 28 [Inv. no. 134]); Oxford, Bodleian MS Aeth. d. 9 [74 miracles, 18th/19th cent.] (cp. Delamarter – Demeke Berhane 2007: 2f., no. 2).

A few hundred mss. of the T.M. are included in the EMML collection (s. EMML I–X, indices); a large number is known to exist in Ethiopia.

The following list of catalogues is limited to those contributions which are not mentioned in Marrassini (1984–86: 93ff.):

Src.: David Appleyard, *Ethiopian Manuscripts*, London 1993, nos. 16, 42, 43; Id., "Ethiopic", in: Bob Miller – Sam Fogg (eds.), *Manuscripts of the Christian East. Slavonic, Byzantine and Greek, Armenian, Georgian, Ancient China, Syriac, Coptic, Arabic and Ethiopic*, London 1996 (Catalogue 18), 79–112; Osvaldo Bucarelli (ed.), *Museo Archivio Giuseppe Vedovato*, Roma 2007; CerMaria [Lit. with references to all mss. known up to 1943]; Enrico Cerulli, "I manoscritti etiopici della Chester Beatty Library di Dublino", *MRALm* ser. 8a, 11, 1965a, 277–324; Id., "Il codice di Leningrado del libro etiopico dei Miracoli di Maria", *RANLmor* ser. 8a, 20, 1965b, 1–19; Carlo Conti Rossini, "Manoscritti ed opere abissine in Europa", *RRALm* ser. 5a, 8, 1899, 606–37; Steve Delamarter – Demeke Berhane, *A Catalogue of Previously Uncatalogued Ethiopic Manuscripts in England: Twenty-three Manuscripts in the Bodleian, Cambridge, and Rylands Libraries and in a Private Collection*, Oxford 2007 (JSS Supplement 21); EMML I–X; Paolo Marrassini, "I Manoscritti Etiopici della Biblioteca Medicea Laurenziana di Firenze", *RSE* 30, 1984–86 [1987], 81–116; Osvaldo Raineri, "I manoscritti Vaticani etiopici 300–23. Ewa Balicka-Witakowska – Alessandro Bausi

Täᵓammərä Maryam in art

Many manuscripts of the T.M. are illuminated. There are twelve miniatures in the ↗Amba Gəšän manuscript. These are not directly related to the text and include, beside the scenes of the Annunciation and Presentation of Mary in the Temple, pictures of *aṣe* ↗Dawit II in front of St. Mary paying honour to her, from simple bowing to *proskynesis*. For some details gilding is used, an exception in Ethiopian ↗painting. Two illuminated manuscripts are known from the time of *aṣe* ↗Zärᵓa Yaᶜəqob: in the Sam Fogg collection (s. Mercier 2000: 80) and München, Museum für Völkerkunde no. 86–307647 (SixTana III, no. 180). These, too, are illustrated with miniatures unrelated to the text and represent the iconic picture of St. Mary alongside with other

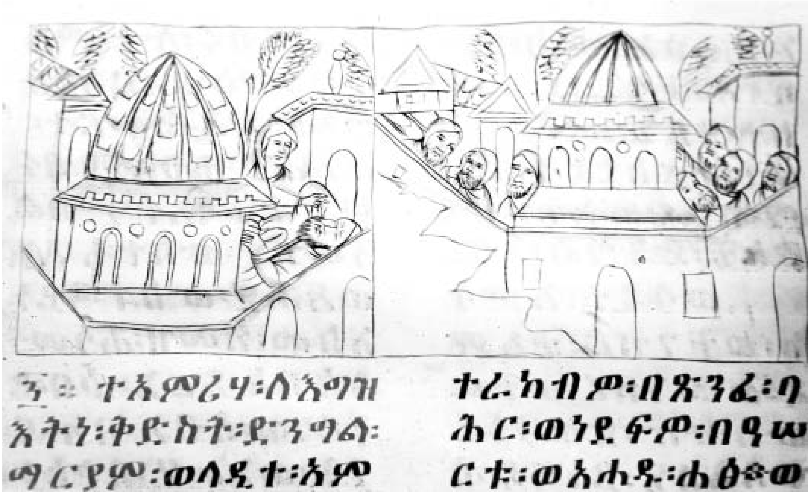

Fig. 1: A monastery and its church dedicated to St. Mary miraculously transferred to the shore of the Mediterranean Sea, executed by an anonymous European artist, ms. *Täʾammərä Maryam*, church of Tädbabä Maryam, Wällo, 15th cent., fol. unknown; photo 1971 by Diana Spencer

holy figures. The first illustrations of the miracles are preserved in the manuscript executed for *aṣe* ↗Ləbnä Dəngəl and kept in the church of ↗Tädbabä Maryam. This is a set of lightly coloured ink drawings (s. fig. 1), obviously executed by a European artist who is sometimes (on rather weak grounds) identified with Nicolò ↗Brancaleone (ChojPaint 394f.). The skilfully drawn illustrations are inserted into the text in different ways, at the beginning and at the end of each story, sometimes vertically along the outer margin. Several episodes are depicted within one illumination, side by side or each within a frame. The manuscript has not been studied in detail, nor has it been fully photographed, so that its exact content is obscure.

It is possible that this manuscript was known to the painter who, in the second half of the 17th cent., created a cycle of illustrations for 33 miracles of the ↗*Akkonu bəʾəsi* series. His work, in the style of the First Gondärine School of painting, was frequently copied (e.g., Jäger 1960; Bosc-Tiessé – Wion 1998). Each miracle is accompanied by one full-page miniature usually depicting more than one episode; only a few stories are displayed in two or three miniatures. The illustrations are accompanied by captions which either explain or summarize the events. One of the early examples is the manuscript executed for *aṣe* ↗Fasilädäs (London, BritLib Orient. 641), in which the pictures concerning the miracles are followed by the miniatures depicting the Passion of Christ and the Last Judgement. In most cases, however, the miracles are introduced by a series of miniatures illustrating the ↗*Kidanä məḥrät* story (e.g., mss. of ↗Aksum Ṣəyon and of ↗Däbrä Wärq, Goǧǧam; s. Annequin 1972) and are completed by the episodes of St. Mary's life (e.g., ms. BritLib Orient. 645) and/or by iconic pictures of her.

In the 18th cent., the same type of illustration was applied, but the introductory miniatures dedicated to the *Kidanä məḥrät* were usually omitted (e.g., ms. BritLib Orient. 648, probably executed for *aṣe* ↗Bäkaffa). The manuscript decorated with 52 miniatures (presently Schøyen collection) which belonged to *aṣe* ↗Täklä Haymanot and was inherited by *aṣe* ↗Dawit III (s. Mann 2005, nos. 43f.) deserves particular attention. Brought to England from ↗Mäqdäla, it entered the collection of Lady Meux of Theobalds Park and was used as model for the facsimile edition of the T.M., privately printed by her in 1900 and supplied with an English translation by Ernest Budge.

The tradition of narrative illustration of the T.M. declined in the 19th cent. Miniatures in the T.M. manuscripts either show the standardized portraits of St. Mary or the devotional pictures without connection to the text.

To the illuminated T.M. manuscripts with illustrated miracles listed in Jäger – Deininger-Engelhart (1961), Bosc-Tiessé – Wion (1998) the following can be added:

First Gondärine school of painting: church of Gännätä Maryam near Lalibäla; Aksum Ṣəyon; Ǝnda Ǝċċäge Kidanä Məḥrät (Tämben); ↗Däbrä Ṣärabi; ↗Zuramba (s. fig. 2).

Second Gondärine school of paintings: Däbrä Qʷäyäṣa, Maryam Tənsaʾe, Guya Täklä Haymanot; Ǝnda Śəllase, Aṣbi (not coloured); ↗Gundä Gunde (Agamä); Ǝnda Abba Ḥadara, Tägʷägəwa Yoḥannəs Wäldä Nägʷädgʷad (Tämben).

Täʾammərä śəllase

The T.ś. (**ተአምረ፡ ሥላሴ**, 'Miracles of the Trinity') is a generic title applied to several collections of miracles worked by or related to the Holy ↗Trinity.

The first type T.ś. is known from a few recent manuscripts: Berlin, Staatsbibliothek Preußischer Kulturbesitz orient. quart. 993 (18th/19th cent.), containing a text entitled **ተአምሪሆሙ፡ ለአብ፡ ወወልድ፡ ወመንፈስ፡ ቅዱስ**, *Täʾammərihomu läʾab wäwäld wämänfäs qəddus*, 'Miracles of the Father, the Son and the Holy Spirit' and a ↗*sälam*-hymn to the Trinity (HamSixBerl no. 113), as well as EMML no. 4769 (19th cent.). The title *Täʾammərihomu* (*läśəllase*) appears, in fact, after the introduction. The work was studied and partly translated by Turaev (1912) on the basis of the Berlin manuscript.

While described as "Miracles", the work does not exactly conform to the form of ↗*täʾammər* known otherwise. The account is nothing but a re-narration of the Biblical history from the Creation to Num 17 ("rod of Aaron"), divided according to subjects. God is everywhere represented as the Trinity (relevant verbal forms being conjugated in 3rd pers. masc. pl.), also before the Creation (since the existence of the Father did not precede that of the Son and the Holy Spirit). Thus the author reconsiders and re-narrates different episodes of the O.T. from the "triadologic" point of view. Turaev (1912: 316–20) identified small inclusions of some apocryphal materials and similarities with such works as *Mäṣḥafä ↗məśṭirä sämay wämədr* and *↗Qälemənṭos* (in the description of the Creation), *Gädlä ↗Addam*, assuming also strong influence of the Apocalypse of ↗Peter. The text contains the story of the "pearl" (*baḥrəy*), i.e. St. ↗Mary, contained in Adam's body (as in ch. 68 of the *↗Kəbrä nägäśt*). Remarkably, ms. EMML no. 4769 contains a version of the T.ś. which is much longer than the one studied by Turaev and continues the narration – composed apparently in the same way – through the rest of the Bible and the Book of ↗Jubilees.

The work has been attributed to *abunä* ↗Bəṣuʿa Amlak of Ǝnda Śəllase since this name is mentioned in the introduction as that of the compiler of the work, and also on the basis of a story of a miraculous apparition of a "giant" to "a man" (the author?) who was in seclusion (Turaev 1912: 310f.; EMML no. 4769, 17.). This happened under *aṣe* ↗Naʿod (indeed, the time when *abunä* Bəṣuʿa Amlak was active).

Another work, also called T.ś., is a part of the treatise *Zena nägäromu läśəllase* (*↗Dərsanä śəllase*). Here, the collection of several dozens of miracles follows the collection of homilies (cp., e.g., mss. EMML nos. 150, 1882; Hamburg, Staats- und Universitätsbibliothek orient. 409). The miracles mostly conform to the pattern of *täʾammər*, telling of wonders worked by the Trinity both abroad (Egypt, Palestine etc., occasionally picking biblical stories) and in Ethiopia.

One more type of collection of miracles worked by the Trinity appears in mss. Roma, ANLin Conti Rossini 53, 62 (StrANL 154–57, 174–77), also entitled, confusingly, *Zena nägäromu läśəllase* (or **ሰይፈ፡ ሥላሴ**, *Säyfä śəllase*, 'Sword of the Trinity', or **ዜና፡ ሥላሴ**, *Zena śəllase*, 'History of the Trinity', the generic titles), in which a wondrous story follows a homily, for each day of the week. Three miracles published by Turaev (1912: 322ff.) originate from this kind of Trinity miracles. One short miracle (mss. Conti Rossini 53, fols. 32v–33v, and 62, fols. 132ra–va) seems to be the same text as in the 15th-cent. ms. VatLib Aeth. 89, fol. 28rv (GréTisVat 357). It is found also in orient. 409, fol. 61ra–va (SixDeu 310) and EMML no. 1882, fol. 61v (text in Turaev 1912: 322f.). The same collection is preserved in mss. VatLib Aeth. 177 (fols. 5–57v) and 180. Turaev (1917: 83ff.) summarizes its second, fifth and seventh miracles.

All three types of collections are connected, but the issue requires a proper study. A core or parts of the T.ś. may be very old, the rest is probably a recent elaboration. Despite the attribution of the T.ś. to an author from Eritrea, no testimony comes from there.

Only the collections of the second and third types appear to be really adopted for propagation of the cult of the Trinity.

Denis Nosnitsin

Täʾammərat Amanuʾel

T.A. (**ተአምራት፡ አማኑኤል**, b. 1888, Azäzo, d. 1963, Jerusalem) was a ↗Betä Ǝsraʾel intellectual and teacher. His father, Fanta Dawit, was of Betä Ǝsraʾel descent, and his mother Ṭərunäš, was of noble Christian lineage.

T.A. was initially educated in the missionary school of ↗Evangeliska Fosterlands Stiftelsen in Asmära. In 1904, Jacques ↗Faitlovitch took him out of the school and sent him to Europe to study Jewish and secular subjects. From 1905 to 1907 he attended the Alliance Israélite Universelle school in Auteil, France, and then for more than a decade, the Rabbinic College in Florence under the guidance of Rabbi Zvi Marguilies, founder of the Pro-Falasha Committee. In 1921 he returned to Ethiopia via Palestine with Faitlovitch.

In 1923, T.A. was appointed principal of the "Fäläša school" in Addis Abäba. T.A. accepted Betä Ǝsraʾel students from the villages, including his nephew ↗Taddäsä Yaʿəqob. In 1928, on behalf of the American Pro-Falasha Committee, established in 1922, he purchased a site for the school of over 4,000 m² in the Giyorgis area.

Täʾammərat Amanuʾel in the Addis Abäba "Fälaša school", 1936; photo by Carlo Alberto Viterbo, courtesy of the Viterbo family

In 1931–32, T.A. travelled with Faitlovitch to the United States to gain financial support for the American Pro-Falasha Committee. He attended Columbia University for a short time, and also took an interest in the Black "Jews" in Harlem, who at times adopted the designation "Hebrews of Ethiopian descent".

Back in Ethiopia, T.A. acted as principal of the school, where he accepted other Betä Ǝsraʾel students who had studied in Europe, as teachers upon their return to Ethiopia. During this period, he also accompanied Carlo ↗Viterbo in his travels in Ethiopia. In 1937, in the wake of the reprisals following the attempted assassination of the Italian general Rodolfo ↗Graziani, T.A. was forced to flee to Egypt. He regularly corresponded with *aṣe* ↗Ḫaylä Śəllase I, and in 1940, joined the Emperor in exile in Khartoum.

After the Liberation, T.A. returned to Ethiopia and was given the task of reorganizing the Foreign Ministry. From 1948 to 1951, he held the position of cultural attaché of the Ethiopian Legation in Paris, working *inter alia* on federating Eritrea with Ethiopia. Throughout these years, T.A. continued to champion the cause of the Betä Ǝsraʾel, at times interceding on their behalf with the Emperor. However, he was unable to re-open the "Falasha School". T.A. corresponded ardently with Faitlovitch, but disagreed with him on several fundamental issues concerning the Betä Ǝsraʾel.

During his later years, T.A.'s relations with the Emperor became strained due to T.A.'s disdain for feudalism, his protest at the delay in instituting land reform, and his refusal to write the Emperor's biography. T.A. left for Djibouti in self-imposed exile and then, in 1955, moved from Asmära to ↗Jerusalem, where he acted as the Cultural Counselor at the Ethiopian Consulate. He died unmarried with no descendants.

T.A. was proficient in Amharic, Təgrəñña, English, French, Italian and Hebrew. He wrote numerous newspaper and scholarly articles, including notes on Betä Ǝsraʾel monks, translations of excerpts from ↗Susənyos's chronicle into Italian and an unpublished essay in Amharic on Gandhi. He believed that Ethiopian history had to be written in an objective manner by Ethiopians, who had yet to acquire self-sufficiency in education (s. also Bahru Zewde 2002:47).

Shalva Weil

Täʾammərat Yəgäzu

T.Y. (**ተአምራት፡ ይገዙ**; also **ታምራት፡ ይገዙ**, Tamrat Yəgäzu; b. 1916, Tägulät Bulga *awrağğa*, d. 24 November 1974, Addis Abäba) was a high-ranking official of ↗Ḫaylä Śəllase I's government.

T.Y. was the son of a certain *balambaras* Taffäsä and his wife Zäwditu Yəgäzu. He grew up in his mother's family and thus took the name of his grandfather *däğğazmač* ↗Yəgäzu Bähabte (FanTarik 307) who had been Minister of Commerce and ↗*käntiba* of Addis Abäba in 1918 (Greenfield 1965: 154).

After receiving his education at the Täfari Mäkʷännən School, T.Y. was trained at the

Täᵓammərat Yəggäzu; photo from the collection of the family

↗Holätä Military Academy where he rose to the rank of *šämbel*. With the coming of the ↗Italian war 1935–36 and after the Battle of ↗May Čäw, he continued to put up resistance against the Italian invasion.

Eventually T.Y. followed his grandfather into exile to Jerusalem, where, at the age of 20, he studied at a college and worked as a secretary for the *Täsfa Kokäb Maḫbär*, an association engaged in supporting the Ethiopian ↗resistance.

He returned to war after having trained troops in a military camp near Khartoum, called Soba, where the last preparations were being made for the return of Ḫaylä Śəllase I. T.Y. followed the Emperor through ↗Omedla into Goǧǧam on his return to Addis Abäba.

During the post-war period, T.Y., then Governor-General, remained an important personality and had numerous positions. He became General Secretary of the Ministy of War, the General Director of the Addis Abäba Municipality and he served as the Governor of Käfa and later Səmen. Above all he became president of the board of managers for the newly established Young Men's Christian Association in Addis Abäba from 1949 onwards. T.Y. served as committee chairman to screen members of the ↗Imperial Bodyguard and civilians who had been involved in the failed ↗coup d'état 1960 (s. EAE vol. 2, 1081–82) against the Emperor (Greenfield 1965: 407f.), after which he became a member of the ↗Crown Council.

After the monarchy's downfall, Mängəśtu Ḫaylä Maryam was determined to eradicate all key members of the former regime (↗Revolution of 1974). On 24 November 1974, the new government executed T.Y. and 59 other senior government officials, civil servants, war veterans, and senior military officers.

T.Y. was married to Marta Ǝmməru, a daughter of *ras* ↗Ǝmməru Ḫaylä Śəllase, from whom he had ten children.

Thomas P. Ofcansky

Täᶜaqəbo məśṭir

The T.m. (**ተዓቅቦ፡ ምሥጢር**, 'Custody of the Mystery') is a short Gəᶜəz text instituting the rules for securing the honour and safety of the Sacrament of the ↗Eucharist. The T.m. was composed in the 15th cent., during the reign of *aṣe* ↗Zärᵓa Yaᶜəqob, who is mentioned twice in the text as the one who instigated the rules. The T.m. is also mentioned in his Chronicle (PerrZarY 78).

The T.m. belongs to a group of texts composed and diffused in order to prescribe norms for the Sacramental rituals, such as the *Mäṣḥafä ↗ baḥrəy* for the ↗unction of the sick.

In order to promote to the utmost degree the honour and respect due to the Eucharist, and to avoid even the slightest carelessness, considering that the consecrated bread and wine are the very flesh and blood of Christ, the T.m. lays down harsh punishments to be inflicted upon those who lack respect, even unwittingly, e.g., those who let even a small part of the Holy Bread or a drop of the Holy Wine, fall on the ground or who emit them after ingestion, should be punished with 153 strokes of the whip (cp. N.T., Jn 21:11; BauSen 299 [text]) and five days of ↗fasting; if the bread or the wine prepared for the ↗*Qəddase* are not appropriate, the deacons or priests in charge should receive 24 lashes; if an insect drops into the chalice, 8 or 4 lashes. The authorities in charge of a church are held responsible for what happens in it, even if they were not directly implicated in the mishandling; this holds true even for the *aṣe* — in case it happened in one of the churches of the royal camp (↗*Kätäma*), which are, by the way, enumerated in the T.m. —, who should inflict upon himself three lashes and one day of fasting.

Some of the narrative texts written during the reign of Zärᵓa Yaᶜəqob – e.g., the miracle of St. ↗Mary in which, after saving a monk from Satan, Mary told him to ask his fellow monks why they prepared the Eucharist (Getatchew Haile 1992: 189–93); or the Vita of ↗Mäbaᵓa Ṣəyon (Budge 1898: 31) – also insist on paying due respect to the Eucharist, and illustrate by vivid examples the prescriptions of the T.m. (quoted in Heldman 1994: 196f.; in Bouanga 2007: 88–95).

Numerous copies of the T.m. exist. The most ancient manuscripts are EMML no. 1480 and BN d'Abbadie 69, from the 15th cent., in which the T.m. is copied together with the *Mäṣḥafä baḥrəy*.

Anaïs Wion

Ṭabarī, aṭ-

Ṭ. (الطبرى, full name Abū Ğaᶜfar Muḥammad b. Ğarīr aṭ-Ṭabarī; b. 839, Āmul, Tapuria, d. 923, Baghdad) was the most famous historian and ↗Qurᵓān commentator of early Islam.

Ṭ. stemmed from a landowner family of Āmul in the Caspian region, prosperous enough to finance Ṭ.’s studies, including extensive travels to the best scholars of his time. In 870 he settled in Baghdad, devoting his time to teaching and writing. His books include law (*fiqh*), prophetic traditions (*ḥadīṯ*) and dogmatics, but his most important works are his voluminous commentary on the Qurᵓān (*at-Tafsīr* or *Ğāmiᶜ al-bayān ᶜan taᵓwīl āy al-Qurᵓān*, 30 vols. in the Cairo ed. 1954–57), and his world history (*Taᵓrīḫ ar-rusul wal-mulūk*, 8,054 pages in the Leiden ed. 1879–1901, 38 vols. in the Albany tr. 1985–95). Both works use the *ḥadīṯ* method, i.e. every topic is related to a primary source through a chain (*isnād*) of traditionists. Where the sources diverge, Ṭ. quotes more than one source for the same story. In his *History*, in which a few passages concern Ethiopia, Ṭ. arranges the traditions in the style of historical annals, the events being recounted yearly up to 302 H. [915 A.D.].

Ethiopia (as *al-Ḥabaša*, ↗Abyssinia) and Ethiopians are first mentioned in the overview of peoples descending from Ham (ed. vol. 1, 216f., 222 = tr. vol. 2, 15f., 20f.). Next, Abyssinia appears in connection with Bahman’s entrusting Ahasuerus b. Cyrus b. Ğāmāsp with the administration of Babylon and its environs, to which ↗India and Abyssinia belonged (ed. vol. 1, 653 = tr. vol. 4, 50). Several Ethiopian references are given in connection with South Arabian history, esp. the events of ↗Nağrān and the raid of ↗Abraha against ↗Mecca (ed. vol. 1, 898–966 = tr. vol. 5, 159–267).

Ṭ. further tells us that ᶜAbdšams b. ᶜAbdmanāf, the grand-great-uncle of the Prophet ↗Muḥammad, concluded a treaty with the Great ↗*Nağāšī* (*an-nağāšī al-akbar*), as a result of which the Meccans travelled regularly to Abyssinia (ed. vol. 1, 1089 = tr. vol. 6, 16). Quite exhaustively, Ṭ. then treats the first ↗*hiğra* (ed. vol. 1, 1181–98 = tr. vol. 6, 98–114), and ᶜAmr b. Umayya aḍ-Ḍamrī’s mission to Ethiopia, to hand over a letter from Muḥammad to ↗Aṣḥam b. Abğar (i.e. ↗Ǝllä Ṣaḥam, whose son, ↗Armaḥ, and father, possibly ↗Ḥataz, are also mentioned here), with the invitation to accept Islam: the ↗*Nəguś*’s answer was in fact positive (ed. vol. 1, 1568ff. = tr. vol. 8, 108ff.).

In his discription of the Umayyad and the ᶜAbbāsid periods, Ṭ. repeatedly mentions the ↗Dahlak islands as a place of exile for criminals and people out of favour (ed. vol. 2, 1351, 1359, 1777, vol. 3, 135 = tr. vol. 24, 80f., 89, vol. 26, 129, vol. 28, 71).

A ↗Beğa incursion in 241 H. [855/56 A.D.] is the last Ethiopia-related event in the *Annals*; the narration also gives some information about the people (ed. vol. 3, 1428–33 = tr. vol. 34, 141–45).

Ewald Wagner

Ṭäbibä ṭäbiban

The Ṭ.ṭ. (**ጠቢበ፡ ጠቢባን**, ‘Wisest among the Wise’, or ‘Sapiens sapentium’) is a hymnological composition in ↗Gəᶜəz.

The Ṭ.ṭ. consists of 100 five-lined stanzas. In some manuscripts, these are divided into seven sections to be read on each day of the week. The poem does not belong to the official liturgy and is obviously to be recited by monks only.

The title refers to the beginning: “O God, wisest among the wise [Ṭ.ṭ.], Almighty, do not ever age from the beginning. I, your servant, with feeble mind and fearful heart, do not dare to pray to you, o Lord, the prayer of salvation: 'Save me and free me of every murderer'".

The main purpose of the work is to glorify God. The author cites from Biblical history, apocryphal narratives and ecclesiastical literature. The Biblical characters mentioned in the poem (Adam, Enoch, Noah, Abraham, Moses) are to bear witness to God's grace and mercy.

The poem was published by Dillmann (DillmChr) after three manuscripts from the Bodleian Library and the British Museum. The oldest witnesses can be dated to the 17th cent. (Berlin, Staatsbibliothek Preußischer Kulturbesitz Orient. quart. 1006 [2]; BritLib Orient 578 [1646 A.D.]), the date providing the *terminus ante quem* for the composition.

Ute Pietruschka

Taboo

T. are behavioural avoidance rules which have a ritual character and usually involve notions of purity and pollution. They occur in all ↗religions and ways of life, and serve to emphasize certain features of the cosmic and social order and, in particular, relate to the cognitive organization of both nature and society according to rules of symbolic classification. T. vary from group to group, and must be understood in the broader context of cosmology and social structure. T. are considered to protect individuals from "magical" contamination, be it ritually polluting or sacral. T. structure relationships between social groups and create distinctions of rank, prestige and "propriety" between people.

Dietary T. (cp. ↗Food) are among the most widespread and can be seen to operate on multiple levels both distinguishing groups from each other and making distinctions within groups. Thus, Ethiopian Orthodox Christians, Betä Ǝsraᵓel and Muslims in Ethiopia are prohibited from eating meat which has not been slaughtered by a co-religionist according to each tradition's specific practice (and blessing). In addition, all three groups share a common T. against the consumption of carrion or meat which is the product of hunting. They also have in common a T. concerning the consumption of certain animals, such as donkey, horse, pig, dog, ↗hippopotamus, rhinoceros and ↗elephant. In contrast to ↗Islam where it is allowed to eat everything not explicitly forbidden, according to the distinction of *halal* and *ḥaram*, among Ethiopian Orthodox Christians, generally those animals not listed as "pure" in the Bible cannot be eaten.

Many Cushitic-speaking peoples traditionally prohibit the consumption of ↗fish. Among the Oromo, for example, only those in dire straits eat fish, and the consumption of hippopotamus, hare, eggs and fowl are widely tabooed.

In some cases, however, dietary T. function within a particular social group prohibiting only certain members from either permanently or temporarily consuming certain foods or beverages. Among the Aari, a new mother is prohibited from drinking ↗milk or eating ↗honey until the child has been named. During pregnancy, it is strictly forbidden for Təgre- and Beǧa-speaking women to eat meat, drink milk or consume butter from an unknown source.

Rulers and other important officials are often subject to a variety of T. which distinguish them from other members of society (cp. ↗Kingship, divine). These include not only food T. but also avoidance of contact with profane persons, relationships, objects and activities. Among the Kəmant, the ↗*wämbär* could not hold a knife or any other weapon. Many chiefs or kings could only handle or consume certain food items. E.g., the Dizi chiefs (*kyaz*, *burǧi*) were not even allowed to touch wheat.

Similar avoidance rules are operative in the context of mediums of ↗possession cults and ritual experts of traditional ↗religions. Among the Oromo, e.g., the ↗*qaallu* must avoid contact with corpses and with ↗blood, including that of women during ↗menstruation or after giving ↗birth. Nor is he allowed to have contact with people who have recently had sexual intercourse, and mourners. The *qaalluu* is also subject to a variety of food T. including prohibitions against consuming ox and heifer meat, red onion, and certain grains. Konso ritual experts are prohibited from taking part in a ↗burial or even entering a sick person's hut. Among the Käfa the king and priests could not be touched by other members of society. Among the Boorana Oromo, however, the *qaalluu* must violate the normal rules of exogamy (or incest T.) in choosing his wife.

At the other end of the social spectrum, T. figure prominently in the social treatment of hunters (↗Hunting), tanners, smiths (↗Iron) and other craftsmen (↗Marginalized people, s. EAE vol. 5). Interestingly, these are often similar to the T. (for example, against the eating of sheep) which apply to respected figures in other societies. However, they are evaluated very differently. Such groups are often accused of violating the T.'s of the dominant society by eating forbidden foods and conducting sexual relations (↗Sexuality), particularly incestuous, considered as immoral and ritually polluting. Such accusations not only mark them as different, but justify their treatment as lesser, or, in some cases, barely human-beings.

People participating in rites of passage such as birth, ↗initiation, ↗marriage and burial are often subject to T. All groups have an incest T. which prohibits marriage and sexual relations among members of the same "family", although the definition of the latter varyies considerably between groups. Many cultures prohibit marriage between persons who have a common patrilineal ancestor up to seven generations, including not only biological kin, but adopted and fostered children and god-parents (↗Genealogy; ↗Kinship). Other groups prohibit marriage within the same clan (Maale, Meʾen, Suri), patrilineage (Konso), or moiety (Oromo).

Among many Ethiopian peoples, contact with a woman during a period of several weeks or even months after giving birth is prohibited. Accordingly, such women are secluded in special huts. Among the Beni ʿAmər, the father is prohibited from even looking at his wife and his new child during this period. Many groups including the Kəmant and Betä Ǝsraʾel seclude women when they are menstruating, and Ethiopian Christians restrict their participation in church activities. In Maale, women of childbearing age were not permitted in the royal compound. In some cases, moreover, gender-based T. are much broader. Thus, among the Konso, women, as in most Ethiopian societies, cannot sacrifice, slaughter, produce iron objects or even watch certain religious ceremonies.

Many T. exist to restrict the contact between sacral objects and the profane sphere. An important example is the ↗*tabot* of the Ethiopian Orthodox Christians which is only allowed to be touched or seen by priests and deacons.

In some cases, certain actions or movements are tabooed. Huntingford (HuntGal 78) reports, e.g., that the Oromo do not point their fingers to the sky, as this would be an insult to ↗Waaqa, and use the middle finger, rather than the index finger to point at objects.

Verbal avoidance rules are a common feature. They are frequent especially in the context of sexuality, religion and ↗magic. T. can also apply to the use of ↗names of persons and certain supernatural beings. Thus, a newly married woman, for example, among the Gurage, is prohibited from using her husband's name when speaking to others. Among the Oromo, husbands, wives and in-laws are prohibited from using each others' names. Gurage girls who belong to a *mʷeyät* association, are forbidden to use the name of the *mʷeyät* itself, its chief and of certain animals. The name of their deity ↗Dämʷamʷit is to be avoided as well. Leslau also reports (1952) that the Gurage avoid the use of certain Gurage words because they sound similar to Amharic words with sexual connotations and vice-versa.

Tabot

The term T. (Gəʿəz, Amh.: **ታቦት**, pl. *tabotat*) is considered to have been borrowed into Gəʿəz from Jewish Aramaic (*tēḇūṯā* / *tēḇōṯa*) according to Nöldeke (1910: 37, 42); Rodinson suggests that it was borrowed from the Arabic of the Jews of Medina (1960–63: 64ff.; not from their Aramaic, as in LesCD 570). In Ethiopic, the term has two meanings, referring both to the altar tablet or slab that rests upon the altar chest (**መንበረ፡ ታቦት**, *mänbärä tabot*); occasionally, it may designate also the altar chest itself. In the Ethiopic Bible, it refers both to the O.T. Ark of Noah and the ↗Ark of the Covenant in which the Tablets of the Law were placed (s. LesCDic 570; DillmLex 560). In fact the altar slab is also called *ṣəllat* (**ጽላት**, sg. *ṣəlle*), which is traditionally considered to be the replica of the Tablets of the Law, "representing" it in each individual church. One more term, *məśwaʿ* (**ምሥዋዕ**), is used in reference to the altar as focal point of the liturgical service (cp. ↗*Qəddase*) and is, in principle, a fixed altar, whereas the T. is a mobile, portable altar-tablet, having the same significance as the fixed altar.

The T. is a consecrated wood or stone tablet that is placed upon the permanent altar chest for the celebration of the ↗Eucharist. This arrangement of dual components – fixed holy table (Taft 1991: 71) and the portable altar stone or tablet – is much like the altar structure of the ↗Coptic Church (s. Basilios in CE, vol. 1, 144; Grossmann in CE, vol. 1, 109; Burmester 1967: 21f.; Evetts 1895:269), and in accordance with the instructions of the ↗*Senodos* which states, "Let there be two altars [*kəlʾettu məśwaʿ*] in every church, one which is carried from place to place, like the stone of the children of Israel that was carried from place to place in the wilderness, and another that is not removed from its place" (BauSen 300f. [text]). The T. is, indeed, carved either out of wood or stone (or "marble", s. Caquot 1961: 88, 116), but there are indications that it was also made out of gold (cp. BassHist 313; Getatchew Haile 1988: 16, 2006: 62 [text]).

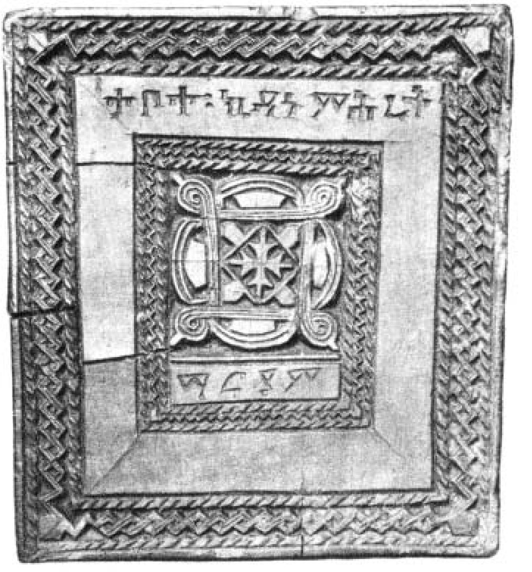

Fig. 1: Wooden *tabot* dedicated to St. Mary's "Covenant of Mary" (*Kidanä məḥrät*), 9,5 cm x 11 cm x 4 cm; from Buxton 1970: pl. 100

The ↗*Fətḥa nägäśt* also instructs that the T. should be portable "like the stone of the children of Israel ..." (Guidi 1897: 16f. [text]; Paulos Tzadua 1968: 11), signifying to the symbolic relationship between the T. and the Tablet of the Law carried by the Israelites within the Ark of the Covenant (Getatchew Haile 1988: 13).

Although the dimensions of the T. are not standard (ranging from ca. 42 cm high x 39 cm wide to as small as 13 cm high x 11 cm wide), the T. panel must be large enough to accommodate the chalice (and paten), to be placed upon it during the liturgy.

Because the T. is so sacred that it may only be seen by the priests who can enter the enclosed sanctuary (cp. ↗*Mäqdäs*), literature concerning the T. is limited. Indeed, it is absolutely prohibited for the laity to see the T., and asking questions about the T. is unseemly.

The *Senodos* has an article ordering the consecration of the T. (BauSen 298f. [text]; cp. Conti Rossini 1943: 151f.). The ritual of consecration of the T. in the Ethiopian Church includes the reading of appropriate verses of the O.T. and N.T. (cp. ms. EMML no. 1206, fols. 167v–71r; cp. also BeckHuntAlvar 545f.). The fact that the ritual may only be performed by a Metropolitan (cp. ↗*Pappas*) created a substantial problem. Similarly, when a T. was polluted (when touched by unauthorized people, and/or by non-Christians), it had to be reconsecrated. Today, a T. is (re-)consecrated by bishops (cp. ↗*Eppisqoppos*).

Presently, many churches possess more than one T. However, the church takes its name from the primary T. and the annual feast of the T. is celebrated accordingly (cp. Fritsch 2001: 388). The festive introduction of the newly consecrated T. into a (new) church is called *nəgś* (lit. 'enthroning'); a church can be methaporically referred to as T. (also in such expressions as *tabot täkkälä*, lit. 'he planted a T.', meaning 'he founded a [new] church').

In the 16th cent., ↗Alvares (BeckHuntAlvar 76) noted that each Ethiopian church possessed a T., and a *mänbärä tabot*. He also observed the procession of the T. as the royal court of *aṣe* ↗Ləbnä Dəngəl moved from one location to another, noting that always each T. was wrapped in precious fabrics and carried by four priests raised on their shoulders upon a stretcher or litter (ibid. 323f.). In present practice, on certain ↗feasts the T. is wrapped in a precious fabric and is carried from the *mäqdäs* with great ceremony on the head of a priest and paraded around the church or church enclosure (Agostinos Tedla da Hebo 1994: 150–55).

In the early 17th cent., the Jesuit priest ↗Barradas provided important information concerning the veneration of the T. He speaks of altar stones that they hold "in greater veneration than they show toward the most holy Sacrament that is consecrated and celebrated over them", and that they can only be blessed by an ↗*abun*, i.e. Metropolitan. He reports that most of the T. he saw were made of wood and often finely decorated with paintings or carvings, though he also saw some made of white stone. All were dedicated to ↗saints and decorated with appropriate inscriptions (Barradas 1996: 144f.).

The degree of veneration in which the T. is held cannot be overstated. At the time of its consecration, a new T. is dedicated to the name of God, Jesus, the Paraclete, St. Mary or a saint, and henceforth the T. is perceived as personifying, indeed becoming the presence of that saint in the church (Getatchew Haile 1988:13f.). Because the T. is believed to be endowed with sacred power, T. were carried into military campaigns with the expectation that they would bring victory. Sometimes T. were captured and, on occassion, ransomed or otherwise restored to their church, but sometimes T. fell into the hands of non-Christians (Getatchew Haile 1980: 76, 1988: 17).

By the early 20th cent., a few T. had been acquired by European museums (Hanssens – Raes 1951: 437 [seven purchased from the Oromo of ↗Wällo; the other originating from ↗Sänᶜafe, Eritrea]; Buxton 1970, pls. 100f., 252; BeckHuntAlvar 547). These form the basis of the following description of carved designs that typically decorate the recto face of T., dating from the early 16th cent. to the 18th cent. All T. are inscribed with the names of the saints to whom they are dedicated. A majority of these wood and stone T., i.e. those datable to the late 17th and 18th cent., are carved with cruciform designs similarly to those of the exterior panels of bilateral pendant diptychs of the same period (AfrZion 244, no. 102, fig. 33). Several early 16th-cent. T. are carved with a large cross that divides the panel into four parts, following the style of the painted design found on the exterior of a 15th-cent. triptych attributed to ↗Fəre Ṣəyon (Heldman 1994: 37, fig. 10). Patterns of decoration of T. changed over time and seem to have inspired the decorative patterns carved or painted upon contemporary wooden icon panels.

Marilyn E. Heldman

Tabot: Mänbärä tabot

M.t. (**መንበረ፡ ታቦት**, Gəʿəz, lit. 'seat, stand, throne of the *tabot*', pl. *mänabərtä tabot*[*at*]) is the so-called "altar chest", which, together with *tabot*/*ṣəllat,* i.e. the altar tablet, can cover the notion of altar (**ምሥዋዕ**, *məśwaʿ*).

The portable altar tablet needs the support of a table or chest, i.e. *mänbär*. It can be of various materials, sizes and styles (from a few centimeters in height to a sizeable piece; in joinery, monoxyle, in rock or metal) congruent with the sacred object it is meant to carry. M.t. is anointed when the *tabot*, normally already consecrated, is brought into a new church, the bishop saying a **ጸሎት፡ በእንተ፡ ቡራኬ፡ መንበር** … (*Ṣalot bäʾəntä burake mänbär* …, 'Prayer about the Blessing of the *Mänbär* …', s. the Pontifical by *abba* Yaʿəqob 1978/79: 171). This rite confers to the M.t. a certain level of sacredness and calls for appropriate reverence, best understood in reference to the prescriptions concerning the altars (cp. BeckHuntAlvar 518), and to the fact that they are not usually moved.

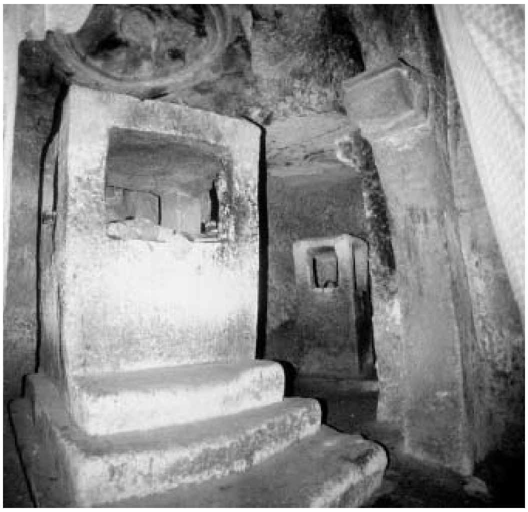
A tentative chronology of M.t. can be elaborated by a comparison of its types and forms and the comparative chronology of churches and their altar installations. In a number of cases, ↗inscriptions and pictorial presentations, engraved or painted, may provide some information.

The oldest M.t. were small, rather carefully crafted, adorned with carvings and angle ornaments, had four legs ensconced into holes (which are still visible in, e.g., Gundufru Śəllase near Aṣbi, and in ↗Dəgum); a few of them are hitherto extant in such ancient churches of East-Təgray as ↗Zarema Giyorgis, Agobo Qirqos, ↗Däbrä Sälam Mikaʾel.

The next stage of the development seems to have an early witness in ↗Mikaʾel Amba's church (1150 A.D.): it displays a triple chancel pointing to three sanctuaries, which implies as many altars. This phenomenon developed in the area of ↗Lalibäla, including at ↗Yəmrəḥannä Krəstos (Fritsch 2010), in the last 20 years of the 12th cent. and the first part of the 13th cent. (as witness the M.t. dedicated by *aṣe* ↗Lalibäla, s. Gigar Tesfaye 1984: 121f., pl. XI; Strelcyn 1979). There, additional M.t. were introduced into the pastophoria of the churches built hitherto (seeming pastophoria, archaizing churches? Cp. Fauvelle-Aymar et al. 2010) or placed side by side in sanctuaries of a new, open type, or in sanctuaries of the churches which seem to have retained the old disposition of liturgical space (↗Gännätä Maryam, Wəqro Maryam near Näbälät; cp. Fritsch – Gervers 2007:37f.). In a few cases monolithic (such as Lalibäla Śəllase, s. Bianchi Barriviera 1962:38f.; Gervers 2003:35), but mostly monoxyle, such M.t. are found in Lalibäla, Zoz Amba, Ṭəra [Ṭəla, Ṭəl] Asfäri Ǝsṭifanos, Bilbäla Giyorgis, and as far as ↗Däbrä Mäᶜar, ᶜUra Mäsqäl (Təgray). A number of these M.t. bear inscriptions (Strelcyn 1979:137; Gigar Tesfaye 1984:114f.; Bosc-Tiessé 2010). In several of these inscriptions, the M.t. itself is referred to as *tabot*; it is dedicated to a particular saint or group of saints who are often recalled in an engraved prayer and the top of such M.t. is decorated with a cross. These objects were probably not, therefore, mere M.t. but consecrated altars proper (*məśwaᶜ*) which did not require the addition of an altar-tablet to be used for the liturgy. Their being dated in the first half of the 13th cent. (s. ill., EAE vol. 3, 478) is supported by the presence of Lalibäla's name in the dedicatory inscriptions. Such M.t. do not appear in later periods; the introduction of these M.t. might have been connected to Metropolitans ↗Mikaʾel II, ↗Yəsḥaq or ↗Giyorgis.

Somewhat later M.t. have a specific dedication but lack other features; they were probably meant to receive a certain *tabot* (e.g., the Paraclete at Ṭəra Asfäri Ǝsṭifanos; the Four Living Creatures at ↗Ǝmäkina Mädḫane ᶜAläm). The presence of a number of *tabotat* in the region of Lalibäla originating from the time of the eponymous king confirms that their multiplication took place during his reign and with his involvement.

The "chest" of the M.t. usually has a cavity, called **ከርሠ፡ ሐመር**, *kärśä ḥamär* (lit. the 'womb of the ship'), accessible through an opening which is sometimes equipped with a small door. Originally, it was a storage place and may still be used for that purpose; several later rock-hewn altars have this feature on the east side. The legs of the M.t. "must be regarded as the last vestige of the original table-shaped form of the altar" (Grossman in CE vol. 1, 107). When feet are present, the cavity amounts to a doublet. Since the tiny size of many M.t. does not permit storage, the cavity can be considered a formal vestige which manifests faithfulness to the models received from the ↗Coptic Church. As a rule and despite a few exceptions (e.g., ↗Wäqen Gäbrəʾel), the cavity of the M.t. should be turned eastwards, as is the case of the Ethiopian rock-hewn altars and the altars in Egypt. Oddly, some of the ancient M.t. found in Lalibäla Golgota and elsewhere (e.g., at Mikaʾel ᶜAbiy ᶜAddi, ↗Gärᶜalta) have the cavity opened from two directions (east and south and east and north), with two doors (s. Bosc-Tiessé 2010).



Central and southern altars of Wəqro Mädḫane ᶜAläm, South Gondär; photo 2007, courtesy of Michael Gervers

After the re-establishment of the ↗Solomonic dynasty by *aṣe* ↗Yəkunno Amlak ca. 1270, the following period witnesses a greater variety in M.t. form and decoration. E.g., Ǝmäkina Mädḫane ᶜAläm possesses a wrought-iron M.t. adorned on three sides with flowery gilded brass crosses (Fritsch 2009, fig. 19). A M.t. of ↗Betä Ləḥem (ca. 1400), which might have originally been its main altar, is remarkable due to its decoration recalling the Ark of the Covenant (Fritsch – Gervers 2007:24, fig. 9).

In the 14th cent., three altars were often found in the churches, but there was no imposed number as it is demonstrated by the churches with room made for one – or two – altar only. They may be made of rock or wood. At the same time, the monumental, tall rock M.t. appeared, e.g. ,Wəqro Mädḫane ᶜAläm (South Gondär, excavated under *aṣe* ↗Säyfä Arᶜad) based on the model which spread from the time of the Fāṭimids throughout Coptic Egypt. They are generally free-standing, about 2 m tall, and with a cavity opening towards the east, the shape of their upper part resembling the Coptic ciborium-shaped altar. Frequently they have arched openings on all sides; the back may also be blind in order to ensure the solidity of the structure. The general development seems to have been (Evetts 1895:269 [cp. ↗Abū Ṣāliḥ]) that the M.t. in the central part of the sanctuary is of ciborium-type whereas the side altars (M.t.) are simple cubes with a raised edge on all four sides, the sides being decorated with crosses, sometimes with a cavity in the east side (May Kado Giyorgis, ↗Däbrä Ṣəyon, Abba ↗Yoḥanni, Wäqen Gäbrəʾel, ↗Wəqro Maryam Näbälät). It is doubtful whether these altars were ever consecrated.

Some rock-hewn M.t. have a particular feature on their east side: a cavity opened through their back and reaching their top; they are therefore deprived of a real, complete table (↗Maryam Dəngəlat; the southern altar at Säḥart Ǝnda Iyäsus near Guğät; the southern altar at Däbrä Ṣəyon; the southern altar of Mikaʾel Barka near Aṣbi). All seem to belong to the same context of 14th/15th-cent. Təgray.

The shape of the monoxyle M.t. which have a shallow depression on the top, like that found in the 14th-cent. rock churches of Yäč̣əra Mädḫane ᶜAläm (near Kon, Wadla, North Wällo), indicates that they were meant to be completed by a *tabot*. This feature is similar to the raised top edge found on several Ethiopian M.t., also designed for a *tabot,* and is linked with the depression on Coptic altars meant for a consecrated wooden board (cp. Grossman in CE vol. 1, 107).

From the beginning of the 16th cent., most of the M.t. seem to derive from the ciborium-like Coptic altar. The examples include, e.g., the M.t. of ↗Gundä Gunde with paintings (perhaps, late 15th cent., s. Fritsch – Gervers 2007: 32, fig. 20). Peculiar is the wrought-iron M.t. at Ǝšätän Maryam (Fritsch 2009). This evolution is further illustrated by the M.t. of Guya Abunä Täklä Haymanot in which a niche-like opening gives access to its lower hollow part, a feature also present in the 18th-cent. M.t. of the nearby church of Č̣ih Śəllase (Tämben). Such M.t. represent the most common type: a high wooden box, crowned by four pinnacles and a canopy with a cross. Inside, it has two or three storage levels, which can be accessed from one or even four sides through doors. As a rule, the *tabotat* are stored on the top shelf, the sacred vessels on the middle one and the books and other paraphernalia on the bottom. The M.t. are often decorated with paintings (outside and in some rare cases inside). This type of M.t. is still in wide-spread use, although it does not exclude other forms. In the circular churches which became typical during the time of the ↗Gondärine kingdom, and are still common, as a rule there is only one single (high) M.t. (of this type) but several *tabotat*, used on their patronal days.

Such a single M.t. associated with the multiplicity of *tabotat* in one church is meant to satisfy the need of venerating several saints, resolving problems of space which could have been caused by the presence of several M.t., impossible to accommodate in a circular church. Another solution to the same problems is the "polysemic" *tabotat* (cp. Hanssens – Raes 1951, no. 1 with 35 names; cp. also nos. 2, 3, 4, 6, 7, 8).

The tendency in the large modern cathedrals is to have wide sanctuaries hosting three M.t., in order to simultaneously celebrate Mass at all three of them, enhancing the solemnity of the ritual, and to have more ministers distributing Holy Communion to the faithful.

The cavity within the traditional M.t. is called *kärśä ḥamär* ('the 'womb of the ship') because it is likened to Noah's Ark (*tabotä Noḫ*), a symbol of salvation through the Church (cp. 1 Pet 3: 20–21), and the three levels inside are compared to the three storeys found in Noah's Ark (Gen 6:16). The symbolism of the parts of the M.t.'s parts is also explained in different versions of the ↗*Śərᶜatä betä krəstiyan* (e.g., Griaule 1932: 8). There are a few representations of M.t. on miniatures and wood carvings (cp. Fritsch – Gervers 2007: 42f.).

Tädbabä Maryam

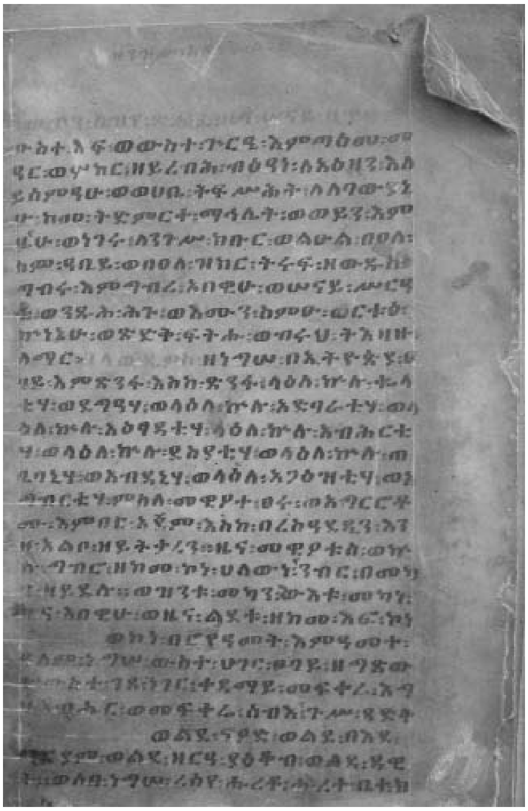
T.M. (**ተድባበ፡ ማርያም**) is a church located in Amhara ↗Sayənt, at the top of an ↗*amba*, which, in addition to being a natural fort, has artificial stone defences; a gate is known as Mäläs Sänqa (GuiIohan 188; Combes – Tamisier 1838: 208, 357).

T.M. was founded by *aṣe* ↗Gälawdewos in 1552. His Chronicle is the main source for its early history (ConzGal 50–54, 58ff., 73; no mention in Kropp 1988). Its first head, with the title **በትረ፡ ያርክ** (*bäträ yark*, from Arabic for ‘patriarch’, KaneDic 916) was Afawä Dəngəl, a close advisor of Gälawdewos. The ↗*tabot* was consecrated by the metropolitan *abunä* ↗Ṗeṭros. There were 318 grantees and incumbents, a symbolic number that stressed the devotion of the royal institution to the Nicene Creed (↗Nicaea) in a context of strong tensions with ↗Catholicism. ↗Däbrä Libanos of Šäwa was the mother church of T.M. (however, the pro-*Qəbat* Chronicle of *aṣe* ↗Iyasu II, places T.M. in the network of the ↗Ewosṭateans; GuiIyas 16).

T.M. has always had a strong connection to another foundation of Gälawdewos, the church of Gälawdewos Mäkanä Sämaᶜt in ↗Bägemdər (South Gondär region). The members of the clergy of each church gather for the feasts in both places (and they were until recently tattooed *zä-Tä* or *zä-Gä*, respectively, s. Wion 2007).

According to the “short chronicles”, it was in T.M. that, during the reign of *aṣe* Gälawdewos, the ↗*mələkkət* was first introduced into the ↗*Dəggʷa*, by *azzaž* Gera and *azzaž* Raguᵓel.

Gälawdewos had most probably conceived of the church as his burial place. Some versions of the “short chronicles” report that, although the Muslims who killed him took his head to their



A folio of a manuscript of the chronicle of *aṣe* Gälawdewos; photo 2008, courtesy of Habtamu Mengistie

country, it was later buried in Antioch in the grave of St. ↗Gälawdewos, while the rest was buried in T.M. (BassÉt [II] 109; BegCron 33). T.M. became a royal necropolis. In 1563, T.M.’s abbot Zädəngəl sheltered the body of *aṣe* ↗Minas (CRHist 6ff.). According to some “short chronicles”, Minas was buried there. The “short chronicles” also mention different 15th-cent. sovereigns buried in T.M.: ↗Tewodros I, ↗Yəsḥaq, ↗Ǝndrəyas (BassÉt [II] 307f.; BegCron 11f., 69f.; ms. BN Éth. 141, fol. 13).

The present building was constructed in 1915 under the patronage of *ras* Mikaᵓel (Spencer 1972: 69). The coffins are kept in an old mausoleum which, according to the local priests, is the *mäqdäs* of the original ↗church building (ibid. 70).

T.M. remained in the focus of royal attention for centuries, being a key-point in terms of territorial control of the eastern border with ↗Goǧǧam.

During the reign of *aṣe* ↗Susənyos, the clergy of T.M. had to convert to Catholicism. Susənyos’s brother, *ras* ↗Ṡəᶜəlä Krəstos, was appointed *bäträ yark* (PerChron 239), and the church received numerous land grants to reward its members for their conversion (Pennec 2003: 235ff.; BecRASO VII, 91ff.; XII, 465–72).

In 1695, *aṣe* ↗Iyasu I stopped at T.M. on his way to a campaign in Šäwa. He entered according to the royal rituals (*bä-sərᶜatä mängəśtu*) and donated royal vestments (*ləbsä mängəśtu*; GuiIohan 188; BassÉt [II] 307f.; BegCron 69f.).

T.M. remained quite distant from the theological debates between the *Qəbat* and *Täwaḥədo* during the ↗Gondärine period. At the end of the 18th cent., however, T.M. was active in the new theological debates. In 1792, the monks of Däbrä Libanos appointed ↗*əč̣č̣age* Wäldä Yona from T.M., a strong supporter of the ↗*Sost lədät* doctrine (CerDLib II, 155f.). He fought against the Coptic metropolitan, *abunä* ↗Yosab, and upon the latter's death in 1803, with the support of *däǧǧazmač* ↗Gugsa, seized the *abun*'s land (BlunChr 475; CRReal 98).

Among T.M.'s most precious regalia (Spencer 1972: 75f., 91f.) are two objects most probably commissioned by *aṣe* ↗Ləbnä Dəngəl. They might have been placed in the custody of T.M. at the time of its foundation. One is a small manuscript of the ↗*Täᵓammərä Maryam*, dedicated to Ləbnä Dəngəl, with illustrations attributed to ↗Brancaleone (Spencer 1972: 75; ChojPaint 393ff., 445ff.). T.M. also possesses a triptych representing the Virgin with the Child in the central panel and an archangel on each of the lateral panels, tentatively identified as a 16th-cent. Cretan icon (Spencer 1972: 88). The Ethiopian clergy attributes the icon to St. Luke and refers to it as *Śəᶜəlä adḫəno* ('Picture of Salvation'), for it is only taken out of the *mäqdäs*, where it is kept, during times of trouble (Spencer 1972: 70ff; Heldman 2005: 127, 129f., 136f.). T.M. also possesses a peculiar cross called *Näwa bägᶜu*, with engravings of the Archangels Michael and Gabriel, a seraphim, the figure of the crucified Christ in high relief and ram's head on the shaft (Spencer 1972: 72f.; Balicka-Witakowska in PICES 10, vol. 1). Also, an Adoration of the Magi can be attributed to the 16th-cent. painter Lázaro de ↗Andrade.

Cardinal ↗Massaja visited T.M. ca. 1848 and reported that the "natural fortress" of T.M. had four churches where over a 100 clergy served. From a fellow Catholic missionary he heard that the people there venerated a book written in a foreign language, and that it was an autel canon printed in Venice.

In 1927 *aläqa* ↗ᶜAlämu Ḫaylä Maryam was asked by Empress ↗Zäwditu to paint the murals in T.M. He was assisted by his nephew, ↗Ǧämbäre Ḫaylu.

Diana Spencer, who visited T.M. several times in the early 1970s, reported on the cult of ↗relics there. The church claimed to possess the relics of 75 Oriental saints. When they are taken out of the church during celebrations, they are covered with a veil and carried around the church on the head of a monk like a *tabot*. Also, a very popular ↗pilgrimage takes place every year in T.M. for the Nativity of Mary (↗*Lədäta lä-Maryam*) on 1 *Gənbot*.

Anaïs Wion

Taddäsä Bərru

Brigadier General T.B. (ታደሰ፡ ብሩ, b. 1907, Abote, Sälale, d. 18 March 1983, Addis Abäba) was an Ethiopian military officer. In 1936 his father went to the Northern Front to fight against Mussolini's invading army and was killed by poison gas. Three months after she had been informed about her husband's death, T.B.'s mother died of grief.

T.B. attended the ↗*nəbab bet* of Sire Mädḫane ᶜAläm in ↗Sälale. After leaving school, T.B. formed a guerrilla band, which joined a corps of patriots under his uncle *balambaras* Beka and awaited the arrival of the invaders in his place of birth in order to try to repulse them. However, his insurgency group was attacked by local bands armed by the Fascists and T.B.'s insurgency force had to join the larger and better equipped “fifth column” near Finčaʾa cave, Sire Mädḫane ʿAläm. After a day-long fight, T.B. was captured together with his group and was handed over to the Italians and transported to Mogadishu.

On arrival at Danane, on the north-east coast of the then Italian Somaliland, T.B. was sentenced to life imprisonment with hard labour. During the five years of occupation, his tasks were to pull water wagons and break stones.

After *aṣe* ↗Ḫaylä Śəllase I had returned to Ethiopia in 1941, the British military commander who captured Mogadishu identified T.B. as a promising soldier and sent him to Mombasa to undergo military training under British officers. Subsequently T.B. was raised to the rank of sergeant and sent back to Ethiopia where he participated in the ↗War of Liberation.

After the war T.B. joined Ḫaylä Śəllase’s newly organized army. He achieved the ranks of sergeant major and, after being moved to Harär province, second lieutenant. On the Emperor’s initiative, T.B. then joined the ↗Holäta Military Academy. From there, he was transferred to the 5th Army Battalion at Addis Abäba. In 1944 T.B. was appointed as a training officer at Holäta. Two years later he was raised to the rank of deputy commander of the 29th Battalion. After having served for three years as a commander of the 24th Battalion with the rank of Major, T.B. was appointed deputy administrative chief of the Third Division.

When the post-war ↗police force was organized, T.B. became lieutenant colonel of the police. In 1957 he was entrusted with training the *fäṭno däraš* or special force unit. In 1958 T.B. was raised to the rank of colonel and was appointed deputy commander of the Police Force. In this position, he was instrumental in foiling the abortive ↗coup d’état 1960 (s. EAE vol. 2, 1081–82) led by General ↗Mängəśtu Nəway. With his specially trained force he attacked the rebels and occupied Bole airport which enabled the leader of the loyalists, General Märəd Mängäša, to make contact with the Emperor, using the Ethiopian Airline’s civil aviation radio, and to get reinforcements by air. T.B. was appointed brigadier general by Ḫaylä Śəllase and the first commander of the Territorial army based on traditional forces, which he hoped would foil another rebellion by the army, if it ever occurred again.

In February 1962 Nelson Mandela, the leader of the armed wing of the anti-apartheid African National Congress (ANC) of South Africa, came to Ethiopia to attend a meeting of the Pan-African Freedom Movement for East, Central and Southern Africa (↗Pan-Africanism). Following Mandela’s request, the Emperor ordered T.B. to give Mandela military training. After returning home, Mandela mobilized the ANC to start a clandestine armed struggle. Charged with the crime of travelling to Ethiopia without official permission, sabotage, high treason and conspiracy he was convicted to life imprisonment. During his 1990-visit to Ethiopia following the ANC’s victory against Apartheid, the first person he asked for was T.B. and he was saddened to hear his mentor’s fate.

Nelson Mandela (left) with Taddäsä Bərru; photo 1962, courtesy of the author

T.B. became the organizer and first president of the *Yäfidäl Särawit* (‘Alphabetization Brigade’) which carried out a wide-scale ↗literacy campaign. As recounted to this author in 1966, he initially refused to join the ↗Mäč̣č̣a and Tulama Association, but later became a member when thinking he was an Amhara, Prime Minister ↗Aklilu Habtäwäld warned him that the *fidäl serawit* might galvanize the Oromo masses. Soon T.B. was arrested on the accusation that he tried to lead the Mäč̣č̣a and Tulama Association to overthrow the imperial regime. He was brought to trial and sentenced to death by the Supreme Court. The Emperor commuted the verdict to life imprisonment.

On the eve of the ↗Revolution of 1974 T.B. was released with other political prisoners. Realizing that the people who came to power were in his view as chauvinistic as their predecessors, T.B. took up arms to fight for the liberation of the Oromo. However, he was captured and executed by the order of Mängəśtu Ḫaylä Maryam who falsely accused him of opposing the *Därg*’s “land to the tiller” programme.

Taddäsä Yaᶜəqob

T.Y. (**ታደሰ፡ ያዕቆብ**, b. 1913, Sämano, Säqqält, Dämbəya, d. 2005) was a ↗Betä Əsraᵓel figure and civil servant. He was the son of Nəguśe Ǧämbär and Yäšiharäg Gäbrä Maryam, the sister of ↗Täᵓammərat Amanuᵓel. In 1925, T.Y. joined as a student the Falasha School in Addis Abäba founded by Jacques ↗Faitlovitch. From 1930 to 1937, he was sent to study in Cairo, first at the Jewish school Moise de Cattani Pacha and then at the Lycée Français.

Taddäsä Yaᶜəqob in his home in Addis Abäba; photo 1988, courtesy of the author

In 1940, T.Y. worked in the Secretariat of the Secret Service of the British army in ↗Khartoum. In October 1940, he was appointed chief of the Propaganda Unit of the Goǧǧam Front on behalf of ↗Ḫaylä Śəllase I. After the Liberation, from 1941 to 1944, T.Y. was Director of the Ministry of Finances in Ethiopia. In 1952 he was appointed Director-General of the Mines in the same Ministry and four years later he acted as Assistant Minister of the Ethiopian Electric Light and Powers Authority. In 1958 he was appointed Vice Minister of Finances and in 1960 Vice-Minister of Agriculture. In December 1961, he was made Minister of State in the Prime Minister's Cabinet, a post he held till 1966, when he was appointed High Public Service Commissioner. He acted as President of the Advisory Council of the Commercial Bank of Ethiopia from 1964 till 1974, when he was imprisoned under the ↗Provisional Military Administrative Council.

T.Y. received numerous awards, such as the Ethiopian Star of Victory, the Grand Officer of the Order of Mənilək II, the Grand Cordon of the Order of the Ethiopian Star, the Campaign and Africa Stars from the British government and the Grand Officer of the Legion of Honour from the French government.

T.Y. became an advocate for the modernization of the Betä Əsraᵓel through ↗education. In the 1950s, he served as treasurer of Faitlovitch's Pro-Falasha Committee, which established a school in Asmära and he was instrumental in dispatching two groups of youth to study in ↗Israel. When "Operation Solomon" took place in 1991, T.Y. preferred to remain in Ethiopia, where he died.

Tadewos

Abunä T. (**ታዴዎስ**, birth name Harägä Wäyn; b. 1895, Gännätä Ləᶜul Maryam, Wällo, d. 19 December 1964 [10 *Taḫśaś* 1957 A.M.], Jerusalem) was one of the first five bishops of the ↗Ethiopian Orthodox (Täwaḥədo) Church consecrated by the Archbishop (later the first Ethiopian Patriarch) *abunä* ↗Basəlyos.

T. received traditional church ↗education first near his home village (↗*nəbab bet*) and later in Azawur Kidanä Məḥrät (↗*zema bet*) and Märṭo

Iyäsus, Gondär (↗*qəne bet*). He completed ↗*mäṣḥaf bet* at Däbrä Tabor.

In 1927/28 T. came to Addis Abäba and started teaching at the Männagäša Qəddus Giyorgis church.

Later, he went to ↗Jerusalem where he was appointed as the ninth head of the Ethiopian Monasteries in Jerusalem.

During the Italian occupation (1936–41), T. was active in the ↗Resistance from abroad. He consoled the Imperial family who took refuge in ↗Dayr as-Sulṭān, and supported the patriotic movement by sending motivating letters and material help. He was active with propaganda among the ↗diaspora.

On 2 September 1951 T. was ordained bishop and installed at the Gore diocese. There T. was active in reenergizing the Church's influence after the five years of occupation. He aspired to secure development for this remote part of the country. He reportedly appealed to the clergy to act as role models for others by working hard. He himself was known to work in his garden and on church agricultural lands (Märša Aläk̲äññ 2004: 138).

In his last years, T. for health reasons stopped his service as Archbishop and went to ↗Däbrä Libanos of Šäwa and in 1953 A.M. [1960/61 A.D.] to Jerusalem. He was buried there.

Mersha Alehegne

Tadewos of Däbrä Bartarwa

Abunä T. (ታዴዎስ; fl. second half of the 14th cent.), the founder of Däbrä Bartarwa, in ↗Tämben, locally venerated as a ↗saint, was born in Səbṭa (probably in Eritrea). The main source on his life is his Vita, preserved in only one manuscript (BN d'Abbadie 177, 18th cent., fols. 4r–59r), also containing hymns in honour of T. and hagiographic texts about T.'s nephew and disciple ↗Filmona. A microfilm of another manuscript of the *Gädlä Tadewos* is reported to be preserved at IES (mf. 118).

When the mother of T. died, his sister Yolyana took care of the family until she left for ↗Däbrä (Maryam) Q^{w}äḥayn, to take the monastic habit from *abunä* Barnabas. Soon she was followed by T.'s father Elsa^{c}; later he briefly returned to his children, to divide his possessions among them and to take T. and his sister Məkhənä Maryam to Däbrä Q^{w}äḥayn. There, T. received his education and was ordained deacon. Elsa^{c} and his children were later compelled to leave the monastery, due to the jealousy of other monks. They lived in the "wilderness"; then Elsa^{c} and Yolyana died (on 26 *Gənbot* and 1 *Näḥase*, resp.; unusually, the Vita tells that both received the ↗*kidan*).

T. went to *abba* ↗Mädḫaninä Ǝgzi^{ɔ} and received the monastic habit from him. He was ordained priest. Staying in a wild remote area, he started working miracles, crossing the River Wär^{c} without touching the water. Also he excelled in ascetic deeds (e.g., he remained ten days bound to a tree; he lost his sight after looking for three days at the sun – but received it back from an angel). From (↗Däbrä) Tä^{ɔ}amina, he sent his two disciples Elyas and Filmona to look for a suitable place to settle. Thus Däbrä Bartarwa was founded, where T. placed a ↗*tabot* devoted to St. ↗Mary.

The Vita gives few details of T.'s live and contains instead lengthy passages in anticipation of T.'s death, including a trip to the "third heaven" and heavenly ↗Jerusalem, where T. was frustrated to see that the martyr Victor received more "golden columns" than he, but was cheered up by the promise that his children would be pardoned "without questioning" till the 10th generation.

A rare case among Ethiopian ↗saints, T. is said to have become a martyr (cp. ↗Martyrdom), since he and some of his disciples fell victim to robbers. The thieves came once and stole some things; knowing that they would come again and anticipating death, T. nevertheless forbade his disciples to leave the place. As the robbers returned (on 29 *Ṭəqəmt*), they were unable to enter the church, its doors having been blessed by T. They set the church on fire, and T. and his disciples Ǝndrəyas and Märqoryos, who stayed "embracing" the *tabot*, died. Later, T.'s disciple Krəstos Bezanä found the bodies; T. resurrected for a while, and gave him his last blessing. Monastic vestments of T., as well as the *tabot* and a manuscript with the "Vita of Barbara" were found undamaged by the fire.

The Vita reports that T. was buried in (Däbrä) Tä^{ɔ}amina, while the Miracles of T. report that his grave is in Däbrä Bartarwa. However, this monastery (which could be located not far from Däbrä ^{c}Asa of *abba* ↗Yoḥanni) seems to have disappeared long ago.

Despite T.'s veneration of two ↗Sabbath-days, his adherence to the Ewosṭatean movement (cp. ↗Ewosṭateans) looks doubtful. The Vita of T. is an example of a less elaborate, old hagiographic writing. His relation to Däbrä Täᵓamina still needs clarification.

Susanne Hummel

Tadewos of Däbrä Maryam

Abunä T. (**ታዴዎስ**; b. Ṣəlaləš, Šäwa; fl. 14th cent.) was a saintly monk credited with the foundation of the monastery of ↗Däbrä Maryam, or Däbrä Ṣäqʷän, on the island of the same name in Lake ↗Ṭana. He should not be confused with the homonymous founder of Däbrä Bartarwa.

The main source of T.'s biography is his Vita (↗*Gädl*). It was composed in the 15th-cent., but the existing copies are much younger. The text also provides information on local practices and is thus a vivid mirror of the socio-political, economic and religious situation of 13th–14th cent. ↗Šäwa.

According to his hagiography, T. was born to a well-off family who migrated to Šäwa during the ↗Zagʷe period or during the restoration of the ↗Solomonic dynasty. The Vita frequently emphasizes a close relationship between T. and the other famous son of Ṣəlaləš, *abunä* ↗Täklä Haymanot, as well as the resulting close connection between the two monastic communities, Däbrä Maryam and Däbrä ᶜAsbo (↗Däbrä Libanos of Šäwa). T.'s father was from the priestly community in Ṣəlaləš. T. received a traditional ↗education from Ḥəywät Bənä Bäṣəyon, a relative of Täklä Haymanot. T.'s sister was captured together with Täklä Haymanot's mother by the Agäw king ↗Motäläme. She married Motäläme's son and gave birth to ↗Elsaᶜ. T. converted Motäläme and returned with his nephew, who would later become the second abbot of Däbrä Libanos, to Ṣəlaləš, where they encountered Täklä Haymanot, who later gave both the monastic habit. T.'s monastic genealogy thus traces back to ↗Baṣälotä Mikaᵓel, the father of Šäwan monasticism. T. and Elsaᶜ entered the community of Däbrä ᶜAsbo, where T. committed himself to an ascetic life. He left Däbrä ᶜAsbo after Elsaᶜ's death.

T.'s Vita is not consistent considering the date of the founding of Däbrä Maryam. One version gives a date during the lifetime of Täklä Haymanot; another version gives a date following the dispute with *abunä* ↗Yaᶜəqob, the initiator of the Christianization program. In any case, T., who was familiar with "pagan" and Muslim practices flourishing in the Lake Ṭana area, was charged with missionary work in the region. He left Däbrä Libanos together with ↗Anorewos and ↗Samuᵓel and they reached the area of Däbrä Ṣäqʷän where the local people under the Muslim ruler Mayuṭ venerated pagan objects. The monks destroyed these. Mayuṭ, though pleased with their fight against "paganism", felt threatened and arrested the monks. T. succeeded in converting the king and others to Christianity. With the support of the ruler, he settled there. Shortly before the end of his life, he established the community of Däbrä Maryam. Its first leaders were local people, converts from Islam.

T. was one of the twelve ↗*nəburä ᵓəd* who were active in the missionary program of *abunä* Yaᶜəqob. In this context, T. is mentioned in many other hagiographies, together with ↗Bäträ Maryam, ↗Zäyoḥannəs, and Anorewos. Though his engagement in the missionary activities was at first identical with the military target of *aṣe* ↗ᶜAmdä Ṣəyon I, his resistance to the marital practices of the Christian rulers (cp. ↗Marriage; ↗Matrimony) is also mentioned.

The Vita is completed by a cycle of miracles (↗*Täᵓammər*). Some were performed by T. already during his childhood, prefiguring his elusive status, his tendency towards the spiritual life and easy understanding of religious secrets. These miracles also prefigure his refusal to become an ordinary member of society, rejecting marriage to the woman his parents had chosen and dedicating himself to an ascetic life in the wilderness. His acquaintance with a monastic tutor (in his case Täklä Haymanot), the miraculous journey travelling on a cloud to Jerusalem and the view of the celestial community are also mentioned, as is the promise of the ↗*kidan* when he is nearing the end of his life.

T.'s ↗*täzkar* is commemorated on 29 *Ṭərr*. It is not mentioned in the ↗*Sənkəssar* and is apparently only a local feast.

Tädewos of Täᵓamina ↗Däbrä Täᵓamina

Tädla Bayru ᶜOq̱bit

Däǧǧazmač T.B. (ተድላ፡ ባይሩ፡ ዖቅቢት; b. 27 March 1914, Gärämi, Ḥamasen, d. 1984, Stockholm) was an ardent advocate of Ethio–Eritrean union and the first Chief Executive of Eritrea upon federation with Ethiopia (↗Ethiopian-Eritrean Federation) in 1952. He attended the Swedish missionary school (↗Evangeliska Fosterland Stiftelsen) in Asmära, and the Istituto Magistrale in Florence (1926–33), a rare opportunity for a young Eritrean during Italian rule. He served as a teacher and headmaster at schools in Kärän, Aq̱ordät, ᶜAd Täkälezan and ᶜAdwa from 1934 to 1940. He worked briefly as interpreter for the British Political Officer in ᶜAdwa in 1941 before coming to Asmära where he served as assistant to the Senior Civil Affairs Officer.

Although T.B. held the highest office given to Eritreans under the ↗British Military Administration (B.M.A.), he resigned this position in August 1946 protesting the B.M.A.'s policy in Eritrea and became a fulltime activist in the ↗Maḫbär fəq̱ri hagär transforming the rather nebulous organization into a full-fledged unionist party that sought the total integration of Eritrea with Ethiopia. His uncompromising irredentist stance was a major factor in the failure of the Bet Giyorgis meeting in 1946 where attempts were made to bridge the gap between unionists and separatists by proposing a formula of "conditional" union that would allow unity with Ethiopia while retaining a measure of autonomy for Eritrea. T.B. and the radical unionist youth around him fought this half-way solution vehemently and succeeded in marginalizing ↗Wäldä Ab Wäldä Maryam and other proponents of conditional union by castigating them as "quislings" who were doing the bidding of foreign powers.

Tädla Bayru holding a speech as the Chief Executive of Eritrea; from ZRErtra 419

Under T.B.'s dynamic leadership as the secretary general, the ↗Unionist Party was able to expand its network over much of Eritrea and emerged as the most powerful political force in the late 1940s. He led a number of delegations to the ↗United Nations (UN) meeting at Lake Success where Eritrea's future was being discussed and made spirited presentation of the unionist cause. He was also largely responsible for the impressive performance of the Unionist Party during the visit of the ↗United Nations Commission for Eritrea in 1950, convincing the team that no formula that overlooked unionist aspirations would work in Eritrea.

Once the UN mandated Ethiopian–Eritrean Federation was established in 1952, T.B. and his colleagues in the Unionist Party, fully backed by Ethiopian authorities, dominated the new Eritrean government and allowed very little space to their former protagonists. As the Chief Executive of the Eritrean government with the title of *däǧǧazmač*, T.B. showed little regard for the Eritrean ↗constitution and even less respect for the opposition. He used his position to harass and undermine his former personal rivals. He was accused of ordering the assassination attempt on his archenemy, Wäldä Ab Wäldä Maryam and eventually forcing him into exile in the fall of 1953. Family members of *ras* ↗Täsämma Asbärom, former opponent of the Unionist Party, were removed from their positions as chiefs and district officers and some of them imprisoned under various pretexts. To further weaken his opponents, T.B. declared martial law and gave himself power to order the detention of any person for a period of up to six months.

T.B.'s vindictiveness and increasingly dictatorial tendencies aroused the ire of even his unionist compatriots in the executive and legislative branches. Although harboring different grievances and aspirations, ardent unionists such as *qes* ↗Dəmeṭros Gäbrä Maryam and implacable separatists including ↗Idrīs Muḥammad Ādam (later founder of the ↗Eritrean Liberation Front, ELF) joined forces in the ↗Eritrean Assembly to remove T.B. from office. T.B. tried to stave off the opposition by suspending the Assembly more than once, but this only played into the hands of his opponents who appealed for the intervention of the Emperor and succeeded in forcing his resignation in July 1955. He was succeeded by *däğğazmač* (later *bitwäddäd*) ↗Asfəḥa Wäldä Mikaʾel as Chief Executive.

Däğğazmač T.B. moved to Addis Abäba where he was appointed member of the Ethiopian Senate first and later ambassador to Sweden whence he defected to the ELF in 1967, of which he became a spokesman. Although he briefly joined the Supreme Council of the ELF, he was unable to work with his former political enemies and soon withdrew from the Eritrean political scene.

Shumet Sishagne

Tädla Gʷalu

T.G. (**ተድላ፡ ጓሉ**; d. 1868) was the son of Gʷalu Märəd, himself a grandson of *dağğazmač* Ḫaylu, who was the son of *ətege* ↗Bərhan Mogäsa's daughter ↗Wälättä Ǝsraʾel. He thus saw himself as the heir of *ətege* Məntəwwab's political legacy. The members of this lineage contested the political affairs of Goğğam between themselves from the mid-18th cent. through to ca. 1870, when they were supplanted by Adal Täsämma (*nəguś* ↗Täklä Haymanot), a representative of their principal rival lineage, based in neighbouring (new) ↗Damot.

T.G. is first mentioned as "a school boy" in the early 1830s (IES ms. 254, fol. 59), which suggests a birth date in the 1810s or 1820s. His early years were dominated by the Damot rulers, *däğğazmač* ↗Bərru and his son Goššu. However, the political situation changed radically with the rise of *däğğazmač* Kaśa Ḫaylu (later *aṣe* ↗Tewodros II) and his victory at the Battle of ↗Ayšal in June 1853. Kaśa repeatedly tried to appoint his own people to rule Goğğam, and T.G. led the struggle to resist these appointees.

In 1853 T.G. assumed the title of *däğğazmač*, basing himself at Mänqʷärär, later known as ↗Däbrä Marqos (IES ms. 254, fol. 63). Early in 1856, Tewodros campaigned in Goğğam (ZanLitTeo 26; IES ms. 254, fol. 66; MonVidTheod 16ff.). T.G. fled to the fortress of Ǧibälla, soon emerging to challenge the Emperor's appointees, a challenge he sustained until his death. Repeated attempts by Tewodros, including an expedition at the end of 1857 and the beginning of 1858 (ZanLitTeo 31f.; RubActa II, no. 29), to subdue T.G. culminated in 1863 at the Battle of Enğabara, when he inflicted heavy losses on the Goğğam troops, but failed, yet again, to capture T.G. (IES ms. 254, fol. 72v/73r; MonVidTheod 30f.; RubTew 80ff.). While we have repeated references, starting in 1859 and continuing to his death early in 1868 (IES ms. 254, fol. 75), to T.G.'s rebel status, we learn little more about him, other than that his two sons, Nəguśe and Dästa, fought to control his patrimony (RubActa II, nos. 41, 72, 148, 160, 197 and 220).

Src.: *aläqa* Täklä Iyäsus, **የጎጃም፡ ታሪክ** (*Yägoğğam tarik*, 'History of Goğğam'), IES ms. 254; ZanLitTheo; MorTeo 143–80; MonVidTheod 16ff., 30f. [text] = 20f., 38 [tr.]; RubActa II.

Lit.: RubTew 67f., 75, 80ff.; RubInd 173, 227, 241.

Donald Crummey

Täfäri Bänti

T.B. (**ተፈሪ፡ በንቲ**, also Täfäri Bänte; b. 1921, d. 3 February 1977, Addis Abäba) was a Brigadier General and Ethiopian Head of State from 1974 to 1977.

T.B. was born in a partially assimilated Oromo family in the vicinity of Addis Abäba and joined the army at the age of 20. Selected for training in the ↗Holäta Military Academy, he began a successful military career with service in all four Ethiopian ↗Army divisions and assignment as military attaché in Washington in the late 1960s. T.B. was appointed commander of the Second Army in ↗Asmära in September 1974 where he favoured vigorous efforts to suppress Eritrean insurgency.

T.B. was selected by Mängəśtu Ḫaylä Maryam to succeed the murdered ↗Aman Mikaᵓel ᶜAndom as (acting) head of state on 28 November 1974 for his leadership qualities, i.e. integrity, patriotic feelings, and humble origin. He had a reputation as an effective leader and disciplinarian, but had refrained from political involvement. This was, no doubt, the prime reason he appealed to Mängəśtu as replacement of Aman as front man for the ↗Provisional Military Administrative Council (*Därg*). In his new position he soon developed a keen interest in political consolidation of the 1974 ↗Revolution. In a public speech as early as July 1975 he showed an inclination to compromise with civilian leftists who opposed military leadership of the Revolution. In a speech on the first anniversary of the Revolution in September 1975 he announced a plan for early formation of a political party to implement the policies of the Revolution: "The day is not far when peasants, workers and progressive elements will be constituted under one progressive political party to assume the high responsibilities of the state" (*Ethiopian Herald*, 13 September 1975). The project provoked a period of intense rivalry between *Därg* fractions.

During the year which followed infighting in the *Därg* led to the death of several of its members. T.B. moved steadily toward closer association with opponents of Mängəśtu to the point where, on 29 December 1976, after nine weeks of negotiations, the *Därg* adopted a "reform" which made T.B. Head of State as Chairman of the *Därg* and Commander-in-Chief of the Armed Forces. This was, in effect, a coup against Mängəśtu and his supporters, many of whom were removed from the *Därg* and sent to the provinces or abroad. T.B. had become more convinced than ever that a party was necessary. In a speech in Revolution (*Abyot*) Square on 30 January 1977 T.B., dressed in civilian clothes, declared: "In the absence of a party it is difficult to channel the energy of progressive forces [...] Had this been sufficiently realized during the last 2½ years we would have had a national party by now [...]" (*Ethiopian Herald*, 1 February 1977).

Mängəśtu was not to be so easily pushed aside. He proceeded to mount a counter-coup which resulted on 3 February 1977 in a bloody shootout which culminated in the death of T.B. and five of his supporters. The next day Mängəśtu in a speech in Revolution Square denounced T.B. as having attempted a fascist coup. The *Därg* met again from 7–11 February and elected Mängəśtu Chairman and Head of State.

Paul B. Henze

Täfäri Mäkʷännən ↗Ḫaylä Śəllase I

Täfäri Šaräw

T.Š. (ተፈሪ፡ ሻረው, b. early 20th cent., Addis Abäba, d. 1978, Addis Abäba) was one of the first Ethiopian factory owners; he also became Ethiopian ambassador to Sweden. In 1931, he allegedly became the owner of the ↗Ambo Mineral Water Bottling Plant, which was later transferred to the Imperial Estate and nationalized in the 1970s.

Following the Italian Invasion T.Š. held various government positions. He was considered a protégé of *ras* ↗Mäsfən Sələši who appointed T.Š. to a position in the Ḫaylä-Śəllase I Foundation in 1954, which was viewed with suspicion by the powerful Minister of Pen, *ṣäḥafe təᵓəzaz* ↗Wäldä Giyorgis Wäldä Yoḥannəs (ClapHS 115). T.Š. had been disliked by Wäldä Giyorgis Wäldä Yoḥannəs, and other leading families in Ethiopia. His appointment to a ministeral post was rejected, and he stood under house arrest for some time. He was sent to Sweden as a kind of political exile. In 1960, while ambassador to Sweden, T.Š. supported the abortive ↗coup d'état 1960 (s. EAE vol. 2, 1081–82). He was among the few Ethiopians abroad who spoke in favour of the coup. He openly accused Ḫaylä Śəllase I of amassing a private fortune in foreign banks and of his oppresive and corrupt rule. After this statement he was dismissed from his post. He lived in Sweden for 16 years and did not return until after the fall of the Ḫaylä Śəllase regime.

T.Š. was married to *wäyzäro* ↗Lule Täsfaye, who was head of the Ethiopian Women's Association.

Amḫa Märsᶜe Ḫazän – Red.

Täfäri Wäsän

Wag šum T.W. (**ተፈሪ፡ ወሰን**; b. 1842, Lasta, d. 1874, Goǧǧam) was a leader of ↗Lasta. His father was *wag šum* Wäsän, who was assassinated a few years after his son came to power. T.W. succeeded his father at a young age but was soon deposed and imprisoned by his cousin *wag šum* ↗Gäbrä Mädḫən. However, he escaped from his confinement and joined the court of *aṣe* ↗Tewodros II, where he commanded a cavalry force of 10,000 men.

T.W. participated in Tewodros's campaign in ↗Wag against the rebellious Gäbrä Mädḫən. He captured his cousin and presented him to the ruler while he allowed the *wag šum's* son, Gobäze Gäbrä Mädḫən (later *aṣe* ↗Täklä Giyorgis II), to escape. Later, Tewodros imprisoned T.W. at ↗Mäqdäla for fear that he would join the rebellion of Gobäze, whose father had been hanged by Tewodros in 1858. Following the death of Tewodros in 1868, T.W. was released by the British forces of the ↗Napier expedition and immediately joined the court of *aṣe* ↗Täklä Giyorgis II. At the Battle of ↗ᶜAssäm in 1871 between *aṣe* Täklä Giyorgis and *däǧǧazmač* ↗Kaśa Mərč̣a (later *aṣe* ↗Yoḥannəs IV), T.W. managed to escape and was later reconciled with *aṣe* Yoḥannəs.

As a gesture of pacifying the region, which was disgruntled over the imprisonment and later death of their kin *aṣe* Täklä Giyorgis in his confinement in ↗Təgray, T.W. was confirmed to his traditional title of *wag šum* and the administration of his area. In 1874 he built the church of Mädḫäne ᶜAläm at ↗Säqoṭa. The same year, *wag šum* T.W. accompanied *aṣe* Yoḥannəs in his campaign to ↗Goǧǧam and died there during the campaign.

Wudu Tafete Kassu

Täfärra Wärq Kidanä Wäld

Ṣäḥäfe təʾəzaz T. (**ተፈራ፡ ወርቅ፡ ኪዳነ፡ ወልድ**; b. 1905, Addis Abäba, d. 10 July 1979, Addis Abäba) was a high-ranking politician. Born to Kidanä Wäld Bisäwwər and Däǧǧyəṭnu Garädäw, he received primary education at Mänagäša Qəddus Giyorgis Church and later studied English and theology at a Swedish Evangelical Mission (↗Evangeliska Fosterlands Stiftelsen) school.

In 1937, T. began to work as an English translator at the British Legation. Following the assassination attempt on General ↗Graziani, he was accused of involvement and was imprisioned by the Italians. Along with other 300 Ethiopian exiles, T. was taken to the Italian island of Asinara. He could, however, soon be transfered to Naples and was subsequently released and transported to Great Britain. There, he met with *aṣe* ↗Ḫaylä Śəllase I and worked for the Abyssinian Refugee Fund. In 1940 T. joined the British campaign to liberate Ethiopia (↗War of Liberation) and in Khartoum he served as liaison officer and interpreter between the British officers and the Emperor. He marched from Khartoum to Goǧǧam with the Emperor and arrived in Addis Abäba on 5 May 1941 (Abärra Ǧämbäre 2004: 11–65).

In 1941, T. was appointed Special Secretary of the Emperor (Spencer 1984: 120). From his office he also administered the Betä Saydä Ḫaylä Śəllase I Hospital, the Ethiopian ↗Air force, the ↗Harär Military Academy and Empress Mänän's Handicraft School. His loyalty to the Emperor earned him the appointment as the Minister of Pen (↗*ṣäḥafe təʾəzaz*; Abärra Ǧämbäre 2004: 71) in 1954. In 1957, he was appointed Minister of the Imperial Court during which office he introduced reforms in palace administration (Markakis 1974: 219). In 1974 T. was appointed as a member of the ↗Crown Council (Abärra Ǧämbäre 2004: 71). With the onset of the ↗Revolution, he was incarcerated by the military government and executed (Zäwde Gäbrä Śəllase 2008: 80). He was married to Asäggädäčč Kiros and had two daughters.

Known for his hard work and tenacity, T. rarely appeared in public. He visited more than 50 countries either escorting the Emperor or alone (Abärra Ǧämbäre 2004: 87–99). He was awarded 11 orders in Ethiopia and 40 orders from 29 other nations (ibid. 98–101). Among his accomplishments was the erection, jointly with Sylvia ↗Pankhurst, of a committee in Ethiopia to raise funds for the construction of the Princess Ṣ́äḥay Memorial Hospital. He also served as a board member of the memorial building for Prince ↗Mäkʷännən Ḫaylä Śəllase and of the Board of Trustees of the Bäʾata Maryam Church, the memorial of Mənilək II. From 1947–74 he served as the first chair for the Director's board of the Ethiopian ↗Red Cross Association (Abärra Ǧämbäre 2004: 96).

Fentahun Tiruneh

Taffäsä Habtä Mikaʾel

Fitawrari T. (**ታፈሰ፡ ሀብተ፡ ሚካኤል**; b. 5 June 1900, Addis Abäba, d. 16 April 1964, Addis Abäba) was viewed as one of *ras* Täfäri's (later *aṣe* ↗Ḫaylä Śəllase I) young reformers.

T.'s father, *fitawrari* Habtä Mikaʾel Habtä Śəllase, died early, and T. grew up with his uncle *däǧǧazmač* ↗Abba Wəqaw Bərru. In 1918, T. started government service as secretary to his uncle who at that time was governor of ↗Gimira. Later they became estranged due to T.'s support of *ras* Täfäri. In 1921, T. moved to Addis Abäba and worked as chief of security of the Chemin de fer franco-éthiopien (↗Railways). On 27 September 1925 he became *grazmač* and was nominated governor of ↗Illubabor. On 31 December 1929, T. became *fitawrari* and governor of ↗Ǧiǧiga, where he was credited with building a road link between Ǧiǧiga and Hargeisa. In 1930, he moved to Addis Abäba and was made head of department at the Ministry of Works. After one year, he became the Minister of Works. During this period, he was responsible for the Ethiopia–British Somaliland Border Commission (↗Boundaries; ↗Wälwäl).

In 1936, during the Italian invasion, T. served on the eastern front with *däǧǧazmač* ↗Näsibu, where he was responsible for logistics (↗Italian war, 1935–36). After the defeat of Ethiopia, T. went to Paris where he became an instructor of Amharic at the École des Langues Orientales (↗INALCO). He returned to Ethiopia in 1945 and served as Minister of Works, Justice, as well Post, Telephone and Telegraph. T. also served as Ambassador to Egypt and France. On 1 November 1957, he became a member of the Senate, and on 20 June 1959, vice president of the Senate (↗Parliament). He retired in 1961.

T. was married to *wäyzäro* Mulatäwärq, by whom he had six children, one of whom, Habtä Śəllase Taffäsä, was head of the Ethiopian Tourism Bureau in the 1960s and 1970s.

Amḫa Märs^ce Ḫazän

Ṭäǧǧ

Ṭ. (Amh. **ጠጅ**, Tgn. **ሜስ**, *mes*; Orom. *daaḍi*) is an alcoholic beverage (↗Drinks) produced by the fermentation of ↗honey and consumed throughout Ethiopia and Eritrea.

The use of Ṭ. in Ethiopia is believed to go back to ↗Aksumite times. Certainly, by the 16th cent. it was being used to honour warriors, as when *aṣe* ↗Śärṣä Dəngəl let the hero ^cAqba Mikaʾel drink Ṭ. in his presence.

In the 19th cent., in the northern highlands and in parts of the south, e.g., ↗Wälaytta, the drink was controlled by royalty, who restricted consumption, e.g., to honoured individuals and soldiers. King ↗Ṭona of Wälaytta in the 19th cent. filled large shields with Ṭ. for his great warriors to drink from "like lions".

Often, only royally designated women were allowed to brew Ṭ. and to deal with any bee products (↗Bees and beekeeping). *Ǝtege* ↗Ṭaytu was responsible for ca. 50 richly decorated ↗horn containers of highest-quality Ṭ., whose carriers had a higher status than those with undecorated or leather containers (Prouty 1986:138). At his ↗*gəbbi* in Ǝnṭoṭṭo Mənilək II had a special glass-door cabinet just for storing Ṭ. as well as a separate area of the court for making it. ↗Käfa, on the other hand, produced the drink in quantities indicating a wide usage.

Production

Cold water and dark raw honey including the comb are heated (1:4 ~ 1:7 v:v). Honey from Goǧǧam and of coffee and *mäsqäl* blossoms are considered the best for Ṭ. Crushed dry-heated or boiled ↗*gešo* (twigs and bark; sometimes leaves), ca. one-third the weight of the honey, is added a few days later. The new mixture is fermented in a covered container in a dark room, from a few days to a month. Most recipes call for repeated stirring during this time. The floating residue is removed. More honey (or the first honey) may be added. At this point, the Ṭ. is ready, though fermentation continues without added bitterness up to the bacterial tolerance level.

Highest quality Ṭ. will be aged, traditionally underground, for as long as six to twelve months. Variations are many, including re-crushing the *gešo* and adding various ingredients to give a different flavour or a special "kick". These include, e.g., vernonia, ↗sorghum, ↗maize, wheat, ↗*čat*, fennel, ↗coffee, *araqe*, but also secret ingredients. For a stronger drink, even poisonous additives such as ↗*əndod* and *aṭäfari* (*Datura stramonium* or *Cannabis sativa*) may be employed.

So-called filtered Ṭ. is a higher quality Ṭ. with higher quantities of the essential ingredients and extra honey added before sealing. Ṭ. should be amber-coloured, cloudy and slightly effervescent, with a woody and bitter-sweet taste. Fine Ṭ, aged 6–12 months, has been compared to cognac and Bordeaux. A less alcoholic Ṭ. is made mostly with ↗sugar and aged a week or less. There is also **ብርዝ** (*bərz*), a minimally fermented honey water, and distilled Ṭ.

Biochemistry

Various yeasts and the lactic acid bacteria present with the *gešo* and honey convert sugars into alcohol and lactic acid, producing the aroma and flavour. Ṭ. is mildly acidic (pH ~ 4). The alcohol content ranges from 5% to over 20%. Besides being intoxicating, Ṭ. has a number of nutritive qualities, including providing calories (1.49 mg/ml – 3.73 mg/ml), B vitamins, some protein (0.33 – 4.66 mg/ml), and amino acids and nitric oxide (both desirable for fertility; Bekele Bahiru et al. 2001), and fluids.

Social aspects

The most common place to consume Ṭ. is the **ጠጅ፡ ቤት** (*ṭäǧǧ bet*, 'Ṭ. house'). Usually, Ṭ. *bets* are inexpensive, function as a social space to pass the time, to pass on information and rumours and to carry out various kinds of disputations. Women are not common clients in urban establishments, though they frequently work in or run them. Especially in the north, ↗*azmari* will play and sing. In the countryside, Ṭ. *bet* are normally run by local women or men, whereas in ↗Addis Abäba, ↗Gurage and ↗Amhara predominate.

Ṭ. houses have multiplied greatly in Addis Abäba. The first arose at the end of the 19th cent. and were run by women brewers. By 1908 ca. 50 ↗*ṭälla* or Ṭ. sheds were reported, growing to over 1,000 shortly thereafter. A number of these housed prostitutes, giving them a reputation still encountered at times today (↗Prostitution). These establishments were sanctioned by the government, the taxes on them rumoured to go straight to the imperial treasury.

Ṭ. is served in thick Florence glasses with flared openings (**ብርሌ**, *bərəlle*). Raw beef or braised beef or lamb or yam sandwiches are served at many Ṭ. *bets*, and *qolo* or other finger food may be sold.

Ṭ. plays an important role as a drink for special occasions. Thus, it is consumed at festivals, ↗weddings or ↗*täzkar*, during special meals at home, and in traditional and expensive restaurants. Ṭ. is also used in the preparation of ↗spices and of ↗food in general.

Because Ṭ. is more expensive to make than *ṭälla* and because of its royal aura, Ṭ. enjoys respect as the national drink. Nevertheless, attempts at mass marketing have met with little success. The amount of Ṭ. produced in Ethiopia is unknown, but an estimate of recent annual production, based on 80 %–90 % of Ethiopian honey being used for Ṭ. and 23,000 tonnes of honey, would lie between 40–150 million litres.

Kim Dammers

Tägulät

T. (**ተጉለት**, traditional form **ተጕለት**, Tägʷəlät) is an area north of ↗Däbrä Bərhan in northern ↗Šäwa.

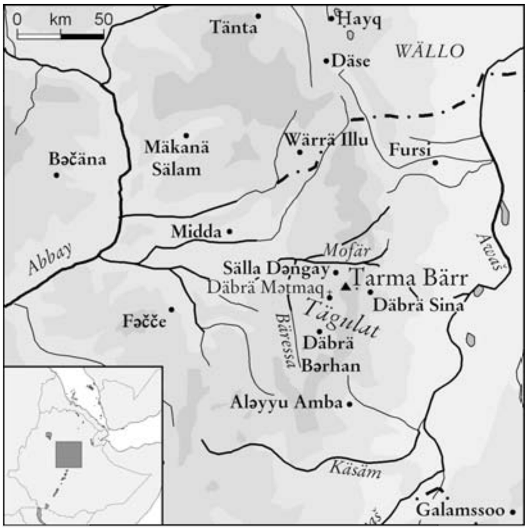
In modern scholarly literature, T. proper is considered to be the ↗*qʷälla* areas bordered by the Mofär River in the north and the Bäressa in the south. Sometimes the district of ↗Wägda to the south is also included. The T. lowlands are crosscut by a number of rivers, tributaries to the Mofär and the Bäressa, and travel is generally difficult. In everyday speech “T.” tends to cover all the area west of ↗Ṭarma Bärr, i.e. south of Mänz and north of Däbrä Bərhan. The latter seems to correspond rather well to the T. of the period before ↗Aḥmad b. Ibrāhīm al-Ġāzī.

T. can possibly be identified with Märᶜade of Islamic sources, threatened by ↗Ṣabraddīn b. Dalḥuy of Ifat.

↗ᶜAmdä Ṣəyon is reported to have appointed a governor over T. in 1332/33 (MarAmdS 52).

T. and Däbrä Bərhan were imperial towns during the reign of *aṣe* ↗Zärᵓa Yaᶜəqob (BTafA 365). This Emperor also founded the church of ↗Däbrä Məṭmaq in the area. The historical town of T. has not been located, but there is a small village named T. some 7 km west of ↗Sälla Dəngay.

Däbrä Bəṛhan was an important imperial town until it was conquered by Aḥmad b. Ibrāhim al-Ġāzī. During the Muslim and later the Oromo invasions, Christian communities survived in the inaccessible river valleys of T. and similar districts.



T. is mentioned as one of several Šäwan districts or chiefdoms paying homage to *aṣe* ↗Iyasu I on his visit to Šäwa in the late 17th cent.

T. was incorporated into the rapidly expanding principality of Šäwä during the rule of *märᵓəd azmač* ↗Asfa Wäsän (1775–1808), or perhaps even earlier as a consequence of the massacre of the Oromo in the Däbrä Bəṛhan area during the rule of ↗Amməḫa Iyäsus. Thereafter T. appears as an administrative unit within Šäwa. In some tables of the land tax system (cp. MahZekr), T. seems to refer to a rather restricted area, since Sälla Dəngay, Wärana and Wägda are listed separately. In the late imperial period, T. was merged into one *awrağğa* with ↗Bulga (Tägulät–Bulga *awrağğa*), which covered a much wider area, including the *wäräda* of ↗Ankobär, Assagərt, ↗Kässäm, Wärana, Basso, ↗Morät, ↗Angoläla and Qəmbəbit.

The leading families of T. were very close to the Šäwan dynasty, and many key officials originated from this area, e.g., *däğğazmač* ↗Gärmame Wäldä Ḥawaryat (for others s. ↗Addisge).

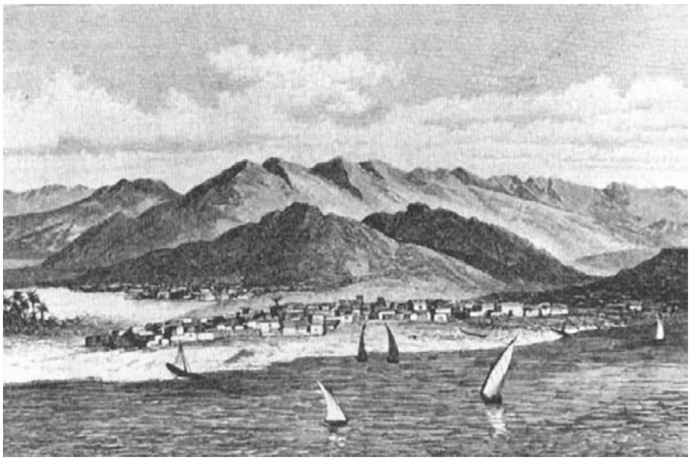
Tağūra/Tağurra

T. (ᶜAfar: Tagórri, Arabic Tuğurra, Tağurra, French Tadjoura) is a historical port and an ↗ᶜAfar town in today’s state of ↗Djibouti. It is located on the northern coast of the Gulf of T.



Tağūra at the beginning of French colonization on a 19th-cent. sketch; from MasHist 123

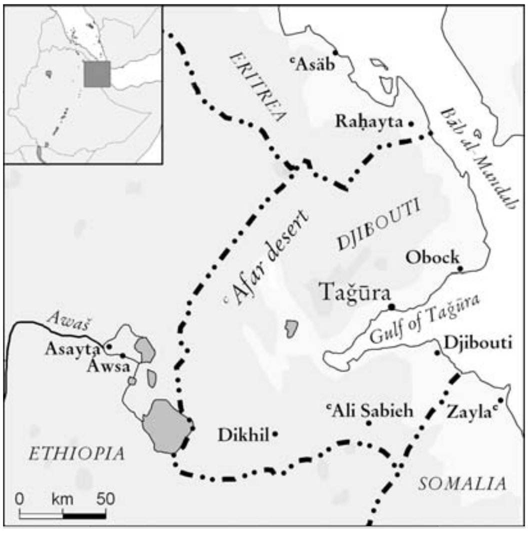
Its ^{c}Afar etymology is **tagor-li* ‘which has water-skins (*tógor*, pl. of *tagrá*)’, which is a reference to its permanent well. The first mention of the town in Arabic (تجر, *tğr*) might be on al-↗Idrīsī’s map dated 1154 (but erroneously located). It could be also on the map of the astrologer and geographer al-Bīrūnī (973–1048) if one agrees to read *tğr* instead of نجد (*nğd*), north-west of ↗Zayla^{c}. The first European mention of the Gulf, “este rio entra quatro jornadas”, is on Lopo Homem’s map (1554) before Almeida’s (1662). The town itself is located on Diego Homem’s map (1565).

Until the 19th cent., the town was not visited by European travellers, which explains that T. was erroneously placed by European geographers on the southern coast of the Gulf of T. (e.g., Dellile’s map in Laroque 1716). The French merchant Dufey is the first recorded European to reach the port, in September 1838, coming from ↗Ankobär. After him, T. became the head of the main trail to Šäwa through the ^{c}Afar deserts. The governor of the Egyptian Red Sea Governorate, which nominally included T., Werner ↗Munzinger disembarked there with Egyptian troops which were, however, defeated on the outskirts of ↗Awsa (15 November 1875). Until the beginning of French domination, T. was among the main ports through which slaves were exported to the Arabian Peninsula, along with Zayla^{c} and ↗Berbera. ↗Abū Bakr Ibrāhīm Šaḥīm, from Zayla^{c} monitored this slave trade from Ifat to Ambabbo, a coastal hamlet west of T. where slaves were kept waiting for embarking (↗Slavery).

The town was originally divided into two quarters: Gala^{c}to upwards and Saḥarriytó where Yemeni merchants coming from Šiḥr had their stores. T. is known for having seven mosques including a *maqām* on the beach east of T. dedicated to “*šek* Maḥammad Darbēn”, Ibrāhīm Abū Zaḥarbūi, a saint of Harär buried in Zayla^{c}.

The first *sulṭān* of T., *dardar* “^{c}Asa” Kāmil is recorded in the middle of the 15th cent. The rule of alternation between the Dīnitté and the Burḥanto, the two main branches of the Ad^{c}ali ruling tribe was established at the beginning of the 17th cent. Among the insignia of power were the drums *dinkāra* (Arabic *naqqāra*; Ethio-Semitic *nägarit*) which the rulers of the Kingdom of ↗Dankali did not have. The first treaty (Traité de Paris, 11 mars 1862) founding the French colony of ↗Obock mentions the names of the Dīnitté heir to the sultanate “Mohamed, son of sultan Hammed” (Ḥummad b. “Ad^{c}allom” Maḥammad), and his future Burḥanto vizir “Hammed, son of the late sultan Mohammed” (Ḥummad b. Maḥammad b. Mandaytu). The latter also signed a second “Traité d’amitié et de cession” (21 September 1884) with the French governor Léonce ↗Lagarde.

T. suffered numerous fire-outbreaks in 1814, 1866 (when raided by the troops of the *sulṭān* of Awsa), 1893, 1897, 1905 which weakened its development. In 1855, the town had around 3,000 dwellers. 30 years later, Paul ↗Soleillet (1886:41)



indicates 700 to 800 inhabitants, showing that the town had not recovered from the 1866 raid.

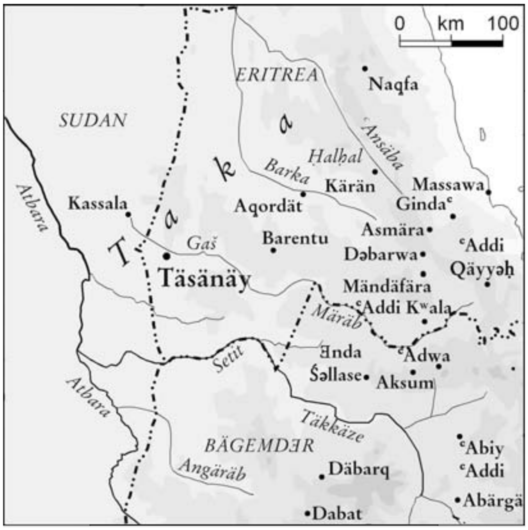
Taḫśaś ↗Calendar (Month)

Taka

T. was an Egyptian, later Sudanese province (*mūdirīya*), which in Egyptian times extended into today's western lowlands of ↗Eritrea. The ↗Beğa Hadándowa and Hallenga are the dominant population of T. and there are also minor ↗Təgre groups, called there Ḥasa (also Ḫasa), arabophone Šukrīyah and even other migrants such as ↗Hausa, ↗Fellata and other Sudanese. T. has fertile lands and is crossed by the rivers ↗Atbara, and ↗Gaš. It is characterized by savannah, which is burnt annually by the local population in order to cultivate durra.

In 1840 the Jebel al-T. (or ↗Kassala) area was occupied by Egyptian forces and the province of T. formally established, with Kassala as its capital. The borders to the south fluctuated according to the degree of control over the nomadic populations and their immediate sedentary neighbors in the Eritrean highlands. The nomadic Təgre-speaking populations of the ↗Barka lowlands, in today's Eritrea, entered into a loose vassalage under the governors of T., paying tribute and occasionally serving as irregular soldiers. Starting from the 1850 raid, carried out by them, the ↗Bilin highlands were also considered a dependency of T. Its north-western part ↗Ḥalḥal became included through the conversion of the population to Islam. ↗Kärän, however, was only claimed by T., but never permanently occupied; following raids a number of its inhabitants were enslaved and brought to T. (↗Slavery). Also the ↗Kunama territories were in parts included into T., mainly ↗Ilit and Sokodas, which were Islamized.



T. was an important centre for the *Ḫatmīya* Sufi order starting from about 1800 (↗Islamic brotherhoods; Trimingham 1965: 233f.; cf. also TrIslam 244f.), which gained a sizeable followership in Eritrea. Its seat is the township of Ḫatmīya in Kassala, with the tomb of Ḥasan al-Mīrġanī (d. 1869).

From 1883 T. was partially occupied by the Mahdiyya forces led by ᶜUṯman Diqna, Kassala capitulating in July 1885 (↗Mahdists). In 1886 the last Egyptian troops capitulated near Sawākin (ErlAlula^2 100f.). The Italian advance into the Eritrean lowlands from 1887 brought the latter into conflict with the Mahdists; local opposition against the Mahdists among the Təgre and ↗Beni ᶜAmər helped the Italians to advance steadily, until in July 1894 Kassala itself was occupied by them. In December 1897, however, they had to give up T., after which it was taken over by the British (Hollis 1941: 39). This was followed by the May 1902 treaty, in which, in turn, the British recognized Italian possession of the Kunama lowlands.

Economically, the fertile T. lowlands flourished due to cotton plantations near the Atbara and Gaš rivers, which were started already in the 1870s under the Governor-General, ↗Munzinger, and much advanced under British rule after 1897. T. was then replaced by the *mūdirīya* of Kassala.

Täkäśtä Bərhan

Abunä T.B. (**ተከሥተ፡ ብርሃን**, fl. second half of the 14th cent.) is a saint of the ↗Ethiopian Orthodox (Täwaḥədo) Church who is considered to be the founder of the monastery of ↗Dima Giorgis, in Goǧǧam.

T.B. was a contemporary of *aṣe* ↗Dawit II; the main source on his life is his Vita (↗*Gädl*), still inedited (cp. KinBibl no. 148 reporting a few hagiographic documents, and a microfilm in the IES; perhaps also EMML no. 80, fols. 44r-46; Raineri in EncSan 1129f.). According to this source, he was born to the pious Mälkä Ṣədəq and Dəlbäᵓiyäsus, in ↗Šäwa. On the day of his conception, they saw a pillar of light, and before the birth his future was revealed to them in a vision. He was baptized as Bäkimos; later he was ordained deacon and then went to Goǧǧam. There, he was ordained priest and entered the monastic life.

While wandering in Goǧǧam, T.B. reportedly founded such churches as Qädamawit Maryam, Moṭa Däbrä Mikaᵓel, and Č̣älämit Maryam in ↗Bəčena. He then left Goǧǧam and went to Təgray, evangelizing ↗Adyabo, and then served in Aksum as ↗*nəburä əd*. On his return to Goǧǧam, he preached in the region of Dima, from where he expelled a female demon called Ǝmmä Wəlud (also Ǝmmä Mäwlad, equated in the Vita with Šotälay) who brought sickness and death to small children.

The Saint was called T.B. by “9,999” people whom he baptized at once. He established a monastic community of Dima and let a ↗*ṣäbäl* spring flow from a rock nearby. He died on 10 *Mäggabit* and was buried in Dima. His successor *abba* Tomas brought to Dima the *tabot* of St. ↗George of Lydda and established the place as ↗*gädam* under *aṣe* ↗Yəsḥaq.

Takkälä Wäldä Ḥawaryat

Däǧǧazmač T.W.Ḥ. (**ታከለ፡ ወልደ፡ ሐዋርያት**; b. ca. 1900, Bulga, d. 16 or 27 November 1969, Addis Abäba) was a ↗Resistance leader. Born into a ↗*balabbat* family, he married into the Šäwan nobility. His wife was Askalä Wäldä Amanuᵓel, a descendant of *nəguś* ↗Śahlä Śəllase. T.W.Ḥ. received traditional education at the Ǝnṭoṭṭo Raguᵓel church.

T.W.Ḥ. started his career during the rule of *ləǧ* ↗Iyasu at the municipality of ↗Addis Abäba. During the ↗coup d’état 1916 (s. EAE vol. 2, 1081) he sided with his close friend *ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḥaylä Śəllase I). T.W.Ḥ. was then appointed deputy governor of ↗Käfa, judge in the antislavery court, customs director at ↗Gore, secretary general of the Ministries of Interior, Public Works, Transport and Agriculture. He received the title of *blatta* (↗ *Blattengeta*) in 1935.

T.W.Ḫ. was a staunch supporter of Ḫaylä Śəllase until the ↗ Italian war 1935–36, when he advocated a guerrilla warfare. He tried to dissuade Ḫaylä Śəllase from leaving the country and proposed to move the government to the distant south-west. This notwithstanding, he was put in charge of the administration of Addis Abäba when the Emperor moved with the army to the north.

When Ḫaylä Śəllase went into exile, T.W.Ḫ., together with other patriots, continued to lead a guerrilla war against the Italians. He retreated for some time to Khartoum and, before Ḫaylä Śəllase's return in 1941, he participated in a meeting in Gondär, together with several hundred Patriots. There the future government of Ethiopia was discussed, and more constitutionalism demanded (in which an elected ↗ Parliament would be given increased power), even considering republicanism. T.W.Ḫ. also visited Ethiopian refugees in Kenya and re-entered Ethiopia together with British forces in 1941. He was wounded and taken prisoner by the Italians, but after being released reached Addis Abäba at about the same time as the Emperor.

T.W.Ḫ. was made Governor General of Šäwa, but his loyalty to Ḫaylä Śəllase was found lacking. He was imprisoned for more than two years but in 1945 was appointed deputy ↗ *afä nəguś*. Personal intrigues and envy in the entourage of the Emperor forced the demotion of T.W.Ḫ. to governor of the distant ↗ Boräna, where he was accused of fomenting tribal war. For once, his case was investigated, and he was acquitted. From 1957 to 1961, T.W.Ḫ. held again the position of *afä nəguś* and was then detained at his house outside Addis Abäba for several years without charge or trial.

T.W.Ḫ. died, gun in hand, at his home in Addis Abäba, in 1969, when security forces arrested him for suspected involvement in an attempt to assassinate the Emperor. The University Students' Union, then at the height of its opposition (↗ Student movements), spread a pamphlet about the life and death of T.W.Ḫ., in which the government actions against him were condemned and his figure was praised.
